

Testing for Hepatitis C

- Talk to your health care provider about whether you should be tested.
- The **ONLY** way to tell for sure if you have hepatitis C is a simple and safe blood test.
- Your health care provider will draw a small amount of blood from a vein in your arm.

Hepatitis C Results

- Accurate 6 months or more after exposure.
- A positive test means you were exposed to the hepatitis C virus at some point.
- Further tests can see if the virus is still in your blood right now. If it is, that means you have hepatitis C.
