

Terminal Area Forecast

**Fiscal Years
2000-2015**

December 2000

**U.S. Department of Transportation
Federal Aviation Administration
FAA-APO-00-7**

Preface

This summary document of the Terminal Area Forecast (TAF) was developed by the Federal Aviation Administration's (FAA) Statistics and Forecast Branch, Office of Aviation Policy and Plans, and uses as a primary input the national forecasts of aviation activity contained in FAA Aerospace Forecasts: Fiscal Years 2000-2011 (March 2000).

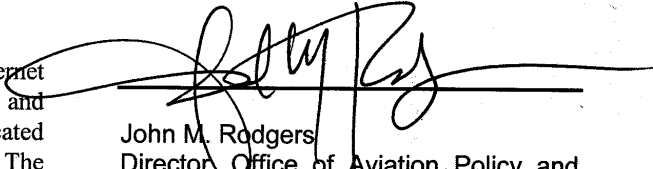

This publication provides aviation data users with summary statistics on passenger demand and aviation activity at U.S. airports, in particular, at the 31 large hub airports with one percent or more of total enplanements. Also, it offers information on where to obtain more detailed data and forecasts for individual airports and for the entire TAF population of U.S. airports—currently 3,412 airports.

The TAF can be accessed from two Internet locations. A copy of the TAF database and Windows 95-based TAF model are located at http://api.hq.faa.gov/apo_pubs.htm. The TAF model allows users to create their own

scenarios and forecasts. Also, the user can download the TAF forecast publication from this site. The publication includes data for all FAA and contract towers as well as terminal radar approach control facilities (TRACONs). This document is divided by the nine FAA regions.

Additionally, the user can access TAF data directly at <http://www.apo.data.faa.gov/>. This JAVA-based model allows the public to access and print historical (1976 to 1999) and forecast (2000 to 2015) aviation activity data by individual airport, state, or FAA region.

The FAA welcomes public comment on the forecasts, as well as suggestions for improving the usefulness of the TAF.

John M. Rodgers
Director, Office of Aviation Policy and Plans

Acknowledgments

This document was prepared by the Statistics and Forecast Branch of the FAA Office of Aviation Policy and Plans. Daniel E. Taylor and Peter LeBoff have primary responsibility for the development of the forecasts. Robert L. Bowles, Statistics and Forecast Branch Manager; Arnold Schwartz, Charles Moles, and Cheryl Miner, industry economists, also contributed their valuable support.

The software support was executed under the direction of Carlton R. Wine, Manager, Information Systems Branch. Mr. Wine and his staff organize and manage the data bases used to produce the forecasts, update the computer programs, and carry out the computer operations necessary to produce the

individual airport forecasts. We extend a special thanks to Damien G. Agostinelli who programmed the TAF software and has made the access and analysis of this airport data so much easier.

Special acknowledgments are made to FAA Regional and District Office staff, particularly Airports and Air Traffic personnel, for their assistance in coordinating the regional reviews, state input, and forecast recommendations. The reviews and comments of the regional offices were extremely important and useful in guiding the Statistics and Forecast Branch in making adjustments to the preliminary version of the report. Undoubtedly, their effort has enhanced the accuracy and credibility of the final product.

Summary Highlights for Fiscal Year 1999

- The TAF contains forecasts for 288 FAA towered airports, 163 Federal contract towers, 180 radar approach control facilities, and 2,813 non-FAA airports.
- A total of 674.1 million passengers were enplaned at U.S. airports in 1999. Enplanements at FAA and Federal contract towered airports in 1999 summed to 668.4 million.
- The top 100 air carrier airports accounted for 634.7 million enplanements in 1999, or 94 percent of total enplanements at U.S. airports.
- FAA towers handled 55.0 million operations (takeoffs and landings) in 1999, including 23.7 million commercial aircraft operations.
- Towers operated under Federal contract by FAA handled 13.1 million operations, including 1.4 million commercial operations.
- The 31 large hub airports (enplaning one percent of total passengers) enplaned 471.7 million passengers in 1999. These airports are projected to enplane 843.6 million passengers by 2015, a 79 percent increase over the 16-year period (3.7 percent annually). Aircraft operations at large hubs are forecast to grow 44 percent over the forecast period (2.3 percent annually), from 14.9 to 21.4 million.
- The 37 medium hub airports (enplaning 0.25 to 0.99 percent of total passengers) recorded 129.1 million enplanements and are expected to reach 223.7 million by 2015, a 73 percent increase. Aircraft operations are forecast to increase from 8.6 to 11.9 million, a 38 percent rise.
- Atlanta (37.6 million enplanements), Chicago O'Hare (34.4 million), Los Angeles (30.4 million), Dallas/Ft. Worth (28.1 million), and San Francisco (19.3 million) are the five largest U.S. commercial airports, accounting for 22.2 percent of total enplanements at U.S. airports.
- Atlanta is expected to remain the country's busiest airport through the forecast period with a projected 68.7 million enplaned passengers in 2015. Chicago O'Hare is projected to enplane 55.7 million passengers followed by Los Angeles with 51.7 million enplanements.
- Enplanements at Washington Dulles, Orlando, and Cincinnati are projected to grow fastest among large hub airports. Annual growth rates at these airports are expected to average 5.2, 5.0, and 4.8 percent per year, respectively.
- The Southern region led all FAA regions with 148.4 million passenger enplanements, 22 percent of total passenger enplanements at towered and non-towered airports. The Western Pacific region follows with 139.7 million passenger enplanements, 21 percent of total.
- The Southern region is expected to maintain its lead in passenger enplanements, reaching 267.5 million by 2015, an 80 percent increase. The Western Pacific region will remain in second place in 2015 with 248.3 million passenger enplanements.

Forecast Process

Introduction

This Terminal Area Forecast (TAF) contains historical and forecast data for enplanements, airport operations and instrument operations. The data cover the 288 FAA towered airports, 163 Federal contract tower airports, 180 radar approach control facilities, and 2,813 non-FAA airports. Data in the TAF are presented on a U.S. Government fiscal year basis (October through September).

The TAF is on the Internet at two locations. A copy of the TAF database and Windows95-based TAF model are located at http://api.hq.faa.gov/apo_pubs.htm/. The TAF model allows users to develop alternative scenarios and forecasts. Also at this web address, you will find a download version of the TAF publication. The publication includes all FAA and contract towers as well as terminal radar approach control facilities (TRACONS). This document is divided by the nine FAA regions.

Additionally, you can access the TAF data directly at <http://www.apo.data.faa.gov/>. This JAVA-based model allows public access to historical and forecast aviation activity data by individual airport, state, or FAA region.

The TAF is prepared to assist the FAA in meeting its planning, budgeting, and staffing requirements. In addition, state aviation authorities and other aviation planners use the TAF as a basis for planning future airport improvements.

Data presented in this document show historical information from 1995 through 1999 and forecasts for 2000, 2001, 2002, 2005, 2010, and 2015.

The tables available on the Internet contain historical data beginning in 1976. The airport activity data consists of the following:

- ◆ *enplanements (originating and connecting)* for air carriers and commuters;
- ◆ *itinerant operations* for air carriers, commuters and air taxis, general aviation (GA), and military;
- ◆ *local operations* for GA and military aircraft; and
- ◆ *total instrument operations* (primary and secondary).

Appendix A furnishes a detailed description of the activity data elements in the TAF.

Forecast Method

Aviation activity forecasts at FAA-towered and contract towered airports are developed using historical relationships between airport activity measures and local and national factors influencing aviation activity. Each estimate is examined for its reasonableness by comparisons with historical trends and for consistency with airport activity. If forecasts deviate from their expected trend, FAA employs other statistical techniques to reforecast the series. Other methods include other functional forms and the use of growth rates developed outside the TAF. The TAF may incorporate estimates prepared by local authorities and/or recent FAA-approved airport master plans, when the forecast staff economists conclude that the methods used to develop these forecasts are acceptable. In addition, the 41 commercial service airports in the large hub cities receive a more in-depth review by FAA economists.

The analyses of these hub city airports include additional consideration for the effect of local economic variables (such as income, employment, etc.) and the growth of originating and connecting traffic as well as the price of flying to and from that airport. The hub forecasts also include assumptions regarding the seating capacity and load factors for aircraft operating out of the airport.

The TAF assumes an unconstrained demand for aviation services based upon local and national economic conditions as well as conditions within the aviation industry. In other words, an airport's forecast is developed independent of the ability of the airport and the air traffic control system to furnish the capacity required to meet demand.

Because military operations forecasts often have national security implications, the Department of Defense (DOD) provides only limited information on future aviation activity. Hence, the TAF projects military activity at its present level except when FAA has specific knowledge of a change. For instance, DOD may announce a base closing or may shift an Air Force wing from one base to another.

For all FAA towers and non-FAA facilities with air carrier or commuter/air taxi service, the TAF corresponds to prevailing local and national trends. For non-FAA facilities, which rely solely on Form 5010 data for general aviation activity levels, operations are held constant unless otherwise specified by a local or regional official.

Forecast Review Process

Initially, FAA headquarters staff and management review FAA and federal contract tower airport forecasts. These preliminary estimates are then submitted to FAA regional and district offices for review. Suggested changes made

by the FAA regional staff are reviewed and incorporated into the TAF if found reasonable by the Office of Aviation Policy and Plans (APO) staff economists. Significant increases in commercial activity are normally incorporated into the TAF where APO receives verifiable evidence of a firm commitment by an air carrier or commuter airline to initiate new service.

Summary statistics presented in the TAF differ marginally from the national totals contained in FAA Aerospace Forecasts: Fiscal Years 2000-2011. Reasons for the minor differences are threefold, first, the TAF forecast methods rely, in part, upon an airport's historical national share of aviation activity, but also consider other trends. In particular, large hub airport forecasts are based, in part, on the projected local economic activity and airport specific airline fares. Second, the TAF includes facilities not serviced by the FAA in its totals. These facilities make up a large share of the general aviation operations activity shown in the summary tables. Third, individual forecasts are not scaled to force aggregates to equal national totals.

Data Sources

The forecast process begins with an update of the latest historical passenger and aircraft activity data, using information derived from several data sources. FAA's National Flight Data Center provides general airport information such as the airport name, location, and location identifier. Airport operations and instrument (radar assisted) operations data for airports with FAA and Federal contract air traffic control services are reported by FAA air traffic and federal contract tower staff. Operations at non-FAA airports are derived from FAA Form 5010 reports on aviation activity at the airport as estimated by FAA inspectors

and/or information provided by airport managers, state aviation activity surveys and other information.

U.S. domestic and international (U.S. and foreign flag carriers) enplanements are derived from the Department of Transportation's (DOT) Form T-100 data. Commuter enplanements are derived from DOT Form 298-C data.

Based aircraft data are supplied by state aviation officials and reported on FAA Form 5010.

These data show numbers of aircraft, mostly general aviation aircraft, permanently based at an airport.

For the most part, the TAF contains actual historical data through fiscal year 1999. However, international and commuter enplanements contain estimates for the fourth quarter of fiscal year 1999 (July to September). Appendix A contains a detailed description of each TAF data element.

TAF and National Forecast Totals

National Forecast Trends

Trends at individual airports reflect to varying degrees national trends taking place within the aviation industry. Therefore, a change from last year's TAF reflects, in part, changes in the national forecast. Changes also reflect, of course, dynamics occurring at individual airports.

The national forecast published in March 2000 as FAA Aerospace Forecasts: Fiscal Years 2000-2011 shows aircraft operations (takeoffs and landings) at FAA and Federal contract tower airports growing at an annual rate of 2.0 percent over the next 12 years. Average annual growth rates for the 12-year period by user group are as follows: air carrier, 2.8 percent; air taxi/ commuter, 2.6 percent; and general aviation, 1.7 percent. Comparable 12-year growth rates from the March 1999 national forecast were 2.8, 2.2, and 1.4 percent, respectively.

The projected annual rate of increase for air carrier enplanements from the national forecast is 3.8 percent over the 12-year forecast period, close to the 3.6 percent annual rate projected last year. Regional/commuter enplanements are projected to increase 5.5 percent annually, compared with 5.4 percent in last year's forecast.

Data Summary and Comparisons

In fiscal year 1999, the FAA served 288 towers (levels 1 through 5) and 163 Federal contract towers. California has the most FAA towers with 36, followed by Florida and Texas with 20 each. Regions with

the most FAA towers are Southern and Western Pacific which operate 55 and 52 FAA towers, respectively. Table S-3 presents FAA and Federal contract towers by region and state.

The 31 large hub airports enplaned 471.7 million passengers in fiscal year 1999 while 37 medium and 70 small hub airports enplaned 129.1 and 50.4 million passengers, respectively. The 313 non-hub airports enplaned 17.2 million passengers during the fiscal year. Table S-5 presents passenger enplanements and airport operations by hub size. Appendix B presents a listing of hub airports classified by size (large, medium, small, and non-hub) as well as a list of Federal contract towers.

Enplanements at large hub airports are projected to increase 79 percent between 1999 and 2015, from 471.7 to 843.6 million. Total enplanements, including those at non-towered facilities, are forecast to increase 75 percent over the same period, from 674.1 to almost 1.2 billion passengers.

Operations (arrivals and departures) at large hub airports totaled 14.9 million compared to levels of 8.6 and 9.7 million at medium and small hub airports, respectively. Total airport operations by hub size are shown in Table S-5.

Operations at large hub airports are forecast to increase 44 percent by 2015, growing to 21.5 million. Operations at all FAA and Federal contract tower airports are projected to increase from 68.2 to 90.3 million, an increase of 33 percent.

Non-hub airports accounted for 34.9 million operations or 51.2 percent of total operations at FAA and Federal contract towers. General aviation aircraft operations account for the majority of operations at these smaller airports.

Tables S-6 through S-10 summarize airport operations and enplanements by region from 1995 through 2015. Southern (25.8 million), Western Pacific (21.3 million), and Great Lakes (20.9 million) regions rank as the top three FAA regions in airport operations. Operations for all TAF airports totaled 124.4 million in 1999.

Aircraft operations in Western Pacific and Northwest Mountain regions are projected to lead FAA regions in the rate of growth of aircraft operations, increasing 26 and 25 percent over the forecast period, respectively.

The Southern region led the FAA regions in passengers enplaned with 148.4 million in fiscal year 1999, followed by Western Pacific with 139.7 million passengers. Enplanements in the Southern and Western Pacific regions are projected to grow by 3.8 and 3.7 percent annually over the forecast period, the largest growth rates among the regions.

Large, Medium, and Small Hubs

This section reports historical data and forecast aviation activity summaries for the nation's hub airports. An airport qualifies as a *large* hub with one percent or more of total U.S. passengers enplaned. A *medium* hub airport enplanes from 0.25 to 0.99 percent of total U.S. passengers while *small* and *non*-hub airports enplane from 0.05 to 0.249 percent and less than 0.05 percent, respectively.

Table S-5 shows enplanements and operations for FAA towered airports by hub size. Enplanements at large hubs are expected to increase at an annual rate of 3.7 percent to 2015. Medium and small hub airports are forecast to increase at annual rates of 3.5 and 2.8 percent, respectively, during the period.

Large Hub Forecasts

Table S-1 presents enplanement forecast summaries for large hub airports. In fiscal year 1999, the busiest passenger airport, Atlanta, enplaned 37.6 million passengers followed by Chicago O'Hare with 34.4 million, Los Angeles with 30.4 million, and Dallas/Ft. Worth with 28.1 million.

Dallas and Atlanta will experience the strongest growth in enplanements among the top four airports, expanding at an annual rate of 3.8 percent, over the forecast period. Los Angeles is forecast to increase at an annual rate of 3.4 percent compared to 3.1 percent for Chicago O'Hare.

Graph S-1 shows that enplanements will expand most rapidly over the next 16 years at Washington Dulles (up 5.2 percent annually), Orlando (5.0 percent), Cincinnati (4.8 percent), Salt Lake City (4.7 percent), Las Vegas (4.6 percent), and Baltimore-Washington (4.4 percent).

Three hub airports, Washington Dulles, Phoenix, and Orlando make the largest upward movement in ranking of enplanement. Washington Dulles moves up to 20th from 26th while Phoenix rises to 5th from 10th and Orlando climbs to 11th from 16th position in the ranking. At the other extreme, Newark is expected to drop seven positions to 15th while San Francisco, Boston, and New York's La Guardia

each drop five positions, ranking 10th, 23rd, and 24th, respectively in 2015.

Table S-2 presents operations forecast summaries for the large hub airports. In fiscal year 1999 FAA controllers at Chicago O'Hare handled 898,000 landings and takeoffs, a workload slightly higher than Atlanta which totaled 895,000 operations. The next busiest airports are Dallas/Ft. Worth and Los Angeles with 867,000 and 771,000 landings and takeoffs.

In 2015, Atlanta is projected to have the largest number of operations with 1.4 million followed by Dallas/Ft. Worth with 1.2 million operations--up 2.7 and 2.3 percent annually. Operations at Chicago O'Hare increase by only 1.8 percent over the same time period; the relatively slow growth dropping Chicago to 3rd in the operations ranking by 2015. Operations at Los Angeles are projected to increase at an annual rate of 2.3 leaving their ranking unchanged.

Graph S-2 shows that operations will increase most rapidly at Cincinnati (up 3.8 percent annually), Orlando (up 3.6 percent), and at Minneapolis and Houston Intercontinental (each up 3.3 percent). Cincinnati and Houston Intercontinental are expected to move into the top 10 busiest airports list replacing Miami and Boston.

Medium/Small Hub Forecasts

The 37 medium hubs enplaned 129.1 million passengers in 1999. Enplanements at these airports are forecast to increase by 73 percent over the forecast period, an annual growth rate of 3.5 percent. At the 70 small hubs, enplanements are projected to grow by 53 percent, an annual pace of 2.8 percent.

Operations at medium hubs are forecast to rise 38 percent by 2015, or 2.0 percent per year. Small hub aircraft operations are forecast to grow only 25 percent or 1.4 percent annually

* This selection of airports includes major air carrier airports in metropolitan areas where the total enplanements in the air carrier airports in the area summed to more than 1 percent of the national total. This selection is based on 1999 enplanements.

**Percent of total operations.

Graph S-2. Airport Operations Growth Rates For Large Hub Airports - 1999 to 2015

Comments:

Table AAL-7. Instrument Operations by Service Provider

Loc ID	Facility Type	Facility Name, City	1994	1999	2000	2001	2005	2010	2015
* A11	Tracon, Rapcon,	ANCHORAGE TRACON, Anchorage	290,333	320,693	327,241	333,843	361,061	395,663	429,836
ANC	Limited Radar Tower	ANCHORAGE INTL, Anchorage	210,602	237,636	243,111	248,031	277,670	326,436	374,822
MRI	VFR Tower	MERRILL FIELD, Anchorage	1,380	1,627	1,655	1,687	1,818	1,981	2,130
		Other Airports:,	78,351	81,430	82,475	84,125	81,573	67,246	52,884
* FAI	Radar Tower	FAIRBANKS INTL, Fairbanks	52,278	51,336	52,029	52,741	55,661	59,318	62,885

Notes: The first facility listed is instrument operations service provider; For TRACONS, miscellaneous service is to non-FAA facilities; For radar towers, non-FAA facilities are included with local tower services. Instrument operations to airports served by the approach control facility may not total the number of operations reported by a TRACON or tower due to the complexities in the airspace system.

		Other Airports:,	0	38,397	65,501	62,771	60,486	69,851	85,326

Notes: The first facility listed is instrument operations service provider; For TRACONs, miscellaneous service is to non-FAA facilities; For radar towers, non-FAA facilities are included with local tower services. Instrument operations to airports served by the approach control facility may not total the number of operations reported by a TRACON or tower due to the complexities in the airspace system.

Notes: The first facility listed is instrument operations service provider; For TRACONS, miscellaneous service is to non-FAA facilities; For radar towers, non-FAA facilities are included with local tower services. Instrument operations to airports served by the approach control facility may not total the number of operations reported by a TRACON or tower due to the complexities in the airspace system.

Notes: The first facility listed is instrument operations service provider; For TRACONS, miscellaneous service is to non-FAA facilities; For radar towers, non-FAA facilities are included with local tower services. Instrument operations to airports served by the approach control facility may not total the number of operations reported by a TRACON or tower due to the complexities in the airspace system.

		Other Airports:,	150,436	188,244	189,891	192,225	203,265	219,878	237,030

Notes: The first facility listed is instrument operations service provider; For TRACONs, miscellaneous service is to non-FAA facilities; For radar towers, non-FAA facilities are included with local tower services. Instrument operations to airports served by the approach control facility may not total the number of operations reported by a TRACON or tower due to the complexities in the airspace system.

Notes: The first facility listed is instrument operations service provider; For TRACONs, miscellaneous service is to non-FAA facilities; For radar towers, non-FAA facilities are included with local tower services. Instrument operations to airports served by the approach control facility may not total the number of operations reported by a TRACON or tower due to the complexities in the airspace system.

Notes: The first facility listed is instrument operations service provider; For TRACONs, miscellaneous service is to non-FAA facilities; For radar towers, non-FAA facilities are included with local tower services. Instrument operations to airports served by the approach control facility may not total the number of operations reported by a TRACON or tower due to the complexities in the airspace system.

Appendix A

Description of Activity Measures

Air Carrier Enplanements

These data summarize domestic enplaned passengers (originations and connections) of U.S. commercial air carriers and international enplanements for both U.S. and foreign flag carriers submitted to the U.S. Department of Transportation (DOT), Bureau of Transportation Statistics (BTS) on Form 41, T-100 reports. Estimates include both scheduled and non-scheduled enplaned passengers.

Commuter Enplanements

These data include enplanements on scheduled commuter or regional carriers as reported on DOT Forms 41 and T-100 as well as Form 298-C. Carriers reporting on Form 298-C operate at least five scheduled round trips per week and its entire fleet consists of aircraft with 60 or fewer seats.

FAA adjusts the TAF database to account for carriers that report on Form 41 as an air carrier but fly primarily commuter aircraft. The adjustment removes these enplanements from the air carrier category and places them into the commuter category. These operators perform primarily as regional commuter carriers although they operate a small number of larger air carrier aircraft.

Aircraft Operations

FAA air traffic controllers count landings and takeoffs at FAA towered airports. Controllers employed by an FAA contractor count operations at FAA contract towers. At non-FAA facilities, operations counts represent an estimate.

One air carrier operation represents either a takeoff or a landing of a commercial aircraft with seating capacity of more than 60 seats.

Commuter operations include takeoffs and landings by aircraft with 60 or fewer seats conducting scheduled commercial flights. Air taxi operations include takeoffs and landings by aircraft with 60 or fewer seats conducted on non-scheduled or for-hire flights.

General aviation operations represent all civil aviation aircraft takeoffs and landings not classified as commercial or military. Military operations represent takeoffs and landings by military aircraft. GA and military operations are further subdivided into itinerant or local flights.

Local Operations

FAA data classifies as local the following operations:

- Aircraft operations that operate in a local traffic pattern or within sight of the airport, and
- Aircraft known to fly within a 25-mile radius of the airport.

Itinerant Operations

FAA reports all aircraft operations other than local operations as itinerant. Essentially, these data represent takeoffs and landings of aircraft going from one airport to another.

Instrument Operations

These data include arrivals, departures, and overflights conducted by an FAA approach control facility for aircraft with an Instrument Flight Rule (IFR) flight plan or special Visual Flight Rule procedures. They also contain operations where a terminal control facility provides IFR aircraft separation. The FAA classi-

fies these operations into the following three types.

Primary Instrument Operations

These data consist of aircraft arrivals and departures at a primary airport, normally the airport with the approach control facility.

Secondary Instrument Operations

These data show arrivals and departures at secondary airports.

Overflights

These data include operations of aircraft in transit through the approach control facility airspace.
