Introduction

This research user guide is produced on an annual fiscal year (FY) basis by the Veterans Affairs Information Resource Center (VIREC), a national resource center within the Health Services Research and Development Service (HSR&D) of the U.S. Department of Veterans Affairs. It contains frequency tables for selected variables in the FY2003 Medical SAS^{®1} Inpatient Acute Care “Main” dataset and Medical SAS Outpatient “Visit” dataset.

Common Dataset Name	Dataset 2-Character Reference	Full Dataset Name	Description
Main	PM	MDPPRD.MDP.SAS.PM03	All demographic, clinical, stay information
Visit	SF	MDPPRD.MDP.SAS.SF03	All encounter stop codes, patient demographics

For each variable, values are presented in two columns: The “*Internal Value*,” which represents the actual value stored in the dataset, and the “*Formatted Value*,” which represents the value that will appear in printouts if a permanent SAS format has been assigned to the variable. Any permanent SAS format value assigned to a variable is created by the Austin Automation Center (AAC) and may not necessarily match the literal values shown in other data sources. The formatted values can always be overwritten to appear as whatever value the programmer chooses.

Unlike from the last year’s version, the column headings of “All Workload” and “Veterans Only” were eliminated in this year’s and the frequencies and their column percents under “*N*” and “*%*” headings represent all workload, including both veterans and non-veterans.

In all tables, missing values were designated by “(blank)” for a character variable or “(missing)” for a numeric variable.

What’s New

In this guide, we added frequency tables for a few new variables. They are [ETHNIC](#) and [RACE1](#) – [RACE6](#) in the Inpatient Main Dataset.
