

The boundaries of the regular blocks are 4,800 international meters on a side and contain 2,304 hectares. The regular boundaries are defined in terms of X and Y coordinates of the Universal Transverse Mercator Grid System based on the Geodetic Reference System (GRS) 1980 Ellipsoid.

SOBDs have not been published for blocks adjoining the approximate (short dashed) Submerged Lands Act Boundary and the Limit of 8(1) Zone. Coordinates and areal measurements for these blocks are not considered by the MMS to reflect an official federal position.

Onshore planimetric base compilation is from the USGS 1:63,000 Digital Line Graph files, downloaded from <http://gdcd.usgs.gov>. These DLG files include both high and low water lines.

The areas along the (long dashed) Submerged Lands Act boundary have not been determined.

National Wildlife Refuge boundaries were obtained from <http://alaska.fws.gov/aba/tm/GIS/refuge.htm>.

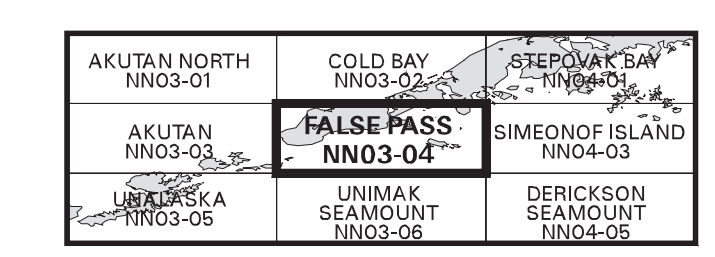

Copies of these diagrams and other information may be obtained at the appropriate MMS OCS Region or from www.mms.gov/ld/maps.htm.
