

# Airport Improvement Program

Fiscal Year 2005

Report to Congress 22<sup>nd</sup> Annual Report of Accomplishments

## THE SECRETARY OF TRANSPORTATION WASHINGTON, D.C. 20590 MAY 0.2 2007

The Honorable Nancy Pelosi Speaker of the House of Representatives Washington, DC 20515

Dear Madam Speaker:

I am pleased to send you the 22nd Annual Report of Accomplishments under the Airport Improvement Program for Fiscal Year 2005. As required by Section 47131, Title 49 United States Code, this report contains comprehensive information on the Airport Improvement Program and Airport Land Use Compliance Program. The narrative sections, figures, and tables highlight the accomplishments of both programs and provide additional information on the Passenger Facility Charge Program.

An identical letter has been sent to the President of the Senate.

Mary l. Peter

Mary E. Peters

Enclosure

## THE SECRETARY OF TRANSPORTATION WASHINGTON, D.C. 20590 MAY 0.2 2007

The Honorable Richard B. Cheney President of the Senate Washington, DC 20510

Dear Mr. President:

I am pleased to send you the 22nd Annual Report of Accomplishments Under the Airport Improvement Program for Fiscal Year 2005. As required by Section 47131. Title 49 United States Code, this report contains comprehensive information on the Airport Improvement Program and Airport Land Use Compliance Program. The narrative sections, figures, and tables highlight the accomplishments of both programs and provide additional information on the Passenger Facility Charge Program.

An identical letter has been sent to the Speaker of the House of Representatives.

Sincerely yours,
Mary E. Peters

Mary E. Peters

Enclosure

## **Executive Summary**

The 22nd Annual Report of Accomplishments: Airport Improvement Program (AIP) – Fiscal Year (FY) 2005 is submitted to Congress in accordance with Section 47131 of Title 49 of the United States Code (U.S.C.). This report covers activities for the fiscal year ending September 30, 2005, and provides a detailed statement of airport development funded by AIP grants, a detailed listing of appropriated funds allocation, and an itemized statement of expenditures and receipts. In addition, this report contains comprehensive information on the Airport Land Use Compliance Program and the Passenger Facility Charge (PFC) Program.

The Federal Aviation Administration (FAA) currently administers Federal funds for airport improvements through AIP. The Airport and Airway Trust Fund (Trust Fund), which was established by the Airport and Airway Revenue Act of 1970 (the Act), provides the revenues used to fund AIP projects and the administration of AIP. The Act, as amended, authorizes the use of monies from the Trust Fund to make grants under AIP on an annual fiscal year basis. The United States Congress authorizes obligation authority to use funds derived from the Trust Fund to be distributed to U.S. airports through AIP.

The Vision 100–Century of Aviation Reauthorization Act (Vision 100), Public Law 108-176, authorized obligation authority for AIP for FY 2004 through FY 2007. For FY 2005, Vision 100 made available \$3.5 billion for AIP. The legislation also contained changes to the basic requirements and guidelines under which FAA implements AIP, including numerous provisions to assist smaller airports and to streamline the environmental review of airport projects.

In FY 2005, Congress set the limit for the amount of funds available for awarding new grants to \$3.38 billion. However, Congress had previously authorized FAA to recover funds from prior-year projects in which the final costs were less than expected. Consequently, in FY 2005, gross AIP obligations (for 2,099 new grants and 745 grant amendments) amounted to \$3.5 billion, of which \$129 million was for increases in existing grant agreements. The gross obligation amount also included \$219 million for the State Block Grant Program.

In FY 2005, FAA issued 2,099 grants. As detailed in Table 1, 10 percent of these grants, and 35 percent of the corresponding funding, financed projects at large U.S. airports (a 2 percent increase from FY 2004). Of the remaining AIP grants, approximately 87 percent of the grants, and 64 percent of the funding, financed projects at small U.S. airports. FAA awarded the remaining 3 percent of AIP grants, and 1 percent of the funding, to State and local planning agencies to help plan and organize additions and improvements to the U.S. aviation system.

Table 1: AIP Funding Distribution Summary for FY 2005

Funding Category	Number of Grants Awarded	Percent of Total Grants	Obligated Amounts (millions)	Percent of Total Obligated Amounts
Large Airports				
Primary Large Hub Airports	125	6.0	\$776.4	22.7
Primary Medium Hub Airports	85	4.0	\$423.2	12.4
Large Airports Subtotal	210	10.0	\$1,199.6	35.1
Small Airports				
Primary Small Hub Airports	140	6.7	\$406.9	11.9
Primary Nonhub Airports	307	14.6	\$642.7	18.8
Nonprimary Commercial Service Airports	82	3.9	\$96.4	2.8
Reliever Airports	176	8.4	\$186.3	5.5
Other General Aviation Airports	1,083	51.6	\$583.5	17.1
State Block Grant Program	31	1.5	\$218.7	6.4
State Sponsored: Various Locations	14	0.7	\$43.2	1.3
Small Airports Subtotal	1,833	87.4	\$2,177.7	63.8
Airport System Planning				
Planning Agencies and Other	21	1.0	\$28.1	0.8
State Sponsored: Other Locations	35	1.6	\$11.6	0.3
System Planning Subtotal	56	2.6	\$39.7	1.1
Total	2,099	100.0	\$3,417.0 <sup>1</sup>	100.0

Statutory provisions require that AIP funds be apportioned by formula each year to specific airport sponsors, types of airports, or States. These funds are more commonly referred to as "entitlement funds." The largest portion of entitlement funds is available to primary airports (approximately 372 airports with more than 10,000 annual passenger enplanements or boardings). Based on statutory requirements, FY 2005 entitlement funds available to primary airports totaled \$848.3 million.

Remaining AIP funds are referred to as "discretionary funds," and FAA approves discretionary funds for use on projects after consideration of project priority and other selection criteria. In FY 2005, FAA awarded a total of \$1.25 billion of new AIP discretionary funds. FAA also awarded discretionary projects another \$437 million in carryover funds (entitlement funds that the sponsor does not intend to use in the current fiscal year or have expired and been converted to discretionary funds per the authorizing statute).

\_

<sup>&</sup>lt;sup>1</sup> The total for obligated amounts includes only new grants for the current fiscal year with obligations. This number does not include amounts for amendments made to existing grant projects or multi year projects.

Discretionary funds are limited and consequently directed only to higher priority needs. In allocating AIP discretionary funds, FAA selects projects that best advance statutory goals and objectives with respect to the enhancement of the national airport system. Investment decisions are made using a structured selection process that includes a variety of factors that help identify critical annual development needs within associated AIP funding levels. The factors are weighted more heavily in favor of the type of project than the type of airport. In some cases, the authorizing statute directs FAA to allocate discretionary funding to specific airport types and categories; although FAA has more discretion as to what type of development to fund within these discretionary funding "set-asides."

Each fiscal year, entitlement funds not used during the fiscal year are redistributed to other airport sponsors as discretionary funds. The original airport sponsor's entitlement to these funds carries over into the next fiscal year and must be funded out of that fiscal year's AIP budget. In FY 2005, airport sponsors spent over \$415.9 million in entitlement funds carried over from FY 2004—12 percent of the total FY 2005 AIP funds.

The authorizing statute (Title 49 United States Code Chapter 471) also requires FAA to set aside a certain portion of AIP funds for projects relating to capacity, safety, security, and noise (C/S/S/N). Such projects include the construction and improvement of runways, taxiways, and air carrier aprons at many capacity-constrained airports. In FY 2005, the set-aside amount for C/S/S/N projects was formulated to be a minimum of \$388.9 million, or 11.5 percent of the annual AIP.

Typically, final annual AIP allocations result in more funding being provided to C/S/S/N projects than was planned at the beginning of the year. The extra funds for these projects come from unused funds recovered from other projects and from the conversion of entitlement funds unused in the specific year. Accordingly, in FY 2005, FAA awarded AIP grants totaling \$780.1 million in discretionary funds for these projects.

FAA is authorized to issue a letter of intent (LOI) to an airport sponsor to indicate Federal approval of a proposed project. The LOI indicates Federal intent to fund the project in subsequent years (subject to the future availability of AIP funds). In FY 2005, LOI payments totaled \$208.3 million in discretionary funds and \$76.7 million in airport sponsor entitlements. FAA did not approve any new LOIs during the fiscal year. At the end of FY 2005, there were 32 open LOIs with payment schedules totaling \$1.1 billion extending from FY 2006 through FY 2017.

FAA regulates and approves the collection of Passenger Facility Charges (PFCs) from air carrier passengers at commercial airports controlled by public agencies<sup>2</sup> to fund FAA-approved projects that enhance safety, security, or capacity; reduce noise; or increase air carrier competition. Collections of PFCs complement AIP funding as there is

\_

<sup>&</sup>lt;sup>2</sup> PFCs also may be charged by airports privatized under the airport privatization pilot program under 49 U.S.C. 47134 (g).

broader eligibility under the PFC Program for certain noise and terminal projects than under AIP. In calendar year 2005, airport sponsors collected PFCs totaling \$2.4 billion.

In FY 2005, FAA approved or partially approved 104 applications for PFC collections, totaling \$5.9 billion at 91 locations, of which 9 were new locations. As of September 30, 2005, FAA had approved a total of 358 locations for PFC collection since the program's inception in 1991, with authorized PFC collections totaling approximately \$52 billion at 331 locations.

During the fiscal year, AIP funds continued to support capacity projects at the nation's top 35 airports (passenger operations at these airports account for the majority of the scheduled passenger flow in the country). In FY 2005, FAA commissioned an AIP-funded parallel runway at one of these airports—Cleveland Hopkins International Airport. This new runway provides additional capability for simultaneous arrival/departure operations during Visual Flight Rules (VFR) conditions.

Further supporting capacity enhancements, FAA also distributed AIP funds for three regional studies being conducted for the New York, New England, and Los Angeles metropolitan areas to study regional capacity issues. Although these studies are being completed over several fiscal years, the sponsors met their respective performance targets and deliverables during FY 2005.

FAA also had an outstanding year in the processing of major environmental impact statements (EIS) in support of capacity-enhancing or delay-reducing projects. These included the final EIS for improvements of two new runways and associated facilities at Washington Dulles International Airport. In addition, FAA issued final Records of Decision (ROD) for the Chicago O'Hare Modernization Program (OMP), the Philadelphia Runway 17/35 extension, and Los Angeles Master Plan development.

In FY 2005, the Secretary of Transportation was authorized to designate and fund capital development projects for up to 15 eligible airports in the Military Airport Program (MAP). Eleven of the 15 available slots were previously designated, allowing the Secretary of Transportation to designate four additional airports in Arizona, Ohio, Florida, and Guam. During FY 2005, FAA awarded MAP airport sponsors almost \$70 million in discretionary and entitlement funds.

At the close of FY 2005, FAA assisted airport sponsors that sustained damage during the 2005 hurricane season and obligated \$40.5 million in emergency AIP funds to airports damaged by Hurricanes Katrina and Rita. FAA provided these AIP funds for eligible projects to augment airport insurance and other aid sought from the Federal Emergency Management Agency and State and local sources.<sup>3</sup> Additionally, Congress passed a

<sup>&</sup>lt;sup>3</sup> In FY 2005, FAA obligated a total of \$40.5 million; subsequently, in October 2005 Congress passed legislation that afforded more flexible eligibility and Federal participation to airports impacted by Hurricanes Katrina and Rita. All but \$500,000 of these FY 2005 funds were recovered and re-obligated in FY 2006 due to the expanded eligibility and participation rates.

special appropriation for emergency capital funding of \$25 million administered by AIP for Hurricanes Charley, Frances, Ivan, or Jeanne that occurred early in FY 2005.

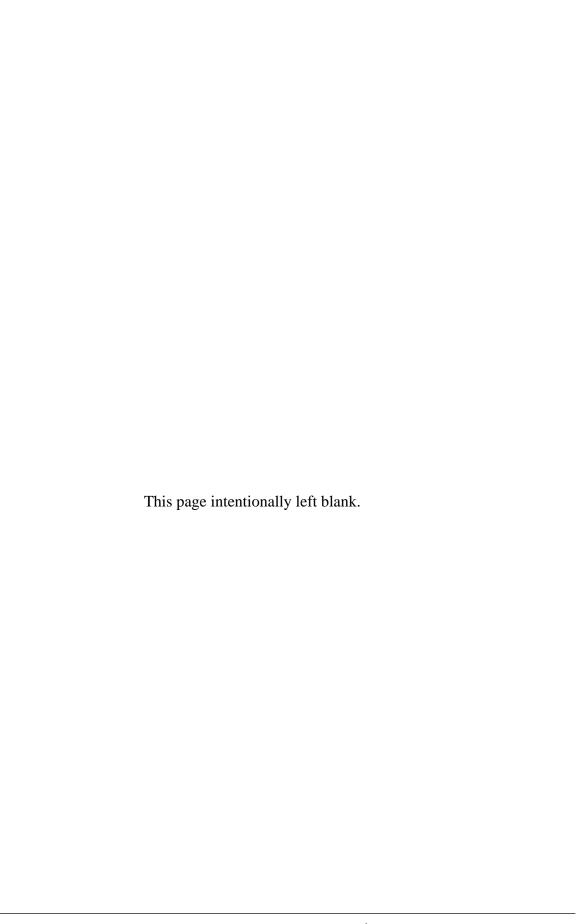

Throughout FY 2005, FAA continued to pursue performance goals intended to enhance the administration of AIP and to ensure the best use of Federal funds. For example, the agency continued to meet its goals for closing older and inactive grants so that AIP funds are not idle and projects are completed in a timely manner. Such initiatives ensure AIP funds are directed to projects that achieve agency safety, security and capacity goals and are cost beneficial.

In FY 2005, FAA modified the process for filing written updates of airport competition plans required by the authorizing statutes. These new procedures implemented on September 30, 2004 limit the scope of written plan updates to only those changes made since previous submittals and substantially reduce the number of written updates sought from airport sponsors. Additionally, the need for regular submission of plan updates was reduced substantially. These changes to program guidance on competition plans were possible due to the positive measures undertaken by airports to reduce barriers to entry and enhance competitive access and by changes in their practices related to use and lease of gates and related facilities.

Further, there have been no competitive access reports filed disclosing an airport's inability to provide an airline with requested access. This indicates that each medium and large hub airport has been able to accommodate requesting carriers.

In administering AIP, FAA also must ensure participation by disadvantage business enterprises (DBEs) in AIP-funded projects and airport concessions. During the most recent reporting period (FY 2004), DBEs received 14.25 percent of contract dollars awarded under AIP, and DBE concessionaires earned 11.24 percent of the total gross receipts generated by all concessions at primary airport locations.

Finally, throughout FY 2005 and in accordance with, "The Wendell H. Ford Aviation Investment and Reform Act for the 21<sup>st</sup> Century (AIR-21)" - 49 U.S.C. § 47131, FAA monitored airport sponsors' compliance with Federal grant assurances or other Federal land use requirements with respect to airport land. Through the Airport Land Use Compliance Program, FAA worked with airport sponsors to resolve violations of land use requirements. At the end of FY 2005, there were 34 airport sponsors undertaking corrective action and 17 airport sponsors found in noncompliance. FAA also worked with another 18 airport sponsors during the fiscal year and brought them into compliance with their grant assurances.

## **Chapter 1: Program Overview**

Section 47104 of Title 49 U.S.C. authorizes the Secretary of Transportation to make project grants for airport planning and development to maintain a safe and efficient national system of public-use airports. The United States Congress periodically authorizes, or appropriates, Federal funds to be distributed to U.S. airports through the AIP.

In administering AIP, FAA gives the highest priority to projects that enhance the safety and security of the U.S. airport and airway system. Generally, the AIP authorizing statute specifies requirements for administering the program; however, FAA also has adopted additional procedures and policies to ensure the efficient and uniform approach to implementing AIP.

The Vision 100, Public Law 108-176, authorized funding for AIP for fiscal year FY 2004 through the FY 2007. For FY 2005, Vision 100 made available \$3.5 billion for AIP. However, appropriation legislation limited the amount of AIP funds available for obligation to \$3.38 billion.

## 1.1 U.S. Airport System Planning

Aviation activity in the United States accounts for approximately 30 percent of all commercial aviation and 50 percent of all general aviation activity in the world. An extensive system of more than 19,500 airports throughout the United States has been developed to support this activity. However, AIP supports only a subset of those airports FAA considers to be important to national transportation, as discussed below.

Section 47103 of Title 49 U.S.C. requires the Secretary of Transportation to maintain a plan for the development of public-use airports in the United States. This plan, the National Plan of Integrated Airport Systems (NPIAS), lists development considered necessary to provide a safe, secure, efficient, and integrated airport system meeting the needs of civil aviation, national defense, and the U.S. Postal Service.<sup>4</sup>

The NPIAS is the official FAA document providing long- and short-range cost estimates of AIP-eligible projects. FAA, in concert with State aviation agencies and local planning organizations, identifies airports for inclusion in the NPIAS that are significant to national air transportation. The NPIAS identifies, for Congress and the public, the airports included in the national system along with the airport development and associated costs required over the ensuing 5 years to implement the plan. These development costs will be partially financed with AIP funds, and/or PFC funding where applicable, to expand and improve the system to meet the present and future needs of

<sup>&</sup>lt;sup>4</sup> Federal Aviation Administration Annual Report on the National Plan of Integrated Airport Systems (NPIAS) 2005-2009 available online at <a href="http://www.faa.gov/airports\_airtraffic/">http://www.faa.gov/airports\_airtraffic/</a>.

civil aviation, requirements in support of national defense, and the special needs of the U.S. Postal Service.

FAA uses the NPIAS in administering AIP. An airport must be included in this plan to be eligible to receive a grant under AIP. For FY 2005 through FY 2009, FAA has designated 3,344 U.S. airports as important to national transportation and, therefore, eligible to receive grants under AIP. FY 2005 AIP apportionments were calculated using calendar year (CY) 2003 passenger and all-cargo data.

## 1.2 Airport Categories

The NPIAS includes all commercial service, reliever (high-capacity general aviation airports in metropolitan areas), and select general aviation airports. As used in the five categories of airports defined below, the word "airport" includes landing areas developed for conventional fixed-wing aircraft, helicopters, and seaplanes.

#### Commercial Service Airports

Commercial service airports are defined as public airports receiving scheduled passenger service and having 2,500 or more enplaned passengers per year. There are 513 commercial service airports. Of these, 372 have more than 10,000 annual passenger enplanements (also referred to as boardings) and are classified as primary airports. Primary airports receive an annual apportionment of at least \$1 million each in AIP funds with the exact amount determined by the number of annual enplaned passengers. However, if Congress appropriates AIP funding levels below \$3.2 billion the primary airport annual minimum apportionment is reduced to \$650,000.

Primary airports are grouped into the following four categories:

#### • Large Hub

Large hub airports are defined as airports that each account for at least 1 percent of total U.S. passenger enplanements (the term "hub" is used by FAA to identify very busy commercial service airports). At these airports, some passenger enplanements originate in the local community, and some consist of connecting passengers transferring from one flight to another. Several large hub airports have little passenger transfer activity, while transfers account for more than half of the traffic at others. In CY 2003, 30 large hub airports accounted for 71 percent of all passenger enplanements (464,486,847 enplanements). Large hub airports tend to concentrate on airline passenger and freight operations and have small amounts of general aviation activity.

#### Medium Hub

Medium hub airports are defined as airports that each account for between 0.25 percent and 1 percent of the total U.S. passenger enplanements. In CY 2003, there were 35 medium hub airports. Together, they accounted for 18 percent of all enplanements (115,177,169 enplanements). Medium hub airports usually have

sufficient capacity to accommodate air carrier operations and a substantial amount of general aviation activity.

#### Small Hub

Small hub airports are defined as airports that enplane 0.05 percent to 0.25 percent of the total U.S. passenger enplanements. In CY 2003, there were 68 small hub airports that accounted for 8 percent of all enplanements (50,202,980 enplanements). Less than 25 percent of the runway capacity at small hub airports is used by airline operations, so these airports can accommodate general aviation activity.

### • Nonhub Primary

Commercial service airports that enplane less than 0.05 percent of all U.S. commercial passenger enplanements but more than 10,000 annual enplanements are categorized as nonhub primary airports. In CY 2003, there were 236 nonhub primary airports that together accounted for 3 percent of all enplanements (20,208,062 enplanements). General aviation aircraft heavily use these airports.

#### Nonprimary Commercial Service

Commercial service airports that have from 2,500 to 10,000 annual passenger enplanements are categorized as nonprimary commercial service airports. In CY 2003, there were 141 of these airports, and they account for 0.1 percent of all enplanements (763,437 enplanements). These airports are used mainly by general aviation.

## **Reliever Airports**

Due to different operating requirements between small general aviation aircraft and large commercial aircraft, general aviation pilots often find it difficult to use congested large and medium hub airports. In recognition of this, FAA has encouraged the development of high-capacity general aviation airports in major metropolitan areas. These specialized airports, called relievers, provide pilots with attractive alternatives to using congested hub airports. They also provide general aviation access to the surrounding area and must have 100 or more based aircraft or 25,000 annual itinerant operations. In CY 2003, there were 278 reliever airports. All airports that are designated as relievers by FAA are included in the NPIAS.

#### General Aviation Airports

Communities that do not receive scheduled commercial service or that do not meet the criteria for classification as a commercial service airport may be included in the NPIAS as sites for general aviation airports if they account for enough activity (usually at least 10 locally based aircraft) and are at least 20 miles from the nearest NPIAS airport. The activity criterion may be relaxed for remote locations or other mitigating circumstances. In CY 2003, there were 2,570 general aviation airports. These airports tend to be

<sup>&</sup>lt;sup>5</sup> Large commercial aircraft typically operate at much greater speeds than small general aviation aircraft. Such operational differences complicate aircraft operations when both types of aircraft use the same runways during periods of high commercial aircraft activity. This is due, in part, to variances in approach airspeed and wake turbulence considerations. In addition, general aviation pilots may be less familiar with air traffic control procedures used at airports that primarily serve air carrier operations.

distributed on a one-per-county basis in rural areas and are often located near the county seat. With an average of 33 based aircraft, they are home to approximately 40 percent of the U.S. general aviation fleet.

Table 2: Distribution of Activity by Airport Type (CY 2003)

Number of Airports	Airport Type	Percentage of All Passenger Enplanements
30	Large Hub Primary	71.3
35	Medium Hub Primary	17.7
68	Small Hub Primary	7.7
236	Nonhub Primary	3.1
141	Nonprimary Commercial Service	0.1
278	Relievers	0.0
2,570	General Aviation	0.0
3,361	Existing NPIAS Airports	99.9
16,164	Low-Activity Landing Areas (Non-NPIAS)	0.1

## 1.3 Collection of Passenger Boarding and Cargo Data

Each year, FAA's Office of the Associate Administrator for Airports (ARP) publishes a report titled *Enplanement and All Cargo Activity*. This report contains annual passenger boardings and revenue cargo data by all-cargo aircraft. The data in the report are obtained from the Air Carrier Activity Information System (ACAIS) and are subsequently used to determine formula distributions of annual AIP funds. As noted above, FY 2005 AIP apportionments were calculated using CY 2003 passenger and all-cargo data.

Passenger boarding data are derived from information air carriers provide the Department of Transportation (DOT), including U.S. scheduled and nonscheduled large certificated air carriers, U.S. commuter and small certificated air carriers, and foreign flag air carriers. In addition, FAA conducts an annual survey of air taxi/commercial operators who voluntarily report their nonscheduled activity. For purposes of calculating AIP apportionments to airport sponsors, passenger boardings also include those passengers on board international flights that stop at airports located in the 50 States for nontraffic purposes (typically refueling stops).

22<sup>nd</sup> Annual Report of Accomplishments

<sup>&</sup>lt;sup>6</sup> Federal Aviation Administration Passenger Boardings and All-Cargo statistics are available online at http://www.faa.gov/airports\_airtraffic/airports/.

Data from all-cargo carriers were compiled for airports with a minimum of 100 million pounds of cargo aircraft landed weight annually. Cargo carriers report the landed cargo aircraft weight of all-cargo aircraft to the airport operator, who then submits it to FAA.

## 1.4 Program History and Statistics

Cumulative performance data of AIP for FY 1982 through FY 2005 is provided in the report's appendices. Appendix B provides a detailed history of AIP and the legislative changes that have affected the program since its inception in 1982. In addition, Appendix C, Grant Funding Authorizations, Obligation Limitations, and Obligations, provides yearly totals for AIP grant funding authorizations, obligation limitations, and obligations since 1982. Detailed footnotes are provided to indicate changes in legislation or special conditions that affected authorized amounts. Appendix D, Total AIP Grant Funds Awarded by Development and Funding Types, shows, in both table and chart form, the overall AIP totals to date for apportioned and discretionary funds and their sum by development/planning type and funding type.

#### 1.5 AIP Administration

Within FAA, the Office of the Associate Administrator for Airports and Planning (ARP) administers AIP. The FAA Airports organization is comprised of staffs in headquarters, nine regional divisions, and twenty district offices. Headquarters staff develops policy for the effective utilization of AIP funds and provides technical, planning, environmental, and administrative guidance to other FAA Airports offices. Most of the day-to-day decisionmaking for AIP project formulation is delegated to the regional or district level. The managers and their staffs have diverse backgrounds, including many with expertise in planning, environmental, engineering, financial, accounting, and administrative functions.

Formulas and program set-asides contained in legislation shape and guide the administration of AIP. FAA headquarters staff, with significant input from regional offices, makes decisions on the distribution of funds. Projects identified for receipt of funds are carefully scrutinized to ensure they are justified based on safety, security requirements, aeronautical demand, and noise mitigation. They must also meet selection criteria established by Congress in enabling legislation. Headquarters staff further refines these mandates and disseminates them to the regions through program guidance and design criteria. Headquarters then monitors adherence to these directives to ensure conformity and consistency nationwide.

In particular, Congress directs FAA through legislation to minimize noise impacts on nearby communities, develop reliever airports, develop cargo hub airports, protect and enhance natural resources, reduce aircraft operation delays, convert former military air bases to civil use, and implement a variety of other provisions to ensure a safe and efficient airport system.

In the administration of AIP, FAA implements these policies by giving the highest priority to projects that enhance the safety and security of the U.S. airport system. By assigning high priority to projects that maintain current airport infrastructure and increase the capacity of facilities to accommodate growing passenger and cargo traffic, the agency advances other major policy objectives.

To achieve this goal, FAA uses a national priority system that includes current year appropriation levels and calculated numerical priority ratings and results in the creation of a quantified listing of airport projects rated by priority. FAA then uses this project ranking in the development of its national Airport Capital Improvement Plan (ACIP). The ACIP provides a selection process for distribution of AIP funds to the projects that have the greatest potential for improving the national system of airports (see Chapter 4: Airport Capital Improvement Plan).

### 1.5.1 Grant Management Automation System Upgrades

In FY 2001, FAA began an automation effort to upgrade several different databases it uses to manage AIP. The databases were updated to operate on a common, expandable platform that could eventually integrate the databases.

In order to improve staff efficiency in administering AIP, FAA developed a new multifaceted database, the System of Airports Reporting (SOAR). The resulting database provides FAA staff a consistent platform with which to maintain common data elements that were once maintained in three separate databases—the Air Carrier Activity Information System (ACAIS), AIP, and the National Plan of Integrated Airport Systems—Airports Capital Improvement Plan (NPIAS—ACIP). The new system provides the FAA staff a single point of access to a web-based application using one set of log-on passwords and provides easier report and querying capabilities, while still adhering to FAA's strict security certification and accreditation process. In FY 2005, FAA staff used the full capabilities of SOAR for the first time.

SOAR assists FAA in identifying needed airport infrastructure development for the ACIP, as well as serving as an AIP grants management and tracking tool.

### 1.5.2 Competition Plan Streamlining

AIR-21, P.L. 106-181, revised the authorizing statue to include a new requirement for certain airport sponsors to file a competition plan with FAA. The purpose of the competition plan is for the airport sponsor to demonstrate how it will foster a competitive environment that will provide for new-entrant air carrier access and expansion by incumbent air carriers.

Sections 40117(k) and 47106(f) of Title 49 U.S.C. direct each medium and large hub airport at which one or two air carriers control more than 50 percent of the passenger boardings to develop and file a competition plan. The statute also directs DOT to

"review [the plan's] implementation from time-to-time to ensure that each covered airport successfully implements its plan."

The FAA carried out the competition plan program by requiring airport sponsors of covered airports to file an initial competition plan in the Federal fiscal year in which they are first identified as a covered airport. FAA will not issue an AIP grant or approve new PFCs in that fiscal year until the plan is accepted. In FY 2001, covered airport sponsors initially submitted their competition plans to FAA and were required to submit updates annually. In FY 2003, FAA extended the time between plan updates from every 12 months to every 18 months.

When airport sponsors were first required to develop competition plans in FY 2001, FAA was taking up to 6 months to approve submittals. In FY 2004, FAA committed to reducing this review time and achieved its goal of reducing the review period to 75 days or less, averaging 62 days to review or update a plan. FAA carried forward into FY 2005 this commitment to timely review and continued to limit review time to 75 days or less.

Based on the competition plans it has reviewed, FAA believes that most covered airport sponsors are making significant progress in fostering a competitive environment. At the end of FY 2005, the covered airports had filed and received approval of their initial plans and required updates. Information provided in the subsequent plan updates filed by covered airport sponsors indicate that most have successfully implemented many of FAA's recommended changes to their competition plans. Accordingly, in FY 2004, FAA modified the program guidance for covered airport sponsors filing a written plan update on a regular basis by issuing a new program guidance letter (PGL 04-08) that provides revised guidance for filing competition plans and updates.<sup>7</sup>

Effective FY 2005, PGL 04-08 limits the scope of updates to changes made since previous submittal, including issues raised in FAA's review letter (a letter sent to the airport sponsor detailing the results of FAA's review of the sponsor's competition plan). In addition, this new program guidance requires an airport sponsor to file written updates after FAA has accepted the original competition plan and two updates only if one of the following conditions exist:

- The covered airport filed a competitive access report as required by Section 424 of Vision 100, P.L. 108-126 describing a denial of access to gates or facilities within the last 6-month period.
- The covered airport has executed a new master lease and use agreement or significantly amended a lease and use agreement, including an amendment due to use of PFC financing for gates.

\_

<sup>&</sup>lt;sup>7</sup> The Department of Transportation will continue to review the implementation of competition plans by all airports through other means, as required by 49 U.S.C. §40117(k)(2).

Due to this revised guidance, FAA reviewed only three competition plan updates in FY 2005 (compared to the 37 competition plan updates reviewed in FY 2004).

Vision 100, P.L. 108-126, added a grant assurance requiring each medium and large hub airport to file a competitive access report (on February 1 and August 1 of each year) if the airport was unable to accommodate an airline's request for access during the previous 6-month period to begin or expand service at the airport. No competitive access reports were filed with the FAA during FY 2005.

## **Chapter 2: FY 2005 Summary of Financial Assistance**

The Airport and Airway Trust Fund (Trust Fund), established by the Airport and Airway Revenue Act of 1970 (the Act), provides the revenues used to fund AIP projects. The Trust Fund concept guarantees a stable funding source whereby users pay for the services they receive—primarily from passenger ticket taxes and aviation fuel taxes. The Act, as amended, authorizes the use of monies from the Trust Fund to make grants under AIP on an annual fiscal year basis. Funds authorized but remaining after a fiscal year due to appropriations limitations carry forward to future fiscal years unless Congress takes specific action to limit such amounts. During the annual appropriations process, Congress may also limit the funding that may be obligated for grants to an amount that differs from the annual authorization. In addition, Congress may reduce FAA's obligation limit by enacting a government-wide budget rescission.

This chapter summarizes the FY 2005 AIP financial commitments and discusses significant accomplishments relating to administration of AIP. For more information on each AIP grant FAA awarded in FY 2005, please refer to Appendix I, FY 2005 AIP Grants Awarded and Grant Amounts by Airport Category, and Appendix J, AIP Grants Awarded in FY 2005 by State. Appendix I lists the number and amount of grants by State and airport category. Obligation amounts listed are for grants and amendments, excluding recoveries, and only FY 2005 grants with obligations are shown. Appendix J provides information on all AIP grants awarded in FY 2005, including the airport sponsor or entity to which the grant was awarded, the grant amount, and a brief description of the project funded.

In FY 2005, Congress limited the amount of funds available for awarding new grants to \$3.38 billion. However, Congress also authorized FAA to recover funds from prior year projects in which the final costs were less than expected (totaling \$171 million in FY 2005). These recovered funds could then be reobligated to new projects and to increase the Federal amount to accommodate cost overruns in existing grants. Consequently, in FY 2005, gross AIP obligations (for 2,099 new grants and 745 grant amendments) amounted to \$3.5 billion, of which \$129 million was for increases in existing grant agreements, known as "upward adjustment" or "amendments." <sup>10</sup>

<sup>&</sup>lt;sup>8</sup> For more information on the AIP funding and grant process, see FAA Order 5100.38C, Airport Improvement Program Handbook. This order is available online at <a href="http://www.faa.gov/airports">http://www.faa.gov/airports</a> airtraffic/airports/•

This amount is the total AIP amount authorized by legislation less a government-wide budget rescission of 0.8 percent, administrative expenses, and contribution to the Small Community Air Service Development Program (a program managed by DOT to expand air service into small communities, per Section 41743 of Title 49 U.S.C.).

See Appendix A, Glossary, for more definitions of terms specific to the AIP.

In brief, 10 percent of the grants awarded and 35 percent of the corresponding funding financed projects at large U.S. airports (a 2-percent increase from FY 2004), leaving 87 percent of the grants and 64 percent of the funding to support projects at small airports. FAA awarded the remaining 3 percent of the grants and 1 percent of funding to State and local planning agencies to help them better plan and organize additions and improvements to the U.S. aviation system. The following table details the distribution of FY 2005 grants by airport funding categories.

Table 3: AIP Funding Distribution Summary for FY 2005

Funding Category	Number of Grants Awarded	% of Total Grants	Obligated Amounts (millions)	% of Total Obligated Amounts
Large Airports				
Primary Large Hub Airports	125	6.0%	\$776.4	22.7%
Primary Medium Hub Airports	85	4.0%	\$423.2	12.4%
Large Airports Subtotal:	210	10.0%	\$1,199.6	35.1%
Small Airports				
Primary Small Hub Airports	140	6.7%	\$406.9	11.9%
Primary Nonhub Airports	307	14.6%	\$642.7	18.8%
Nonprimary Commercial Service Airports	82	3.9%	\$96.4	2.8%
Reliever Airports	176	8.4%	\$186.3	5.5%
Other General Aviation Airports	1,083	51.6%	\$583.5	17.1%
State Block Grant Program	31	1.5%	\$218.7	6.4%
State Sponsored: Various Locations	14	0.7%	\$43.2	1.3%
Small Airports Subtotal:	1,833	87.4%	\$2,177.7	63.8%
Airport System Planning				
Planning Agencies and Other	21	1.0%	\$28.1	0.8%
State Sponsored: Other Locations	35	1.6%	\$11.6	0.3%
System Planning Subtotal:	56	2.6%	\$39.7	1.1%
Total:	2,099	100.0%	\$3,417.011	100.0%

As in previous fiscal years, the largest portion of AIP grants issued by FAA funded reconstruction, rehabilitation, and standards projects. In FY 2005, FAA directed

<sup>&</sup>lt;sup>11</sup> The total for obligated amounts includes only those grants for the current fiscal year with obligations. This number does not include amounts for amendments made to existing grant projects or multiyear projects.

67 percent of AIP funds, totaling \$2.4 billion, to such projects. These projects include the construction and repair of runways, taxiways, and other airfield facilities and the purchase of certain equipment to ensure compliance with FAA standards and regulations.

Such projects were critical to FAA achieving many of its performance goals. In FY 2005, AIP continued to provide the requisite funding needed to achieve many of FAA performance goals related to safety and noise. (See Chapter 13: Performance Measurement, for a detailed explanation of FAA performance goals tied to AIP.) In addition to funding construction, rehabilitation, and other development projects, FAA issued 86 grants, totaling \$336.9 million, specifically for noise compatibility projects in FY 2005. These projects included the purchase of noise-impacted land adjacent to airports, soundproofing residences and schools, and other efforts to reduce adverse impacts of noise. This was an \$18 million increase over FY 2004 AIP funding for such projects.

In FY 2005, AIP funded certain airport security projects but not at the same levels as in previous fiscal years. Per the authorizing statute, AIP funds are limited to security projects required under Title 49, Code of Federal Regulations (CFR), Part 1542, Airport Security (49 CFR Part 1542). This legislative restriction, coupled with alternative sources of security funding, reduced the amount of AIP funds FAA distributed for security projects in FY 2005 to \$70.3 million, a decrease of \$38 million from the previous fiscal year.

FAA also issued two grants totaling \$3.7 million for nontraditional projects. One of these grants funded FAA's Airport Master Record Program, which provides national airport data to the *Airport Facility Directory* and other pilot navigation aids. The other grant was specified by legislation and required FAA to provide funding for safety improvements at the Federally owned Henderson Field, Midway Atoll. Midway Atoll is owned by the Department of Interior, and the U.S. Fish and Wildlife Services manage Henderson Field.

## **Chapter 3: Annual AIP Funding**

Congress authorizes AIP contract authority, which permits FAA, through AIP, to distribute funds from the Airport and Airway Trust Fund. This contract authority is contained in Chapter 481 of Title 49 U.S.C. and has been amended numerous times since 1982. The amounts Congress authorized for obligation rose from \$450 million in FY 1982 to \$2.97 billion in FY 1994<sup>12</sup>, declined to \$2.16 billion in FY 1995, and then rose steadily once again to \$2.47 billion in FY 2000. Under AIR-21, AIP authorizations then increased to \$3.2 billion in FY 2001, \$3.3 billion in FY 2002, and \$3.4 billion in FY 2003. Vision 100 authorized AIP contract authority for FY 2004 through FY 2007.

Historical AIP authorization and amounts available to AIP from FY 1982 through FY 2005 are shown in Figure 1, Yearly AIP Authorizations and Amounts Available for AIP.

Prior to AIR-21, Congress generally limited annual obligations to less than the amount authorized through enactment in the "Grants-In-Aid for Airports" section of annual appropriation acts for the Department of Transportation, Treasury, and Related Agencies. For example, the amount authorized under Title 49 U.S.C. for FY 2000 was \$2.47 billion. In that year's appropriations bill, however, Congress placed an obligation limitation of \$1.95 billion against the authorized amount. Moreover, of the \$1.95 billion obligation limitation, only \$1.85 billion was available to AIP. The remaining \$100 million was used to fund the administrative expenses of FAA's Office of the Associate Administrator for Airports (ARP) (\$45 million) and FAA's share of a government-wide budget rescission (\$55 million).

Since the enactment of AIR-21, the obligation limitation for each year has equaled the authorized amount (save for small reductions to implement across-the-board budget rescissions in some years). As a result, significantly more funds have been available for AIP grants. In FY 2005, Congress authorized \$3.5 billion for AIP but provided 3.38 billion through the appropriations process. From this amount, FAA funded AIP grants, the cost of administrating AIP, and other special projects benefiting the airport community.

<sup>&</sup>lt;sup>12</sup> According to the Office of Management and Budget, with concurrence by the Congressional Budget Office, the total amount authorized in FY 1994 was \$2.97 billion, even though it appeared that \$2.161 billion was the amount authorized. This was due to the combination of the lapse of authority of AIP after FY 1993 and the amendments extending the program in May 1994 and August 1994.

<sup>&</sup>lt;sup>13</sup> The Grants-in-Aid for Airports section of the annual appropriation acts established the maximum that FAA can obligate for AIP grants. This is commonly known as the obligation limitation. That section also provided an appropriation for liquidating AIP obligations.

Of the \$3.5 billion authorized in FY 2005, \$68.3 million was used to fund the administrative expenses of FAA's ARP<sup>14</sup>, and \$19.8 million was used to fund the Small Community Air Service Development Program. <sup>15</sup> Additionally, the overall authorized amount was reduced by \$28 million due to a government-wide rescission of 0.8 percent. The remaining \$3.38 billion was made available for AIP grants. This amount, in addition to the \$171 million in recovered funds from previous fiscal years, resulted in a total of \$3.55 billion available for AIP grants in FY 2005 (see Table 3: AIP Funding Distribution Plan for FY 2005).

The amounts available for obligation fall into two basic categories: apportioned funds (also known as entitlement funds) and discretionary funds. Funds apportioned to airports may generally be used for any eligible airport planning or development. FAA approves other funds for use on projects after consideration of project priority and other selection criteria. Although airport sponsors receiving apportioned funds are given some latitude in determining how they will be used, they are discouraged both by FAA policy and statutory requirements from using entitlement funds for lower priority projects when seeking discretionary funding. Discretionary funds are limited and consequently directed to only higher priority needs.

<sup>&</sup>lt;sup>14</sup> Under the Grants-in-Aid for Airports section of the annual appropriation acts, Congress continues to fund administrative expenses of the Office of the Associate Administrator Airports.

<sup>&</sup>lt;sup>15</sup> The Small Community Air Service Development Program is a program managed by DOT to expand air service into small communities, per Section 41743 of Title 49 U.S.C.

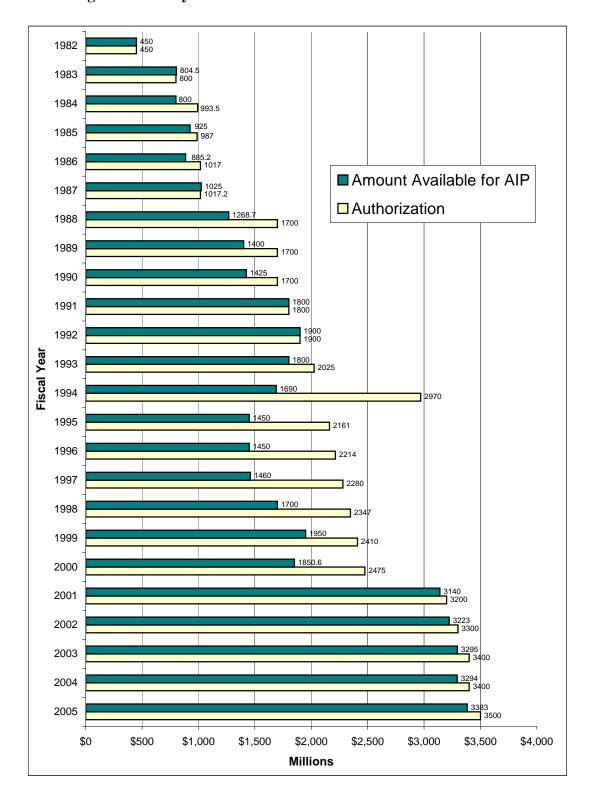

Figure 1: Yearly AIP Authorizations and Amounts Available for AIP

## 3.1 Distribution of Apportioned Funds

Statutory provisions require that AIP funds be apportioned by formula each year to specific airport sponsors, types of airports, or States. These funds are more commonly referred to as "entitlement funds." Such funds are available to large, medium, and small hub airport sponsors in the year they are first apportioned, and they remain available for the 2 fiscal years immediately following. In the case of nonhub primary and nonprimary airports, entitlement funds are available in the year they are first apportioned and remain available for 3 fiscal years following apportionment.

## 3.1.1 Primary Airports

For FY 2005, there were 372 primary airports. These airports boarded 650,808,785 passengers in CY 2003, the year used to determine FY 2005 primary airport entitlement funds. Each primary airport's entitlement funds are based upon the number of passenger boardings at the airport. The minimum amount of entitlement funds apportioned to the airport sponsor of a primary airport is \$650,000 and the maximum is \$22,000,000. As prescribed by the authorizing statute, FAA calculates individual airport annual entitlement funds as follows:

- \$7.80 for each passenger boarding up to 50,000 passengers
- \$5.20 for each additional passenger boarding up to 100,000 passengers
- \$2.60 for each additional passenger boarding up to 500,000 passengers
- \$0.65 for each additional passenger boarding up to 1,000,000 passengers
- \$0.50 for each additional passenger boarding from 1,000,001 passengers and up

Under the authorizing statute, individual entitlements are doubled (with a maximum of \$26 million and a minimum of \$1 million per airport sponsor) if AIP funding in a fiscal year is at least \$3.2 billion. Based on these criteria, FAA calculated FY 2005 entitlement funds available to primary airports to be \$848.3 million.

In addition, Vision 100 directed FAA to calculate entitlement funds for certain airports that do not meet the definition of primary airports. These airports, known as "virtual" primary airports, did not have more than 10,000 enplanements in CY 2003 but, by legislative exception, will receive entitlement funds in the current fiscal year based on prior year enplanements. Vision 100 specified that for airports boarding fewer than 10,000 passengers in CY 2002 or CY 2003 as the result of terrorist attacks of September 11, 2001, FAA could use CY 2000 or CY 2001 enplanement numbers if they were greater than prior calendar year enplanements to calculate FY 2005 passenger entitlements. The amount apportioned in FY 2005 was equal to the amount apportioned in FY 2002 or FY 2003, whichever amount is greater.

In FY 2005, there were 55 "virtual" primary airports and \$55 million of entitlement funds were available to these airports. This is in addition to "virtual" primary entitlement funds carried over from the previous fiscal year. Per the authorizing statute, the amount of entitlement funding distributed to "virtual" primary airports reduced the amount of funding available for discretionary projects by \$46.75 million. <sup>16</sup>

#### 3.1.2 PFC Participant Apportionment Reductions

In 1990, Congress enacted legislation that allows public agencies controlling commercial service airports to charge enplaning passengers using the airport a \$1, \$2, or \$3 PFC. AIR-21 authorized PFC charges of \$4 and \$4.50. Public agencies wishing to impose a PFC must apply to FAA for such authority and meet certain requirements.

Section 47114(f) of Title 49 U.S.C. requires that AIP funds apportioned to a large or medium hub airport be reduced by up to 50 percent if a PFC of \$1, \$2, or \$3 is imposed at that airport and up to 75 percent in apportioned AIP funds for a PFC level above \$3. The reduced apportionment takes effect in the first fiscal year following the year in which the collection of the PFC level begins. The apportionment for an airport in FY 2005 was reduced by 50 or 75 percent of the forecast PFC revenue in that fiscal year (whichever was applicable), but not by more than 50 or 75 percent of the apportionments calculated for that fiscal year.

In FY 2005, 62 of the 68 large and medium hub airports had a PFC in place; all of which were subject to these reductions. Of these 62 airports the following:

- 25 airports were subject to the 50-percent reduction in entitlements
- 34 airports were subject to the 75-percent reduction in entitlements
- 3 airport sponsors were not collecting at the beginning of the fiscal year and were not subject to reductions

FAA redistributes the apportionments that are withheld as a result of PFC collections within AIP. The authorizing statute requires FAA to assign 87.5 percent of these redistributed funds to the Small Airport Fund. In FY 2005, FAA redistributed \$388.8 million to the Small Airport Fund. Of this total, 14 percent was distributed to small hub airports (\$55.5 million in FY 2005), 57 percent was distributed to nonhub primary and nonprimary commercial service (\$222.2 million in FY 2005), and 29 percent was distributed to general aviation/reliever airports (\$111.1 million in FY 2005).

The authorizing statute also requires FAA to redistribute the remaining 12.5 percent of apportionments that are withheld as a result of PFC collections to the AIP discretionary fund. In FY 2005, 12.5 percent of redistributed apportionments equaled \$54.6 million that was converted to discretionary funds. Of this total, three-quarters of the funds were used for C/S/S/N projects. FAA classified the remaining one-quarter as "undesignated"

\_

<sup>&</sup>lt;sup>16</sup> This figure accounts for the total value of nonprimary entitlements that would have gone to these 55 locations had they not qualified as "virtual" primaries.

discretionary" or "pure discretionary" funds (funds that may be used for any eligible project at any airport in the NPIAS).

### 3.1.3 Cargo Service Airports

FAA allocates 3.5 percent of AIP to cargo service airports. Each cargo service airport receives funds in the same proportion as its proportion of landed weight of cargo aircraft to the total landed weight of cargo aircraft at all qualifying airports. In FY 2005, there were 114 airports that qualified as cargo service airports, which shared the 3.5 percent of funding, totaling \$118.4 million.

#### 3.1.4 State/Insular Areas

Since FY 2001, a total of 20 percent of the annual amount Congress makes available for AIP grants was apportioned for use at nonprimary commercial service, general aviation, and reliever airports within the States and insular areas. These airports are collectively referred to as nonprimary airports (see Section 1.2, Airport Categories). Out of this amount, nonprimary airports are entitled to an individual apportionment based on the lesser of one-fifth of the airport's 5-year capital needs as identified in FAA's NPIAS or \$150,000. Under this funding entitlement, \$384.5 million was made available to nonprimary airports for obligation in FY 2005. (Under the authorizing statute, if AIP funding drops below \$3.2 billion, the State apportionment is reduced to 18.5 percent, and the nonprimary airports are not provided an individual apportionment.)

Of the amount remaining after allocation of individual nonprimary apportionments, 99.38 percent was apportioned to airports within the 50 States, the District of Columbia, and Puerto Rico, while the remaining 0.62 percent was apportioned to airports in the insular areas (Guam, American Samoa, the U.S. Virgin Islands, and the Commonwealth of the Northern Mariana Islands). The formula for distribution of funds to States is based on the proportions of both the land area of each State to the total land area of all States, and the population of each State to the population of all States. FAA makes decisions on the use of funds in each State, other than those in the State Block Grant Program, <sup>17</sup> in consultation with the States. This exercise of discretion by FAA assures that critical project needs are identified and funded within the States. In FY 2005, \$1.81 million was made available for obligation to the insular areas and \$290.48 million was available to the States, the District of Columbia, and Puerto Rico.

17

<sup>&</sup>lt;sup>17</sup> Per the authorizing statute, the State Block Grant Program allows certain States to assume responsibility for administering AIP grants at airports classified as other than primary airports. States participating in the State Block Grant Program administer funding of nonprimary commercial service, reliever, and general aviation airports (see Chapter 5, State Block Grant Program).

#### 3.1.5 Alaska Supplemental Funds

Congress apportions funds for certain Alaskan airports to ensure that the State of Alaska receives at least as much as these airports were apportioned in FY 1980 under previous Grants-In-Aid for Airports appropriation legislation. In FY 2005, this requirement provided an additional \$21.35 million for Alaskan airports, based on the special apportionment rule applicable if AIP funding level is \$3.2 billion or more.

## 3.2 Distribution of Discretionary Funds

The authorizing statute defines the remaining funds as discretionary funds but establishes a number of set-asides amounts to assure specified funding levels are achieved, as follows:

- **Noise:** An amount equal to 35 percent of the discretionary fund (\$300.7 million in FY 2005) was reserved for noise compatibility planning and implementing noise compatibility programs under Section 47501 *et seq.* of Title 49 U.S.C. FAA can use entitlement funds to satisfy this set-aside as long as the total AIP funds awarded for noise compatibility purposes equals the amount specified by legislation. In FY 2005, FAA issued noise grants totaling \$336.9 million.
- **Military Airports Program (MAP):** FAA reserved 4 percent of the discretionary fund, amounting to \$34.5 million in FY 2005, for the MAP. <sup>18</sup> FAA exceeded this set-aside amount, awarding in FY 2005 a total of \$75.4 million to sponsors of selected MAP locations.
- Reliever: An amount equal to two-thirds of 1 percent is to be made available for grants to airport sponsors of reliever airports that have (1) more than 75,000 annual operations, (2) a minimum usable runway length of 5,000 feet, (3) a precision instrument landing procedure, and (4) a minimum number of based aircraft as determined by the Secretary of Transportation or has been designated by the Secretary of Transportation as a reliever airport. (This set-aside is not provided if AIP is less than \$3.2 billion.) In FY 2005, 37 eligible airports met these criteria and an amount of \$5.7 million was set aside for the sponsors of these airports. The actual amount of AIP funding in FY 2005 awarded to these sponsors exceeded the set-aside amount, totaling \$30.3 million.

<sup>&</sup>lt;sup>18</sup> The MAP, a funding set-aside of the discretionary portion of AIP, provides financial assistance for capacity and/or conversion-related projects at current joint-use or former military airports. Joint-use military airports are those military airports where the U.S. Government leases a portion of the airport to a civil airport sponsor and permits civilian use of the airfield (see Chapter 6, Military Airport Program).

• Capacity/Safety/Security/Noise (C/S/S/N): Of the remaining discretionary funds (\$518.5 million), FAA reserved 75 percent or \$388.9 million for C/S/S/N projects in FY 2005 (780.1 million discretionary funds were actually awarded to these projects). The 25 percent of the remaining discretionary funds (\$129.6 million) was available for any eligible project at any airport included in the NPIAS.

The following table shows the AIP Funding Distribution Plan based on the funding requirements described above.

**Table 4: AIP Funding Distribution Plan for FY 2005** 

(\$ Millions)

Authorized by Legislation	3,500.0
Available for AIP Authorized	3,500.0
Less:	3,500.0
Government-wide Budget Rescission (0.8%)	28.0
Small Community Air Service Dev. Program	19.8
Administrative Expenses	68.3
Total Available for AIP Grants	3,383.9
FUNDING DISTRIBUTION	
Entitlements/Apportionments	
Primary Airports	903.4
Cargo (3.5% of total available for AIP grants)	118.4
Alaska Supplemental	21.3
States (20% of total available for AIP grants)	
Nonprimary Entitlement 384.5	
State Apportionment by Formula 292.3	
676.8	676.8
Carryover Entitlement	415.9
Subtotal Entitlements	2,135.8
Small Airport Fund	
Nonhub Airports	222.2
Noncommercial Service	111.1
Small Hub	55.5
Subtotal Small Airport Fund	388.8
Subtotal Nondiscretionary	2,524.6
DISCRETIONARY	
Noise (35%)	300.7
Reliever (0.66% of discretionary funds)	5.7
MAP (4% of discretionary funds)	34.4
Subtotal Discretionary Set-asides	340.8
C/S/S/N	388.9
Remaining Discretionary	129.6
Subtotal Other Discretionary	518.5
Subtotal Discretionary	859.3
Funding Distribution Total for Fiscal Year Funds	3,383.9
Recovery Ceiling Authorized for Reobligations	171.0
Total Authorized Obligation Level	3,554.9

## 3.3 Carryover Funds

Carryover entitlements are funds that FAA allocates to a State or airport sponsor (per formulas specified in the authorizing statute) but, for a variety of reasons, a State or airport sponsor elects not to use in the fiscal year in which FAA made the funds available. The law governing AIP specifies that these funds remain available to the specific State or airport for either 2 or 3 years after the year of apportionment, depending on the category of airport. FAA redistributes carryover funds not used in the current fiscal year to other airport sponsors as discretionary funds, and the obligation to fund the original airport sponsor is "carried over" into the subsequent fiscal year.

The obligation to fund in a future fiscal year reduces the amount of new discretionary funds available in that fiscal year. In FY 2005, FAA was obligated to make available to airport sponsors \$415.9 million in prior fiscal year apportionment funds—12 percent of the total AIP.

While carryover funds increase the discretionary funding in the current fiscal year, they reduce the amount of discretionary funds available in a subsequent fiscal year. The authorizing statute requires FAA to fund carryover amounts before all other AIP apportionment and set-aside commitments. Discretionary set-asides specified in the authorizing statute (minimum funding levels for noise projects, certain reliever airports, and the MAP) are particularly sensitive to increases in carryover amounts. FAA calculates set-aside funds as a percentage of the available discretionary funds and establishes the level of discretionary funds after carryover funds are deducted from the total AIP.

Effective FY 2001, AIR-21 significantly increased AIP funding and concurrently established a new category of entitlement funding referred to as nonprimary airport entitlements (NPE). This new funding category authorized additional entitlement funds (up to \$150,000 per year each) to nearly 3,000 nonprimary airports.

In FY 2005, FAA apportioned \$384.5 million in entitlement funds to 2,671 NPE airports. Of these NPE airports, 1,187 carried over \$230<sup>19</sup> million of the total \$431.7 million of FY 2005 entitlement funds carried over into the FY 2006. The NPE carryover amounts were 53 percent of all FY 2005 carryover funds and increased total carryover funds to approximately 12.7 percent of the total AIP (compared to 6.25 percent from FY 1995 through FY 2000). While this was an increase in carryover as a percentage of the total program compared to the carryover percentage prior to AIR-21, an analysis shows that after factoring out the effect of the NPE category, the percent of carryover of the total AIP is virtually identical (approximately 6 percent).

<sup>&</sup>lt;sup>19</sup> The \$230 million in carryover funds for NPE airports comprises entitlement funds carried over from several fiscal years, including FY 2003 and FY 2004.

#### 3.4 Federal Share of AIP Projects

At medium and large hub airports, the Federal share is 75 percent of the total allowable project cost, except for project grants to implement noise compatibility projects as authorized by Section 47501 *et seq.* of Title 49 U.S.C., which are funded at 80 percent. At all other airports, the Federal share is 95 percent of the total allowable project cost for all projects, including noise compatibility projects. The increase in Federal share to 95 percent was established in FY 2004 under Vision 100 to provide relief to operators of small airports after the terrorist attacks of September 11, 2001. Vision 100 has a sunset clause that returns the Federal share for these airports back to 90 percent after FY 2007.

In FY 2005, this increase in Federal share resulted in FAA redirecting \$121.8 million away from capital projects to cover the additional 5 percent that otherwise would be funded by the airport sponsor.

Legislation also provides for upward adjustments for projects in States containing high percentages of public lands and 95 percent of allowable planning costs for airport system planning grants.

## **Chapter 4: Airport Capital Improvement Plan**

The FAA's policy for selecting projects for AIP discretionary funding is intended to ensure the following objectives are met: (1) the national system of airports is safe and secure, (2) the existing infrastructure is preserved, (3) critical expansion needs are met, and (4) projects are compatible with neighboring communities. AIP investments must be directed toward these objectives to enable passengers, shippers, and aircraft operators to operate and use the system in a safe and reliable manner.

All development projects in a NPIAS are eligible for AIP funding; however, the cost of planned development outweighs the funding available from AIP, which typically funds only 25 percent of all airport capital investment. Therefore, in allocating AIP funds, FAA must select projects that best advance statutory goals and objectives with respect to the enhancement of the national airport system.

Investment decisions are made using a structured selection process that includes a variety of factors that help identify critical annual development needs within associated AIP funding levels. The factors are weighted more heavily in favor of the type of project than the type of airport. In some cases, the authorizing statute directs FAA to allocate funding to specific airport types and categories. FAA has more discretion as to what type of development to fund within discretionary funding set-asides.

The project selection process occurs during a 6-month cycle that creates a funding plan known as the Airport Capital Improvement Plan (ACIP), an internal product used by FAA to select projects for AIP funding. The ACIP allows FAA to determine and fund the most critical airport development needs within AIP funding limits set by Congress through the appropriation process.

The ACIP is a subset of the NPIAS, which is used by FAA to identify, plan, fund, and execute airport development while ensuring the most critical airport development needs are being funded nationwide. Projects included in the ACIP are subject to further consideration prior to funding approval. For instance, a project could be included in an ACIP initially but not approved for funding because an environmental action was not completed or the airport failed to secure local matching funds.

## 4.1 ACIP Development Process

The development of an ACIP is a bottom-up process that begins with input from individual airport sponsors and State aviation officials. The primary emphasis is on the effective use of AIP funds, but the concept applies to other funding sources, as well. Other funding sources and initiatives, such as PFC collections and innovative financing mechanisms, have expanded funding options for airport development. In Figure 2, Airport Capital Improvement Plan (ACIP) Process, illustrates the ACIP development process and how airport sponsors, local planning agencies, and regional FAA offices contribute to this process.

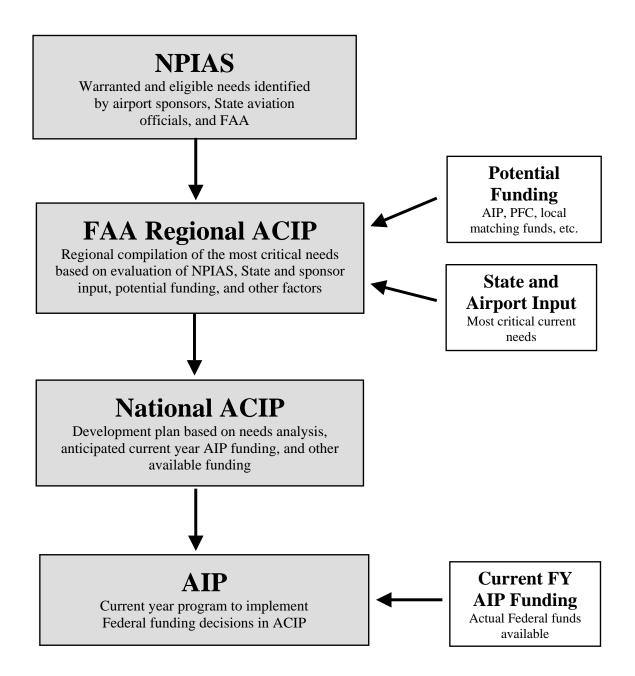

FAA creates an ACIP using a process consisting of three filters. The first filter occurs at the regional and field office level of FAA where project engineers and planners develop a district or regional ACIP, incorporating input from airport operators, States, airport planning districts, and FAA regional officials. During this process, airport development projects are evaluated based on many factors. They include costs for Federal mandates, adequacy of sponsor maintenance of airport infrastructure, feasibility of accomplishing the project, the benefit-cost relationship, eligibility of the proposed development, and potential funding. This filter allows field personnel to determine critical current-year needs and to develop a realistic field-level ACIP. Each regional office then submits an ACIP to FAA headquarters for evaluation.

The second filter occurs at FAA headquarters where staff evaluates all nine regional ACIPs for development of a single national funding plan. The national ACIP categorizes projects according to the size of the airport or two special project categories (noise mitigation and airport planning). Within each of these categories, FAA ranks projects on the basis of an analysis that takes into account the type of airport, the type of project, and other factors, such as the agency's goals for safety, security, and infrastructure preservation. Within the confines of appropriation levels and any laws and formulas that affect the disbursement of discretionary funds, FAA establishes a cutoff point in each category using a calculated numerical priority rating. The result is a quantified listing of airport projects rated by priority, referred to as the "candidate list." Projects included on the "candidate list" are considered eligible for receiving discretionary funding.

To meet current funding levels, FAA headquarters applies a third filter to pare down the "candidate list" by selecting a target priority rating. Projects above this rating may receive funding. Generally, projects receiving a numerical rating below the target do not receive funding unless they are a phase of larger project, have a letter of intent, are unexpectedly delayed or changed because of a statutory mandate, are unanticipated (such as infrastructure repairs needed after a hurricane), or otherwise receive special emphasis (e.g., national effort to enhance runway safety areas). The accumulated costs of the "candidate list" generally exceed amounts available in each AIP funding category to allow flexibility in selecting the most critical merit-based projects for funding.

FAA has formal guidance on the calculation of the numerical priority rating that places more emphasis on type of project and whether a project is a component of a larger project rather than merely on airport size. This guidance also requires written justification for deviations from the priority list and specifies that FAA regions must constrain the number of projects submitted within a budget ceiling specified by FAA headquarters.

Figure 2: Airport Capital Improvement Plan (ACIP) Process

#### 4.2 Benefit-Cost Analysis

In addition to priority ratings, FAA requires the airport sponsor to complete a benefit-cost analysis (BCA) for projects issued a letter of intent (LOI) (see Chapter 8: Letter of Intent) and capacity projects exceeding \$5 million in discretionary funds over the life of the project. FAA does not conduct a BCA for other AIP projects because the authorizing statute exempts certain projects (such as noise projects) from the BCA process or the underlying value of this type of project has already been subject to economic evaluations required through the regulatory proposal or amendment process. <sup>20</sup>

While such general economic evaluations may be part of the planning process for other types of projects, the BCA does not impact the project ranking process for the AIP discretionary candidate list. There are many reasons BCAs are not used in the project ranking process. In particular, a substantial portion of AIP, including discretionary funding, is specified by formula. In addition, a large share of AIP goes to fund safety, standards, and noise projects that are more difficult to evaluate using economic models.

In addition, interpretation of BCA data can be subjective. BCA results are generally influenced by sensitivity analyses and the plausibility of the results rather than being based on a precise number. Airport sponsors vary their level of effort to satisfy the BCA requirement. In many instances, airport sponsors limit the analysis to easier-to-quantify benefits, thereby not fully ascertaining or quantifying all the benefits that could be identified for the project. Furthermore, FAA relies on a variety of information—e.g., types of commitment letters from potential users, forecast projections, fleet mix, and load factor projection—to decide whether to recognize benefits of a particular project.

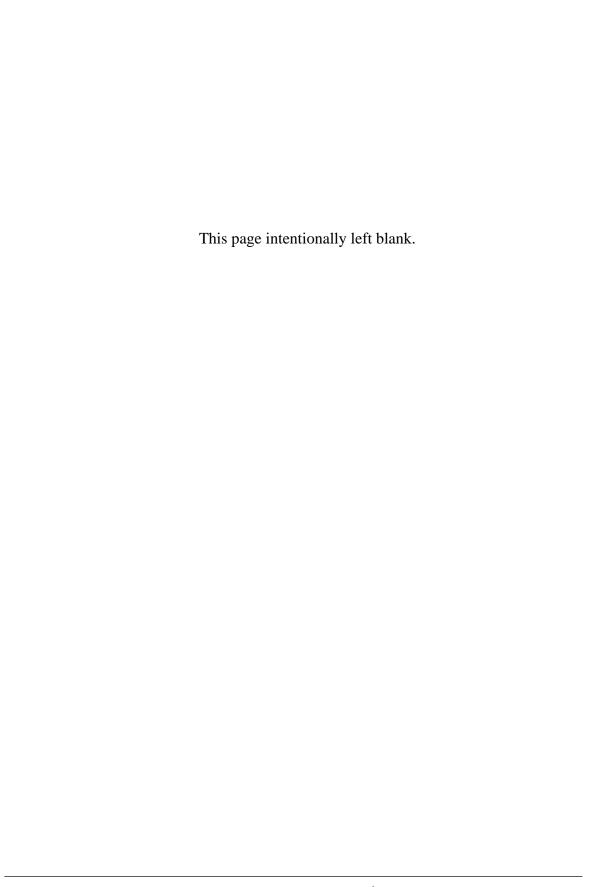

Using requirements developed by FAA, the airport sponsor conducts a BCA. The airport sponsor then submits its BCA and supporting documentation to FAA for review and acceptance. When possible, an airport sponsor conducts a BCA in conjunction with the development of the airport master plan or environmental study. If it is not feasible to include the BCA in these activities, the airport sponsor conducts a BCA on a supplemental basis and submits it to FAA when requesting AIP funds.

In general, a BCA must demonstrate that the project's benefits outweigh its costs before FAA will consider the project eligible for discretionary funding. This BCA requirement does not apply to reconstruction projects that do not change the operating characteristics of the airport. In addition to providing a BCA, airport sponsors seeking a LOI—a multiyear commitment of Federal AIP support for airfield project— must meet additional requirements, as discussed in Chapter 8.

<sup>&</sup>lt;sup>20</sup> To be eligible for Federal funds, certain AIP projects must comply with Federal regulations, including 14 CFR Part 139, Certification of Airports, and 49 CFR Part 1542, Airport Security, and associated FAA standards and policies. When Federal regulations are proposed or amended, the Federal government must complete a regulatory evaluation to determine the costs and benefits of any proposed new or amended requirements. The public is provided an opportunity to comment on such evaluations.

While projects requiring a BCA cannot be funded until FAA accepts the BCA, FAA can still include the project in the ACIP for planning purposes. Since the ACIP is a multiyear planning tool, it is possible for a project needing a BCA to be included in the ACIP for future-year funding consideration.

In FY 2005, FAA reviewed 10 BCAs for capital projects to be funded in future fiscal years. The estimated total cost for these proposed capital projects totaled \$3.3 billion, of which \$405 million is requested AIP discretionary amounts. As BCAs are used as a tool to evaluate a limited portion of available discretionary funds and the total project funding, FAA does not track the net benefits of these projects or other summary information to determine if they had a higher net benefit than capital projects that do not require a BCA.

## **Chapter 5: State Block Grant Program**

Requirements for the State Block Grant Program are contained in 14 CFR Part 156, State Block Grant Pilot Program. As specified in this regulation, States assume responsibility for administration of AIP grants at airports classified as "other than primary" airports. States participating in the State Block Grant Program administer funding of nonprimary commercial service, reliever, and general aviation airports. Each State is responsible for determining which locations within its jurisdiction will receive funds and for ongoing project administration. A national priority system for funds distributed at the discretion of the Secretary of Transportation has been established to provide uniform criteria so that the funding is used more efficiently by the States.

The national priority system is available for considering use of entitlement funds and block grants. Projects are favored that best carry out the purpose of the Act, with highest priority given to safety, security, reconstruction, standards, and capacity, in that order. See 49 USC 47120 and 47128(c). The priority system does not consider all factors that states, local governments, or private sponsors use within their priorities. However, so that the objectives of non-Federal entities are considered in project selection, the application of the national priority system is flexible as allowed under Order 5100.39, Airports Capital Improvement Plan.

FAA initiated this program in 1989 with three States: Illinois, Missouri, and North Carolina. Currently nine states participate in the program—the original three States plus Michigan, New Jersey, Texas, Wisconsin, Pennsylvania, and Tennessee. Since the enactment of AIR-21, 10 states have been authorized to participate in the State Block Grant Program. FAA is willing to accept applications for an opening in the program at any time.

New Jersey is in the process of withdrawing from the program. New Jersey has not accepted new grants under the State Block Grant Program since FY 2002 and anticipates closing out all grants funded under this program by FY 2006. New Jersey's withdrawal is due to changes in the State's aviation agency programs.

For FY 2005, FAA granted \$218,662,988 million in State apportionment and discretionary funds under the State Block Grant Program. Table 4: State Block Grant Totals for FY 2005 provides a breakdown of these funds by State.

**Table 5: State Block Grant Totals for FY 2005** 

	Block Gra		
State	Apportionment <sup>21</sup>	Discretionary	State Total
Illinois	\$17,820,432	\$16,571,690	\$34,392,122
Michigan	\$20,007,722	\$8,981,250	\$28,988,972
Missouri	\$15,603,594	\$0	\$15,603,594
North Carolina	\$15,305,984	\$7,900,000	\$23,205,984
Pennsylvania	\$11,608,076	\$5,014,428	\$16,622,504
Tennessee	\$13,911,096	\$4,688,950	\$18,600,046
Texas	\$ 41,499,302	\$14,031,548	\$55,530,850
Wisconsin	\$16,484,916	\$9,234,000	\$25,718,916
State Block Grant Total:	\$152,241,122	\$66,421,866	\$218,662,988

<sup>21</sup> Apportionment amounts include nonprimary entitlements, state apportionments, and nonprimary commercial service entitlements.

## **Chapter 6: Military Airport Program**

Since FY 1991, Congress has authorized the Military Airport Program (MAP) for the purpose of providing additional airport capacity to the U.S. airport system. The MAP, a funding set-aside of the discretionary portion of AIP, provides financial assistance for capacity and/or conversion-related projects at current joint-use or former military airports. Joint-use military airports are those military airports where the U.S. Government leases a portion of the airport to a civil airport sponsor.

MAP funding helps finance needed infrastructure changes to meet civil aviation standards and the needs of civil aviation users. For example, some surplus military airfields have wide runways with runway edge lights located 150 feet on either side of the runway centerline. To comply with civil standards, the airport sponsor must move the runway edge lights 75 feet closer to the runway centerline. Military lighting systems and signs also frequently need to be changed to meet the requirements of 14 CFR Part 139, Certification of Airports, if certain air carriers use the airport. In addition, the civil airport sponsor may need to build additional infrastructure, such as roads, parking lots, and a terminal building.

Airport sponsors participating in the MAP can get discretionary funding for projects not normally eligible under AIP, including projects to rehabilitate or construct fuel farms, surface parking, cargo buildings up to 50,000 square feet, and utilities. Many of these projects are needed to upgrade a former military airfield to accommodate the needs of civil tenants and to make civil operation economically viable. Examples include projects for upgrading hangars to meet local building code requirements (such as fire, safety, and access for the disabled) and projects to upgrade and separate utility systems (including older central above-ground heating systems).

The following types of airports are eligible to participate in the MAP:

- Airports that were realigned or declared surplus and scheduled for closure under the Department of Defense (DOD) Base Realignment and Closure (BRAC) programs or Title 10 U.S.C. 2687 (disposal of large surplus defense installations that are normally reported to the General Services Administration);
- Current or former military airports that would reduce delays at commercial service airports that experience 20,000 hours of annual takeoff and landing delays by passenger aircraft; or
- Military airports that would enhance air traffic control and airport system capacity in a metropolitan area.

Although the Secretary of Transportation may designate one general aviation airport at a time for inclusion in the MAP, all other eligible airports must be classified as reliever or commercial service airports as designated in the NPIAS.

The Secretary of Transportation was authorized to designate, or redesignate, and fund capital development projects for up to 15 eligible MAP airports per fiscal year. In any single year, MAP may include certain airports that have been carried forward from the previous year, airports that had been designated at one time and are now being reconsidered, and others that will be new entrants into the program. Designated airports remain eligible to participate in the program for up to 5 fiscal years following their initial designation.

Of the 15 slots authorized, 4 slots were available in FY 2005. FAA received a total of 6 applications for these available slots. From these applications, the Secretary selected Cecil Field, Jacksonville, FL; Williams Gateway Airport, Phoenix, AZ; Guam International Airport, Agana, Guam; and Rickenbacker Airport, Columbus, OH. Each location was approved for a 3-year team, and all four sites had previously been in the MAP for at least one term.

Applications from the other two airport sponsors were not accepted because of the availability of alternative financing sources or the airport was not included in the NPIAS (and therefore, ineligible to receive AIP grants).

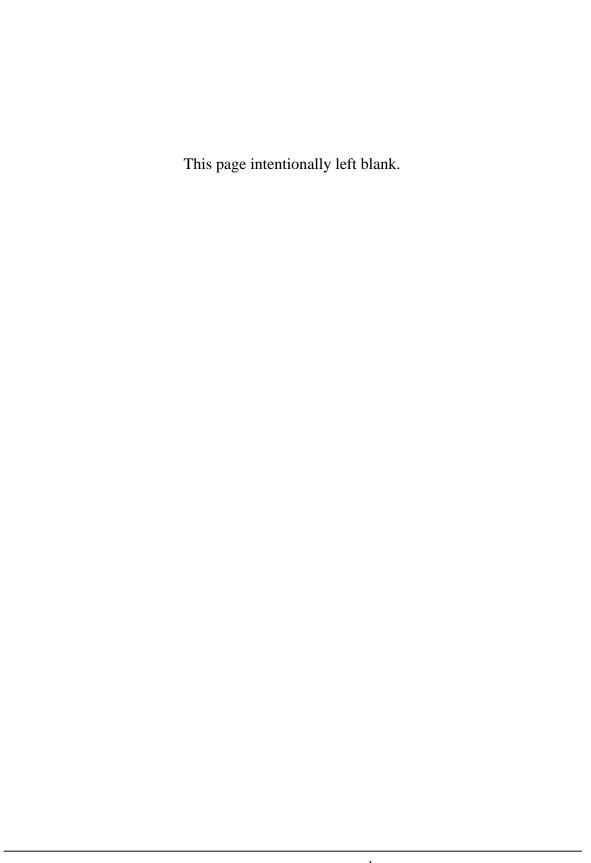

In Table 5: MAP Selected Locations and Funds Awarded in FY 2005 provides discretionary and entitlement amounts FAA awarded to sponsors of FY 2005 MAP airports. AIP funds to MAP airports in FY 2005 totaled close to \$70 million, exceeding the \$34.5 million set-aside required by the authorizing statute.

There are also existing joint-use agreements at active military airfields that allow civil aircraft operations. In addition, DOD issues long-term land leases to civil sponsors so they have land to develop at these joint-use facilities. This is often the case at surplus military airfields converting to civil airports.

Table 6: MAP Selected Locations and Funds Awarded in FY 2005

Airport Name	City	St	MAP Discretionary Funds	Non-MAP Discretionary Funds	AIP Entitlement Funds	Total
Alexandria Int'l	Alexandria	LA	\$2,236,137	\$1,972,200	\$1,364,984	\$5,573,321
Cecil Field*	Jacksonville	FL	\$2,984,190	\$0	\$169,540	\$3,153,730
Gray AAF	Killeen	TX	\$4,000,000	\$4,500,000	\$1,569,944	\$10,069,944
Griffiss Airpark	Rome	NY	\$4,583,750	\$0	\$750,000	\$5,333,750
Guam Int'l*	Agana	GU	\$4,039,589	\$1,900,000	\$4,242,620	\$10,182,209
Kalaeloa	Kapolei	НІ	\$2,541,972	\$0	\$3,258,028	\$5,800,000
Mather Field	Sacramento	CA	\$0	\$0	\$750,000	\$750,000
Millington Munic.	Millington	TN	\$2,093,950	\$0	\$0	\$2,093,950
Okaloosa/Eglin AFB	Valparaiso	FL	\$0	\$0	\$2,231,671	\$2,231,671
Plattsburgh Int'l	Plattsburgh	NY	\$4,435,250	\$3,703,140	\$600,000	\$8,738,390
Rickenbacker*	Columbus	ОН	\$3,380,665	\$40,000	\$1,397,721	\$4,818,386
Sawyer	Marquette	MI	\$1,050,000	\$0	\$300,000	\$1,350,000
Tipton Army Airfield	Odenton	MD	\$888,250	\$0	\$0	\$888,250
Williams Gateway*	Phoenix	AZ	\$2,137,500	\$6,723,838	\$150,000	\$9,011,338
Total			\$34,371,253	\$18,839,178	\$16,784,508	\$69,994,939

<sup>\*</sup> Denotes MAP airports authorized in FY 2005

## Chapter 7: Major Capacity, Safety, and Security Project Grants

One of the primary goals of AIP is to preserve the capacity, safety, and security of U.S. airports. To that end, the authorizing statute requires FAA to set aside a certain portion of AIP funds for projects relating to capacity, safety, and security. Such projects include the construction and improvement of runways, taxiways, and air carrier aprons at many capacity-constrained airports.

At the beginning of each fiscal year, the amount FAA can make available for AIP grants is calculated from the amount authorized by legislation, subject to any obligation limitation included in FAA's appropriation and other uses directed by statute. The amount available for AIP grants is then distributed among the many different funding categories and set-asides, as specified by the authorizing statute. The authorizing statute requires FAA to use discretionary AIP money to fund set-asides and establishes funding minimums that the agency must make available for each of the four required set-asides, including C/S/S/N projects.

In FY 2005, the amount available for AIP obligations was \$3.384 billion, and the corresponding amount set aside for C/S/S/N projects was formulated to be a minimum of \$388.9 million or 11.5 percent of the annual AIP (see Table 3: AIP Funding Distribution Plan for FY 2005).

Typically, final annual AIP allocations result in more funding being provided to C/S/S/N projects than was planned at the beginning of the year. This is because they represent the most important and significant contributions to airport system improvement. The extra funds are a portion of unused funds recovered from other projects (\$171 million in FY 2005). Accordingly, in FY 2005, FAA awarded AIP grants totaling \$780.1 million in discretionary funds for these projects. In addition to this amount, other funding—including PFC revenues collected at U.S. commercial service airports, sponsor enitlements, and State apportionment funding—may be allocated to C/S/S/N projects.

Some of the more significant FY 2005 C/S/S/N projects include:

• **Boston-Logan International Airport,** Boston, MA: During FY 2005 work was underway for a new Runway 14/32, scheduled to open in FY 2006. The new runway is 5,000 feet long and 150 feet wide and will be utilized largely by regional air carrier airlines. Included in FAA's Operational Evolution Plan (OEP)<sup>22</sup>, the runway will be unidirectional, with all arrivals and departures over water, i.e. takeoffs on Runway 14 and landings on Runway 32. An LOI was issued in April 2004 for the construction of the runway and associated work. The total LOI is for \$90,800,000. The first

<sup>&</sup>lt;sup>22</sup> The National Airspace System Operational Evolution Plan (OEP) is the FAA plan to improve capacity and efficiency in the National Airspace System over the next 10 years. The OEP is available online at http://www.faa.gov/programs/oep/.

- scheduled LOI grant was for FY 2005 and included a combination of entitlement and discretionary funding.
- Chicago O'Hare International Airport, Chicago, IL: The O'Hare Modernization Program (OMP) is the City of Chicago's proposal to realign three existing runways, extend two existing runways, and construct one new runway at O'Hare. This will result in an eight-runway reconfiguration consisting of six parallel East/West runways and two crosswind runways. As part of the reconfiguration, the City of Chicago proposes to acquire 440 acres of adjacent property, including 539 housing units and 197 businesses. The Environmental Impact Statement (EIS) chose the OMP as the "selected alternative" and found that the configuration will reduce overall delays by 66 percent and increase the annual operational capacity from 974,000 to 1,194,000 aircraft operations. The Record of Decision (ROD) for the EIS was signed on September 29, 2005, and the associated Airport Layout Plan was approved on September 30, 2005. The expected total OMP project cost is \$7.5 billion in 2004 dollars. The reconfiguration is identified as a capacity project in FAA's OEP.
- Cleveland Hopkins International Airport, Cleveland, OH: The phased replacement of Runway 6L/24R with new Runway 5L/23R is under way. The project will improve airfield safety and capacity by replacing the closely spaced parallel Runway 6L/24R, which is 400 feet from Runway 6R/24L, with a new runway that is 1,241 feet from Runway 6R/24L. Included in FAA's OEP, the new runway will provide the capability for simultaneous arrival/departure operations during Visual Flight Rule (VFR) conditions. Phase 1 of the new runway (6,800 feet) opened on December 12, 2002. Phase 2a (an additional 2,200 feet with Category I Instrument Landing System (ILS) approaches) was commissioned on August 5, 2004. Subsequently, Phase 2b finalized work for Category III ILS approaches, and the airport sponsor commissioned the runway on November 25, 2004. FAA financial support is being provided under an AIP LOI for \$148 million of the total \$500 million project cost. Additional funding is provided by PFC revenue (approximately \$82 million) and other local funds.
- Cincinnati-Northern Kentucky International Airport, Covington, KY: A new 8,000-foot by 150-foot third parallel runway spaced 4,300 feet west of the existing parallel runways is under way. Included in FAA's OEP, this new runway will be the first to allow triple simultaneous instrument approaches with less than 5,000 feet runway separation using Standard Terminal Area Radar System (STARS) capability. The new runway will primarily be used for arrivals, but may also be used for some departures. The FAA's Benchmark Capacity Study estimated the runway would increase the airport's capacity by 26 percent in VFR and Instrument Flight Rule (IFR) conditions. The total construction of the project is estimated to be \$237 million (total cost including financing is \$376.3 million), and the new runway 18R/36L was commissioned in December 2005. An LOI grant of \$19,150,137 was issued in

FY 2005. The total LOI committed to this project from FY 2002 to FY 2011 is \$131,699,860. A PFC for the project-related cost (including financing) was approved for approximately \$250 million.

- Dallas/Fort Worth International Airport, Dallas/Fort Worth, TX: This is a multiphase project to increase capacity by extending Runways 18L, 18R, and 17C. In FY 2004, the addition of 2,000 feet to Runway 18R was completed, and the airport sponsor commissioned the runway on October 30, 2003. In addition, the airport sponsor awarded a construction contract for the extension of Runway 17C and work continued on this runway through FY 2005. FAA financial support is being provided under an AIP LOI for \$28 million of the total \$90 million expected project cost.
- Hartsfield-Jackson Atlanta International Airport, Atlanta, GA: A multiphase project to construct a 9,000-foot runway was worked on during FY 2005. Additionally, in FY 2005, FAA issued an AIP grant for \$14 million for the ongoing construction of this new runway. Included in FAA's OEP, this new runway allows for triple simultaneous instrument approaches using the Precision Runway Monitor System. The new runway is the fifth parallel runway and being used for arrivals and departures in all weather conditions down to Category II minimums. FAA's Benchmark Capacity Study estimates that the new runway will increase the airport's capacity by 31 percent in optimum weather conditions and by 27 percent in adverse weather conditions. The airport sponsor commissioned this runway on May 16, 2006. FAA financial support was provided under an AIP LOI for \$104 million of the total \$1.3 billion project cost.
- Lambert-St. Louis International Airport, St. Louis, MO: The new runway was commissioned on April 13, 2006. Included in FAA's OEP, the new runway is 9,000 feet long and 150 feet wide, allowing the airport to increase aircraft operations conducted under VFR by 14 percent and IFR by 84 percent. A new four-lane highway tunnel is open and carries traffic beneath the new runway. Paving of the runway took place in calendar year 2005. LOI grants of \$3.8 million and \$3.7 million were issued in FY 2005. The total LOI committed to this project from FY 1999 to FY 2010 is \$191 million. The expected total project cost is \$1.1 billion.
- Los Angeles Regional Implementation Study/Strategic Action Plan, Los Angeles Metropolitan area: The Southern California Association of Governments (SCAG) initiated a study in FY 2004 utilizing AIP funds. The study is based on the aviation component of SCAG's 2004 Regional Transportation Plan (RTP), which proposes to accommodate a total regional air passenger demand of 85 million enplanements by 2030. The Regional Implementation Study, completed in September 2005, evaluated approaches to regional airport and ground access governance and recommends implementation of a management structure appropriate for the SCAG region. The Regional Aviation Strategic Action Plan will identify the means by which to implement the study's recommendations. Work on the Regional Aviation Strategic Action Plan is scheduled for completion in FY 2006. The total grant amount for the study and action plan is \$833,000. In FY 2005, AIP committed a total of

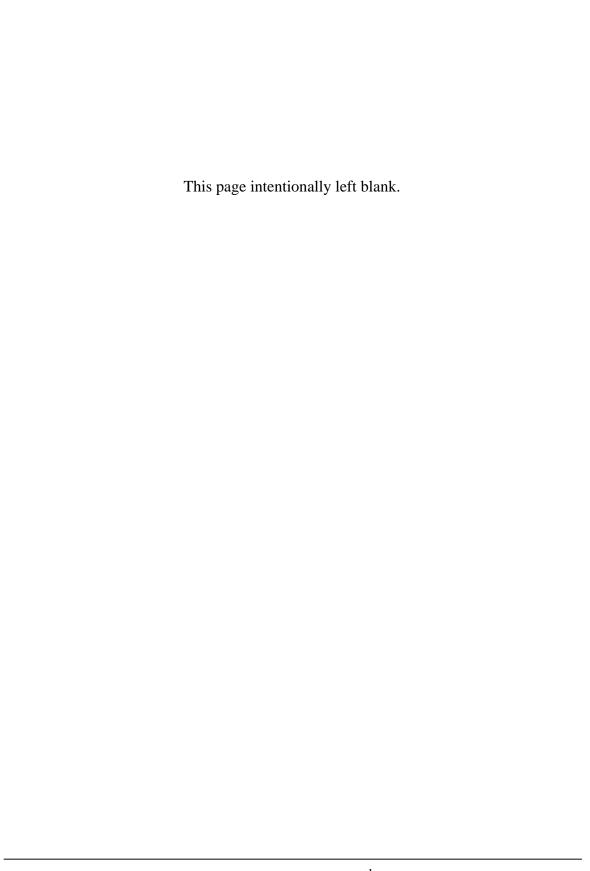

\$119.3 million in grants to the SCAG system of airports. Included in this total were grant funds of \$65.8 million for Los Angeles International Airport runway 7R/25L relocation identified in FAA's OEP to improve the safety and efficiency of the airport.

- Minneapolis-St. Paul International Airport, Minneapolis, MN: A new runway, 17L/35R opened October 27, 2005. Included in FAA's OEP, the new runway is 8,000 feet long and 150 feet wide, allowing the airport to increase airport capacity between 26 and 29 percent by operating nearly independently of the existing parallel runways. Although originally planned to be a Category I ILS runway, current plans are for Category II/III approaches allowing significantly lower landing minimums. Paving the runway and restoring the runway protection zone was completed in FY 2005. In 1999, FAA approved an LOI providing \$95 million in Federal funding over 12 years. To date, FAA has provided \$73.5 million under the LOI. The expected total project cost is \$563 million.
- New England Regional Aviation System Plan, Phase II, New England region: In the first phase, a regional forecast of aviation activity was developed using advanced forecast methods combined with extensive coordination with State aviation officials and a unique peer-review process. During FY 2005, work continued on the second phase of this innovative study of regional aviation capacity. Initiated in FY 2004, the second phase involves a sophisticated Airport Choice model that is being used to estimate forecast demand at 11 key regional airports, including Boston-Logan International, Manchester (NH), Providence/T.F. Green (RI), and Windsor Locks/Bradley (CT) airports. The results of these forecasts will be used to help shape a regional approach to meeting long-term aviation demand. The two FAA grants for both phases total \$2.5 million.
- New York City Regional Air Service Demand Study, Phase I, New York City region: In FY 2005, a study was commenced to analyze strategies and policies to address the increasing demand for passenger air service at the three Port Authority of New York and New Jersey (PANYNJ) airports—John F. Kennedy International, Newark Liberty International, and LaGuardia Airport. The study considered the opportunities and limitations of these three metropolitan large hub commercial airports, as well as the surrounding regional airports, including Stewart International, Westchester County, and Long Island/MacArthur Airports in New York State; Trenton and Atlantic City International Airports in New Jersey; and Lehigh Valley International Airport in Pennsylvania. The study involves three separate grants with the PANYNJ, the New York State Department of Transportation's Aviation Bureau, and the Delaware Valley Regional Planning Commission. The study consists of (1) a survey of passengers, (2) a forecast of passengers and operations activity, (3) a forecast of origins and destination volumes, (4) a projection of carrier schedules, and (5) an assessment of the system's airports capacity. In FY 2005, the passenger surveys for the PANYNJ airports were completed, and the surveys for the regional

- airports and the remaining study tasks were under way. The FAA grants for this phase of work total \$2.9 million.
- Philadelphia International Airport, Philadelphia, PA: In FY 2005, AIP issued grants totaling \$26.6 million to the airport. FAA's OEP identifies the extension of runway 17/35 providing operational benefits to reduce delays. AIP committed \$18.7 million. The grants are earmarked for the preparation of two EIS, the first for the 1,040-foot extension of Runway 17/35, the second EIS for the Airfield Capacity Enhancement Program consisting of a study of environmental impacts resulting from major changes in the airfield configuration. The proposed changes would increase the airports ability to meet future airfield capacity demands. The second EIS is expected to be complete in 2007. Construction to extend the runway began in FY 2005.
- Robert Gray Army Airfield, Killeen, TX: This project established civilian facilities to accommodate scheduled passenger service at Robert Gray Army Airfield to replace limited facilities at Killeen Municipal Airport. A joint-use agreement between the U.S. Army and the City of Killeen allows access to Robert Gray Army Airfield at Fort Hood, and in August 2004, the facility opened for passenger service. Development at Robert Gray Army Airfield included construction of a parallel taxiway, aircraft-parking apron, and terminal building with six gates, entrance road, and auto parking facilities. In FY 2005 FAA grants totaled \$10,069,944. The total project cost was \$46 million.
- Seattle-Tacoma International Airport, Seattle, WA: A multiphased project to construct a third parallel runway (8,500 feet long and 150 feet wide) with 2,500 feet of separation from an existing runway. The new runway resumed construction and will provide all-weather capability for two aircraft arrival streams. In FY 2004, the airport sponsor resolved legal action that temporarily halted construction, and FAA approved a second LOI amendment for the project. Included in FAA's OEP, the construction of this third runway is needed to preserve capacity when low-visibility conditions exist. The airport sponsor anticipates commissioning the runway in November 2008. In FY 2005, FAA provided \$25,529,584 in LOI commitments. The expected total project cost is \$1.05 billion.
- **Proposed South Suburban Airport,** Peotone, IL: FAA issued to the State of Illinois a \$3 million AIP grant in September 2002, a \$2.5 million AIP grant in August 2003, and a \$2.5 million AIP grant in August 2004 for a Master Plan Study and a Tier 2 EIS. In July 2002, FAA completed the Tier 1 EIS and ROD for site approval. The State of Illinois continued to work on plans for the potential establishment of a South Suburban Airport (SSA) to be located near Peotone, IL. Based on FAA site approval granted in 2002, the State of Illinois has been acquiring land to preserve the option of developing an inaugural airport, which initially would include one runway with the capability to expand to accommodate future market demand. FAA and the State of Illinois are also engaged in ongoing work in support of the master planning and Tier 2 environmental review for the SSA proposed development. In FY 2005, the State of Illinois submitted a Preliminary Draft Concept Alternatives Analysis. FAA reviewed

the Draft and was anticipating the receipt of the Master Plan and Airport Layout Plan based on the preferred alternative.

• Washington Dulles International, Dulles, VA: In FY 2005, AIP issued grants totaling \$8 million towards expanding an apron and rehabilitating a taxiway. In FAA's OEP, an addition to the existing Runway 1L/19R is identified as a capacity project with construction scheduled to being in FY 2006. This project adds a fourth runway to the airfield at Dulles Airport. The proposed fourth runway will be a north-south runway, approximately 9,500 feet long and 150 feet wide and is due for completion in 2010. Construction is anticipated to occur between the years 2006 and 2010 with the improvements expected to be fully operational in the year 2010. A new north-south runway, with adequate spacing would provide the ability for dual independent simultaneous approach capabilities in conjunction with the existing Runway 1L/19R providing redundancy for the existing north-south parallel runways and similar capabilities in the event of a runway closure of either of the existing north-south runways (due to rehabilitation/maintenance, repairs, aircraft rescue and fire fighting exercises, snow removal, etc.) and unforeseen emergencies (incidents), without hindering overall airport operations.

## **Chapter 8: Letter of Intent**

FAA is authorized to issue a letter of intent (LOI) for certain airport development projects when current obligating authority is not timely or adequate to meet an airport sponsor's desired timing for a project. Under this provision, an airport sponsor may notify FAA of an intention to carry out a project in advance of Federal funds and request that FAA issue an LOI. FAA evaluates the proposal and, if approved, issues a letter stating that reimbursement will be made according to a given schedule as funds become available. The LOI indicates Federal approval to an airport sponsor of a proposed project's scope and the timing for its accomplishment. It also indicates Federal intent to fund the project in subsequent years, subject to the future availability of AIP funds.

Before an airport sponsor begins construction, FAA must approve the scope of work and the proposed funding plan. In addition to standard project criteria, FAA requires that a benefit-cost analysis (see Chapter 4: Airport Capital Improvement Plan (ACIP)) accompany any LOI request. FAA also considers the airport sponsor's financial commitment to the project. For large and medium hub airports, the authorizing statute requires a review of the project's effect on the capacity of the national air transportation system.

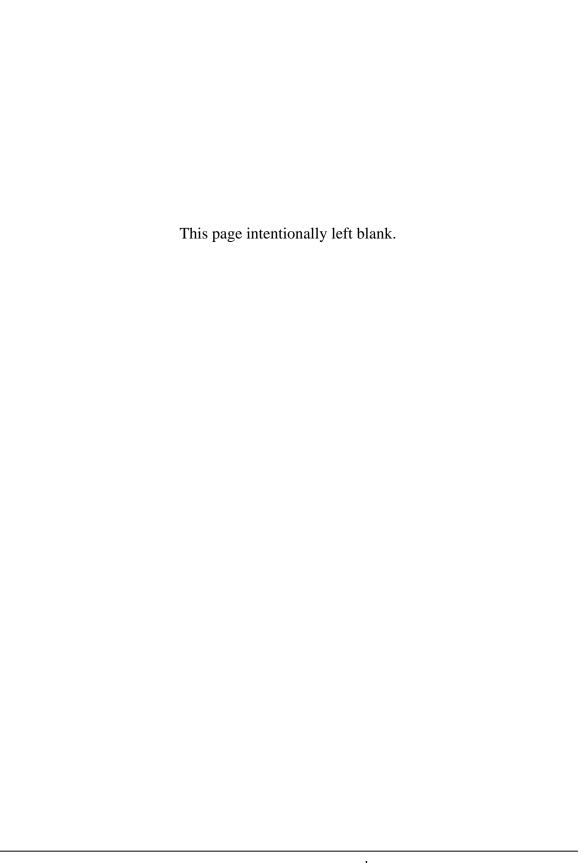

Once FAA and the airport sponsor reach an agreement on the scope of the project and the proposed payment stream, FAA prepares the LOI indicating its intent to provide future funding for the agreed-upon project. This expression of intent on the part of FAA is sufficient to reduce the risk associated with making improvements now and not receiving reimbursement until future years. Most airports finance projects with revenue bonds and are likely to receive favorable bond rates if the Government supports the project with an LOI.

An airport sponsor that receives an LOI may proceed with the project without waiting for future AIP grants, and all allowable costs in the LOI related to the airport development remain eligible for reimbursement. However, an LOI is not an obligation of Federal funds and is subject to availability of AIP funds.

Below is a brief summary of the LOI program for FY 2005. For additional information, please refer to Appendix F, Letter of Intent Commitments by Fiscal Year, and Appendix G, LOI Payments for FY 2005. Appendix F lists the amounts for future fiscal years committed in letters of intent to the listed airports. This appendix breaks down the airport sponsor's commitment by their apportioned funds in AIP and the funds FAA intends to provide from AIP discretionary funds. Appendix G shows locations awarded grants associated with LOIs during FY 2005 and both entitlement and discretionary amounts awarded. The amounts shown are the total for the grant award but not necessarily the amount paid during the fiscal year.

In FY 2005, LOI payments totaled \$208.3 million in discretionary funds and 76.7 million in airport sponsor entitlements. At the end of FY 2005, there were 32 open LOIs with

## **Chapter 9: Environmental Responsibilities**

The FAA's Office of the Associate Administrator for Airports (ARP) assesses potential environmental impacts that may result from airport development projects. FAA must complete this assessment before it approves airport layout plans or amendments or finances airport development projects. This evaluation of environmental impacts is based on requirements contained in the National Environmental Policy Act of 1969 (NEPA) and other Federal laws, regulations, and orders that detail specific criteria to be used for protecting the human and natural environment.

FAA Order 1050.1E, Environmental Impacts: Policies and Procedures, and FAA Order 5050.4B, National Environmental Policy Act Implementing Procedures for Airport Actions, define the scope of environmental evaluations needed to comply with NEPA and other appropriate environmental directives. These orders address potential impacts to—among other environmental resources—noise, air quality, water quality, public recreation lands, wildlife refuges, prime or unique farmlands, hazardous materials, historical and archeological sites, endangered species, coastal zones, wetlands, and floodplains. This evaluation process provides FAA; other Federal, State, and local agencies; and the public with a better understanding of potential environmental impacts and measures to mitigate adverse impacts.

Although there is commonality among airport projects, FAA determines the breadth of analysis for each project, based on the nature of each project. As a result, the FAA's environmental process is one that can vary greatly in complexity and duration. The FAA's procedures identify the types of airport actions requiring environmental reviews. The review process will be one of the following:

- Limited based on a predefined category of excluded projects, known as categorical exclusions;
- An environmental assessment; and/or
- A detailed environmental impact statement.

FAA first reviews the proposed project to determine if a categorical exclusion applies. These actions normally do not cumulatively affect the quality of the human environment. If this determination can be made, and there are no extraordinary circumstances, there is no further need to analyze the project's effects on the environment.

If the project has the potential to significantly impact the human environment, the airport sponsor will normally prepare an environmental assessment (EA) based on the requirements prescribed in FAA Orders 1050.1E and 5050.4B. If after reviewing the EA, FAA determines the document meets legal requirements and the project (including any identified mitigation) would not significantly affect environmental resources, the agency

22<sup>nd</sup> Annual Report of Accomplishments

<sup>&</sup>lt;sup>23</sup>The current version of FAA Order 5050.4B, Airport Environmental Handbook, is available online at: http://www.faa.gov/airports\_airtraffic/airports/

will adopt the EA and prepare a document known as a Finding of No Significant Impact (FONSI).

After reviewing the EA, FAA determines, if the project will significantly impact the environment, FAA must further analyze the severity of the impacts and evaluate measures that could reduce or eliminate degradation of environmental resources. Section 102(2)(C) of NEPA requires an Environmental Impact Statement (EIS) when a project would significantly affect the quality of the environment. If the project normally requires an EIS or significant impacts are anticipated, FAA may proceed directly into the EIS. The EIS is a detailed study of a proposed action's potential environmental impacts. FAA and an FAA-selected consultant specializing in evaluating and assessing environmental impacts prepare the EIS. FAA may use an EA that an airport sponsor prepares as the basis for further analyses in the EIS. The resulting EIS:

- Defines a proposed project's purpose and need;
- Describes alternatives, including the no action alternatives, that will achieve that purpose and need;
- Identifies the environmental impacts resulting from these alternatives, including the alternative FAA identifies as its preferred action;
- Discusses the measures FAA will require to mitigate adverse environmental impacts; and
- Includes public comments on these topics and FAA's responses to those comments.

After completing the EIS, FAA will issue a Record of Decision (ROD). The ROD provides the approving FAA official's rationale for the decision made.

## 9.1 Streamlining the Environmental Review Process

In response to congressional direction, FAA issued a Report to Congress in May 2001 about the Federal environmental requirements related to the planning and approval of airport improvement projects. The report specifically addressed FAA's assessment of the current level of coordination between Federal and State agencies and the role of public involvement. It also examined staffing and other resources and the timeline for environmental reviews, together with any recommendations for streamlining the environmental review process. Among the recommendations were six initiatives for streamlining the airport environmental review process:

- Set up teams to prepare EISs for all major runway projects at large hub primary airports. These are the top 30 airports that board 70 percent of U.S. air passengers.
- Reallocate staff to support environmental work. This also includes seeking reimbursable agreements with airport sponsors to expedite reviews.
- Maximize use of consultants to assist FAA with more EIS-related tasks.
- Increase the use of categorical exclusions where appropriate, and streamline both the EA/FONSI and EIS processes.
- Improve interagency cooperation and coordination to achieve more timely environmental reviews of airport projects.

• Compile a best practices guide to improve EIS management and preparation.

FAA subsequently undertook all six initiatives. The initiatives have and continue to contribute to improved efficiencies in the preparation and coordination of environmental analyses and EIS documents for proposed airport development projects across the country. In addition to the reallocation of the staff in FAA's Office of the ARP, in FY 2004, Congress authorized 31 new positions specifically to assist FAA headquarters and regional offices in expediting the preparation and processing of EISs for airport improvement projects. These positions were filled by the end of FY 2005 with 18 environmental specialists and 13 environmental attorneys. The increased staff has greatly contributed to the FAA's ability to prepare and process major EISs and resolve environmental issues in a timely manner.

Vision 100–Century of Aviation Reauthorization Act (Vision 100), Public Law 108-176, contained a number of environmental provisions applicable to the Airports Program, notably, Title III, Subtitle A, the "Aviation Streamlining Approval Process Act of 2003." This particular provision directs the Secretary of Transportation (i.e., FAA) to develop and implement an expedited and coordinated environmental review process for airport capacity enhancement projects at congested airports, aviation safety projects, and aviation security projects. The FAA's ARP is implementing an expedited and coordinated review process for several EISs that are just beginning. In addition, this office has formalized this review process in the revised Order 5050.4B and related documents.

#### 9.2 Changes to FAA Environmental Guidance and Policies

The FAA's ARP updated its environmental handbook, FAA Order 5050.4A. A revised FAA Order 5050.4B was published in draft form for public comment in the *Federal Register* in December 2004. Based on comments received, FAA finalized the order and issued the final update in April 2006 The updated order joins FAA Order 1050.1E, Environmental Impacts: Policies and Procedures, the agency's overall environmental guidance document which was updated in June 2005.

Besides actions to provide a comprehensive update of Order 5050.4, the FAA's ARP continues to provide updated environmental guidance to its field offices as a result of revisions in laws and regulations issued by Congress, the President, and other Federal agencies. This office, in conjunction with other FAA offices, also developed and implemented guidance for environmental provisions contained in Vision 100, including the provision for streamlining the environmental review of certain airport projects.

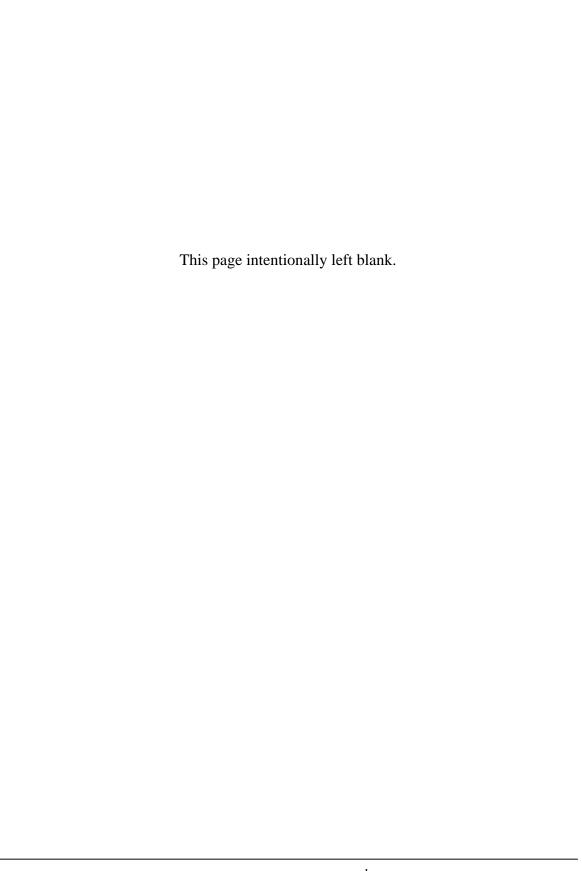

## 9.3 High-Priority Transportation Projects

In 2003, the Secretary of Transportation selected the proposed airport expansion projects at the Los Angeles and Philadelphia International Airports as 2 of the initial 13 high-priority transportation projects under Executive Order 13274, Environmental Stewardship and Transportation Infrastructure Project Reviews. The goal of the executive order is to promote environmental stewardship and expedite environmental reviews of high-priority

transportation projects. Both projects benefited from the executive order and were moved forward expeditiously as a result of improved coordination and concurrent environmental reviews by Federal and State agencies.

For each EIS, FAA formed a team of multidisciplinary agency and consultant personnel to undertake the analysis and guide the preparation of the documents. In the case of the Philadelphia project, a stewardship and streamlining agreement was developed and agreed to by 18 Federal and state agencies involved in the environmental approval and permitting process. A final EIS and ROD for the proposed Los Angeles International Airport project were issued in January 2005 and May 2005, respectively. A final EIS and ROD for the first of the two proposed Philadelphia International Airport projects were issued in April 2005. The Philadelphia project was completed a month ahead of schedule and under budget.

In CY 2004, a proposed replacement airport in St. George, UT, was added as a high-priority transportation project under the auspices of Executive Order 13274. The project was selected because of unresolved issues between FAA and the Department of Interior, National Park Service, regarding the assessment of potential noise impacts to nearby national parks due to the new airport and aircraft overflights. FAA, the Department of Interior, and the National Park Service are working together to determine the appropriate method for evaluating the impact of potential aircraft noise on Zion National Park, located approximately 26 miles from the new airport site. FAA issued a draft EIS in September 2005. FAA issued a final EIS in May 2006 with a ROD in August 2006.

## **Chapter 10: Noise and Air Quality Programs**

#### 10.1 Noise Compatibility

Under 14 CFR Part 150, Airport Noise Compatibility Planning, <sup>24</sup> FAA continues to help airport sponsors develop comprehensive programs to reduce noise and achieve compatible land uses in areas surrounding an airport. Part 150 prescribes the procedures, standards, and methodology governing the development, submission, and review of airport noise exposure maps and airport noise compatibility programs. Since an approved noise compatibility program (NCP) is a precondition to receiving AIP funds for most noise mitigation actions, most operators of airports where noise is a significant factor have engaged in some level of noise planning. They view the opportunity to conduct planning and mitigation with Federal funds as a means of fostering better relations with nearby communities.

By the end of FY 2005, 266 different airport sponsors chose to take part in the noise planning process, and most have already submitted noise exposure maps depicting the noise environment surrounding the airport. Of these, 226 have approved NCPs, and FAA has approved 72 amendments to NCPs. In FY 2005, 11 grants were awarded for new or updated noise studies, costing about \$2.3 million, and another 79 grants for \$340 million were awarded for noise compatibility mitigation.

Many public agencies have applied for approval to collect PFCs, in part to provide more funding to improve airport land use compatibility. In FY 2005, PFC authority for noise planning and mitigation totaled more than \$135 million. Since the inception of the program in 1992, \$2.8 billion has been approved for collection.

PFC eligibility for noise compatibility projects differs from AIP eligibility in a significant way. As noted, to be AIP eligible, a noise mitigation measure must, with few exceptions, be an approved noise compatibility measure in an FAA-approved NCP under Part 150. To be eligible for a PFC approval, a noise compatibility measure needs only qualify for approval under a Part 150 NCP, whether or not the airport has undertaken the Part 150 study process. Even where an approved NCP is in place at that airport, PFCs can be used to fund a measure not included in the approved NCP, as long as the measure would qualify for inclusion.

In FY 1992, FAA began managing the new 14 CFR Part 161, Notice and Approval of Airport Noise and Access Restrictions (issued September 25, 1991). Part 161 carries out terms of the Airport Noise and Capacity Act of 1990 (ANCA, recodified at 49 U.S.C. 47521 *et seq.*) by setting up a national program for reviewing airport noise and access

<sup>&</sup>lt;sup>24</sup> FAA's Part 150 Airport Noise Compatibility Program was established under the Aviation Safety and Noise Abatement Act of 1979 (recodified at 49 U.S.C. 47501 *et seq.*).

restrictions on Stage 2 and Stage 3 aircraft operations.<sup>25</sup> Part 161 also advises airport operators on how ANCA and Part 161 apply to the airport noise compatibility planning conducted under 14 CFR Part 150. FAA has set up an interdisciplinary team to review airport noise and access restrictions. This team works informally with many airports across the country and provides advice on how to comply with ANCA, Part 161, and other pre-existing Federal laws governing airport access.

With the passage of Vision 100, additional noise projects outside the Part 150 program became eligible for AIP grants in FY 2004. Section 160 of Vision 100 added Section 47141 to 49 U.S.C., which authorizes the Secretary of Transportation to make grants from AIP noise set-aside funds to States and units of local government for compatible land use planning and projects around large and medium hub airports that have either never submitted a noise compatibility program or have not updated such a program within the preceding 10 years. These grants are limited to FY 2004 through FY 2007. FAA has endeavored to get the word to eligible State and local governments through several venues, including national planning forums, planning magazines, and the FAA's website. Thirty-one airports were identified as being large or medium hubs where State or local governments would be eligible to participate in this program. To date, FAA has had few inquiries for these studies from potential applicants.

#### 10.2 Voluntary Airport Low Emission Program

On December 12, 2003, Vision 100 was signed into law and authorized provisions leading to a Voluntary Airport Low Emission (VALE) Program for reducing airport ground emissions at commercial service airports in air quality nonattainment and maintenance areas. The start of the VALE program was announced on September 30, 2004 to begin in FY 2005. In the first year of the program, FAA awarded two AIP grants for VALE low-emission projects totaling \$443,000.

The VALE program is intended to help airports meet their obligations under the Clean Air Act (CAA) in conjunction with State and regional efforts to comply with health-based National Ambient Air Quality Standards. The program targets emission reductions for the six criteria pollutants (ground level ozone, carbon monoxide, particulate matter, nitrogen dioxide, sulfur dioxide, and lead) from all airport stationary and mobile sources. Aircraft emissions are not included in the program because the Environmental Protection Agency (EPA) regulates this source on an international basis.

The VALE program was developed in cooperation with the EPA and the U.S. Department of Energy (DOE). It provides airport sponsors with financial and regulatory incentives to make earlier and greater investments in proven low-emission technology. In addition, the program encourages the use of domestic alternative fuels for more emission savings and energy independence.

<sup>&</sup>lt;sup>25</sup> Stage 2 and Stage 3 aircraft are those aircraft that meet certain noise levels and other prescribed requirements under 14 CFR Part 36, Noise Standards: Aircraft Type And Airworthiness Certification.

Participation in the VALE program is voluntary for airport sponsors and participating State air quality agencies, which play an important role in the program. Funding for the VALE program is provided through two airport assistance programs, AIP and PFC. The regulatory incentives for the program are provided through "airport emission reduction credits." Airport sponsors receive the credits from State air quality agencies for eligible VALE projects and may use the credits to meet future CAA requirements.

Project eligibility is limited to capital investments and to the deployment of proven, cost-effective technologies that are commercially available. Eligible low-emission technology ranges from on-road vehicles and aeronautical ground support equipment (GSE) to refueling and recharging stations, gate electrification, and other infrastructure improvements for lowering emissions. Eligibility guidelines are based on Vision 100, the CAA, and AIP and PFC Program requirements as well as previous agency experience with the Inherently Low Emission Airport Vehicle (ILEAV) Pilot Program (2001–2005) (See Section 14.1, ILEAV Pilot Program).

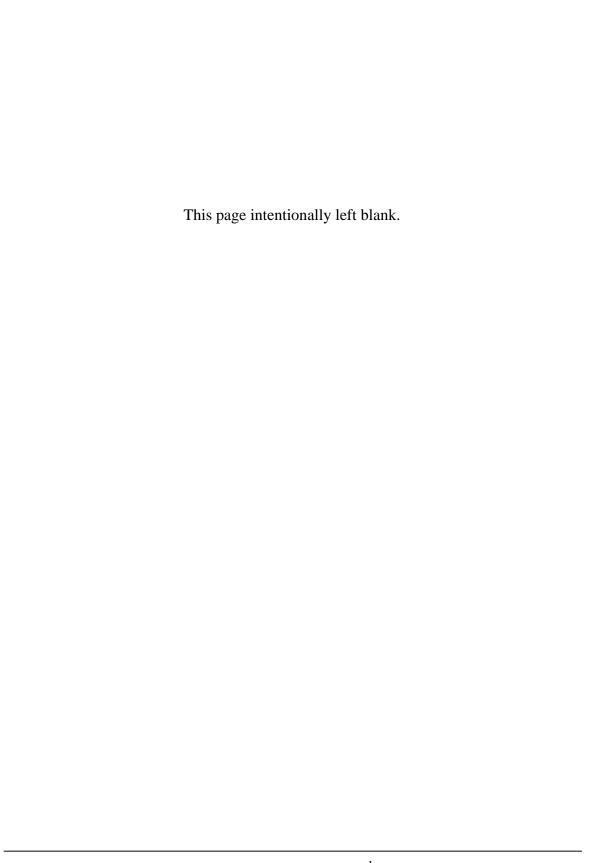

The VALE program reflects the emergence of air quality as a major environmental concern for aviation. Approximately one-third of U.S. commercial service airports, including many of the nation's largest and busiest, are located in EPA-designated nonattainment or maintenance areas.

FAA and the airport community recognize that controlling airport emissions and meeting these requirements is essential to the continued growth and improvement of public aviation. The VALE program provides the means for demonstrating that airport development and air quality improvements can happen together. It reduces uncertainties for sponsors and provides them with the resources and tools to plan future modernization efforts more efficiently.

Airports offer practical opportunities for controlling emissions from stationary and ground transportation sources because of their centralized operations. Airport fleets, especially GSE, operate primarily, if not exclusively, on airport property. In addition, refueling and recharging stations can often be sited safely and conveniently for vehicle refueling.

Vision 100 also authorized an Airport Ground Support Equipment (GSE) Emissions Retrofit Pilot Program. This is separate from the VALE program. The pilot program offers 10 AIP grants of up to \$500,000 per airport to sponsors that test and evaluate GSE retrofits using cleaner conventional fuels and emission control technologies. These technologies must be certified by the EPA and meet many of the requirements established for the VALE program. To date, no grants have been issued under this pilot program.

While the GSE Emissions Retrofit Pilot Program will expire with Vision 100, the VALE program will become a permanent part of AIP and the PFC Program.

# Chapter 11: Disadvantaged Business and Civil Rights Requirements

In FY 1999, the U.S. Department of Transportation (DOT) issued a revision to its disadvantaged business enterprise (DBE) regulations for contracting in light of the U.S. Supreme Court decision in *Adarand Constructors v. Peña*<sup>26</sup>. Subsequently, DOT revised the airport concession DBE regulations again in FY 2005 to comply with *Adarand* and other statutory changes. These revisions require Federal affirmative action programs to be narrowly tailored to meet a strict scrutiny standard. The goal of at least 10 percent participation, specified in sections 47113 and 47107(e) of Title 49 U.S.C. for DBE participation in DOT-assisted contracts, including those funded with AIP grants, and airport concessions continues as a national goal under the revised rule (49 CFR Part 26, Participation by Disadvantaged Business Enterprises in Department of Transportation Financial Assistance Programs).

Under Part 26, overall DBE goals must be based on demonstrable evidence of the relative availability of DBEs that are ready, willing, and able to participate in DOT-assisted contracts. Consequently, FAA approved goals that were both lower and higher than 10 percent for DOT-assisted contract and airport concessions programs that reflected the relative availability of DBEs. In addition, DOT's DBE regulations do not penalize an airport sponsor merely for not achieving its overall DBE participation goal. Instead, the airport sponsor is required to use an approved process to establish the goal<sup>27</sup> and make good faith efforts to achieve this goal. If this is done, the airport sponsor is considered to have met the necessary requirements. FAA applies similar principles to its airport concessions program.

During FY 2005, DBEs received 16.50 percent of contract dollars awarded under AIP (2.25 percent more than the previous fiscal year), and DBE concessionaires earned 11.24 percent of the total gross receipts generated by all concessions at primary airport locations (a 0.87 percent increase from the previous fiscal year).

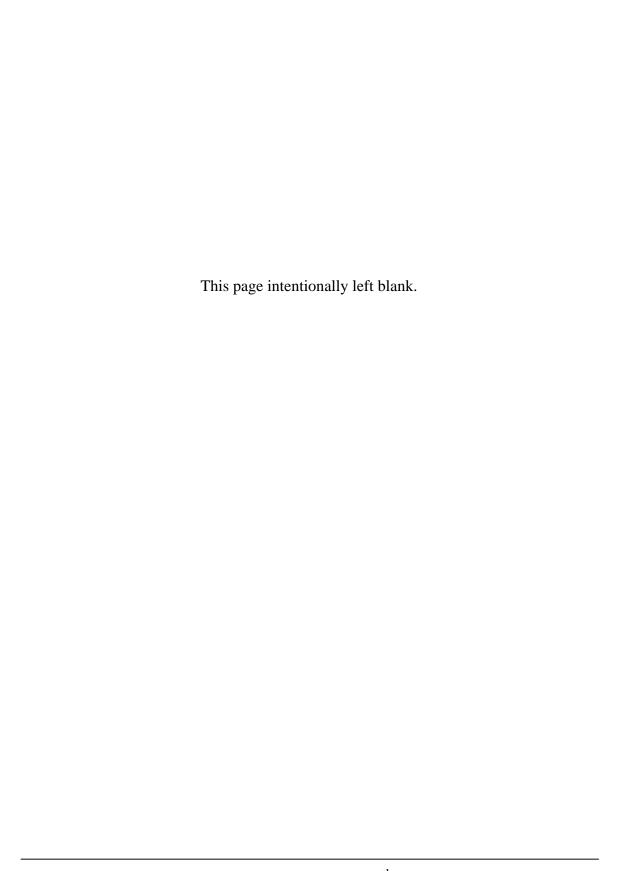

During FY 2005, FAA informally resolved 25 complaints filed under the Americans with Disabilities Act of 1990 and the Rehabilitation Act of 1973. At the beginning of FY 2005, there were 12 unresolved disability complaints, and FAA received an additional 23 complaints during the year, for a total of 35 complaints.

Eighteen complaints filed under Title VI of the Civil Rights Act of 1964 were also informally resolved during FY 2005. The number of unresolved Title VI complaints at the beginning of 2005 was 23, and FAA received 10 additional complaints during the fiscal year, for a total of 33 complaints. Two administrative complaints relating to

<sup>&</sup>lt;sup>26</sup> Adarand Constructors v. Peña, 515 U.S. 200 (1995)

<sup>&</sup>lt;sup>27</sup>Requirements for establishing a DBE goal are contained in 49 CFR Part 23, Participation by Disadvantaged Business Enterprises in Airport Concessions, and 49 CFR Part 26, Participation by Disadvantaged Business Enterprises in Department of Transportation Financial Assistance Programs.

noncompliance with AIP grant assurances pertaining to civil rights requirements, filed under 14 CFR Part 16, Rules of Practice for Federally-Assisted Airport Enforcement Proceedings were pending in FY 2005. One complaint was filed in FY 2005 and closed in FY 2006. In that case the FAA found no basis for the DBE allegation and the airport sponsor's actions were consistent with Federal obligations. The second Part 16 complaint, filed in FY 2003, resulted in a Director's determination, issued on September 1, 2005 that found the airport sponsor in compliance with its Federal obligations.

## **Chapter 12: Passenger Facility Charge Program**

The Passenger Facility Charge (PFC) Program was first authorized by the Aviation Safety and Capacity Expansion Act of 1990. The PFC statutory language is codified under Title 49 U.S.C. 40117, and FAA uses this authority to issue requirements for PFC collections under 14 CFR Part 158, PFCs.

Through the PFC Program, FAA regulates and approves the collection of fees, known as PFCs, from air carrier passengers at commercial airports controlled by public agencies. Public agencies then use these fees to fund FAA approved projects that enhance safety, security, or capacity; reduce noise; or increase air carrier competition. The PFC Program provides an important additional source of capital for expansion and rehabilitation of the U.S. airport infrastructure. The PFC Program enables public agencies controlling commercial service airports, after receiving approval from FAA, to charge enplaning passengers using the airport a \$1, \$2, \$3, \$4, or \$4.50 PFC.

PFC collections and AIP funds are complementary in the overall funding of airport improvements. The majority of PFC-approved projects are also AIP eligible. However, there is broader eligibility under the PFC Program for noise compatibility measures, for terminal gates and related areas, and costs associated with debt financing. One major use of PFC is the local "match" funds for AIP grants, particularly at nonhub primary airports.

Since its inception, Congress has made several statutory changes to the program. Most recently, the passage of AIR-21 modified the program by raising the maximum PFC limit to \$4.50. In addition, Congress included a mandate in Vision 100 for FAA to develop a nonhub pilot program to streamline the application process. FAA issued a final rule for the pilot program on March 23, 2005. This pilot program is ongoing and has been a success. Other changes required under Vision 100 will be addressed in future rulemakings.

Within FAA, the PFC Program is administered by the Office of the Associate Administrator for Airports, which comprises staffs in the headquarters location and nine regional divisions (six of which have district offices). Although authority to approve other PFC applications was delegated to regional staff in FY 1997, headquarters staff issues any controversial or precedent-setting PFC decisions. However, regional input is vital to headquarters staff for approval of collections and use of PFCs for such decisions.

FAA headquarters and regional personnel work together to ensure that PFC collections meet the following conditions:

- Projects proposed for PFC funding meet statutory objectives and eligibility requirements and are adequately justified;
- PFC revenues do not exceed allowable project costs;
- The PFC collection process is reasonable and nondiscriminatory; and
- The public agency conforms to other requirements and assurances in PFC regulation.

In addition, headquarters and regional staff ensure that PFC information is coordinated with other airport users, as well as the air carriers at airports participating in the PFC Program. FAA also coordinates with the DOT Office of the General Counsel to ensure that air carriers correctly remit PFC collections to public agencies.

In FY 2005, FAA approved or partially approved 104 applications for PFC collections at 91 locations, of which nine were new locations. PFC collections enabled by these and earlier approvals have made significant contributions to many of the major capacity, safety, and security projects described earlier in this report. In FY 2005, FAA approved PFC applications, totaling \$5.9 billion, including these at the following airports:

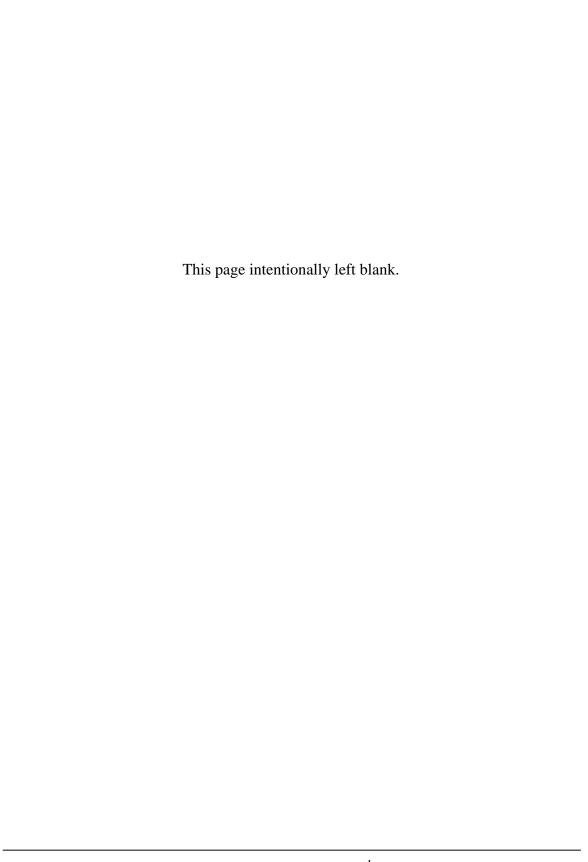

- Phoenix Sky Harbor International Airport, Phoenix, AZ (\$177,800,000);
- Los Angeles International Airport, Los Angeles, CA (\$267,249,968);
- Fort Lauderdale International Airport, Fort Lauderdale, FL (\$270,817,368);
- Orlando International Airport, Orlando, FL (\$232,818,000);
- Minneapolis-St. Paul International Airport, Minneapolis, MN (\$191,380,173);
- Las Vegas McCarran International Airport, Las Vegas, NV (\$622,726,100);
- Pittsburgh International Airport, Pittsburgh, PA (\$250,136,744);
- Dallas-Fort Worth International Airport, Dallas, TX (\$2,891,040,000); and
- Washington Dulles International Airport, Chantilly, VA (\$672,867,049).

In CY 2005, public agencies collected PFCs totaling \$2.4 billion (an increase of \$216 million from CY 2004 PFC collection).

As of September 30, 2005, a total of 358 locations had been approved for PFCs since the program's inception in 1991 and collections are occurring at 331 locations . Since 1991, FAA has authorized PFC collections totaling approximately \$52 billion. 28 Ninety-one percent of large and medium hub airports were collecting PFCs as of the end of the fiscal year, with 79 percent of small hub and nonhub primary airports collecting PFCs. Participation in the PFC Program falls off sharply at the level of nonprimary commercial service airports, with only 23 percent of these airports collecting PFCs as of the end of FY 2005. This category of airports has low passenger volume, so the revenue generated may not off set the cost associated with implementing a PFC program.

<sup>&</sup>lt;sup>28</sup>A complete listing of all PFC approved locations, collections, and expiration dates is available online at <a href="http://www.faa.gov/airports\_airtraffic/airports/pfc/">http://www.faa.gov/airports\_airtraffic/airports/pfc/</a>.

## **Chapter 13: Performance Measurement**

Performance measurement has taken on a major role in FAA activities, including the AIP, due to the Government Performance Results Act (GPRA) of 1993. The GPRA requires Federal agencies to set targets for achievement, expressed in measurable terms. The GPRA measurement focuses on broad outcomes like greater safety, increased capacity, international leadership, and organizational excellence. The goals and measurements are tracked through strategic plans, business plans, annual performance plans, and program performance reports.

FAA sets its goals and reports on performance in the FAA Flight Plan.<sup>29</sup> The Flight Plan is a multiyear strategic effort, setting a course for FAA through 2011. This strategic plan is tied directly to agency funding and is updated each year. The plan includes outcome-based performance goals with measures and targets for four goals:

- Greater Safety Achieve the lowest possible accident rate and constantly improve safety;
- Increased Capacity Work with local governments and airspace users to provide capacity in the U.S. airspace system that meets projected demand in an environmentally sound manner;
- International Leadership Increase the safety and capacity of the global civil aerospace system in an environmentally sound manner; and
- Organizational Excellence Ensure the success of the FAA's mission through stronger leadership, a better-trained workforce, enhanced cost-control measures, and improved decision-making based on reliable data.

The FAA's Office of the Associate Administrator for Airports (ARP) Business Plan was developed to support the strategic goals and objectives of the FAA Flight Plan. The ARP Business Plan has a strong alignment to the Flight Plan, clear and measurable activity targets, and realistic milestones. In 2005, this business plan demonstrated effective coordination with outcome-based performance goals with measures and targets for each of the Flight Plan's four goals.

<sup>&</sup>lt;sup>29</sup>The current edition of the FAA Flight Plan, 2007–2011, is available online at <a href="http://www.faa.gov.">http://www.faa.gov.</a>

#### 13.1 Greater Safety

FAA has an important long-term goal to improve 100 percent of runway safety areas <sup>30</sup> (RSAs) to meet standards or to the extent practicable. In FY 2005, FAA continued to make progress and completed improvements for 43 priority runways, exceeding the FAA's ARP FY 2005 Business Plan goal of at least 41 priority RSAs. FAA also granted approximately \$282 million in AIP funds for RSA improvements for the remaining 246 out of 453 priority runways, including 34 that will be completed in FY 2006.

The reduction of the number of runway incursions<sup>31</sup> is another major FAA safety goal. In FY 2005, ARP supported this goal by striving to have 57 or less runway incursions involving vehicle or pedestrians, known as V/PDs, at airports with an FAA air traffic control tower (approximately 517 towers). Both FAA and the airport community focused on controlling V/PDs throughout the year. These actions resulted in only 52 V/PDs, which exceeded the target by nine percent.

Many safety projects FAA funded in FY 2005 support these efforts to reduce runway incursions, including AIP discretionary funds awarded to safety projects solely intended to reduce runway incursions (such as enhanced runway marking and lighting and pavement reconfiguration). FAA Runway Safety Action Teams (RSATs) established at individual airports recommended these projects. In FY 2005, FAA issued 16 AIP grants, totaling \$333.8 million, in support of RSAT recommendations.

To promote safety, ARP focused contract and staff resources on updating standards contained in Advisory Circulars (ACs). Many AIP-funded projects must comply with the safety standards contained in the ACs. In FY 2005, FAA updated a record number of 24 ACs. This has reduced the average age of ACs from 13.5 years in FY 2002 to 8.2 years in FY 2005. This is significant progress on ARP's long-term goal of reducing the average age of more than 100 ACs to less than 5 years.

During FY 2005, ARP also continued efforts to increase the level of airport safety and technology research. In a memorandum of agreement, DOT, FAA, and the National Academy of Sciences created the congressionally directed Airport Cooperative Research Program. This program is authorized at \$10 million per year and will significantly increase the level of airport research.

<sup>&</sup>lt;sup>30</sup> A runway safety area is a defined area comprised of a runway and the surrounding surfaces that is prepared or suitable for reducing the risk of damage to aircraft in the event of an undershoot, overshoot, or excursion from a runway (see 14 CFR 139.5, Definitions).

<sup>&</sup>lt;sup>31</sup> A runway incursion is defined as any occurrence in the airport runway environment involving an aircraft, vehicle, person, or object on the ground that creates a collision hazard or results in a loss of required separation with an aircraft taking off, intending to take off, landing, or intending to land.

Similarly, ARP sponsors airport research during the fiscal year to advance airport safety, totaling \$8,500,000. This research was done through the Airport Technology Research program funded in the FAA Facility and Equipment (F&E) appropriation and involved research on the following items:

- Airport design
- Operation of new large aircraft
- Airport wildlife hazard abatement
- Runway incursions
- Airport visual guidance technology
- Rescue and fire fighting

Finally, ARP used AIP funds to increase safety and access to rural airports in Alaska. To achieve these goals starting in FY 2005 through 2010, FAA issued \$40.7 million in AIP funds to bring 6 out of 20 substandard Alaskan airports to meet FAA lighting standards for 24-hour access by essential medical emergency aircraft. Further, ARP worked cooperatively with the FAA Alaskan Region Airports Division to administer \$1.8 million of FAA facilities and equipment funding for runway lighting at four rural airport locations.

#### 13.2 Greater Capacity

The National Airspace System Operational Evolution Plan (OEP) <sup>32</sup> is FAA's plan to improve capacity and efficiency in the National Airspace System over the next 10 years. The OEP identifies 35 commercial airports that account for the majority of the scheduled passenger flows in the country. In CY 2002, 73 percent of total scheduled U.S. enplanements and 69 percent of total scheduled U.S. aircraft operations occurred at these airports. The OEP for 2005-2010 established a goal to improve capacity at these 35 OEP airports by 30 percent.

From FY 2002 through FY 2005, six new OEP runways have been commissioned, including an AIP-funded parallel runway at Cleveland Hopkins International Airport commissioned in FY 2005. This new runway provides additional capability for simultaneous arrival/departure operations during VFR conditions (see Chapter 7: Major Capacity, Safety, and Security Project Grants, for more information on AIP-funded runway projects during FY 2005).

In FY 2004, the Department of Transportation (DOT) requested FAA to further study the long-term capacity of the aviation system to ensure it matches forecasts of demand. In particular, DOT asked FAA to determine which OEP airports would not be able to meet future demand and the reasons why. In addition, DOT requested that FAA determine if there are other geographic areas of the country unable to accommodate demand for air transportation.

<sup>&</sup>lt;sup>32</sup> The OEP is available online at http://www.faa.gov/library/plans/.

In June 2004, FAA issued a report that examined the existing and projected capacity of the U.S. airspace system. This report, titled *Capacity Needs in the National Airspace System*, <sup>33</sup> identified airports and/or metropolitan areas that are not expected to meet projected aviation demands in 2013 and 2020, using 2003 data as the baseline. This report looked further into the future than the OEP and took a different approach to determining capacity needs by comparing demand and capacity levels not only at airports but in metropolitan areas as well to determine where future capacity constraints may emerge.

In FY 2005, FAA re-validated the methodology used for this report to ensure investment plans now in place will continue to address future airport capacity demands. In doing so, FAA analyzed and developed solutions for airports identified in this report to ensure they will meet future demand, including capital development needs to be included in the AIP planning process. In addition, similar analysis was completed for non-OEP airports.

To further support capacity enhancements, ARP also distributed AIP funds for three regional studies being conducted for the New York, New England, and Los Angeles metropolitan areas to study regional capacity issues. Although these studies are being completed over several fiscal years, the sponsors of these studies met their respective performance targets and deliverables during FY 2005.

ARP also had an outstanding year in the processing of major environmental impact studies in support of capacity-enhancing or delay-reducing projects. These projects included the final Environmental Impact Statement (EIS) for development at Washington Dulles International Airport regarding the proposed two new runways and associated facilities. In addition, final Records of Decision were issued for the Chicago O'Hare Modernization Program (OMP), Philadelphia Runway 17/35 extension, and Los Angeles Master Plan development.

## 13.3 International Leadership

ARP's international activities grew substantially in FY 2005, requiring both headquarters and regional FAA personnel to participate in numerous international assignments.

Of particular note was ARP's support for the U.S. effort to reconstitute civil aviation in Iraq and Afghanistan. FAA airport certification and safety specialists made two trips to Iraq and conducted onsite assessments at six Iraqi airports. Recommendations were provided to the Iraqi Aviation Authority for improvements required to bring the airports up to International Civil Aviation Organization (ICAO) standards. In Afghanistan, an assessment was conducted at Kabul Airport and recommendations provided to bring the airport up to ICAO safety standards.

<sup>&</sup>lt;sup>33</sup> The *Capacity Needs in the National Airspace System Report* is available online at http://www.faa.gov/airports\_airtraffic/airports/resources/publications/reports/.

In FY 2005, ARP also continued support of the Safe Skies for Africa initiative. Projects included wildlife hazard assessments at airports in Kenya and Uganda. In addition, ARP supported an FAA assessment of aviation safety in Djibouti and conducted airport safety and certification seminars in Cape Verde and South Africa.

Similarly, ARP continued to provide technical assistance to the General Administration for Civil Aviation in China (CAAC). A 2-week training session for eight CAAC airport inspectors was conducted. The first week involved classroom training at the FAA Aeronautical Center in Oklahoma City. During the second week, the group was divided into two smaller groups for hands-on airport safety inspection training in two FAA regions.

Finally, ARP engineering staff represented the U.S. government at ICAO meetings of the Aerodrome Panel and meetings of the Visual Aids Working Group, the Aircraft Rescue and Firefighting Working Group, and the Airport Design Working Group.

#### 13.4 Organizational Excellence

By establishing organizational excellence goals, FAA develops initiatives to ensure the success of FAA's mission through stronger leadership, a better-trained and safer workforce, enhanced cost-control measures, and improved decision-making based on reliable data. In FY 2005, ARP supported these goals by making improvements in all of its management and organizational processes, including AIP.

To ensure better AIP funds control, ARP set out to reduce the number of older, multiphased grants still active and to address grants that have not been active in over 18 months. ARP was successful in monitoring and taking appropriate actions on inactive AIP grants on which the airport sponsor has made no funds requests within 18 months or longer. This allowed ARP to achieve its goal of activating or closing 100 percent of such grants (totaling 1,474 grants) during FY 2005.

In addition, ARP exceeded its goal to close out 95 percent of AIP grants that are 4 years and older. A total of 810 of these older AIP grants, or 96 percent, were closed. ARP also achieved its goal to issue 90 percent of construction and equipment grants based on costs determined by bids rather than estimates.

In FY 2005, ARP also established a national goal of providing relief to 20,000 residents, students, and medical patients (per year on average over a 5-year period) impacted by the airport environment by reducing their noise exposure to a day-night average sound level<sup>34</sup> of less than 65 decibels. These noise compatibility projects were funded through AIP. In

-

<sup>&</sup>lt;sup>34</sup> The day-night average sound level means the 24-hour average sound level, in decibels, for the period from midnight to midnight, obtained after the addition of 10 decibels to sound levels for the period between midnight and 7 a.m. and between 10 p.m. and midnight, local time.

FY 2005, FAA issued 58 AIP grants totaling \$336.5 million in AIP funding in support of noise compatibility projects that will benefit approximately 25,319 individuals. This exceeded our performance target of 20,000 individuals by 26 percent.

Historically, approximately two-thirds of non-noise AIP funds are expended on infrastructure development of airside facilities, more specifically, runways, taxiways, aprons, and associated lighting, safety and standards projects. To most effectively expend funds to maintain pavement integrity, it is important that projects be accomplished before extensive damage due to normal wear and tear and climatic conditions requires more extensive reconstruction (versus rehabilitation). Accordingly, the Office of Airports maintains and monitors a database of runway pavement conditions at all NPIAS and commercial service airports to assure that a minimum level of pavement condition is being maintained. Our established goal is to assure that 93% of all runways at airports in the NPIAS are maintained in good or fair condition. In FY 2005, actual field surveys affirmed that 96% of runways at NPIAS airports met these criteria.

During FY 2005, ARP conducted a nationwide customer satisfaction survey on the following:

- Measure customer satisfaction with the manner in which the ARP conducts its business;
- Garner user views on staff interaction, processes, and materials;
- Identify and/or develop best practices that can be leveraged across FAA; and
- Establish a baseline to provide for measurement of improvement in future years to gauge the effectiveness of resulting FAA regional actions plans.

The survey was conducted by the University of Michigan, CFI Group, and the Federal Consulting Group using the American Customer Satisfaction Index (ACSI). Established in 1994, the ACSI tracks trends in customer satisfaction and provides valuable benchmarking insights on the consumer economy for companies, industry trade associations, and government agencies. The index produces information unique to each participating Federal agency on how its activities affect and are perceived by its customers.

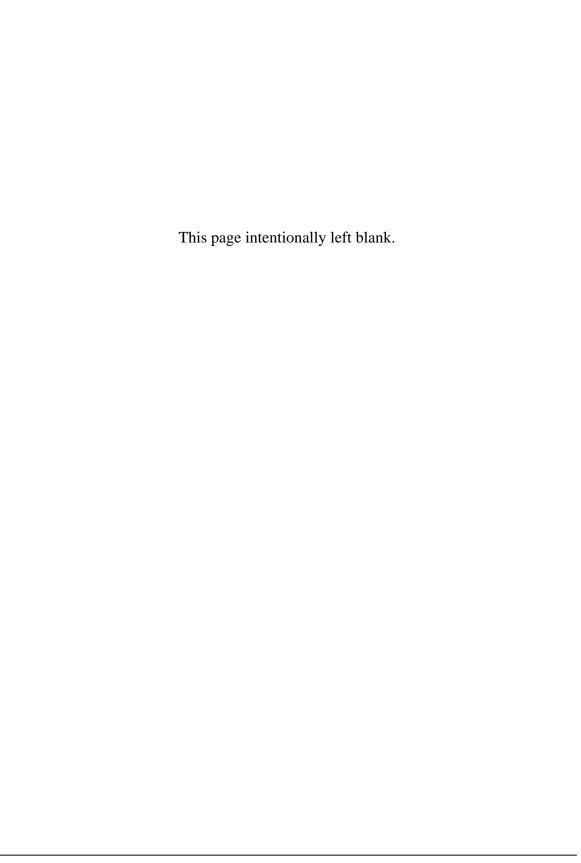

Over 600 respondents, representing a broad cross-section of airports and consultants, responded to the web-based survey. The overall ACSI score for ARP was 71 on the ACSI's 100-point scale, on par with other Federal government regulatory agencies.

ACSI uses customer interviews as input to a multiequation econometric model. The ACSI model is a cause-and-effect model with indices for key drivers of satisfaction (customer expectations, perceived quality, and perceived value), satisfaction (ACSI), and outcomes of satisfaction (customer complaints and customer loyalty). For ARP, the key "driver of satisfaction" was the interaction between headquarters and FAA Airports District Office personnel. Further, the survey identified ARP's core strengths as staff

interaction for their knowledge, accuracy of information provided, and availability, as well as communications/outreach efforts.

ARP is developing regional action plans to address the three areas the survey identified as needing improvement:

- Process improvements, such as allowing more flexibility in adapting guidelines for local interests, paper reduction, and more consistent policy;
- Materials improvement, such as more timely updates to resource guidance, more consistent interpretation, and easier access (via the internet, if possible); and
- Resource management, focusing on most widely used forms of communication (e.g., internet and advisory circulars).

## **Chapter 14: Pilot Programs and Special Funding**

#### 14.1 ILEAV Pilot Program

The Inherently Low Emission Airport Vehicle (ILEAV) Pilot Program completed its fifth and final year of low-emission equipment acquisition and Federal monitoring in FY 2005. The ILEAV Pilot Program, which was authorized in 2000 under AIR-21, served as an important source of experience and information for the subsequent Vision 100 reauthorization and its emission provisions for the VALE Program (see Chapter 10).

The ILEAV Program met its mission to provide information on the feasibility and reliability of emerging low-emission airport technologies. The pilot projects, which sponsored a wide range of technologies and fuel types, provided the agency and the airport community with useful comparisons of the technical, environmental, and economic trade-offs. The results of these pilot projects have provided FAA a better understanding of issues critical to the successful introduction of low-emission vehicles in the airport environment, including the commercial availability of alternative fuel vehicles, refueling and recharging systems, emission assessment methods, ownership issues, and cost effectiveness.

## 14.2 Airport Privatization Pilot Program

The Airport Privatization Pilot Program authorizes FAA to exempt up to five airports from certain Federal requirements pertaining to the use of airport revenue. Airports participating in the program may be exempt from requirements to repay Federal grants, to return property acquired with Federal assistance, and to use the sale or lease proceeds for airport improvements only.

Of the five airports authorized by the legislation, the following options and limitations apply: general aviation airports can be leased or sold, only one large hub primary airport can be included in the program, and air carrier airports can only be leased.

DOT and FAA published application procedures in the *Federal Register* for the pilot program in September 1997. The first application was approved and an exemption was issued on March 30, 2000, to the New York State Department of Transportation and SWF Airport Acquisition, Incorporated, for Stewart International Airport (SWF), a primary airport in Newburgh, NY.

SWF continues to be the only airport with an approved exemption. The Orleans Levee District's application for New Orleans Lakefront Airport remains on file pending receipt

of additional information from the sponsor. At the close of FY 2005, there were three available slots for future applicants.

#### 14.3 Innovative Financing Techniques Program

In 2003, Vision 100 extended the innovative financing technique provisions contained in 49 U.S.C. Section 47135(a) to allow 20 additional finance projects through FY 2007. This is in addition to the 20 demonstration projects FAA approved in FY 2001 and FY 2002.

First introduced in 1996, as a pilot program, these provisions allow FAA to test and evaluate at airports smaller than large and medium hubs innovative airport development financing techniques not otherwise eligible for AIP funds. Such techniques include paying interest, commercial bond insurance, other credit enhancements associated with airport bonds, flexible matching share, and use of entitlement funding for paying principal and interest of terminal building costs incurred before FY 2000. FAA approved 10 demonstration projects under the pilot program.

Subsequently, Congress incorporated into the authorizing statute several of the financial innovations tested in the initial demonstration projects with the passage of AIR-21. Building on this success, FAA approved 10 additional demonstration projects during FY 2001 and FY 2002, for a total of 20 demonstration projects. In these demonstration projects, FAA focused on carrying out worthy projects quickly to save overall project costs and encouraged projects with the potential to improve small airport financing through borrowing.

As during the previous fiscal year, FAA did not receive any innovative finance proposals in FY 2005 and, accordingly, approved no additional innovative financing projects.

## 14.4 Emergency Funding for CY 2004 Hurricane Damage

On October 13, 2004, the President signed into law the Emergency Supplemental Appropriations for Hurricane Disaster Assistance Act, 2005 (Public Law 108-324). Part of the FY 2005 Military Construction Appropriations Act, Public Law 108-324 authorized emergency funding to several agencies, including \$25 million in emergency capital funding to compensate airports for capital costs associated with replacement or repair of public-use facilities damaged by Hurricanes Charley, Frances, Ivan, or Jeanne.

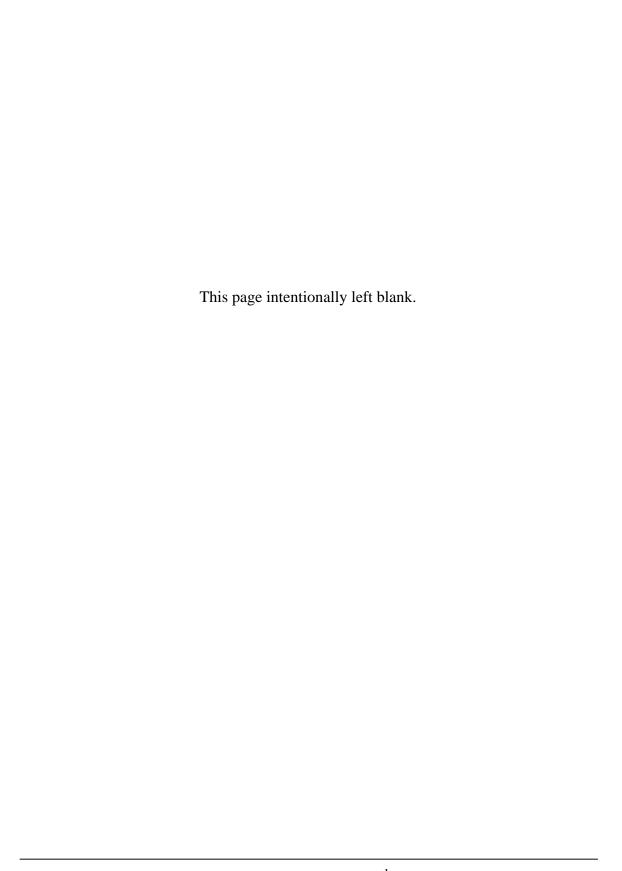

In response, FAA quickly evaluated grant applications on the basis of a special approval process in accordance with the parameters identified in Public Law 108-324. Overall, the supplemental appropriation was allocated to two FAA regions for eligible projects at 66 airports in seven states and Puerto Rico. Florida and Alabama bore the brunt of damage from these hurricanes and received the majority of the funding, with obligation of 93 percent (\$23 million) to 43 Florida airports and 6 percent (\$1.46 million) to 13 Alabama airports. All funds were obligated less than 90 days after passage of the emergency act.

#### 14.5 AIP-Funded Hurricane Grants

Finally, at the close of FY 2005, FAA assisted airports that sustained damage as a result of Hurricanes Katrina and Rita with expedited AIP grants for eligible projects using FY 2005 AIP funding.

Airport damage sustained as a result of the unprecedented 2005 hurricane season was extensive, and returning airports to safe operation was critical to meeting the relief needs of the devastated Gulf Coast region. FAA was able to assist in the relief effort by providing AIP funds for eligible projects in the closing days of FY 2005 to augment airport insurance, aid sought from the heavily burdened Federal Emergency Management Agency, and State and local sources. In all, FAA obligated \$40.5 million of FY 2005 AIP funds to airports in Louisiana, Texas, Mississippi, and Alabama that sustained damage as a result of Hurricanes Katrina and Rita.

The timing of the hurricane season occurring in the final weeks of the fiscal year presented a challenge in meeting the needs of airports that sustained heavy damage. Airport sponsors are not always able to identify specific projects and solidify damage estimates, insurance claims, and relief from other sources in the immediate aftermath of severe storms. Within the limits of the FAA's statutory authority, we provided capital relief needs resulting from seasonal storm damage.

## **Chapter 15: Land Use Compliance**

Section 737 of The Wendell H. Ford Aviation Investment and Reform Act for the 21<sup>st</sup> Century (AIR-21), now codified under 49 USC § 47131, requires the annual compilation of the *Land Use Compliance Report*.<sup>35</sup> This report is to provide a detailed statement listing airports that the Secretary of Transportation believes are not in compliance with Federal grant assurances or other Federal land use requirements with respect to airport lands. The report is to include the circumstances of such noncompliance, the timelines for corrective action, and the corrective action the Secretary intends to take to bring the airport sponsor into compliance.

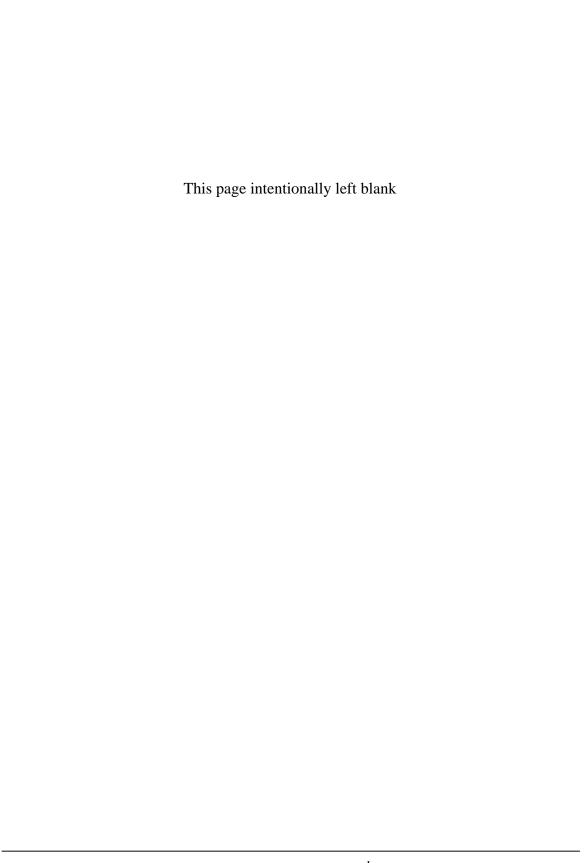

In response to this requirement, FAA has prepared the *Land Use Compliance Report for FY 2005* and included it as Appendix H: Land Use Compliance Report for FY 2005. This report lists airport sponsors that at the end of FY 2005, FAA is investigating or working with to resolve a land use compliance issue and where corrective actions have been requested or are under way. <sup>36</sup> Inclusion in the report does not mean that an airport sponsor has been found to be in noncompliance. The list also includes airports identified in previous years but where resolution is still in progress.

In monitoring airport sponsor compliance with land use requirements, FAA relies in part on inspections of selected airports. This inspection program serves as a compliance oversight and surveillance tool pertaining to airport land use subject to Federal obligations. Congress authorized this program in FY 2000, and the following fiscal year, FAA implemented a regular program of land use inspections of selected airports in each FAA region.

FAA has developed and implemented guidance related to the methodology and procedures to be used when conducting land use inspections, including (1) airport selection criteria, (2) data gathering, (3) pre-inspection procedures, (4) onsite inspection procedures, and (5) corrective actions. The purpose of land use inspections is to ascertain the airport sponsor's compliance with the terms of applicable Federal obligations incurred through grant agreements, surplus property, and non-surplus property conveyances dealing specifically with the use of airport property. FAA also uses this inspection program to promote standardized reporting formats and completeness of land use records and to provide supporting data for potential compliance determinations, both informal and formal. The results of these inspections, including those conducted in FY 2005, are the basis of the *Land Use Compliance Report*.

<sup>&</sup>lt;sup>35</sup> See 49 USC § 47131 (a) 5.

<sup>&</sup>lt;sup>36</sup> Section 47131(b) does not require FAA to make a final agency determination on a compliance matter in order to list an airport in the *Land Use Compliance Report*.

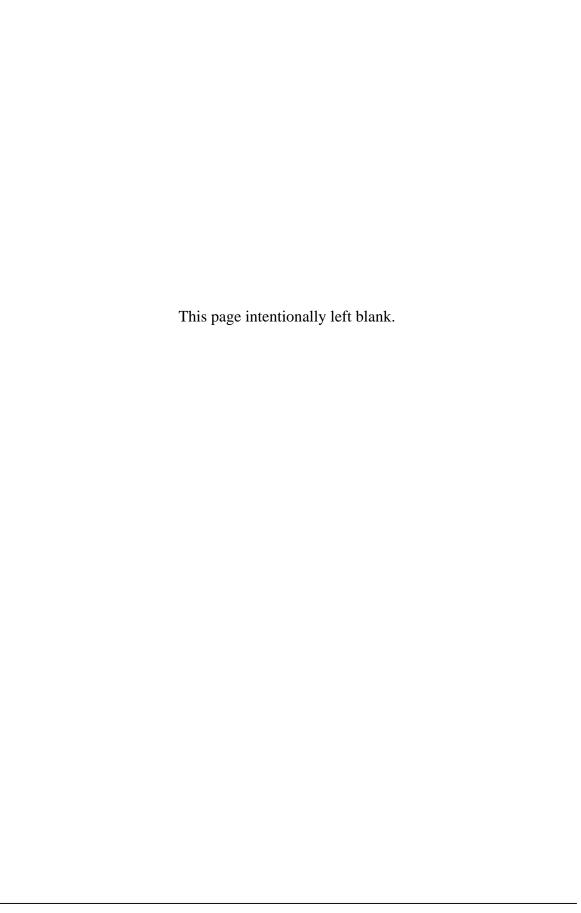

## **Appendix A: Glossary**

- Allocations. After a project is fully processed and approved, FAA regions notify airport sponsors of an allocation of funds for a project. This is merely a notification of intent to grant (obligate) funds and does not involve a transfer of funds. Total allocations by a FAA region can never exceed funds made available by FAA headquarters to a region in either planning figures or allotments. Allocations based only on planning figures issued in advance of obligation limitations and apportionments may have to be withdrawn if final congressionally approved program levels are lower than originally expected.
- Allotments. After receipt of an Office of Management and Budget (OMB) apportionment, FAA will request its budget office to make an allotment of funds to FAA regions to support previously issued planning figures. Allotments and adjustments to allotments will be made throughout the year as required.
- Apportionments. There are two actions referred to as apportionments:
  - The authorizing legislation requires an apportionment of funds to be made each
    October to airport sponsors and States based on formulas contained in the
    authorizing legislation. This apportionment notifies airport sponsors and States
    that these funds are available for eligible work, but does not involve any transfer
    of funds. Such apportionments are more commonly referred to as "entitlements"
    funds.
  - 2. The other type of apportionment is made by the OMB and allows FAA to obligate congressionally authorized AIP funds. The OMB apportionment is formally requested by FAA, which provides a financial plan for orderly use of the funds. The financial plan is based on FAA regional submission of annual program plans. The OMB apportionment may contain restrictions on the use of funds such as restrictions on the amount that may be used quarterly. Such apportionments are more commonly referred to as "discretionary" funds.
- Appropriations. A legislative act authorizing the expenditure of a designated amount of public funds for a specific purpose. Short-term appropriations legislation sometimes is enacted and is known as a "continuing resolution." In the case of AIP, legislation authorizing the grant program provided the necessary authorization to spend funds and issue grants in the form of contract authority. Congress uses the appropriation process to establish an obligation limit for AIP.
- <u>Authorization</u>. A legislative act granting FAA the "contract authority" to issue AIP grants within a specified dollar amount.

- <u>Authorizing Legislation</u>. AIP is authorized by Chapter 471 of Title 49 U.S.C., as amended.
- <u>Carryover Funds</u>. Funds apportioned for primary or cargo service airports, States (including nonprimary apportionments when applicable), and Alaskan airports for eligible work that an airport sponsor can claim to use during the fiscal year for which the amount was apportioned and the 2 fiscal years immediately after that year (or the 3 fiscal years immediately following that year in the case of primary nonhub airports and nonprimary airports). Grants using carryover funds from apportionment funds may be used whether or not there is AIP authorizing legislation if sufficient contract authority remains from a prior authorization legislation.
- <u>Discretionary</u>. The term "discretionary" refers to funds that are available for use on eligible projects at FAA's discretion. Discretionary funds are of two types. One type is referred to as discretionary set-aside funds (for noise planning and programming, Military Airport Program (MAP) participants, and a special reliever airport category). The other type is comprised of those funds remaining after the apportionments are made and the set-asides are accommodated. Of these remaining funds, 75 percent—known as capacity/safety/ security/noise (C/S/S/N)—is to be used for preserving and enhancing capacity, safety, security, and carrying out noise compatibility planning and programs at primary and reliever airports. The remaining 25 percent, known as remaining or pure discretionary, may be used for any eligible project at any airport.
- Entitlements. The term "entitlements" refers to the passenger, cargo service, and State apportionments (including nonprimary apportionments when applicable) available to sponsors and States based on formulas in the Act. See the definition of "apportionments" above.
- Obligations. The execution of a grant agreement with an airport sponsor constitutes an obligation of the U.S. Government to pay the amounts specified in the grant. Obligations of funds are processed through FAA regional accounting offices in two steps: (1) a "reservations of funds" is made before the grant is signed; and (2) an "obligation" is reported when the grant is signed. Total obligations in a region may never exceed the total of funds allotted to a region.
- <u>Obligation Limitation</u>. Language in an annual appropriations act that limits annual grant funds to either the authorized level or to any different level determined by Congress to be suitable for economic requirements.
- <u>Passenger Facility Charges (PFCs)</u>. These are fees collected for every enplaned passenger at commercial airports controlled by public agencies for projects and at fee levels approved by FAA. Airport sponsors then use these fees, up to \$4.50 for every enplaned passenger, to fund FAA-approved projects that enhance safety, security, or capacity; reduce noise; or increase air carrier competition.

- <u>Payments</u>. Payments to a sponsor are made either through processing of requests submitted by a sponsor to FAA or via a letter of credit arrangement.
- <u>Recoveries</u>. As adjustments are made based on actual grant payments, funds may be recovered (de-obligated) from existing obligations and, under certain circumstances, may be re-obligated for new projects or for upward adjustments to existing projects. For block grants, funds are not normally recovered. These funds may be used within the block grant for other eligible projects.
- <u>Set-aside funds</u>. Portions of discretionary funds are set-asides designed to achieve funding minimums specified in the authorizing statute, including (1) 35 percent for noise compatibility planning and implementing noise compatibility programs under Title 49 U.S.C. Section 47501 *et seq.* (2) 4 percent for the Military Airport Program; and (3) if AIP is funded at \$3.2 billion or above, 0.66 percent for a limited number of reliever airports with more than 75,000 annual operations, a runway with a minimum usable landing distance of 5,000 feet, a precision instrument landing procedure, at least 100 based aircraft, and that relieve airports that have at least 20,000 hours of annual delays in commercial passenger aircraft takeoffs and landings.
- Small Airport Fund. Title 49 U.S.C. Section 47114(f) requires that AIP funds apportioned to a large or medium hub airport be reduced if a PFC is imposed at that airport. In accordance with Title 49 U.S.C. Section 47116(b), FAA distributes the withheld apportionments, as follows: 12.5 percent to the AIP discretionary fund and 87.5 percent to the "small airport fund," of which certain amounts must be spent at small hub primary airports, general aviation airports (including reliever airports), and nonhub commercial service airports.

## **Appendix B: Program History**

The Federal Government initiated a grants-in-aid program shortly after the end of World War II to promote the development of a system of civil airports to meet U.S. aviation needs. This early program, the Federal-Aid Airport Program (FAAP), was established with the passage of the Federal Airport Act of 1946 and funded from the general fund of the Treasury. FAAP grants could be used for basic airport development, including airfield construction, passenger terminals, entrance roads, and land needed for the airport.

Act of 1970 established a more comprehensive program. This Act provided grant assistance for airport planning under the Planning Grant Program (PGP) and for airport development under the Airport Development Aid Program (ADAP). The source of funds was a newly established Airport and Airway Trust Fund that derives its revenues from aviation user taxes on items such as airline fares, air freight, and aviation fuels. The act was amended several times and was extended 1 year before expiring on September 30, 1981.

The Airport and Airway Improvement Act of 1982: The Airport and Airway Improvement Act of 1982 (Title V of the Tax Equity and Fiscal Responsibility Act of 1982, P.L. 97-248, September 3, 1982) established the successor grant program, the Airport Improvement Program (AIP). The AIP provides assistance under a single program for airport planning and development with user taxes from the Airport and Airway Trust Fund. This 1982 Act also provides funds to conduct noise compatibility planning and to implement noise compatibility programs that are authorized by the Aviation Safety and Noise Abatement Act of 1979 (P.L. 96-193).

The Airport and Airway Improvement Act has been amended several times. The first, enacted barely 1 month after the initial statute, was the Continuing Appropriations Act (P.L. 97-276, October 2, 1982). It provided authority to convert unused apportioned funds for use in the award of discretionary grants. The Surface Transportation Assistance Act (P.L. 97-424, January 6, 1983) increased the annual authorizations for AIP for FY 1983 through FY 1985.

The Airport and Airway Safety and Capacity Expansion Act of 1987: The Airport and Airway Safety and Capacity Expansion Act of 1987 (P.L. 100-223, December 30, 1987) extended AIP grant authority for 5 years. It authorized \$1.7 billion each fiscal year through 1990, \$1.8 billion for FY 1991, and \$1.9 billion for FY 1992. This Act also authorized FAA to use the letter of intent process to finance high-priority capacity projects with funds that become available in future fiscal years. Another provision of the 1987 amendment was authorization of a State Block Grant Program in three States during FY 1990 and FY 1991. The FAA initiated this program with Illinois, Missouri, and North Carolina. The amendment also established a Disadvantaged Business Enterprise (DBE) Program to help small business concerns owned and

controlled by socially and economically disadvantaged individuals. Under the statutory authority establishing the DBE Program, not less than 10 percent of AIP funds made available yearly for approved construction projects must be awarded to DBE firms and individuals. However, subsequent Supreme Court decisions and the resultant revisions to the Department of Transportation's DBE regulations require DBE goals to be "narrowly tailored." Therefore, DBE goals must be based on demonstrable evidence of the relative availability of DBEs ready, willing, and able to participate in DOT-assisted contracts.

The Airport and Airway Safety, Capacity, Noise Improvement and Intermodal Transportation Act of 1992: The Airport and Airway Safety, Capacity, Noise Improvement and Intermodal Transportation Act of 1992 (P.L. 102-581, October 31, 1992) authorized the extension of AIP at a funding level of \$2,025 million through FY 1993. This Act included a number of changes in AIP. The primary changes include the expanded eligibility of development under the Military Airport Program (MAP); eligibility for the relocation of air traffic control towers and navigational aids (including radar) if they impede other projects funded under AIP; the eligibility of land, paving, drainage, aircraft deicing equipment, and structures for centralized aircraft deicing areas; and projects to comply with the Americans with Disabilities Act of 1990, the Clean Air Act, and the Federal Water Pollution Control Act. The Act also increased the number of States that may participate in the State Block Grant Program from three to seven and extended that program through FY 1996. In 1993, the FAA added Michigan, New Jersey, Texas and Wisconsin to the program.

The AIP Temporary Extension Act of 1994: The AIP Temporary Extension Act of 1994 (P.L. 103-260, May 26, 1994) extended the authorization of AIP until June 30, 1994. This Act stipulated that the minimum amount to be apportioned to a primary airport based on passenger boardings would be \$500,000. The Act also modified the percentage of AIP funds that must be set aside for reliever airports (reduced from 10 percent to 5 percent), commercial service nonprimary airports (reduced from 2.5 percent to 1.5 percent), and system planning projects (increased from 0.5 percent to 0.75 percent). It also provided a minimum level of discretionary funds after August 1, 1994. If the discretionary funds remaining after all formulas and set-asides are calculated are less than \$325 million, all set-asides and apportionments (except Alaska supplemental funds) must be reduced by equal percentages to provide this minimum level of discretionary funds. Eligibility for terminal development was expanded to allow the use of discretionary funds at reliever airports and nonhub primary airports.

Codification of Certain U.S. Transportation Laws at 49 U.S.C.: P.L. 103-272 (July 5, 1994), Codification of Certain U.S. Transportation Laws at 49 U.S.C., repealed the Airport and Airway Improvement Act of 1982, as amended, and the Aviation Safety and Noise Abatement Act of 1979, as amended, and recodified them without substantive change at Title 49 U.S.C., etc. Several notable name changes were contained in the recodification language. The term "enplanements" was replaced with the term "passenger boardings." The codification also uses the term "passenger facility fees" instead of "Passenger Facility Charges." These terms, when used in a discussion of legislative provisions and program objectives, are interchangeable.

The Federal Aviation Administration Authorization Act of 1994: The Federal Aviation Administration Authorization Act of 1994 (P.L. 103-305, August 23, 1994) extended AIP until September 30, 1996. This Act increased the number of airports that can be designated in the MAP from 12 to 15, but required that FAA find that projects at newly designated airports will reduce delays at airports with 20,000 hours of delay or more. It also expanded AIP eligibility to include universal access control and explosives detection security devices. This Act also imposed a requirement for a number of actions by FAA and airport sponsors regarding airport rates and charges and airport revenue diversion.

The Federal Aviation Reauthorization Act of 1996: The Federal Aviation Reauthorization Act of 1996 (P.L. 104-264, October 9, 1996) extended AIP until September 30, 1998. Various changes were made to the formula computation of primary and cargo entitlements, State apportionment, and discretionary set-asides. Specifically, under primary airport entitlements, the formula was adjusted by changing the credit for the number of enplaning passengers over 500,000 from \$0.65 to (1) \$0.65 for the passengers from 500,000 up to 1 million and (2) \$0.50 for each passenger over 1 million. Cargo entitlements were decreased from 3.5 percent of AIP to 2.5 percent of AIP. The previous cap of 44 percent of AIP for primary and cargo entitlements was removed.

State apportionments were increased from 12 percent of AIP to 18.5 percent, with the previous set-asides for reliever and nonprimary commercial service airports removed. The eligibility for use of State apportionments was expanded to include nonprimary commercial service airports. The system planning set-aside was also eliminated.

The noise and MAP set-aside computations were also changed from 12.5 percent and 2.5 percent of total AIP, respectively, to 31 percent and 4 percent of the discretionary fund. In addition, previously there was a minimum level of \$325 million for the discretionary fund after subtraction of the various apportioned funds and set-asides. In addition, this Act changed the minimum discretionary fund level to \$148 million plus the total amount required from the discretionary fund to carry out in the fiscal year letters of intent issued before prior to January 1, 1996.

Three new pilot programs for innovative financing techniques, pavement maintenance, and privatization of airports were added to the program. Other changes included changes to the MAP in the number of airports under the program, criteria for selection, project eligibility, and permission to extend MAP participants for an additional 5-year period.

The State Block Grant Program was formally adopted by removing the designation of "pilot" and the number of participant States was increased first from 3 to 7 States in 1997, to 9 States in 1998. Following enactment, FAA added Pennsylvania and Tennessee to the program.

The Act also aligned PFC and AIP to permit both to be used for funding projects to comply with Federal mandates and to relocate navigational aids and air traffic control

towers. However, these relocations are eligible only when needed in conjunction with approved airport development using AIP or PFC funding. Finally, new provisions for revenue diversion enforcement were added to FAA's authority.

**1999 AIP Extensions:** During FY 1999, four separate public laws extended AIP through September 30, 1999:

- <u>Initial Extension</u>. P.L. 105-277, enacted October 21, 1998, extended AIP for a 6-month period ending March 31, 1999. The AIP contract authority was established at \$1.205 billion, and the obligation limitation was established at \$975 million. This public law created new project eligibility, during FY 1999 only, for assessments of turn of the century (Y2K) CY 2000 processing capabilities for airport technology systems.
- Second Extension. P.L. 106-6, enacted March 31, 1999, extended AIP for a 2-month period until May 31, 1999, increasing the contract authority by \$402 million and the obligation limitation to \$1.3 billion, or an additional \$325 million. In addition, the public law relocated the Small Hub Fund from the Discretionary Fund to the Small Airport Fund. Further, the law removed a cap of \$300 million that was placed on the Discretionary Fund.
- Third Extension. P.L. 106-31, enacted May 21, 1999, extended AIP until August 6, 1999. It increased AIP contract authority by \$443 million and increased the obligation limitation for FY 1999 by \$360 million to a total of \$1.660 billion. The law further restored discretionary set-aside for the MAP, which was inadvertently permitted to expire.
- <u>Final Extension</u>. On September 29, 1999, P.L. 106-59 was enacted extending AIP to September 30, 1999. This law increased AIP contract authority to \$2.41 billion, an increase of \$360 million. The obligation limitation was increased to \$1.95 billion, an increase of \$290 million.

The Wendell H. Ford Aviation Investment and Reform Act of the 21st Century: In April 2000, Congress enacted the Wendell H. Ford Aviation Investment and Reform Act of the 21st Century (AIR-21), reauthorizing AIP through FY 2003. AIR-21 instituted many changes to the program, including changes to funding levels, revised criteria for program eligibility, and expanded pilot programs. Some of these changes are as follows:

- The authorized AIP funding level significantly increased in FY 2001 to a level of \$3.2 billion, growing to \$3.4 billion in FY 2003.
- Formula changes became effective in FY 2000 without regard to the total AIP level, including (1) a minimum passenger entitlement increase from \$500,000 to \$650,000, (2) a cargo entitlement increase from 2.5 percent of AIP to 3 percent, and (3) set-aside increase for noise compatibility planning and projects from 31 percent of discretionary funds to 34 percent.

- If the amounts made available for AIP through the appropriations process equal or exceed \$3.2 billion in FY 2001 and beyond, the following changes would be made to the AIP formula: (1) passenger entitlements determined by formula would double; (2) minimum passenger entitlements would increase to \$1 million; and (3) maximum passenger entitlements would increase from \$22 million to \$26 million.
- State apportionment increased from 18.5 percent to 20 percent, with each nonprimary airport entitled to an individual apportionment based on the lesser of one-fifth of the airport's 5-year capital needs as identified in FAA's National Plan for Integrated Airport Systems (NPIAS) or \$150,000.
- A new "super reliever" airport set-aside was established and funded at two-thirds of a percent of AIP.
- Two new pilot programs were established—one for low emission vehicles and supporting infrastructure and another for projects implemented through design-build contracts. AIR-21 also extended the innovative finance pilot program and made the pavement maintenance pilot program permanent.
- The maximum allowable PFC increased from \$3.00 to \$4.00 or \$4.50. A large or medium hub that imposes a PFC at the \$4.00 or \$4.50 level would be obliged to increase its passenger entitlement turnback from 50 percent to 75 percent.
- Qualifications for a large or medium hub airport to qualify for the higher PFC (above \$3.00) changed, requiring sponsors of these airports to show that the projects proposed for funding would make significant contributions to (1) improving safety or security, (2) increasing air carrier competition, (3) reducing current or anticipated congestion, or (4) reducing aviation noise impacts.
- Number of states eligible to participate in the State Block Grant Program increased from 9 to 10. To date, no qualified state has applied to fill the 10<sup>th</sup> slot.

The Aviation and Transportation Security Act: The Aviation and Transportation Security Act (ATSA), P.L. 107-71, amended Title 49, U.S.C., to make eligible any additional security related activity required by law or the Secretary. This new eligibility was broad and could include operational costs that heretofore have not been eligible under AIP. The period of eligibility was for FY 2002 only and could include only the additional costs from September 11, 2001, to September 30, 2002.

Section 119(a)(1) of ATSA provided for use of FY 2001 or FY 2002 entitlements on any nonprimary airport activity, including operational activities, where the airfield had been the subject of security restrictions defined by Notice to Airmen FDC 1/0618. Section 119(a)(1) of the ATSA made eligible for AIP in FY 2002 payments for "debt service on indebtedness incurred to carry out a project at an airport owned or controlled by the sponsor or at a privately owned or operated airport passenger terminal financed by indebtedness incurred by the sponsor if the Secretary determines that such payments are necessary to prevent a default on the indebtedness." This provision applied to both publicly owned projects and privately-owned or operated passenger terminal buildings, including those on AIP-eligible airports that may be under private ownership. No airport requested any AIP funding under this provision.

Finally, ATSA amended Section 47102(3) of Title 49, U.S.C., to include the replacement of baggage conveyor systems, and reconfiguration of terminal baggage areas, that are undertaken by an airport owner or operator and that the Secretary determines are necessary to install bulk explosive detection devices. The effect of this amendment made this development AIP eligible (already PFC eligible). Unlike other provisions of ATSA, eligibility for this item was not limited to FY 2002.

Emergency Funding for Costs of New Security Requirements Resulting From Terrorist Attacks of September 11, 2001: The Department of Defense's Supplemental 2002 Appropriations Act, P.L. 107-117, appropriated \$175 million to the FAA to reimburse airports for direct costs to comply with new security requirements as a result of terrorist attacks on September 11, 2001. On March 8, 2002, the Secretary of Transportation announced the allocation of these funds to 317 eligible airports. The funds helped defray costs associated with additional law enforcement personnel, airport surveillance and the revalidation of all airport-issued and approved identification.

#### The specific allocations were:

- Nonhub airports 184 airports received \$35.6 million;
- Small hub airports 67 airports received \$28.3 million; and
- Large and medium hub airports 66 airports received \$111.1 million.

The Vision 100—Century of Aviation Reauthorization Act: On December 12, 2003, the President signed into law the Vision 100—Century of Aviation Reauthorization Act (Vision 100), P.L. 108-176. Vision 100 provided funding for AIP from FY 2004 through FY 2007. The new legislation also contained changes to the basic requirements and guidelines under which FAA implements AIP, including numerous provisions to assist smaller airports and to streamline the environmental review of airport projects.

#### Several sections of Vision 100 are summarized below:

- Section 123 established a pilot program for streamlining approvals under the PFC
  Program for nonhub airports. Under this pilot program, FAA deems a PFC approval
  request approved unless the agency objects within 30 days. In addition, changes were
  made to requirements for air carrier consultation, public comment and Federal
  Register notice, application content, air carrier financial management, debt service,
  military charters, low emission vehicles and the Air Traffic Modernization Program.
- Section 141 expanded the eligibility for routine pavement maintenance to nonhub airports. Under AIR-21, pavement maintenance was made eligible for nonprimary airports.
- Section 149 contained provisions for nonprimary airports to better use the entitlements granted under AIR-21 that allow these airports to share these entitlements with other airports in the same State or geographic area; airports may also perform work prior to

a grant and be reimbursed later using their nonprimary entitlements. Under this provision, FAA may also provide grants on a multiyear basis similar to larger airports. Airports are also permitted to use these nonprimary entitlements for terminal development work. Finally, this section allows nonprimary airports to use the entitlements for limited revenue producing aeronautical facilities if they have demonstrated that all of its airside needs have been adequately financed.

- Section 148 consolidated various considerations for making discretionary grants into one section and added two more considerations. These two new considerations restrict FAA in giving discretionary grants to the projects with the highest numerical priority rating first and to make a determination that a project will be commenced within six months or within the same fiscal year, whichever is later.
- Section 150 extended the use of nonprimary airports' entitlements from three years to four years.
- Section 152 established a pilot program for the purchase of development rights of privately owned airports by State or local public entities.
- Section 156 extended Title 49, U.S.C. 47135, the innovative finance demonstration program (IFDP). During FY 2004 through FY 2007, the IFDP extension allows an additional 20 airport development projects at small and nonhub airports, as well as any nonprimary commercial service or general aviation airport.
- Section 159 expanded AIP and PFC eligibility to include facilities needed to support low emission vehicles and other air quality improvements including gate electrification and low emission vehicles. It further added a pilot program for the retrofit of conventional fuel burning ground support equipment to lower emission equipment.
- Section 160 permits AIP grants to be provided to local governments for land use compatibility planning and projects if the local airport does not have an existing and current FAR Part 150 noise compatibility program.
- Section 161 increased the Federal share of projects at small hub and smaller airports from 90 percent to 95 percent until 2007.
- Section 424 added a requirement that a large or medium hub airport must disclose to FAA if it has been unable to provide access in the previous 6 months. Such disclosure must be provided on February 1 or August 1 of a year for any inability occurring in the previous six months.

#### **FY 2005 Response to Hurricane Damage:**

On October 13, 2004, the President signed into law the Emergency Supplemental Appropriations for Hurricane Disaster Assistance Act, 2005 (Public Law 108-324) as part of the FY 2005 Military Construction Appropriations Act. Public Law 108-324 authorized emergency capital funding to compensate airport sponsors for capital costs for replacement or repair of public-use facilities, as well as emergency funding for other Federal agencies. The airport emergency funding had to be directly related to damage

caused by Hurricanes Charley, Frances, Ivan, or Jeanne and was distributed at the discretion of the FAA Administrator.

Similarly, on October 7, 2005, the President signed Public Law 109-87 that authorized the Secretary of Transportation to provide grants-in-aid for emergency repairs to airports damaged by Hurricanes Katrina and Rita. The law specified that such emergency aid be funded from FY 2005 and FY 2006 unobligated funds already appropriated to the AIP.

## **Appendix C: Grant Funding Authorizations, Obligation Limitations, and Obligations**

The following chart shows the cumulative performance of AIP since the program's inception in 1982. Funding amounts are shown in million of dollars.

Fiscal Year	Congressional Auth. AIP Funding Amount	AIP Funding Amount Adjusted for Approp. Act Limitations	Gross Obligations <sup>1, 3</sup>	Total Amount of New Grants Awarded	Total Number of New Grants Awarded	
1982 <sup>2</sup>	\$450	\$450	\$413	\$413	651	
1983 <sup>4</sup>	\$800 <sup>5</sup>	\$805	\$806	\$736	1,082	
1984 <sup>6</sup>	\$994	\$800	\$812	\$739	1,104	
1985	\$987	\$925	\$935	\$849	1,160	
1986 <sup>7</sup>	\$1,017	\$885	\$906	\$782	1,083	
1987 <sup>8</sup>	\$1,017	\$1,025	\$1,053	\$919	1,173	
1988	\$1,700	\$1,269	\$1,290	\$1,278	1,251	
1989	\$1,700	\$1,400	\$1,430	\$1,279	1,258	
1990	\$1,700	\$1,425	\$1,453	\$1,285	1,152	
1991	\$1,800	\$1,800	\$1,836	\$1,670	1,404	
1992	\$1,900	\$1,900	\$1,955	\$1,765	1,507	
1993	\$2,025	\$1,800	\$1,875	\$1,830	1,434	
1994 <sup>9</sup>	\$2,970	\$1,690	\$1,731	\$1,702	1,318	
1995	\$2,161	\$1,450	\$1,501	\$1,418	1,047	
1996	\$2,214	\$1,450	\$1,506	\$1,380	941	
1997 <sup>10</sup>	\$2,280	\$1,460	\$1,506	\$1,476	1,066	
1998	\$2,347	\$1,700	\$1,654	\$1,504	1,040	
1999	\$2,410	\$1,950	\$1,990	\$1,959	1,489	
2000	\$2,475	\$1,851	\$1,862	\$1,958	1,149	
2001	\$3,200	\$3,140	\$3,224	\$3,128	1,912	
2002	\$3,300	\$3,223	\$3,302	\$3,152	2,033	
2003	\$3,400	\$3,295	\$3,397	\$3,274	2,234	
2004	\$3,400	\$3,294	\$3,375	\$3,274	2,150	
2005	\$3,500	\$3,384	\$3,417	\$3,546	2,099	

<sup>1</sup> Gross obligations are calculated by adding the amount of new grants awarded with the amount of recoveries in prior-year grants used for increases in existing grants. Gross obligations include current year funds plus reobligations of funds recovered from adjustments to prior year projects. The difference between yearly gross obligations and new grants is attributed to increases to existing grant agreements. <sup>2</sup> The FY 1982, gross obligations included Airport Development Aid Program (ADAP) entitlements that

were authorized to be continued under AIP. FY 1982 data does not include a FY 1982 grant to the Cannon International Airport, Reno, NV, for \$5.1 million that was funded with FY 1982 funds authorized prior to approval of AIP.

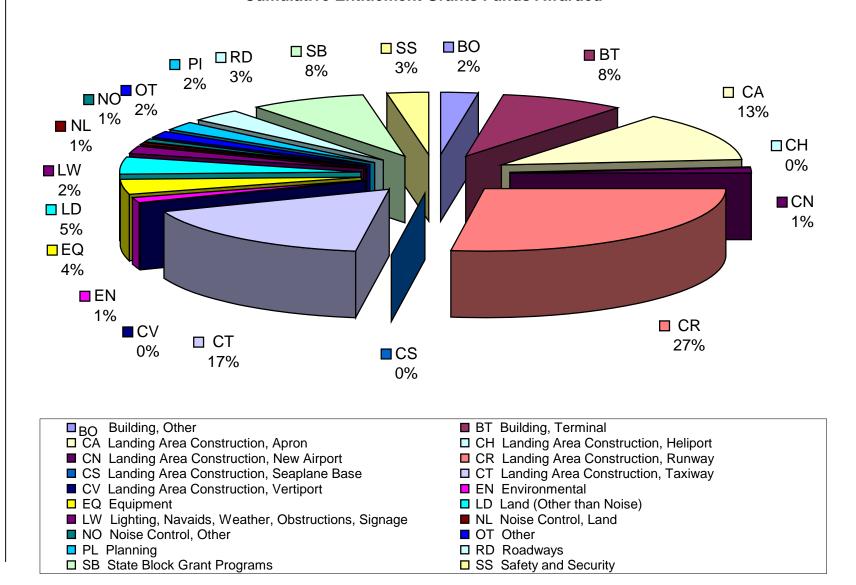

- <sup>3</sup> For FY 1982–1993, gross obligation amounts do not include reobligated funds recovered from adjustments to obligations made under the ADAP program authorized from FY 1970 through FY 1981. Legislation allowed use of recovered ADAP funds for ADAP grant increases up to a maximum of 10 percent of the original grant amount. Reobligation amounts were \$7.1 million for 1982; \$6.7 million for 1983; \$7.1 million for 1984; \$5.2 million for 1985; \$4.0 million for 1986; \$6.7 million for 1987; \$2.7 million for 1988; \$3.1 million for 1989; \$1.1 million for 1990; \$0.4 million for 1991; \$0.2 million for 1992; and \$0.1 million for 1993.
- <sup>4</sup> The FY 1983 appropriation included \$600 million of the \$800 million authorized and \$150 million of the \$200 million authorized by the Surface Transportation Assistance Act of 1982 (STAA) and appropriated under the Emergency Jobs Bill (Public Law 98-8), plus another \$54.5 million of unrequested entitlements carried over from prior years.
- <sup>5</sup> The STAA increased authorization by \$200 million in FY 1983 and FY 1984 and by another \$75 million in FY 1985. The projects approved under this authorization were referred to as "Jobs Bill Projects" since they were financed with funds appropriated by the Emergency Jobs Bill (Public Law 98-8).
- <sup>6</sup> The FY 1984 appropriation included \$793.5 million of the \$993.5 million authorized and \$6.5 million of the \$200 million authorized by the STAA and appropriated under the Emergency Jobs Bill (P.L. 98-8).
- The FY 1986 appropriation included \$885.2 million of the \$925 million authorized and was reduced by P.L. 99-177, Balanced Budget and Emergency Deficit Control Act.
- <sup>8</sup> The FY 1987 appropriation included the \$1 billion authorized, plus a \$25 million supplemental appropriation (P.L. 100-71).
- According to the Office of Management and Budget, with concurrence by the Congressional Budget Office, the total amount authorized in FY 1994 was \$2.97 billion, even though it appeared that \$2.16 billion was the amount authorized. This was due to the combination of the lapse of authority of AIP after FY 1993 and the amendments extending the program in May 1994 and August 1994.
- <sup>10</sup> Congress imposed rescissions in contract authority of \$50 million per P.L. 104-208, Omnibus consolidated Appropriations Act (1997), and \$750 million per P.L. 105-18, 1997 Emergency Supplemental Appropriations Act.

# Appendix D: Total AIP Grant Funds Awarded by Development and Funding Types

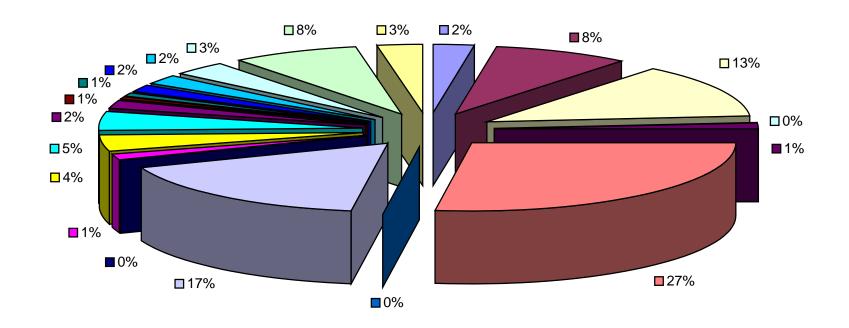

### **Cumulative Grants Awarded**

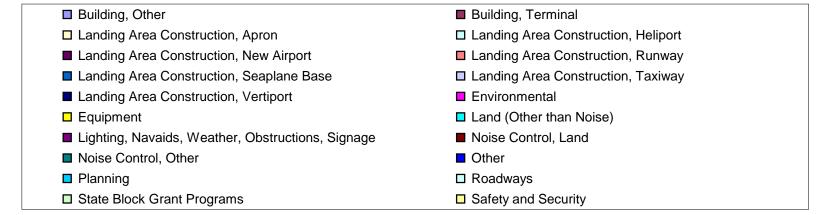

Development Planning Type		Apportioned Grant Funds		Discretionary Grant Funds		Combined Grant Funds

					Land Use Compliance Rep	ort for FY 2005		
Location	Reg	City	St	Locid	Compliance Issue	Corrective Action	Compliance Status	Estimated Completion/ Compliance Date
Aniak	AL	Aniak	AK	ANI	Airport has permitted non-aeronautical uses without FAA concurrence and at below Fair Market Value.	Eliminate non-aeronautical uses or seek FAA concurrence at Fair Market Value.	Non- Compliant	3/13/2005
Beaver	AL	Beaver	AK	WBQ	Several structures are located on airport property without adequate oversight and compensation.	Execute lease agreements and collect fair market rents for activities at the airport.	Closed, In Compliance	9/20/2005
Fort Yukon	AL	Fort Yukon	AK	FYU	a. The Airport Layout Plan is not current. b. Several non-aeronautical uses (residences, storage) have been permitted on airport property without FAA approval.	a. Submit an updated Airport Layout Plan.     b. Airport must submit a corrective action plan that is consistent with FAA requirements.	In Process	10/31/2005
Igiugig	AL	Igiugig	AK	IGG	a. Airport Layout Plan is not current. b. Airport has permitted certain non-aeronautical (residences, offices, vehicle parking) uses at the airport without FAA approval.	a. Airport must submit a corrective action plan that is consistent with FAA requirements. b. Submit an updated Airport Layout Plan.	In Process	10/31/2005
Ralph M Calhoun Memorial	AL	Tanana	AK	TAL	In addition to a non-conforming Airport Layout Plan, the airport has permitted non-aeronautical uses of airport property without FAA approval.	Airport must update the Airport Layout Plan and terminate non-aeronautical uses.	Non- Compliant	9/30/2005
Soldotna	AL	Soldotna	AK	SXQ	a. Airport Layout Plan does not conform with actual airport properties and uses. b. Unauthorized airport construction has taken place, which in turn conflicts with several land use requirements, including 14 CFR Part 77, and airport safety. c. Residential hangars have been permitted at the airport.	The sponsor must update the Airport Layout Plan, restore intended uses of airport property, remedy any safety action items, and terminate residential use of airport property.	Non- Compliant	5/30/2005
Moton Field Municipal	SO	Tuskegee	AL	06A	Airport property, an access road, and Federally improved aeronautical facilities (apron and taxiway) were donated to the National Park Service (NPS) without obtaining a release from the FAA and without compensation to the airport account.	Sponsor was to present a plan to credit airport account for lost aeronautical, access and non-aeronautical assets. City committed to replace the access road to the airport with other than FAA funds, replace an airport apron, and reimburse the FAA the Fair Market Value of the land deeded to the NPS.	Closed, In Compliance	9/1/2005
Pinal Airpark	WP	Marana	AZ	MZJ	The entire airport was leased to a private company in violation of the applicable Surplus Property Agreement. Airport not open to the public.	Sponsor must re-negotiate lease with operator and address all outstanding compliance violations.	Non- Compliant	9/30/2005
Sedona	WP	Sedona	AZ	SEZ	Airport has permitted non-aeronautical uses on airport property.	Airport must terminate the non-aeronautical activities or/and seek FAA release of the property.	In Process	12/31/2005

	Land Use Compliance Report for FY 2005											
Location	Reg	City	St	Locid	Compliance Issue	Corrective Action	Compliance Status	Estimated Completion/ Compliance Date				
Williams Gateway	WP	Phoenix	AZ	IWA	Airport disposed of obligated airport property without FAA approval.	Sponsor must submit for FAA approval the release and current use of airport land. Sponsor must compensate airport account at Fair Market Value based on an appraisal. A new Airport Layout Plan and Exhibit A must be submitted to FAA.	In Process	12/31/2005				
Winslow- Lindbergh Regional	WP	Winslow	AZ	INW	Airport sponsor disposed of airport property without FAA approval.	Take corrective action that is acceptable to the FAA and that is consistent with property release procedures.	In Process	12/31/2005				
Banning Municipal	WP	Banning	CA	BNG	Airport property is being used for non- aeronautical purposes (drag racing) without FAA approval.	Eliminate the non-aeronautical use agreement.	Non- Compliant	9/30/2004				
Blythe	WP	Blythe	CA	BLH	a. Sponsor allowed long-term leases of airport property for non-aeronautical use without FAA approval.	a. Terminate leases or seek FAA release of land from aeronautical use.	Non- Compliant	9/30/2004				
Brawley Municipal	WP	Brawley	CA	BWC	Airport sponsor sold dedicated airport property without FAA approval.	Submit a corrective action plan to resolve the matter by restoring airport property and/or seeking FAA approval.	In Process	12/31/2005				
Brown Field Municipal	WP	San Diego	CA	SDM	Airport has permitted several non-aeronautical uses without FAA approval, many of which are below Fair Market Value.	FAA has requested that the airport take corrective action to eliminate and mitigate the non-aeronautical uses that exist at the airport by seeking FAA approval and ensuring adequate compensation to the airport at Fair Market Value.	Non- Compliant	09/30/2005				
Calexico International	WP	Calexico	CA	CXL	Airport sponsor permitted non-aeronautical use of airport property at below fair market value.	Demonstrate to FAA that adequate action is being taken to compensate the airport for the Fair Market Value use of the property.	In Process	12/31/2005				
Fresno Yosemite International	WP	Fresno	CA	FAT	Airport disposed of airport property without FAA approval (release) and below fair market value (FMV).	Sponsor must submit and FAA must approve the release and current use of land. Sponsor must compensate airport account at Fair Market Value based on an appraisal. A new Airport Layout Plan and Exhibit A must be submitted to FAA.	In Process	12/31/2005				
Gillespie Field	WP	San Diego/El Cajon	CA	SEE	a. Residential development was permitted on airport property. b. Non-aeronautical use of aviation hangars. c. 70 acres of airport property are used for non-aeronautical use and below Fair Market Value. d. Airport property was used for non-aeronautical purposes without FAA approval and adequate compensation.	a. Prevent new residential development and correct any existing uses as leases come up for renewal. b. Dedicate aviation infrastructure for aviation uses. c. Dedicate the 70 acres of land to aeronautical use. d. Compensate airport account in accordance with FAA's guidelines.	In Process	12/31/2005				

					Land Use Compliance Rep	oort for FY 2005		
Location	Reg	City	St	Locid	Compliance Issue	Corrective Action	Compliance Status	Estimated Completion/ Compliance Date
Holtville	WP	Holtville	CA	L04	Airport is no longer used as an airport. Airport has effectively been abandoned.	Airport sponsor was asked to take appropriate action to ensure that the facility is used for airport purposes.	Non- Compliant	9/30/2005
Imperial County	WP	Imperial	CA	IPL	Airport has permitted non-aeronautical use of airport property and has refused aeronautical use of certain facilities to preserve non-aeronautical uses.	Airport has submitted a plan to the FAA and has committed to dedicate property for aeronautical uses as soon as demand arises.	Closed, In Compliance	9/1/2005
Inyokern	WP	Inyokern	CA	IYK	Airport property is being used for non- aeronautical activities without FAA concurrence, including temporary airport closure.	Sponsor can return property to aeronautical uses or seek conditional FAA approval for non-aeronautical uses.	Closed, In Compliance	09/02/2005
Mammoth Yosemite	WP	Mammoth Lakes	CA	ММН	a. Airport property has been compromised by non-aeronautical leases and agreements without FAA approval. b. Exclusive right has effectively been granted. c. Airport sponsor has not demonstrated it holds property interest in part of airport property.	Sponsor must provide evidence that it has taken corrective action to address non-aeronautical leases, that exclusive rights issue has been addressed and that it holds adequate property interest in all airport property.	Non- Compliant	5/31/2005
March ARB	WP	Riverside	CA	RIV	a. Airport sponsor disposed of airport property without FAA approval. b. Airport is not open to the public.	a. Compensate airport fund with the fair market value of the property in question. b. Take steps to open the airport to the public.	Non- Compliant	9/30/2005
Montgomery Field	WP	San Diego	CA	MYF	Airport sponsor has permitted non-aeronautical uses of airport property (vehicle parking).	Take action to terminate the non-aeronautical use of airport property.	Closed, In Compliance	9/1/2005
Palm Springs International	WP	Palm Springs	CA	PSP	Airport sponsor has permitted non-aeronautical uses of airport property below fair market value and without FAA approval.	Provide a corrective action plan to address the unauthorized land use.	Closed, In Compliance	06/22/2005
Rialto Municipal /Miro Field/	WP	Rialto	CA	L67	a. Sponsor permitted long-term leases at the airport without compensation to the airport account. b. A taxiway was improperly converted to permit drag racing. c. Several facilities are used for non-aeronautical purposes without FAA approval.	a. Obtain Fair Market Value for all non- aeronautical uses. b. End of drag racing, re- establish aeronautical function for the taxiway. c. Seek FAA approval for any non-aeronautical use.	Closed, In Compliance	9/1/2005
Rio Vista Municipal	WP	Rio Vista	CA	O88	An aviation hangar is leased to a non-aeronautical entity without FAA approval.	Sponsor must return the hangar to aeronautical use.	Closed, In Compliance	9/1/2005
Santa Ynez	WP	Santa Ynez	CA	IZA	Several non-aeronautical uses were permitted at the airport without FAA approval and below fair market value.	Correct the situation (identified in an OIG Audit Report) by compensating the airport account for the fair market use of airport property used for non-aeronautical purposes.	In Process	12/31/2005
Shafter-Minter Field	WP	Shafter	CA	MIT	a. Airport property was disposed of without FAA concurrence. b. Several non-aeronautical land uses have been permitted without FAA approval.	In order to ascertain the extent of the land use violations, FAA asked sponsor to provide supporting documentation related to unauthorized land uses.	Non- Compliant	9/30/2005

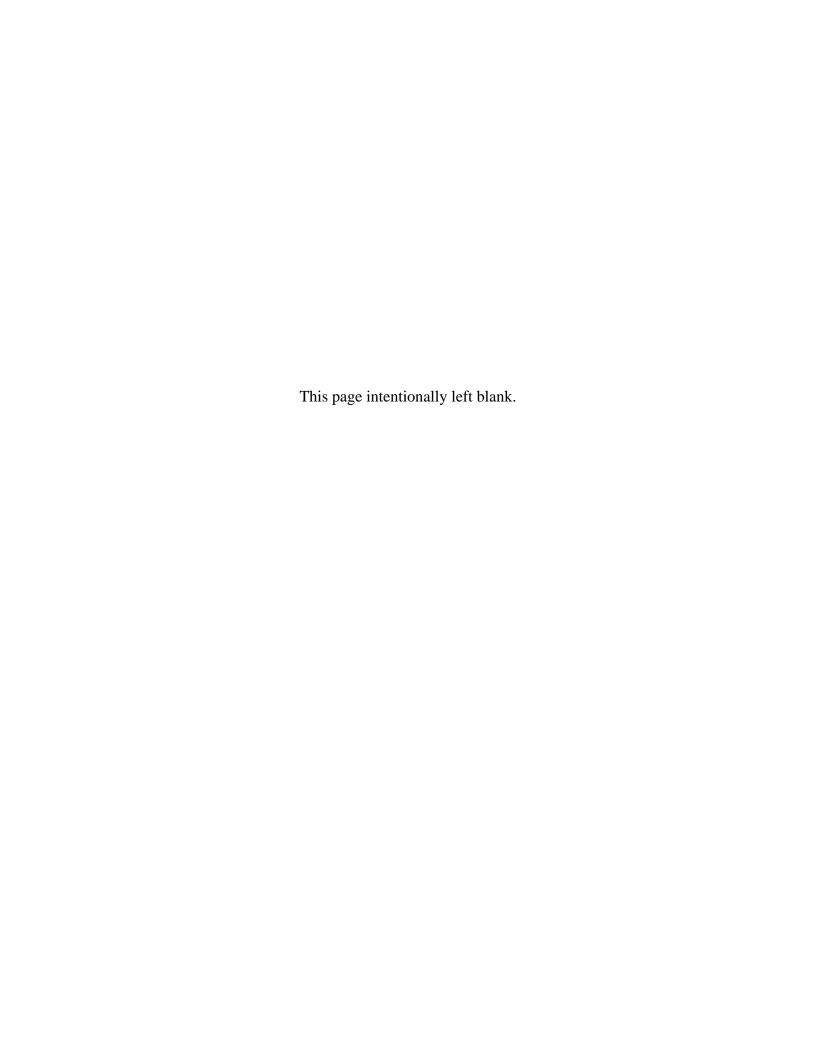

ı						Land Use Compliance Rep	oort for FY 2005		
	Location	Reg	City	St	Locid	Compliance Issue	Corrective Action	Compliance Status	Estimated Completion/ Compliance Date
	Van Nuys	WP	Van Nuys	СА	VNY	a. Several non-aeronautical uses of airport property must revert to aeronautical use. b. Certain airport property is to be dedicated to aeronautical uses.	a. Sponsor to establish a transition plan and take action to convert the non-aeronautical use areas to aeronautical uses. b. Dedicate certain areas for aeronautical uses and make them available accordingly.	In Process	12/31/2005
	Jeffco	NM	Denver	СО	ВЈС	Airport Layout Plan is inconsistent with release records and as such is not representative of actual conditions at the airport.	Update Airport Layout Plan	In Process	9/30/2005
	Opa Locka	SO	Miami	FL	OPF	a. Airport sponsor exchanged property with the United States Coast Guard without FAA approval. b. Roads and canal constructed in part with airport property without FAA approval. c. Airport sponsor permitted several nonaeronautical uses of airport property. d. Airport sponsor has permitted the local imposition of land use development limitations and encumbrances (i.e. historic preservation) on prime aeronautical development land. e. Outdated property maps.	a. and b. Seek FAA approval on the property exchanged, road and canal uses and other land uses. c. and d. Work with FAA in ensuring adequate aeronautical uses of airport properties. e. Submit updated property maps.	In Process	12/31/2005
	Valkaria	so	Valkaria	FL	X59	Airport property was disposed without FAA approval and below Fair Market Value.	Sponsor must seek FAA release and compensate the airport account accordingly.	Closed, In Compliance	2/15/2005
	Venice Municipal	SO	Venice	FL	VNC	Airport has not received adequate lease payments for several non-aviation parcels.	Sponsor must establish an acceptable property management control system, establish Fair Market Value for non-aviation parcels and adjust rental amounts.	Closed, In Compliance	9/1/2005
	Brunswick Golden Isles	so	Brunswick	GA	BQK	Sponsor allowed unauthorized non-aeronautical use of airport property.	Sponsor must request a release of the property in question and compensate the airport account accordingly.	In Process	12/31/2005
	Dekalb- Peachtree	so	Atlanta	GA	PDK	a. Various units of County government are using airport property for non-aeronautical purposes without appropriately compensating the airport. b. Several non-aeronautical uses of airport property were not approved by FAA.	a. and b: Sponsor must seek FAA release and compensate the airport account accordingly.	In Process	9/30/2005
	Malcolm McKinnon	SO	Brunswick	GA	SSI	Sponsor allowed unauthorized use of airport property for non-aeronautical activity without FAA approval.	Request a release of the property in question and compensate the airport account accordingly.	In Process	12/31/2005

	Land Use Compliance Report for FY 2005											
Location	Reg	City	St	Locid	Compliance Issue	Corrective Action	Compliance Status	Estimated Completion/ Compliance Date				
Metropolis Municipal	GL	Metropolis	IL	M30	Airport sponsor allowed non-aeronautical use (model airplane operations) of airport property without FAA concurrence.	Coordinate corrective action with the FAA to achieve either removal of the non-aeronautical use or achieve conditional approval.	In Process	10/2/2005				
Plymouth Municipal	GL	Plymouth	IN	C65	a. Without FAA approval, sponsor allowed a third party to pave road on airport property for which only an easement had been granted. The sponsor permitted the surrounding nonsponsoring public entity to remove all restrictions on the easement without FAA approval.	a. Remove the easement and the road.	In Process	12/31/2005				
Independence Municipal	CE	Independence	KS	IDP	Airport property has been leased at below Fair Market Value for non-aeronautical purposes.	Rectify the situation by re-negotiating lease terms.	Closed, In Compliance	2/24/2005				
Sturgis Municipal	so	Sturgis	KY	105	Airport has permitted non-aeronautical uses of airport property without FAA approval.	Take corrective action by requesting FAA approval and ensuring adequate airport compensation.	In Process	12/1/2005				
Auburn/Lewiston Municipal	NE	Auburn/Lewiston	ME	LEW	a. Airport property is being used for non-aeronautical purposes without FAA approval and below Fair Market Value. b. Grant funded airport property was exchanged for other properties without FAA approval.	Airport must take corrective action by correcting leases and re-establishing proper use of airport lands.	Closed, In Compliance	9/1/2005				
Augusta State	NE	Augusta	ME	AUG	The airport sponsor permitted non-aeronautical uses of airport property by allowing an aviation dedicated AIP funded storage facility to be used for non-aeronautical uses.	Remove non-aeronautical uses from aviation dedicated, AIP funded facility.	Closed, In Compliance	9/1/2005				
Rangeley Lake	NE	Rangeley	ME	M57	Aeronautical facilities are being used for non-aeronautical purposes.	Take corrective action in order to terminate the leases associated with the non-aeronautical uses and to charge Fair Market Value for those non-aeronautical uses approved by FAA.	Closed, In Compliance	9/1/2005				
Coleman A. Young Municipal	GL	Detroit	MI	DET	Airport sponsor has permitted several non-aeronautical uses of airport property without FAA concurrence.	Airport sponsor must terminate non-aeronautical uses or/and seek FAA approval under applicable policies.	In Process	12/31/2005				
St Clair County International	GL	Port Huron	MI	PHN	Airport has transferred obligated airport property to another party without FAA approval.	Sponsor can return property to the Airport or seek an FAA release with appropriate compensation of the airport account at Fair Market Value.	Closed, In Compliance	9/1/2005				
Chandler Field	GL	Alexandria	MN	AXN	a. Several on-airport leases for non-aeronautical use are not consistent with FAA land use criteria. b. Exhibit A must be updated to show several rights-of-way, new road and avigation easements.	a. Request FAA concurrence for interim uses, amend leases and compensate airport account accordingly (Fair Market Value). b. Submit new Exhibit A.	Closed, In Compliance	9/1/2005				

	Land Use Compliance Report for FY 2005												
Location	Reg	City	St	Locid	Compliance Issue	Corrective Action	Compliance Status	Estimated Completion/ Compliance Date					
Sullivan Regional	CE	Sullivan	МО	UUV	Airport sponsor allowed non-aeronautical use of airport property (model airplane operations) without FAA concurrence.	Coordinate corrective action with the FAA to achieve either removal of the non-aeronautical use or achieve conditional approval.	Closed, In Compliance	9/14/2005					
Warren Field	so	Washington	NC	OCW	Airport sponsor has permitted non-aeronautical uses (including residential) on airport property in a manner inconsistent with its Federal obligations.	FAA has asked for the residence to be removed.	In Process	12/31/2005					
Mandan Municipal	GL	Mandan	ND	Y19	a. Airport property was used for agricultural purposes without FAA concurrence. b. Sponsor permitted the storage of non-aeronautical material adjacent to an aircraft parking area. c. Outdated Exhibit A.	a. Sponsor must submit a request for concurrent use at Fair Market Value. b. Remove the materials. c. Submit new Exhibit A.	In Process	12/31/2005					
Manchester	NE	Manchester	NH	МНТ	In 2003, the airport sponsor executed a land swap without FAA approval.	Take corrective action to ensure compliance with FAA approval/release procedures.	In Process	12/31/2005					
Gallup Municipal	sw	Gallup	NM	GUP	Airport has failed to maintain an adequate Airport Layout Plan (ALP).	Submit a current Airport Layout Plan.	Closed, In Compliance	9/1/2005					
East Hampton	EA	East Hampton	NY	НТО	Airport sponsor permitted non-aeronautical land uses within the airport property without FAA approval and below fair market value.	Take action to correct non-aeronautical uses and compensate the airport in a manner that is consistent with applicable law and FAA policy.	In Process	12/31/2005					
Francis S Gabreski	EA	Westhampton Beach	NY	FOK	Airport sponsor has permitted non-aeronautical uses without FAA approval.	Eliminate non-aeronautical uses or seek FAA approval under applicable policies.	In Process	12/5/2005					
Cincinnati Municipal Airport Lunken Field	GL	Cincinnati	ОН	LUK	A significant portion of the airport is being used for non-aeronautical uses without FAA approval and without adequate fair market value compensation.	Corrective action plan is to dedicate certain parcels to aeronautical use in order to address aeronautical demand. FAA must approve existing land uses and existing land uses must provide the airport with adequate compensation.	In Process	12/31/2005					
Clermont County	GL	Batavia	ОН	I69	a. Airport sponsor has granted an exclusive right for all airport property. b. Airport sponsor has permitted non-aeronautical use of airport property. c. There is no current Airport Layout Plan (ALP).	a. Airport sponsor must take action to eliminate the exclusive rights that has been granted. b. Submit a new ALP. c. Remove non-aeronautical use or seek FAA approval.	Non- Compliant	09/30/2005					
Fayette County	GL	Washington Court House	ОН	I23	Airport sponsor allowed non-aeronautical use (model airplane operations) of airport property without FAA concurrence.	Coordinate corrective action with the FAA to achieve either removal of the non-aeronautical use or achieve conditional approval.	Closed, In Compliance	9/1/2005					
Ohio State University	GL	Columbus	ОН	OSU	Several non-aeronautical uses were permitted at the airport without FAA approval or/and below fair market value.	Take adequate corrective action to ensure FAA approval is according to the Federal obligations and applicable policy.	In Process	12/31/2005					

	Land Use Compliance Report for FY 2005												
Location	Reg	City	St	Locid	Compliance Issue	Corrective Action	Compliance Status	Estimated Completion/Compliance Date					
Wadsworth Municipal	GL	Wadsworth	ОН	3G3	The airport has permitted certain non-aeronautical uses at the airport without FAA approval.	Airport must take corrective action by seeking approval of certain non-aeronautical uses and by instituting new leasing practices.	In Process	12/31/2005					
Clinton Municipal	sw	Clinton	OK	CLK	Airport has allowed several non-aeronautical activites on airport property without FAA approval.	Eliminate non-aeronautical activities or/and seek FAA conditional approval.	Non- Compliant	9/30/2005					
Grand Lake Regional	sw	Afton	OK	309	Airport sponsor has permitted non-aeronautical land uses, including incompatible land uses, within airport property without FAA approval. Airport sponsor permitted airport property to be encumbered by third party lien and consented to sale of airport property without FAA approval.	Return properties to approved aeronautical uses and return sale proceeds proportionate to Federal assistance received to date and comply with provisions of grant assurances.	Non- Compliant	9/30/2005					
Beaver County	EA	Beaver Falls	PA	BVI	Airport sponsor permitted non-aeronautical use of airport property without FAA approval (soccer field and museum).	Take corrective action to ensure compliance with FAA approval/release procedures.	Closed, In Compliance	9/20/2005					
Greenwood County	so	Greenwood	SC	GRD	a. Several non-aeronautical uses were permitted at the airport without FAA approval. b. Airport property was disposed of without FAA approval. c. Airport Layout Plan and Exhibit A map are not consistent with actual land uses at the airport.	a. Take action to eliminate unauthorized non- aeronautical land uses. b. Seek FAA release on disposed parcel and compensate airport adequately at Fair Market Value. c. Submit updated documents	In Process	12/31/2005					
Ogden-Hinckley	NM	Ogden	UT	OGD	Airport has permitted non-aeronautical use of dedicated airport property at below Fair Market Value.	Seek FAA approval and ensure adequate airport compensation at Fair Market Value.	In Process	9/30/2005					
Accomack County	EA	Melfa	VA	MFV	Non-aeronautical facilities exist on airport property at below Fair Market Value.	Take corrective action by seeking FAA approval of uses and ensuring adequate compensation at Fair Market Value.	In Process	12/31/2005					
Rutland State	NE	Rutland	VT	RUT	a. Airport sponsor allowed non-aeronautical use (camping) of airport property without FAA concurrence. b. Airport sponsor executed a land swap without FAA approval.	a. Coordinate corrective action with the FAA to achieve either removal of the non-aeronautical use or achieve conditional approval. b. Take corrective action to ensure compliance with FAA approval/release procedures.	In Process	12/31/2005					
Dane County Regional-Truax Field	GL	Madison	WI	MSN	Airport sponsor permitted non-aeronautical use of airport property (public trails) without FAA approval.	Coordinate corrective action with the FAA to achieve either removal of the non-aeronautical use or achieve conditional approval.	Closed, In Compliance	9/1/2005					

	Land Use Compliance Report for FY 2005											
Location	Reg	City	St	Locid	Compliance Issue	Corrective Action	Compliance Status	Estimated Completion/ Compliance Date				
Richard I Bong	GL	Superior	WI	SUW	Sponsor allowed a public school to be built on airport property without FAA authorization.	Sponsor must request FAA for the release of the parcel, and credit the airport with the Fair Market Value of the property in accordance with an appraisal acceptable to the FAA. Sponsor must also correct any incompatible land use problems with the development.	Non- Compliant	09/30/2005				
Watertown Municipal	GL	Watertown	WI	RYV	a. Part of a runway protection zone (RPZ) was used for a non-aeronautical use (road). b. Airport property was sold for commercial development without FAA concurrence.	a. Close the road in the RPZ. b. Seek FAA release of property in question and compensate airport with Fair Market Value of property.	Non- Compliant	09/30/2005

	A	AIP Grants	Awarded in l	AIP Grants Awarded in FY 2005 by State										
State/City	Airport/Project Location	Service Level	Grant Number	Federal Funds	Description of Project									
Alabama														
Alabaster	Shelby County	Reliever	11	\$ 722,538	Rehabilitate Apron, Rehabilitate Runway, Rehabilitate Taxiway									
Albertville	The Albertville Municipal-Thomas J Brumlik Field	General Aviation	15	\$ 746,846	Acquire Equipment, Rehabilitate Runway, Rehabilitate Taxiway									
Aliceville	George Downer	General Aviation	3	\$ 109,070	Acquire Land For Approaches, Conduct Miscellaneous Study									
Andalusia/Opp	Andalusia-Opp	General Aviation	9	\$ 3,509,721	Construct Apron, Extend Runway, Improve Runway Safety Area, Rehabilitate Runway									
Ashland/Lineville	Ashland/Lineville	General Aviation	1	\$ 314,602	Acquire Land For Approaches									
Atmore	Atmore Municipal	General Aviation	3	\$ 1,083,149	Construct Apron									
Auburn	Auburn-Opelika Robert G. Pitts	General Aviation	17	\$ 131,348	Construct Apron									
Bay Minette	Bay Minette Municipal	General Aviation	5	\$ 113,947	Construct Building, Construct Fuel Farm, Update Airport Master Plan Study									
Bessemer	Bessemer	Reliever	9	\$ 1,728,512	Extend Runway									
Birmingham	Birmingham International	Primary	59	\$ 4,542,671	Construct Access Road, Construct Apron									
Birmingham	Birmingham International	Primary	60	\$ 4,000,000	Acquire Land for Noise Compatibility within 65 - 69 DNL									
Birmingham	Birmingham International	Primary	61	\$ 4,002,838	Remove Obstructions									
Centre	New	System Plan	3	\$ 1,516,680	Construct Apron, Construct Runway, Construct Taxiway									
Centreville	Bibb County	General Aviation	2	\$ 1,053,572	Rehabilitate Runway									
Clanton	Gragg-Wade Field	General Aviation	3	\$ 150,000	Acquire Land For Approaches									
Courtland	Lawrence County	General Aviation	4	\$ 300,000	Conduct Miscellaneous Study, Rehabilitate Taxiway									
Cullman	Folsom Field	General Aviation	13	\$ 327,159	Expand Apron, Rehabilitate Runway, Rehabilitate Taxiway									
Demopolis	Demopolis Municipal	General Aviation	6	\$ 150,000	Construct Building									
Dothan	Dothan Regional	Primary	25	\$ 1,700,150	Improve Runway Safety Area									
Elba	Carl Folsom	General Aviation	1	\$ 372,080	Acquire Land For Approaches									
Eufaula	Weedon Field	General Aviation	12	\$ 300,000	Construct Building									
Fairhope	H. L. (Sonny) Callahan	General Aviation	8	\$ 150,000	Construct Building									
Fayette	Richard Arthur Field	General Aviation	4	\$ 150,000	Construct Fuel Farm, Install Runway Vertical/Visual Guidance System, Rehabilitate Airport Beacons									
Fort Payne	Isbell Field	General Aviation	12	\$ 285,662	Construct Taxiway, Rehabilitate Taxiway Lighting									
Geneva	Geneva Municipal	General Aviation	1	\$ 544,551	Acquire Land For Approaches									
Gulf Shores	Jack Edwards	General Aviation	20	\$ 226,100	Acquire Land for Development									

State/City	Airport/Project Location	Service Level	Grant Number	Federal Funds	Description of Project
Alabama					
Guntersville	Guntersville Municipal - Joe Starnes Field	General Aviation	8	\$ 1,073,164	Construct Runway
Haleyville	Posey Field	General Aviation	3	\$ 99,334	Improve Building
Headland	Headland Municipal	General Aviation	6	\$ 637,942	Strengthen Runway
Huntsville	Huntsville International- Carl T Jones Field	Primary	45	\$ 2,781,966	Construct Taxiway, Rehabilitate Apron, Rehabilitate Runway, Security Enhancements
Huntsville	Huntsville International- Carl T Jones Field	Primary	46	\$ 3,396,302	Rehabilitate Terminal Building
Huntsville	Huntsville International- Carl T Jones Field	Primary	47	\$ 600,000	Update Airport Master Plan Study
Jackson	Jackson Municipal	General Aviation	2	\$ 364,138	Acquire Land For Approaches, Install Airport Beacons, Install Runway Vertical/Visual Guidance System, Rehabilitate Runway Lighting, Remove Obstructions
Jasper	Walker County-Bevill Field	General Aviation	9	\$ 87,881	Construct Apron, Improve Airport Drainage, Remove Obstructions
Jasper	Walker County-Bevill Field	General Aviation	10	\$ 208,317	Rehabilitate Runway Lighting
Lanett	Lanett Municipal	General Aviation	2	\$ 384,864	Improve Runway Safety Area, Remove Obstructions
Mobile	Mobile Downtown	Reliever	16	\$ 3,282,677	Install Miscellaneous NAVAIDS, Install Runway Vertical/Visual Guidance System, Rehabilitate Runway
Mobile	Mobile Regional	Primary	35	\$ 4,814,271	Acquire Land for Development, Conduct Miscellaneous Study, Expand Service Road, Improve Terminal Building, Rehabilitate Access Road, Rehabilitate Taxiway, Security Enhancements
Mobile	Mobile Regional	Primary	36	\$ 40,000	Install Miscellaneous NAVAIDS
Montgomery	Montgomery Regional (Dannelly Field)	Primary	35	\$ 2,000,000	Construct Terminal Building
Oneonta	Robbins Field	General Aviation	3	\$ 236,667	Expand Apron
Ozark	Blackwell Field	General Aviation	6	\$ 1,733,094	Construct Taxiway
Pell City	St Clair County	Reliever	6	\$ 568,380	Expand Apron
Prattville	Autauga County	General Aviation	9	\$ 167,447	Conduct Miscellaneous Study, Construct Fuel Farm, Expand Apron
Roanoke	Roanoke Municipal	General Aviation	1	\$ 427,778	Acquire Land For Approaches
Russellville	Russellville Municipal	General Aviation	5	\$ 295,176	Conduct Miscellaneous Study, Improve Fuel Farm
Scottsboro	Scottsboro Municipal- Word Field	General Aviation	9	\$ 184,520	Acquire Land for Development, Construct Building, Rehabilitate Runway
St. Elmo	St Elmo	General Aviation	4	\$ 450,000	Construct Building
Talladega	Talladega Municipal	General Aviation	12	\$ 1,000,000	Construct Taxiway
