Administration

Terminal Area Forecast Summary

Fiscal Years

2007 - 2025

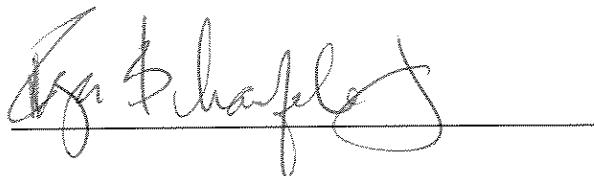

Preface

This publication provides aviation data users with summary historical and forecast statistics on passenger demand and aviation activity at U.S. airports. The summary level forecasts are based on individual airport projections.

The Terminal Area Forecast (TAF) includes forecasts for active airports in the National Plan of Integrated Airport Systems (NPIAS). The Federal Aviation Administration's (FAA) Statistics and Forecast Branch, Office of Aviation Policy and Plans, develops the TAF. As its primary input, the TAF initially used the national forecasts of aviation activity contained in *FAA Aerospace Forecasts, Fiscal Years 2007-2020*. The final TAF considers the forecasts and assumptions contained in *FAA Aerospace Forecasts, Fiscal Years 2008-2025*. The tables for the national forecasts can be found at http://www.faa.gov/data_statistics/aviation/aerospace_forecasts/2008-2025/.

The TAF can be accessed from the Internet. The TAF model and TAF database are located at <http://aspm.faa.gov/>. The TAF model allows users to create their own forecast scenarios. It contains a query data application that allows the public to access and print historical (1976 to 2006) and forecast (2007 to 2025) aviation activity data by individual airport, state, or FAA region.

The FAA welcomes public comment on the forecasts, as well as suggestions for improving the usefulness of the TAF.

Roger Schaufele, Jr.
Manager, Statistics and Forecast Branch
Office of Aviation Policy and Plans

Acknowledgments

This document was prepared by the Statistics and Forecast Branch of the FAA Office of Aviation Policy and Plans under the direction of Roger Schaufele, Manager, Statistics and Forecast Branch. Daniel E. Taylor and Peter LeBoff have primary responsibility for the development of the forecasts. Fahad Ahmad provided valuable technical support. Roger Schaufele and Cheryl Miner also contributed their valuable support in the development of forecasts for the 35 Operational Evolution Partnership (OEP) airports.

The software support was provided under contract by IT WORKS! Software. We extend a special thanks to Damien

Agostinelli, Dawn Amore, and Alice Dobrin whose invaluable programming support for the TAF software made accessing and analyzing this airport data so much more efficient.

Special acknowledgments are made to FAA Airports staff in the Regional and Airport District Offices for their assistance in coordinating the regional reviews, state input, and forecast recommendations. The reviews and comments of the regional offices were extremely important and useful in guiding the Statistics and Forecast Branch in making adjustments to the preliminary version of the forecasts. Their efforts have enhanced the accuracy and credibility of the final product.

Summary Historical and Forecast Highlights

- A total of 732.4 million passengers were enplaned at U.S. airports in 2006; FAA and Federal contract towered airports accounted for 728.5 million enplanements.
- The top 100 air carrier airports accounted for 691.7 million enplanements in 2006, or 95 percent of total U.S. enplanements.
- FAA towers handled 44.7 million operations (takeoffs and landings) in 2006, including 23.3 million commercial aircraft operations.
- FAA contract towers handled 16.8 million operations in 2006, including 2.0 million commercial operations.
- The 35 Operational Evolution Partnership (OEP) airports enplaned 537.8 million passengers in 2006. These airports are projected to enplane 938.6 million passengers in 2025, a 74.5 percent increase over the forecast period (or 3.0 percent annually).
- The 30 large hub airports¹ enplaned 508.0 million passengers in 2006. These airports are projected to enplane 892.5 million passengers in 2025, a 75.7 percent increase over the 19-year period (or 3.0 percent annually).
- The 38 medium hub airports² recorded 146.3 million enplanements in 2006. These airports are projected to enplane 250.3 million passengers in 2025, a 71.1 percent increase over the 19-year period (or 2.9 percent annually).
- Atlanta (41.0 million enplanements), Chicago O'Hare (36.9 million), Los Angeles (29.3 million), Dallas/Ft.Worth (28.6 million), and Denver (22.5 million) led U.S. commercial airports in passenger enplanements, accounting for 21.6 percent of enplanements at U.S. airports.
- Atlanta is projected to remain the country's busiest airport, as measured by passenger enplanements, through the forecast period with a projected 70.1 million enplaned passengers in 2025. Chicago O'Hare is projected to enplane 59.5 million passengers in 2025, followed by Los Angeles with 58.7 million enplanements.
- Enplanements at Washington Dulles, Chicago Midway, and Las Vegas airports are projected to grow fastest among the 35 OEP airports. The annual growth rates at these airports are forecast to increase by 4.7, 4.3, and 4.1 percent per year, respectively, over the forecast period.
- In terms of total operations, Atlanta was the busiest U.S. airport in 2006 with 963,000 aircraft operations. Chicago O'Hare and Dallas/Ft. Worth were the second and third busiest airports with 962,000 and 704,000 operations, respectively.
- In 2025, Atlanta is expected to remain the busiest airport in the nation, as measured by total operations, with a projected 1.44 million operations. Chicago O'Hare (1.37 million operations) is projected to

¹ Airports enplaning one percent or more of total enplanements.

² Airports enplaning 0.25 to 0.99 percent of total enplanements.

stay in second place with Los Angeles (1.22 million operations) moving up to third place.

- The FAA's Southern region airports enplaned more passengers than any other region with 165.3 million passengers in 2006, or 23 percent of U.S. enplanements. The Western Pacific region was second with 152.3 million enplanements, or 21 percent of the total.
- The Western Pacific region is expected to lead in passenger enplanements in 2025, reaching 283.9 million. The Southern region is projected to drop into second place with 281.6 million enplanements.
- The Southern region led all FAA regions in the number of airport operations with 24.9 million in 2006. The Southern region is expected to remain first in 2025 with 30.6 million operations. The Western Pacific and Great Lakes regions ran second and third in airport operations in 2006 with 19.4 and 18.5 million, respectively. In 2025, the Western Pacific region is projected to remain in second place with 25.1 million operations and the Great Lakes region is projected to remain in third place with 21.6 million operations.

Forecast Process

Introduction

The Terminal Area Forecast (TAF) contains historical and forecast data for enplanements, airport operations, instrument operations, and based aircraft. The data cover the 264 FAA towered airports, 235 Federal contract tower airports, 30 terminal radar approach control facilities, and 2,864 non-FAA airports as of September 30, 2006. Data in the TAF are presented on a U.S. Government fiscal year basis (October through September).

The TAF is available on the Internet. The TAF model and TAF database are located at <http://aspm.faa.gov/>. The TAF model allows users to create their own forecast scenarios. The TAF database allows public access to historical and forecast aviation activity data by individual airport, state, or FAA region. In addition, links to the TAF from previous years are available via the address noted above.

The TAF is prepared to assist the FAA in meeting its planning, budgeting, and staffing requirements. In addition, state aviation authorities and other aviation planners use the TAF as a basis for planning airport improvements.

This document presents a set of summary tables on airport activity statistics. The airport activity data contained in the TAF consist of the following:

- ◆ *enplanements (sum of originating and connecting passengers)* for air carriers and regionals;

- ◆ *itinerant operations* for air carriers, commuters and air taxis, general aviation (GA), and military aircraft;
- ◆ *local operations* for GA and military aircraft; and
- ◆ *instrument operations* for aircraft operations under radar control.

Data presented in the TAF show historical information from 1976 through 2006 and forecasts for 2007 to 2025.³ Appendix A provides a detailed description of the activity data elements in the TAF. Appendix B provides a list of FAA airports by hub size and a list of FAA contract towers.

Forecast Method

The TAF assumes an unconstrained demand for aviation services based upon local and national economic conditions as well as conditions within the aviation industry. In other words, an airport's forecast is developed independent of the ability of the airport and the air traffic control system to furnish the capacity required to meet demand. However, if the airport historically functions under constrained conditions, the FAA forecast may reflect those constraints since they are embedded in historical data. In statistical terms, the relationships between economic growth data and data representing growth in aviation activity reflect those constraints.

Aviation activity forecasts for FAA-towered and Federal contract towered airports are developed using historical relationships be-

³ Operations data for FAA towers and Federal contract towers for 2007 are actual.

tween airport passenger demand and/or activity measures and local and national factors that influence aviation activity. Each estimate is examined for its reasonableness and consistency by comparisons with historical trends of airport activity. If forecasts deviate from their expected trend, FAA uses other statistical techniques to reforecast the series. Other methods may include use of regression analysis and the use of growth rates developed separately from the TAF. The TAF may incorporate estimates prepared by local authorities and/or recent FAA-approved airport master plan forecasts, when FAA staff concludes that the methods used to develop these forecasts are acceptable.

In addition, the 35 airports in FAA's Operational Evolution Partnership (OEP) received a more in-depth review by FAA economists. The analyses of these hub city airports include additional consideration for the effect of local economic variables (such as income and employment) and the growth of originating and connecting traffic as well as the price of flying from that airport. The hub forecasts also include assumptions regarding the seating capacity and load factors for commercial aircraft operating out of the airport. The volatility in aviation activity necessitated increased efforts to develop the near-term forecasts for the large hub airports. These efforts included the use of airport authority statistics to estimate baseline passenger levels; the use of future Official Airline Guide (OAG) schedules to project near-term departures and seats; and the use of month-over-month trends in enplanements per departure to project near-term enplanement and activity levels.

Because military operations forecasts have national security implications, the Department of Defense (DOD) provides only limited information on future aviation activity.

Hence, the TAF projects military activity at its present level except when FAA has specific knowledge of a change. For instance, DOD may announce a base closing or may shift an Air Force wing from one base to another.

For all FAA and Federal contract towered airports and non-FAA facilities with passenger service, the TAF corresponds to prevailing local and national trends. For non-FAA facilities, which rely solely on Form 5010 data for aviation activity levels, operations levels are held constant unless otherwise specified by a local or regional FAA official.

Forecast Review Process

Initially, FAA headquarters staff and management review FAA and Federal contract tower airport forecasts. These preliminary estimates are then submitted to FAA regional and district offices for review. Suggested changes made by the FAA regional staff are reviewed and, if determined reasonable by APO staff economists, are incorporated into the TAF. Significant increases in commercial activity forecasts are normally incorporated into the TAF only where APO receives verifiable evidence of a firm commitment by an air carrier or regional airline to initiate new service.

Summary statistics presented in the TAF differ marginally from the national totals contained in *FAA Aerospace Forecasts, Fiscal Years 2008-2025*. Reasons for the differences are threefold. First, the TAF forecast methods rely, in part, upon an airport's historical national share of aviation activity, but also consider airport specific trends. In particular, large hub airport forecasts are based, in part, on the projected local economic activity and airport specific airline fares. Second,

the TAF includes facilities not serviced by the FAA in its totals. These facilities make up a large share of the general aviation operations activity shown in the summary tables. Finally, individual forecasts are not scaled to force aggregates to equal national totals.

Data Sources

The development of the TAF begins with an update of the latest historical enplanement, operation, and based aircraft statistics, using information derived from several sources. FAA's National Flight Data Center provides general airport information such as the airport name, location, and location identifier. Airport operations and instrument (radar assisted) operations data for airports with FAA and Federal contract air traffic control services are reported by FAA air traffic and Federal contract tower staff. Operations at non-FAA airports are taken from FAA Form 5010 reports on aviation activity at the

airport as estimated by FAA inspectors or information provided by airport managers, state aviation activity surveys, and other sources.

U.S. domestic and international (U.S. and foreign flag carriers) enplanements are derived from the Department of Transportation's T-100 database. Regional carrier enplanements are derived from DOT T-100 and 298-C data.⁴

Based aircraft data are collected by FAA inspectors, airport managers, and state aviation officials and reported on FAA Form 5010. These data show numbers of aircraft, mostly general aviation aircraft, permanently based at an airport.

The TAF contains actual historical operations data through fiscal year 2007 for FAA and Federal contract tower airports. Enplanement data for fiscal year 2007 are estimates. Appendix A contains a detailed description of each TAF data element.

⁴ In October 2002, DOT began collecting data for all airlines using the T-100 format. This change provides more detail on regional airlines, who previously reported on Form 298-C.

TAF and National Forecast Totals

Recovery of Commercial Activity

The dual impact of the 2001 recession and terrorist events of September 11, 2001 put the airline industry into a tailspin from which it is still pulling out. The following table shows the year each of the 35 OEP airports is projected to return to and maintain a level of commercial operations above that in 2000.

35 OEP Airports by Year Level of Commercial Operations Returns to 2000 Level			
Airport	Year	Airport	Year
FLL	2001	MCO	2005
LAS	2001	BWI	2009
MEM	2001	EWR	2009
MDW	2002	PHX	2009
MSP	2002	TPA	2009
SLC	2002	DTW	2010
LGA	2003	LAX	2010
ORD	2003	SFO	2011
ATL	2004	IAD	2013
CLT	2004	DFW	2016
DCA	2004	MIA	2016
DEN	2004	PDX	2016
IAH	2004	CLE	2019
PHL	2004	SEA	2020
SAN	2004	BOS	2021
HNL	2005	CVG	2022
JFK	2005	PIT	after 2025
		STL	after 2025

FAA has designated the OEP airports as those airports most important to the commercial capacity of the national airspace system. The aviation industry downturn in the early years of this decade has resulted in structural changes that have substantially affected several large hubs. For instance, US Airways and American Airlines have pulled down their respective hubs in Pittsburgh and St. Louis. Seventeen of the OEP airports are projected to return to their 2000 level after 2008. In two cases, Pittsburgh and St. Louis, commercial operations are not expected to return to their 2000 level during the forecast period.

National Forecast Trends

Trends at individual airports reflect to varying degrees national aviation trends as well as the dynamics at individual airports. The national forecasts for FAA towered airports reflected in *FAA Aerospace Forecasts, Fiscal Years 2008 – 2025* show aircraft operations growing at an average annual rate of 1.9 percent over the 18-year forecast period. Average annual growth rates for this period by user group are as follows: air carrier, 2.4 percent; air taxi/commuter, 2.9 percent; and general aviation, 1.3 percent. The projected average annual rate of increase for enplanements on U.S. mainline air carriers from the national forecast is 2.8 percent over the 18-year forecast period. Regional enplanements are projected to increase 3.8 percent annually.

Trends by Region

In fiscal year 2006, the FAA served 264 towers and 235 Federal contract towers. California had the most FAA towers with 33, followed by Texas with 19 and Florida with 18. Regions with the most FAA towers were Southern with 51, Great Lakes with 48, and Western Pacific with 46. Table S-3 presents the number of FAA and Federal contract towers by region and state.

Tables S-6 through S-11 summarize airport operations, instrument operations, enplanements, and based aircraft by region from 2002 through 2025. The Southern (24.9 million operations), Western Pacific (19.4 million), and Great Lakes (18.5 million) regions ranked as the top three FAA regions in airport operations in 2006. Operations for all TAF airports totaled 114.4 million. The Western Pacific and Northwest Mountain regions are projected to be the fastest growing FAA regions from 2006 to 2025 in terms of airport operations, increasing 30 percent and 29 percent, respectively.

The Southern region led FAA regions in passengers enplaned with 165.3 million in 2006, followed by the Western Pacific region with 152.3 million passengers. Enplanements in the Western Pacific region are projected to increase the most in percentage terms increasing 86 percent from 2006 to 2025. The next two regions with the fastest projected increase in enplanements are the Eastern (73 percent) and Southwest (72 percent).

In 2006, there was a national total of 199,700 based aircraft. Western Pacific (38,400 aircraft), Southern (36,700), and Great Lakes (32,200) ranked as the top three FAA regions.

Large, Medium, and Small Hubs

Table S-5 presents passenger enplanements and airport operations by hub size. An airport qualifies as a *large* hub with one percent or more of total U.S. passenger enplanements. A *medium* hub airport enplanes from 0.25 to 0.99 percent of total U.S. passenger enplanements while *small* and *non-hub* airports enplane from 0.05 to 0.249 percent and less than 0.05 percent, respectively. Appendix B contains a list of hub airports classified by size (large, medium, small, and non-hub) as well as a list of Federal contract towers.

The 30 large hub airports enplaned 508.0 million passengers in 2006 while the 38 medium and 68 small hub airports enplaned 146.3 and 55.8 million passengers, respectively. The 363 non-hub airports enplaned 18.4 million passengers. Enplanements at large hubs are expected to increase at an annual rate of 3.0 percent over the 2006 to 2025 forecast period. Medium and small hub airports are forecast to increase 2.9 percent and 2.5 percent annually, respectively, during the forecast period.

Operations at large hub airports totaled 13.9 million compared to 7.7 million each at medium and small hub airports. Operations at large hub airports are forecast to increase at an annual rate of 2.2 percent from 2006 to 2025, growing to 21.0 million. Operations at the medium hubs are forecast to rise at an annual rate of 1.8 percent from 2006 to 2025; aircraft operations at small hub airports are forecast to grow only 1.3 percent per year.

Non-hub airports accounted for 32.1 million operations or 52 percent of total operations at FAA and Federal contract towers. General aviation aircraft operations accounted for the

majority of operations at these smaller airports.

35 OEP Airports

Table S-1 presents enplanement forecast summaries for the 35 OEP airports. Atlanta was the busiest airport in 2006 (41.0 million enplanements), followed by Chicago O'Hare (36.9 million), Los Angeles (29.3 million), and Dallas/Ft. Worth (28.6 million). Los Angeles and Atlanta are forecast to have the strongest growth in enplanements among the top four airports, increasing at annual rates of 3.7 percent and 2.9 percent, respectively, over the 2006 to 2025 forecast period. Dallas/Ft. Worth and Chicago O'Hare are forecast to increase 2.7 percent and 2.5 percent, respectively. Graph S-1 shows relative enplanements growth over the next 19 years. The five airports with the fastest projected increase are Washington Dulles, Chicago Midway, Las Vegas, Los Angeles, and John F. Kennedy.

Chicago Midway, Washington Dulles, and Orlando are projected to make the largest upward movements in ranking of enplanements. Chicago Midway moves up from 28th to 21st, Washington Dulles moves

up from 21st to 16th, and Orlando moves up from 13th to 10th position. Hub airports with the largest drop in hub rankings are LaGuardia (from 20th to 24th) and Washington National (from 27th to 31st).

Table S-2 presents operations forecast summaries for the 35 OEP airports. In 2006, FAA controllers at Atlanta handled 963,000 landings and takeoffs, a workload slightly higher than Chicago O'Hare, which totaled 962,000 operations. The next busiest airports were Dallas/Ft. Worth and Los Angeles with 704,000 and 653,000 airport operations, respectively.

In 2025, Atlanta is projected to have the largest number of operations with 1.44 million followed by Chicago O'Hare with 1.37 million. Los Angeles is projected to move into 3rd place in 2025 with 1.22 million operations.

Graph S-2 shows that the three airports projected to grow the fastest in operations are John F. Kennedy, Los Angeles, and Las Vegas. Washington Dulles is expected to move into the list of the top 10 busiest airports; Charlotte is expected to drop out of the top 10 ranking.

*Enplanements include air carrier, commuter and international.

**Percent is of national total enplanements.

***Operations include itinerant air carrier and air taxi only.

Table S-5.
Summary of Enplanements and
Airport Operations at FAA Towers and Contract Towers

	Enplanements at Towered Airports			Annual Compound Growth Rate 2006-2025
	Count	2006	2025	
Large Hubs	30	507,958,226	892,531,074	3.01
Medium Hubs	38	146,257,477	250,288,322	2.86
Small Hubs	68	55,795,525	89,312,145	2.50
Non Hub Towers	363	18,446,206	26,773,108	1.98
Total	499	728,457,434	1,258,904,649	2.92

	Operations at Towered Airports			Annual Compound Growth Rate 2006-2025
	Count	2006	2025	
Large Hubs	30	13,943,792	21,035,088	2.18
Medium Hubs	38	7,730,122	10,949,544	1.84
Small Hubs	68	7,732,554	9,834,265	1.27
Non Hub Towers	363	32,137,793	41,841,314	1.39
Total	499	61,544,261	83,660,211	1.62

*Includes both tower and non-tower airports.

Appendix A

Description of Activity Measures

Air Carrier Enplanements

These data summarize domestic enplaned passengers (originations and connections) of U.S. commercial air carriers and international enplanements for both U.S. and foreign flag carriers submitted to the U.S. Department of Transportation (DOT), Bureau of Transportation Statistics (BTS) on T-100 reports. Estimates include both scheduled and non-scheduled enplaned passengers.

Regional Enplanements

Starting in FY 2003, FAA includes in the regional category enplanements for those airlines whose primary function is to provide passenger feed to mainline carriers, regardless of aircraft size. As of October 2002, all scheduled and non-scheduled operations using aircraft with 10 or more seats to transport regional passengers must report on T-100.

Historic enplanement data includes originating passengers on scheduled commuter or regional carriers as reported on DOT Form 41 and 298-C; where possible, adjustments were made to include connecting passengers. Historically, Form 298-C included carriers operating at least five scheduled round trips per week whose entire fleet consists of aircraft having 60 seats or less.

Aircraft Operations

FAA air traffic controllers count landings and takeoffs at FAA towered airports. Controllers employed by an FAA contractor count operations at FAA contract towers. At non-FAA facilities, operations counts represent an estimate.

Air carrier operations represent either takeoffs or landings of commercial aircraft with seating capacity of more than 60 seats.

Commuter/air taxi operations is one category. Commuter operations include takeoffs and landings by aircraft with 60 or fewer seats that transport regional passengers on scheduled commercial flights. Air taxi operations include takeoffs and landings by aircraft with 60 or fewer seats conducted on non-scheduled or for-hire flights.

General aviation operations represent all civil aviation aircraft takeoffs and landings not classified as commercial. Military operations represent takeoffs and landings by military aircraft. GA and military operations are further subdivided into itinerant or local flights.

Local Operations

Aircraft operating in the traffic pattern or within sight of the tower, or aircraft known to be departing or arriving from flight in local practice areas, or aircraft executing practice instrument approaches at the airport.

Itinerant Operations

FAA reports all aircraft operations other than local operations as itinerant. Essentially, these data represent takeoffs and landings of aircraft going from one airport to another.

Instrument Operations

These data include arrivals, departures, and overflights conducted by an FAA approach control facility for aircraft with an Instrument Flight Rule (IFR) flight plan or special Visual Flight Rule procedures. They also contain

Primary Instrument Operations

These data consist of aircraft arrivals and

operations where a terminal control facility provides IFR aircraft separation. The FAA classifies these operations into the following three types.

departures at a primary airport, normally the airport with the approach control facility.

Secondary Instrument Operations

These data show arrivals and departures at secondary airports.

Overflights

These data include operations of aircraft in transit through the approach control facility airspace.
