ACKNOWLEDGMENTS

Overall responsibility for the data processing and the compilation and documentation for the NHANES I Epidemiologic Followup Study (NHEFS), 1992 Interview Public Use data tape rested with Christine S. Cox. Assistance was provided by other members of the NHEFS data management team: Sandra T. Rothwell, Mike Mussolino, Jennifer H. Madans, Dawn M. Scott, Madelyn A. Lane, Keith Zevallos, Cordell Golden, Cynthia Reuben, Joel C. Kleinman, and Jacob J. Feldman. Special thanks are extended to Joan Cornoni-Huntley of the National Institute on Aging (NIA) who played an important role in the development and continuation of the NHEFS. The contribution of the contractor, Westat Inc., of Rockville, Maryland, who conducted the field work is also gratefully acknowledged.

The NHEFS originated as a joint project between the National Center for Health Statistics (NCHS) and NIA. It has been funded primarily by NIA, with additional financial support from the following components of the National Institutes of Health and other Public Health Service agencies: the National Center for Chronic Disease Prevention and Health Promotion; the National Cancer Institute; the National Institute of Child Health and Human Development; the National Heart, Lung, and Blood Institute; the National Institute on Alcohol Abuse and Alcoholism; the National Institute of Mental Health; the National Institute of Diabetes and Digestive and Kidney Diseases; the National Institute of Arthritis and Musculoskeletal and Skin Diseases; the National Institute of Allergy and Infectious Diseases; and, the National Institute of Neurological and Communicative Disorders and Stroke.

USE OF NHEFS DATA

With the goal of mutual benefit, NCHS requests the cooperation of recipients of data tapes in certain actions related to their use:

- A. Any published material derived from the data should acknowledge the National Center for Health Statistics (NCHS) as the original source. It should also include a disclaimer which credits any analyses, interpretations, or conclusions reached to the author (recipient of the tape) and not to NCHS, which is responsible only for the initial data.
- B. Consumers who wish to publish a technical description of the data will make a reasonable effort to insure that the description is not inconsistent with that published by NCHS. This does not mean, however, that NCHS will review such descriptions.
- C. Authors should provide NCHS with a reprint of published articles which utilize the 1992 NHEFS data. Please send reprints to:

ERRORS IN THE NHEFS DATA TAPES AND SURVEY DIFFERENCES

The NHEFS Public Use data tapes have been subjected to a great deal of careful editing. However, due to the large volume of data in the series, it is likely that a small number of errors or discrepancies remain undetected.

In general, the NHEFS data management team has not attempted to resolve substantive data discrepancies that may exist 1) within the 1992 NHEFS data tapes, or 2) between the 1992 NHEFS data tapes and the data tapes of the original National Health and Nutrition Examination Survey (NHANES I) and/or other NHEFS followup waves.

INTRODUCTION TO THE 1992 NHEFS INTERVIEW TAPE DOCUMENTATION

I. NHEFS BACKGROUND INFORMATION

The NHANES I Epidemiologic Followup Study (NHEFS) is a longitudinal study which uses as its baseline those adult persons ages 25 to 74 years who were examined in the first National Health and Nutrition Examination Survey (NHANES I). The NHEFS is comprised of a series of four followup surveys. The first wave of data collection, the 1982-84 NHEFS, was conducted from 1982 to 1984 and included all persons who were between 25 and 74 years at their NHANES I examination (n=14,407). The second wave of data collection, the 1986 NHEFS, was conducted for members of the NHEFS cohort who were 55-74 years at their baseline examination and not known to be deceased at the 1982-84 NHEFS (n=3,980). The third wave, the 1987 NHEFS, was conducted for the entire non-deceased NHEFS cohort (n=11,750). The fourth wave of data collection, the 1992 NHEFS, includes the entire non-deceased NHEFS cohort (n=11,195).

NHANES I collected data from a national probability sample of the United States civilian noninstitutionalized population between the ages of 1 and 74 years. The survey, which included a standardized medical examination and questionnaires that covered various health-related topics, took place from 1971 through 1974 and was augmented by an additional national sample in 1974-75. The NHANES I sample included 20,729 persons 25 to 74 years of age, of whom 14,407 (70 percent) completed a medical examination. The design, content and operation of NHANES I has been described elsewhere (Vital and Health Statistics, Series 1, Nos. 10a, 10b, and 14).

Although NHANES I provided a wealth of information on the prevalence of health conditions and risk factors, the cross-sectional nature of the original survey limits its usefulness for studying the effects of clinical, environmental, and behavioral factors and in tracing the natural history of disease. Therefore, the NHEFS was designed to investigate the association between factors measured at the baseline and the development of specific health conditions. It originated as a joint project between the National Center for Health Statistics (NCHS) and the National Institute on Aging with collaboration from components of the National Institutes of Health and other Public Health Service agencies. The 14,407 participants who were 25 to 74 years of age when they were examined in NHANES I (1971-75) were included in the followup study population.

In the first wave, the 1982-84 NHEFS, data were collected on all 14,407 subjects (i.e., individuals examined at NHANES I) in the cohort. Tracing of subjects began in 1981 and data collection was conducted from 1982 to 1984. Approximately 93 percent (n=13,383) of the cohort was successfully traced by the end of the survey period. Detailed information on the design, content, and operation of the 1982-84 NHEFS may be found in the Plan and Operation of the NHANES I Epidemiologic Followup Study 1982-84, Vital and Health Statistics, Series 1, No. 22. The basic design of the 1982-84 NHEFS consisted of the

following components:

- tracing subjects or their proxies to a current address;
- acquiring death certificates for deceased subjects;
- performing in-depth interviews with the subjects or with their proxies including, for surviving subjects, taking pulse, blood pressure, and weight measurements of subjects; and,
- obtaining hospital and nursing home records, including pathology reports and electrocardiograms.

The second wave of NHEFS, the 1986 NHEFS, was conducted to assess changes in the health and functional status of the oldest members of the NHEFS cohort since the last contact period. It included 5,677 subjects who were 55 years or older at their NHANES I examination (almost 40 percent of the entire NHEFS cohort). Data collection was restricted to 3,980 subjects aged 55 years or older at NHANES I who were not known to be deceased at the time of the 1982-84 NHEFS, regardless of their tracing or interview status in 1982-84. The remaining 1,697 subjects who were deceased at the time of the 1982-84 NHEFS were excluded from additional data collection in the 1986 NHEFS. Detailed information on the design, content, and operation of the 1986 NHEFS may be found in the Plan and Operation of the NHANES I Epidemiologic Followup Study, 1986, Vital and Health Statistics, Series 1, No. 25.

The 1987 NHEFS, the third wave of data collection, was conducted to continue to collect information on changes in the health and functional status of the NHEFS cohort since the last contact period. Tracing and data collection were conducted during this followup survey only for the members of the NHEFS cohort who had not been identified as deceased in 1982-84 or 1986 (n=11,750) regardless of their previous tracing or interview status. The 2,657 previously deceased subjects were excluded from further data collection in the 1987 NHEFS. Detailed information on the design, content, and operation of the 1987 NHEFS may be found in the Plan and Operation of the NHANES I Epidemiologic Followup Study, 1987, Vital and Health Statistics, Series 1, No. 27.

The fourth wave of the NHEFS, the 1992 NHEFS, collected information on changes in the health and functional status of the NHEFS cohort since the last contact. The 1992 NHEFS cohort includes 3,212 subjects who were deceased at the time of the 1982-84, 1986 and 1987 NHEFS and 11,195 subjects who were not known to be deceased prior to the 1992 NHEFS data collection period. Tracing and data collection in the 1992 NHEFS was undertaken only for the non-deceased subjects, regardless of their tracing or interview status in previous surveys. The 3,212 previously deceased subjects were excluded from additional data collection in the 1992 NHEFS. Detailed information on the design, content, and operation of the 1992 NHEFS may be found in the Plan and Operation of the NHANES I Epidemiologic Followup Study, 1992, Vital and Health Statistics, Series 1, No. 35.

The design and data collection procedures adopted in the 1992 NHEFS were very similar to the ones developed in the previous surveys: subjects were traced; subject and proxy interviews were conducted; and, health care facility abstracts and death certificates were collected. All subjects whose vital status was not obtained through tracing procedures were considered lost-to-followup in the 1992 NHEFS. In some cases, information about the death of a subject was obtained from a former neighbor, a relative or another tracing source. Although this information was noted in the subject's tracing record, he or she was considered lost-to-followup unless the information was verified by means of a death certificate or proxy interview. A subject's death had to be confirmed by either a death certificate or proxy interview.

In addition to verifying the subject's vital status, the tracing process also was used to obtain the current address of surviving subjects as well as to identify a knowledgeable proxy respondent for deceased subjects. Respondents who were identified and located through the tracing procedures were asked to participate in a telephone interview. In a few cases, subjects who had been traced successfully could not be relocated for the interview. Only their vital status and the date when they were last traced in the 1992 survey are available.

A major difference between the NHEFS waves was the manner in which the interviews were conducted. In the 1982-84 NHEFS, the two-hour subject interview was usually conducted in-person while, in subsequent followups, the interview was shortened to approximately 30 minutes in length and was conducted primarily by telephone. In addition, since the questionnaire was not administered in-person, no physical measurements were made in the later followups.

The 1992 NHEFS interviews were conducted over the telephone using a Computer Assisted Telephone Interviewing (CATI) system. CATI is a telephone interviewing technique that allows the interviewer to enter the answers supplied by the respondent directly into the computer. Thus, editing and coding time is reduced and keypunching from a hard copy questionnaire is eliminated. A computer program drives the questionnaire so that the correct skip patterns are followed and the appropriate questions are displayed on the computer monitor. The skip patterns are based on information gathered from previous data collection waves or on responses provided during the 1992 interview. For example, certain questions on pregnancy and menstrual history in the 1992 interview were programmed to be skipped automatically if the subject was male or if the female subject was interviewed previously and was 45 years of age or older at the time of that interview. Edit and logic checks are incorporated into the data collection system itself, thus improving the quality of the data.

As of July 19, 1993, the end of the 1992 NHEFS data collection period, 10,079 (90.0 percent) of the 11,195 members of the 1992 NHEFS cohort had been successfully traced. Interviews were conducted for 9,281 subjects (92.1 percent of those successfully traced). In addition, 10,535 facility stay records were collected for 4,162 subjects using

information obtained from the interview, death certificate, or some other source. Death certificates were obtained for 1,374 (98.7 percent) of the 1,392 subjects who were known to have died since last contact. Detailed information on the design, content, and operation of the 1992 NHEFS may be found in the Plan and Operation of the NHANES I Epidemiologic Followup Study 1992, Vital and Health Statistics, Series 1, No. 35.

The data collected from the 1992 NHEFS are stored on four separate tapes:

- 1) Vital and Tracing Status tape -- contains summary information about the status of the NHEFS cohort,
- 2) Health Care Facility Stay tape -- contains information on reports of stays in hospitals and nursing homes, as well as information abstracted from facility medical records,
- 3) Mortality Data tape -- contains data abstracted from the death certificates from all three NHEFS surveys,
- 4) Interview tape -- contains the data collected from the subject and proxy interviews. This tape is discussed below in more detail.

II. 1992 NHEFS INTERVIEW PROCEDURES

An attempt was made to obtain an interview for all subjects who were successfully traced in the 1992 NHEFS. The procedures used to obtain interviews in the 1992 NHEFS were similar to the ones adopted in the previous followups:

- o An advance letter describing the followup study was sent to the surviving subject or a knowledgeable proxy respondent (for a deceased subject or for a subject who was incapacitated and unable to participate in the interview) once that person had been traced.
- o The interviewer then called the subject or proxy to verify receipt of the advance letter and the vital status of the study subject. Once verification was complete the interviewer attempted to conduct the interview or schedule an appointment for the interview for a later date.
- o The 1992 interview was administered to the respondent by telephone or, when a telephone number was not available, the respondent was sent a mail questionnaire to complete. Any overnight health care facility stays reported during the interview were recorded onto a Hospital and Health Care Facility (HHCF) chart.
- o At the end of the interview, the respondent's address was re-confirmed. This was done for tracing purposes as well as to ensure that a Medical Authorization Form (MAF) would be sent to the proper address to be signed and returned. The MAF was used to request health care facilities to release information from the subject's medical records to the study. It was mailed out to the respondent for his or her signature (or to a blood relative if a proxy respondent was not related to the subject) when at least one health care facility stay was reported during the interview and was listed on the subject's HHCF chart.

A total of 9,281 interviews were conducted in the 1992 NHEFS.

III. 1992 NHEFS QUESTIONNAIRE TYPES AND CONTENT

A. Questionnaire types

Two versions of the questionnaire were used in the 1992 Followup: the subject questionnaire and the proxy questionnaire (see appendix I of the NHANES I Epidemiologic Followup Study, 1992: Plan and Operation, Vital and Health Statistics, Series 1, No. 35). Surviving subjects were always administered the subject questionnaire. If the subject was alive but incapacitated, a slightly modified version of the subject questionnaire was administered to a proxy respondent. A separate proxy questionnaire was used only when the subject was deceased. It consisted of a subset of the questions from the subject questionnaire, with the addition of several questions related to the subject's death.

Note the distinction between a proxy respondent and the proxy questionnaire. A proxy respondent was the informant who answered questions when the subject was not able to participate in interview, either because the subject was alive and incapacitated or because the subject was deceased. The proxy questionnaire, however, was the type of questionnaire administered only to the person who responded for a deceased subject. A total of 1,681 proxy respondents were interviewed in the 1992 NHEFS. Of these, 551 responded for an incapacitated subject and were administered a modified version of the subject questionnaire and 1,130 responded for a deceased subject and, thus, were administered the proxy questionnaire.

Nearly all 9,281 interviews collected in the 1992 NHEFS were conducted by telephone. However, during the main survey, when a subject or proxy could not be contacted by telephone, the respondent was mailed an abbreviated questionnaire. Forty-three 1992 NHEFS mail questionnaires were returned (41 from surviving subjects and 2 from proxy respondents for deceased subjects). Unlike the 1982-84 NHEFS, a returned mail questionnaire in the 1992 NHEFS constitutes an interview and data from the mail questionnaires are included on the 1992 NHEFS Interview tape.

The mail questionnaire for surviving subjects was designed to collect information on: 1) tracing for future recontacts, 2) the subject's current living arrangement and medical history since last contact, 3) the name and address of hospitals and nursing homes in which the subject had stayed since last contact and the admission date for each stay, and 4) if the subject is female, reproductive and hormone use history.

The mail questionnaire sent to the proxy respondent when the subject was deceased was designed to obtain the necessary information on: 1) the subject's identity, 2) the name and address of hospitals and nursing homes in which the subject had stayed since last contact and the admission date for each stay, and 3) the date and location of the subject's death.

B. Questionnaire content

In order to retain item comparability between NHANES I, the 1982-84, 1986, 1987 and the 1992 NHEFS, a majority of the questions included on the 1992 NHEFS questionnaire were the same as those used in the previous NHEFS waves. Both the subject and the proxy questionnaires were divided into sections according to topic area. The 1992 NHEFS survey instruments were designed to gather information on events that occurred since last contact regarding the subject's:

- o living arrangement and household composition,
- o history of selected medical conditions,
- o functional limitation,
- o smoking and alcohol habits,
- o exercise and weight,
- o vision and hearing,
- o pregnancy and menstrual history,
- o utilization of hospitals, nursing homes and other health care facilities, and
- o locality of subject's death (if subject deceased).

The data on functional limitation, exercise and weight, and vision and hearing were collected for surviving subjects only. Several questions asked in previous followup interviews concerning community services utilization, breast self-examination, physician advice on lowering blood pressure and cholesterol were not reasked in the 1992 NHEFS. However, the 1992 NHEFS interview included several new questions on such topics as, skin cancers (including malignant melanoma), outpatient cancer surgery, hernias, calcium supplementation, hormone skin patches, and health insurance coverage.

Retrospective questions were included in Part B (Medical Conditions) of the questionnaire to collect information on the subject's history of selected medical conditions. Figures 1a-1c show the general sequence of the questions. The wording of the medical condition questions in Part B generally depended on whether or not the subject had had a previous NHEFS interview and, if so, whether or not a specific medical condition had been reported for the subject during that interview. If a certain medical condition had been reported in a previous NHEFS interview, the respondent in the 1992 interview was asked to recall any recurrences of that medical condition since the date of the previous interview. The respondent was asked to recall if a doctor had ever told the subject that he or she had the

medical condition in question if: 1) the condition had not been reported in a previous NHEFS interview, 2) the condition was never asked about in previous NHEFS interview, or 3) if the subject had not been previously interviewed.

Respondents also were asked to provide information on all overnight hospital, nursing home, or other non-hospital health care facility stays. Generally, respondents were asked to report all overnight facility stays since 1987 if the subject was last interviewed in the 1987 NHEFS, since 1985 if the subject was last interviewed in the 1986 NHEFS, since 1980 if the subject was last interviewed in the 1982-84 NHEFS, or since 1970 if the subject was last interviewed at the NHANES I examination. In the case where the respondent reported that the subject was first told about having the medical condition of interest before 1980, 1985, or 1987 and that information contradicted information stored in the CATI system obtained in the 1982-84, 1986, or 1987 NHEFS interview, he or she was asked to provide information on all hospital stays since 1970 for that condition.

The beginning of the recall period was defined as either 1970, 1980, 1985 or 1987 rather than the date of the subject's most recent interview (i.e., baseline examination, 1982-84 NHEFS, 1986 NHEFS, or 1987 NHEFS) for two main reasons. First, the beginning or mid-point of a decade may be an easier reference point for recalling events rather than the date of the subject's most recent interview. Second, given that respondents might have difficulty recalling the exact dates of facility stays, increasing the length of the recall period maximizes the probability of collecting information on health care facility stays that occurred since the date of the subject's most recent interview.

All overnight stays in a hospital, nursing home, or other health care facility reported during the interview were recorded onto the HHCF chart. The full name and address of the health care facility, date of admission, and reason(s) for the admission were obtained from the respondent for each stay and transcribed onto the chart. Facility stays reported during the interview were compiled from the HHCF chart and entered into a computerized tracking system. Reports and medical abstracts returned from facilities were then linked together and the 1992 NHEFS Health Care Facility Stay (HCFS) data tape was constructed. For more information, see the introduction to the 1992 HCFS data tape documentation.

At the end of the interview, the interviewer confirmed name and address information with the respondent for future tracing purposes. Confirmation of name and address was also done so that a Medical Authorization Form (MAF) could be sent to the proper address to be signed and returned. The form was used to request health care facilities to release information from the subject's medical records to the study. It was sent to the respondent to obtain his or her signature (or to a blood relative if the proxy respondent was not related to the subject) only when at least one health care facility stay was reported and had been listed on the subject's HHCF chart. When the proxy respondent was not related to the deceased subject or to the incapacitated subject who was unable to sign the MAF, an attempt then was made to identify a relative who could sign the MAF.

As of July 19, 1993, the end of the 1992 NHEFS data collection period, interviews had been conducted for 82.9 percent (n=9,281) of the 11,195 members of the 1992 NHEFS cohort (92.1 percent of those successfully traced). Of these, 41 were partially completed yet are included on the 1992 NHEFS Interview tape. Because the partially completed interviews required special coding considerations, they are discussed in more detail in Section VI of this document. (The variable in positions 189-190 on the 1992 NHEFS Interview tape identifies the interview completion status as well as the interview respondent.)

IV. 1992 NHEFS INTERVIEW TAPE RECORD STRUCTURE

The Interview data tape contains information from 9,281 interviews (8,151 subject and 1,130 proxy interviews) collected in the 1992 NHEFS. The data are stored in a flat, rectangular data file that has a fixed logical record length of 7,954. Each record contains interview data for one study subject. The Interview tape does not include records for those subjects (or their proxies) who refused to be interviewed or who were never contacted. It also does not include records for subjects who were known to be deceased in the 1982-84, 1986, or 1987 NHEFS.

The numeric variables in the data set have a minimum width of two positions and are right-justified. They contain leading blanks except for date variables stored in a month-day-year or month-year format (these variables contain leading zeros). In addition, all numeric variables are integers; no decimal points are required to read the values of a variable. Character variables have a minimum width of two positions and are left-justified, even if they contain numerics.

The interview record is divided into five major sections.

A. NHEFS SUMMARY INFORMATION (positions 1-339)

The first part of the record contains summary demographic and survey information for each subject (e.g., vital status at the 1982-84, 1986, 1987, and the 1992 NHEFS, age at the NHANES I examination, race, sex, birth date, NHANES I examination date, and the 1992 NHEFS interview date). This section also provides summary information from the 1982-84, 1986 and 1987 NHEFS interviews (e.g., interview date, questionnaire type, and the recoded responses for selected medical conditions) when an interview was conducted for the subject in the wave. These types of variables were used to drive the CATI program. Positions 1-5 contain the Sample Sequence Number, which is the subject identification number. This number is unique for each subject and is used when linking data tapes. Thus, the 1992 NHEFS Interview tape can be linked to all other NHEFS and NHANES I data tapes.

B. MAIN BODY OF 1992 NHEFS QUESTIONNAIRE (positions 340-2823)

This section contains the majority of the data collected from the 1992 NHEFS interview.

C. QUESTIONS HAVING MULTIPLE RESPONSE SETS (positions 2824-7954)

This section contains data for questions in Part A and Part B which involve multiple response sets (i.e., the same set of questions were asked about each occurrence of the event of interest and the number of events varies by subject). Thus, information on whether or not the event occurred is found in main body of

the questionnaire but information about the events is found in positions 2819-7954 of the record. Questions concerning household members, cancer types, outpatient cancer surgeries, blood relatives who had cancer, hospital and other non-hospital facility admissions were processed in this manner. Enough space was provided to accommodate the responses on the maximum number of reports given by any one respondent for each of the multiple response question sets. The format for each of the question sets is discussed in detail below.

1. Household members (positions 2824-3108):

This subsection of the record contains the data collected on each household member (either current or previous) reported in response to either Q.A4 or Q.A7 (coded in positions 411-412 and 425-426 respectively). Variables in this subsection of the record include the relationship to the subject and the sex of each current household member or each household member prior to the subject entering a nursing home or other institution. Information is available for up to 19 current or previous household members.

2. Cancer (positions 3109-3295):

This subsection of the record contains the data collected on each different type of cancer reported in response to Q.B67 through Q.B69. Variables in this subsection of the record include the type of cancer (Q.B67), the year the subject was first told about having that type of cancer (Q.B68), and whether or not the subject was hospitalized for the cancer (Q.B69). Since no more than four cancer types were reported for any one subject, there are four sets of fields reserved to store the information collected on cancer. The total number of cancers reported for each subject is stored in positions 799-800.

3. Out-patient Cancer Surgery (positions 3296-3427):

This subsection of the record contains the data collected on each out-patient cancer surgery reported in response to Q.B69A (coded in positions 803-804). Variables in this subsection of the record include what type of cancer the out-patient surgery was for (Q.B69B) and the year of the most recent out-patient surgery for that particular cancer type (Q.B69C). Information is available for up to three out-patient cancer surgery reports.

4. Cancer Family History (positions 3428-5628):

This subsection of the record contains the data collected for each relative with a history of cancer reported in response to Q.B71 through Q.B73. Respondents were asked to provide information on each relative who had been diagnosed with cancer in the last ten years. Variables in this subsection of the record include the

relationship to the subject of the blood relative with cancer(Q.B71), and the relative's type of cancer (Q.B73). Since no more than nine relatives with cancer diagnosis were reported for any one subject, there are nine sets of fields reserved to store the information. Up to ten cancer sites or types were allowed for each relative reported. The total number of family members with cancer diagnosis is stored in positions 807-808.

5. Non-Hospital Facility Admissions (positions 5629-6654):

This subsection contains the data collected on each non-hospital facility admission reported in response to Q.B114 (coded in positions 997-998). The purpose of Q.B114 was to gather information about non-hospital facility (e.g., nursing home, mental health care facility) stays that may not have been specifically reported in response to the hospitalization questions in Part B (Medical Conditions). This subsection contains the information collected from Q.B116 through Q.B122 for each reported admission. As with the other multiple response sets of questions, the interview was structured to allow the respondent to report more than one non-hospital facility admission. Since no more than six non-hospital facility admissions were reported for any one subject, there are six sets of fields reserved to store the information. The total number of non-hospital facility admissions that were reported is stored in positions 999-1000.

The location of each set of non-hospital facility admission questions is listed below:

<u>Non-hospital facility admission set</u>	<u>Positions</u>
First non-hospital facility admission reported	5629-5799
Second non-hospital facility admission reported	5800-5970
Third non-hospital facility admission reported	5971-6141
Fourth non-hospital facility admission reported	6142-6312
Fifth non-hospital facility admission reported	6313-6483
Sixth non-hospital facility admission reported	6484-6654

Each of the six sets of fields in the non-hospital facility admissions subsection contains the same variables. If a respondent reported less than six admissions for a subject, inapplicable codes (-1) were used to fill the tape positions for variables that were not used.

6. Hospital Facility Admissions (positions 6655-7954):

This subsection contains the data collected on each hospital facility admission reported in response to Q.B111 (coded in positions 993-994). The purpose of Q.B111 was to gather information about hospital facility stays that may not have

been specifically reported in response to the hospitalization questions in Part B (Medical Conditions). This subsection contains the information collected from Q.B112 through Q.B113 for each reported admission. As with the other multiple response sets of questions, the interview was structured to allow the respondent to report more than one hospital facility admission. Since no more than fifteen additional hospital facility admissions were reported for any one subject, there are fifteen sets of fields reserved to store the information. The total number of hospital facility admissions that were reported is stored in positions 995-996.

Each of the fifteen sets of fields in the hospital facility admissions subsection contains the same variables. If a respondent reported less than fifteen admissions for a subject, inapplicable codes (-1) were used to fill the tape positions for variables that were not used.

D. 1992 NHEFS HEALTH CARE FACILITY STAY TAPE SUMMARY VARIABLES (positions 7955-8028):

The 1992 NHEFS HCFS tape contains records for all in-scope stays (i.e, in most cases, a stay with an admission date after the date of the subject's most recent interview) reported during the interview. However, in some cases, a record of a stay will be stored on the HCFS tape for which no corresponding information is coded on the subject's interview record. This type of inconsistency sometimes results when information on an overnight stay is not reported in the interview but is recorded on the HHCF chart. Usually it occurs when the interviewer fails to update the interview based on information obtained when filling out the HHCF chart.

Summary variables were created from the 1992 NHEFS HCFS data tape to help rectify this situation. These variables indicate whether or not a facility stay was reported for that medical condition. The summary variables provide the most correct information on the conditions reported by the respondent during the interview for which there is a record for an overnight stay on the HCFS file. More detailed information on the summary variables is provided in the technical note on pages 717-718 of this Interview tape documentation.

E. ADDITIONAL NHEFS SUMMARY INFORMATION (positions 8029-8074):

The last section of the interview record contains the underlying cause of death (for deceased subjects for whom a death certificate is available), NHANES I subsample membership, strata, pseudo primary sampling units, and sample weights.

V. 1992 NHEFS INTERVIEW TAPE VARIABLE DESCRIPTION

Variables in the data set are documented in the codebook with the following information:

A. QUESTION NUMBER

A question number is placed in this location if the variable corresponds to a question asked in the interview. The field is blank if the variable is a flag created during data collection and does not represent a question from the interview. In some cases, the same question number may be assigned to more than one variable. This occurs when the question has multiple parts or multiple responses. For example, two variables are needed to code the response to Q.C2 (How long has subject had to stay in bed?). "C2" is listed in the codebook as the question number for both of the variables in positions 1027-1028 and positions 1029-1030 (Number of months or years and Time period responded in, respectively).

B. VARIABLE NAME

Each variable on the Interview record is assigned a variable name composed of alphabetic characters and/or numbers. The variable names listed in the codebook were assigned arbitrarily and were used solely for the purpose of driving the CATI. In most cases, a maximum of eight characters are used in variable names and each variable is assigned a unique name.

C. COLUMN NUMBER

This lists the positions on the record where the variable is stored.

D. VARIABLE LABEL

The label is an abbreviated description of the variable. The user is strongly encouraged to refer to the hard copy questionnaire when using the Interview tape documentation in order to understand fully the nature and content of the variables.

E. CODES AND FREQUENCIES

The codes for each variable are listed below the variable label. The frequency count appears to the left of the code and the description of the code or range is listed to its right. When a variable has too many response codes to list individually (e.g., age at 1992 NHEFS interview), the codebook provides a range of values rather than each individual value.

Codes represented by negative values are reserved for special use on the 1992 NHEFS Interview tape:

- o a code of -1 in the 1992 NHEFS Interview tape is used as an "inapplicable" code and is assigned when a question is not asked as a result of the questionnaire skip pattern.
- o a code of -7 always indicates that the respondent refused to answer the question.
- o a code of -8 always represents a "don't know" response.
- o a code of -9 represents "not ascertained" and is used when mail questionnaire respondents did not get asked the question. It also is used for partially completed interviews to complete the skip patterns after the breakoff point (see Section VI below).

F. TRACING OF THE INAPPLICABLE RESPONSES

A statement identifying the codes in preceding variables which caused the question to be skipped and the variable to be coded inapplicable (-1) is given below the variable description.

Note: Several interview questions permitted more than one response (e.g., what are the year(s) when subject had additional heart attack(s)). Each response was entered in the CATI system and was stored as a separate variable. An inapplicable statement is given for the first variable of the set and applies to all the other variables in the set. For example, each variable in positions 635-642 corresponds to a year for an additional heart attack reported in response Q.B22. A similar inapplicable statement appears for each of the variables in this series of questions. However, the number of inapplicable codes in positions 635-642 depends on the actual number of additional heart attacks reported. Unlike the set of questions regarding cancers and facility stay reports, variables like these did not need to be placed at the end of the interview record.

The variables where this format is used are:

Column Number	Label
635-642	WHAT YEAR WAS THAT 1ST-4TH ADDITIONAL HEART ATTACK?
643-650	HEART ATTACK NOT REPORTED PREVIOUSLY AND Q.B22 1ST-4TH REPORTED YEAR BEFORE PREVIOUS NHEFS INTERVIEW YEAR OR LATER THAN CURRENT INTERVIEW YEAR
675-678	WHAT YEAR WAS THAT 1ST-2ND ADDITIONAL STROKE?
679-682	STROKE NOT REPORTED PREVIOUSLY AND Q.B34 1ST-2ND REPORTED YEAR BEFORE PREVIOUS NHEFS INTERVIEW YEAR OR LATER THAN CURRENT INTERVIEW YEAR
825-832	WHAT YEAR WAS THAT 1ST-4TH ADDITIONAL HIP FRACTURE?
833-840	HIP FRACTURE NOT REPORTED PREVIOUSLY AND Q.B79 1ST-4TH REPORTED YEAR BEFORE PREVIOUS NHEFS INTERVIEW YEAR OR LATER THAN CURRENT INTERVIEW YEAR
853-860	WHAT YEAR WAS THAT 1ST-4TH ADDITIONAL BROKEN WRIST?
861-868	BROKEN WRIST NOT REPORTED PREVIOUSLY AND Q.B85 1ST-4TH REPORTED YEAR BEFORE PREVIOUS NHEFS INTERVIEW YEAR OR LATER THAN CURRENT INTERVIEW YEAR
951-958	WHAT YEAR WAS THAT 1ST-4TH ADDITIONAL HERNIA SURGERY?
959-966	Q.B102 1ST-4TH REPORTED YEAR IS LATER THAN CURRENT INTERVIEW YEAR OR PRIOR TO SUBJECT'S DATE YEAR OF BIRTH
977-980	WHAT YEAR WAS THAT 1ST-2ND CATARACT SURGERY?
981-984	CATARACT SURGERY NOT REPORTED PREVIOUSLY AND Q.B107 1ST-2ND REPORTED YEAR BEFORE PREVIOUS NHEFS INTERVIEW YEAR OR LATER THAN CURRENT INTERVIEW YEAR

G. NOTES

A variable entry may include a note which follows the explanation of the inapplicable code when additional explanatory information on the variable is required.

VI. 1992 NHEFS PARTIALLY COMPLETED INTERVIEWS

Interview records in which the respondent either refused or was unable to complete the interview have been included on the Interview tape and are given the disposition of "partial complete" (see positions 189-190 of the Interview codebook). An interview was considered to be partially completed if the respondent provided information on at least one facility stay in Part B or, if no facility stays were reported, if the respondent completed at least a substantive portion of Part B.

In the majority of cases, the first -9 indicates where the interview broke off. Questions from the breakoff point to the end of Part I were coded on the record as -9 or -1 depending on the skip pattern.

The record for a partially completed interview may reflect any additional information obtained outside of the CATI system that pertains to questions occurring after the breakoff point. For example, if a subject broke off at Q.B38 (diabetes) but the interviewer obtained information on a hospital stay for a fractured hip before the respondent broke off the interview, Q.B80 (was subject hospitalized for a fractured hip?), which is coded in positions 841-842 would be coded 1 (yes) on the interview record in order to reflect the additional information obtained outside the CATI system.

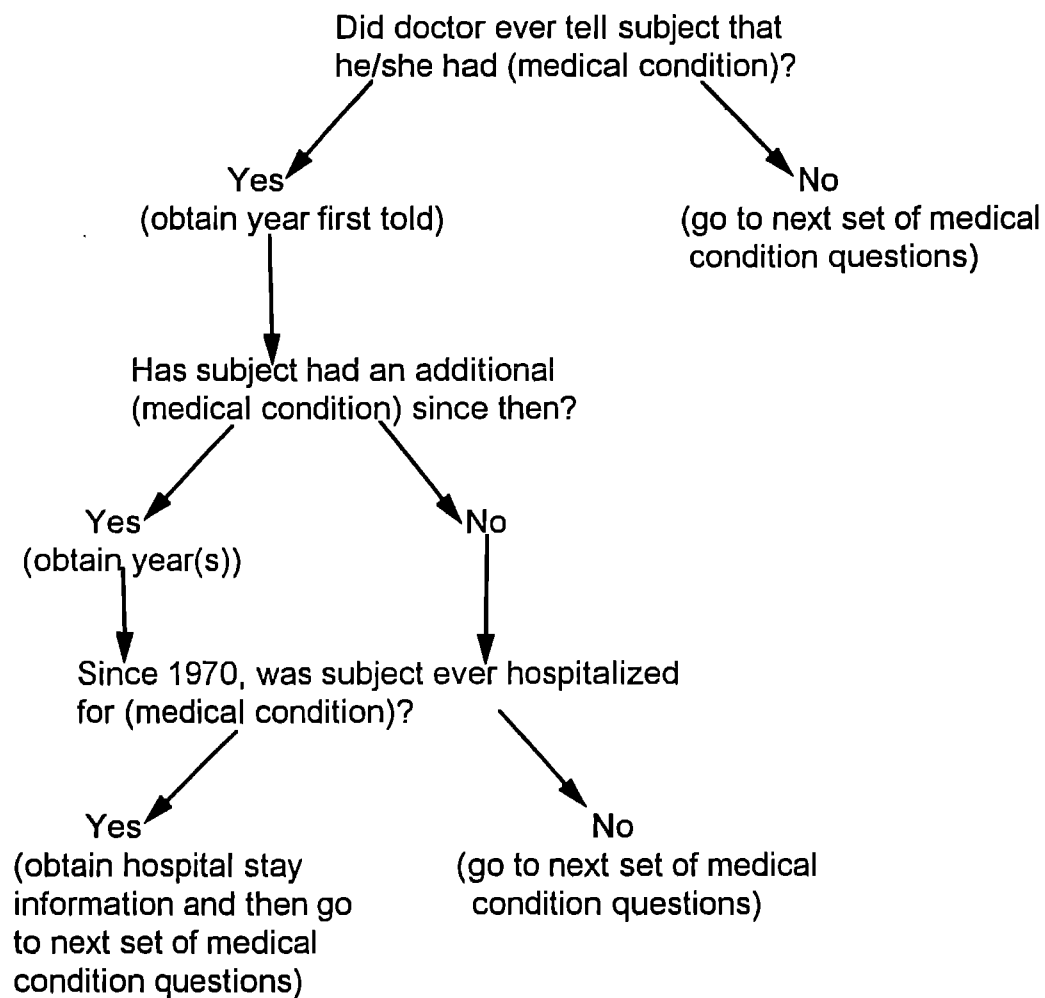

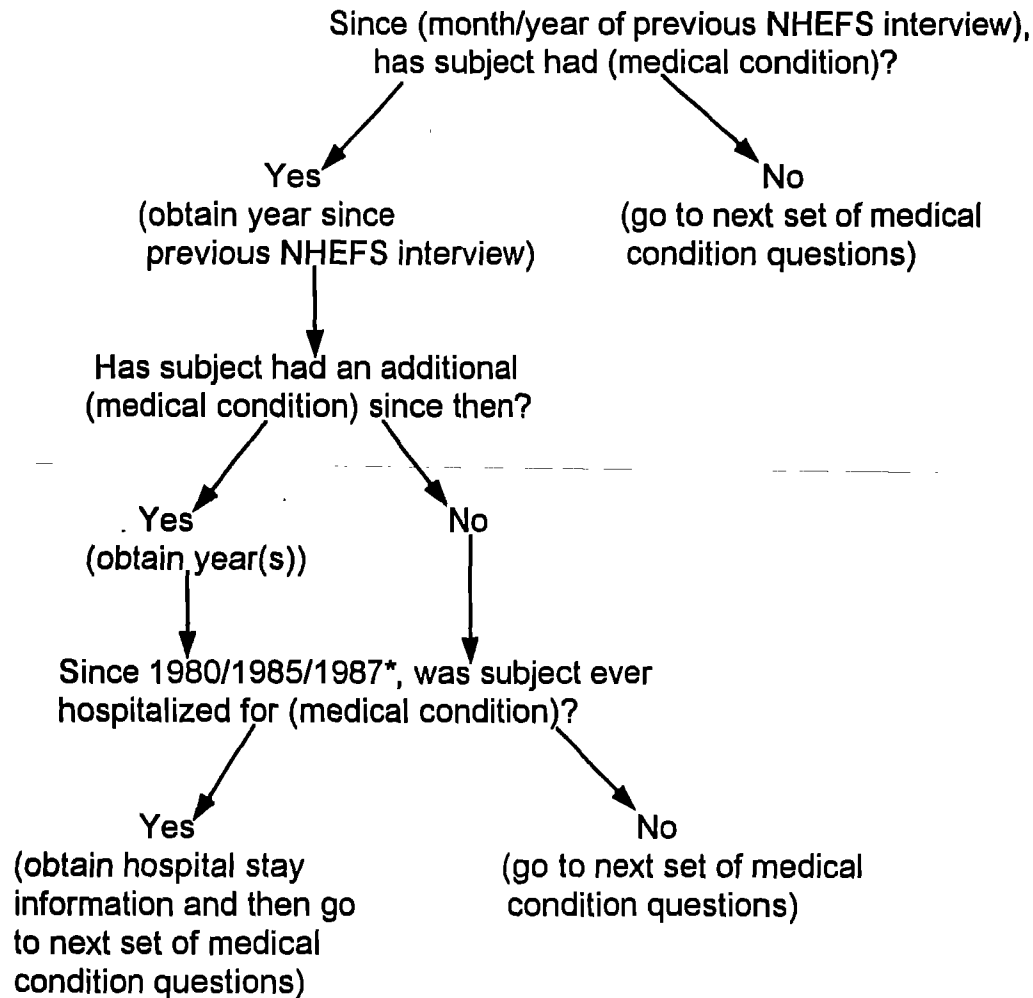

FIGURE 1b

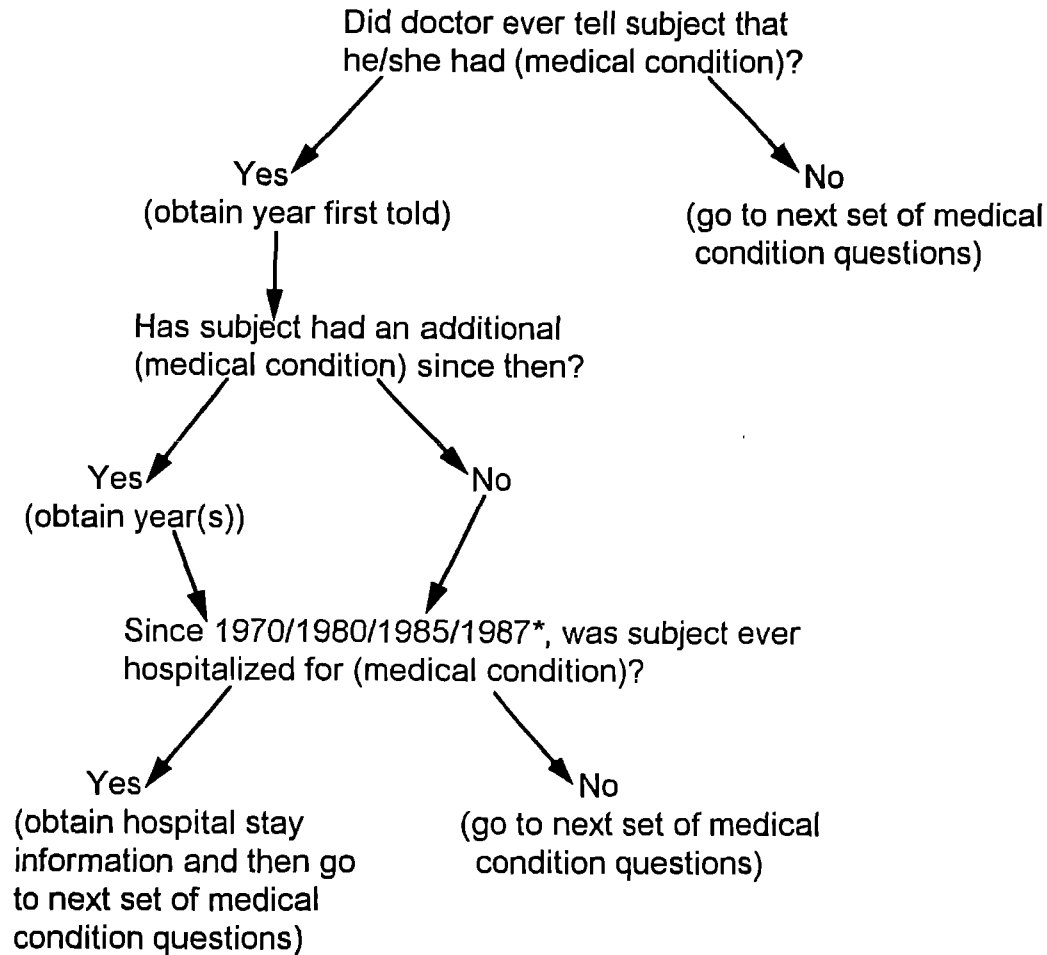

Sequence of medical condition questions in 1992 NHEFS interview for subjects who had a previous NHEFS interview and had a report of the medical condition in that interview

* The hospital stay question was worded either with "since 1980", "since 1985", or "since 1987", depending on whether the most recent interview for the subject was conducted in 1982-84, 1986, or 1987, respectively.

FIGURE 1c

Sequence of medical condition questions in 1992 NHEFS interview for subjects who had an interview in a previous NHEFS and the medical condition was not reported in that interview

* The hospital stay question was worded with "since 1970" only if the respondent gave a year when the subject was first told about having the medical condition in the 1992 NHEFS interview that was before the previous NHEFS interview. Otherwise, the question was worded with "since 1980", "since 1985", or "since 1987", depending on whether the most recent interview for the the subject was conducted in 1982-84, 1986, or 1987, respectively.

CODES C1, C2 AND C3 ARE COMPLETED INTERVIEWS. CODES P1, P2 OR P3 ARE PARTIALLY COMPLETED INTERVIEWS.

AN INTERVIEW STATUS OF "PARTIALLY COMPLETED" (CODES P1, P2, OR P3) INDICATES THAT THE RESPONDENT BROKE OFF THE INTERVIEW AT SOME POINT AFTER COMPLETING AT LEAST A PORTION OF PART B (MEDICAL CONDITIONS) OF THE QUESTIONNAIRE. THE INTERVIEW WAS CONSIDERED A PARTIAL COMPLETE RATHER THAN A REFUSAL TO PARTICIPATE IN THE INTERVIEW, IF THE RESPONDENT PROVIDED INFORMATION ON AT LEAST ONE FACILITY STAY FOR THE SUBJECT IN PART B OF THE QUESTIONNAIRE OR, IF NO FACILITY STAYS WERE REPORTED, IF THE RESPONDENT COMPLETED A SUBSTANTIVE PORTION OF PART B.

A SUBJECT WITH A CODE OF C1 OR P1 IN COL 189-190 MAY HAVE NEEDED SOME ASSISTANCE DURING THE INTERVIEW. INFORMATION ON THE RELATIONSHIP OF THE ASSISTANT TO THE SUBJECT IS LOCATED IN COL 189-190.

A SUBJECT WITH A CODE OF C2 OR P2 IN COL 189-190 WAS NOT ABLE TO PARTICIPATE AT ALL IN THE INTERVIEW AND THE SUBJECT INTERVIEW WAS INSTEAD ADMINISTERED TO A PROXY RESPONDENT. INFORMATION ON THE RELATIONSHIP OF THE PROXY RESPONDENT TO THE INCAPACITATED SUBJECT IS LOCATED IN COL 312-313.

CODES C3 OR P3 IN COL 189-190 INDICATE THE SUBJECT IS DECEASED AND THAT A PROXY INTERVIEW WAS ADMINISTERED TO A PROXY RESPONDENT. THE RELATIONSHIP OF THE PROXY RESPONDENT TO THE DECEASED SUBJECT IS LOCATED IN COL 314-315.

			43	2 MAIL INTERVIEW
	NAGE	203-205		AGE OF SUBJECT AT 1992 FOLLOWUP
			9281	39-96 AGE AT 1992 NHEFS

THE AGE AT 1992 FOLLOWUP VARIABLE CONTAINS EITHER THE SUBJECT'S AGE AT THE TIME OF THE 1992 NHEFS OR THE SUBJECT'S AGE AT DEATH IF THE SUBJECT IS IDENTIFIED AS DECEASED DURING THE 1992 NHEFS. THE AGE AT 1992 FOLLOWUP IS CALCULATED FROM THE NHEFS DATE OF BIRTH (COL 19-26) AND THE DATE OF THE 1992 NHEFS INTERVIEW (COL 159-164) OR THE DATE OF DEATH (COL 318-325). THE VARIABLE AGE OF SUBJECT AT 1992 NHEFS INTERVIEW IS LOCATED IN COL 338-339 AND THE VARIABLE AGE AT DEATH IS LOCATED IN COL 316-317.

VARIABLES IN COL.675-678 CONTAIN THE YEAR OF OCCURRENCE FOR EACH ADDITIONAL STROKE REPORTED IN Q.B34, IN RESPONSE TO EITHER Q.B36 OR Q.B33. COL.675-676 REFERS TO THE FIRST ADDITIONAL STROKE REPORTED AND COL.677-678 REFERS TO THE SECOND ADDITIONAL STROKE REPORTED. THE NUMBER OF INAPPLICABLE CODES IN COL.677-678 DEPENDS ON THE NUMBER OF ADDITIONAL STROKES REPORTED BY THE RESPONDENT. THE YEARS OF OCCURRENCE IN COL.675-678 ARE IN THE ORDER IN WHICH THEY WERE REPORTED AND ARE NOT NECESSARILY IN CHRONOLOGICAL ORDER.

			14	1 DISCREPANCY FLAG

INAPPLICABLE: (COL.769-770=-1,-7,-8,-9,96) OR ((COL.769-770>=COL.10-15) AND (COL.769-770<=COL.159-164))

THIS FLAG WAS USED TO INDICATE DISCREPANCIES BETWEEN B56 (COL.769-770) AND THE CURRENT INTERVIEW YEAR (COL.159-164) OR THE YEAR OF THE PREVIOUS INTERVIEW IN 1982, 1986, OR 1987(COL.10-15). IF THE RESPONSE TO COL.769-770 WAS GREATER THAN THE CURRENT INTERVIEW YEAR, THEN COL.771-772 WAS CODED 1. IF THE RESPONSE TO COL.769-770 WAS LESS THAN THE YEAR OF THE PREVIOUS INTERVIEW, THEN COL.771-772 WAS CODED 1. ALL RESPONSES IN COL.769-770 WERE CONFIRMED WITH THE RESPONDENT BEFORE THIS FLAG WAS SET.

			1932	4 ASK SPECIFIED ACTIVITY QUESTIONS
			5948	5 ASK ALL ACTIVITY QUESTIONS

INAPPLICABLE: (COL.189-190=C3,P3) OR (COL.1021-1022=2)

THIS VARIABLE DETERMINED WHICH OF THE ACTIVITY QUESTIONS THE RESPONDENT WAS ASKED. IF THE SUBJECT CAN NOT USE ANY OF HIS OR HER LIMBS (COL. 1091-1091=2), THEN COL.1110-1111 WAS CODED 1 AND NO ACTIVITIES QUESTIONS WERE ASKED. IF SUBJECT IS BEDRIDDEN (COL.1025-1026=1), THEN COL.1110-1111 WAS CODED 2 AND THE RESPONDENT WAS ONLY ASKED QUESTIONS C15, C16, C17, C24, AND C28. IF SUBJECT CANNOT USE ANY LOWER LIMBS (COL.1090-1091=3), THEN COL.1110-1111 WAS CODED 3 AND THE RESPONDENT WAS ONLY ASKED QUESTIONS C11, C13-C17, C21-C25, AND C27-C29. IF THE SUBJECT'S CURRENT AGE IS LESS THAN 55 YEARS AND THE SUBJECT DOES NOT HAVE ARTHRITIS (COL.203-205<55 AND COL.539-540=2,-7,-8,-9 AND COL.41-42=2), THEN COL.1110-1111 WAS CODED 4 AND QUESTIONS C18, C20, C22, C25, C26, AND C30-C33 WERE ASKED. OTHERWISE, (COL.1110-1111) WAS CODED 5 AND ALL ACTIVITIES QUESTIONS WERE ASKED. NO ACTIVITIES QUESTIONS WERE ASKED IF THE SUBJECT WAS DECEASED OR IF THE PROXY RESPONDENT COULD NOT ANSWER SECTION C.

THE INTERVIEWERS WERE GIVEN THE OPTION OF USING A CODE OF 5 (INAPPROPRIATE ACTIVITY) FOR ACTIVITY QUESTIONS C11-C33. THIS CODE WAS USED IF THE INTERVIEWERS FELT THAT A PARTICULAR QUESTION WOULD BE UPSETTING TO THE RESPONDENT DUE TO THE STATED PHYSICAL CONDITION OF THE SUBJECT. A CODE 6 (CANNOT ANSWER FURTHER) WAS USED WHEN A RESPONDENT INDICATED THAT NO FURTHER ACTIVITY QUESTIONS COULD BE ANSWERED.

THE VARIABLES IN COL 5707-5718 WERE RECODED INTO YES - NO CATEGORIES FOR THE DISEASES OR CONDITIONS REPORTED IN Q.B120, ADMISSION #1. THE RECODED VARIABLES ARE FOUND IN COL. 5719-5786. FOR EXAMPLE, IF CANCER WAS A CAUSE THAT LED TO ADMISSION #1 (I.E., ANY ONE OF THE VARIABLES IN COL 5707-5718 IS CODED 2), THEN COL 5721-5722 IS CODED 1 (YES). IF CANCER WAS NOT ONE OF THE CAUSES THAT LED TO ADMISSION #1, THEN COL 5721-5722 IS CODED 2 (NO).

INAPPLICABLE: COL.5802-5803=-1,2 (IF ONLY FIVE OR LESS REASONS IN B119)

THE VARIABLES IN COL 5878-5889 WERE RECODED INTO YES-NO CATEGORIES FOR THE DISEASES OR CONDITIONS REPORTED IN Q.B120, ADMISSION #2. THE RECODED VARIABLES ARE FOUND IN COL 5890-5957. FOR EXAMPLE, IF CANCER WAS A CAUSE THAT LED TO ADMISSION #2 (I.E., ANY ONE OF THE VARIABLES IN COL 5878-5889 IS CODED 2), THEN COL 5892-5893 IS CODED 1 (YES). IF CANCER WAS NOT ONE OF THE CAUSES THAT LED TO ADMISSION #2, THEN COL 5892-5893 IS CODED 2 (NO).

(7955-8028)

1992 FOLLOWUP HEALTH CARE FACILITY STAY TAPE SUMMARY VARIABLES

IF THE RESPONDENT REPORTED IN THE INTERVIEW THAT THE SUBJECT HAD AN OCCURRENCE OF A SPECIFIC MEDICAL CONDITION, HE OR SHE WAS ASKED IF THE SUBJECT HAD BEEN HOSPITALIZED FOR THAT CONDITION SINCE 1970 OR 1980, DEPENDING ON WHEN AN INTERVIEW WAS LAST OBTAINED FOR THE SUBJECT (FOR MORE INFORMATION, SEE THE INTRODUCTION TO THIS DOCUMENT). ALL HEALTH CARE FACILITY STAYS REPORTED IN RESPONSE TO THE HOSPITALIZATION OR NURSING HOME QUESTIONS IN PART B OF THE INTERVIEW WERE RECORDED ON THE HOSPITAL AND HEALTH CARE FACILITY (HHCF) CHART. HOWEVER, THE INTERVIEW INFORMATION ON OVERNIGHT HEALTH CARE FACILITY STAYS SINCE 1970/1980 MAY NOT MATCH THE INFORMATION STORED ON THE 1992 NHEFS HEALTH CARE FACILITY STAY (HCFS) FILE. INCONSISTENT DATA BETWEEN THE INTERVIEW AND HCFS FILE SOMETIMES RESULTS WHEN INFORMATION ON AN OVERNIGHT STAY IS NOT REPORTED IN THE INTERVIEW BUT IS RECORDED ON THE HHCF CHART. USUALLY THIS OCCURS WHEN THE INTERVIEWER FAILS TO UPDATE THE INTERVIEW BASED ON INFORMATION OBTAINED WHEN FILLING OUT THE HHCF CHART.

EXAMPLE: DURING THE 1992 NHEFS INTERVIEW, A SUBJECT REPORTED THAT SHE HAD NEVER BEEN HOSPITALIZED FOR A HEART ATTACK IN THE TIME PERIOD PROVIDED BY THE INTERVIEWER. HOWEVER, IN A LATER SET OF QUESTIONS ON DIABETES, SHE REPORTED AN OVERNIGHT HOSPITAL STAY FOR DIABETES IN 1989. AS THE INTERVIEWER RECORDED THE STAY INFORMATION ON THE HHCF CHART, THE SUBJECT ADDED THAT SHE WAS ALSO IN THE HOSPITAL AT THAT TIME FOR A HEART ATTACK. WHILE THE INTERVIEWER NOTED THE HEART ATTACK INFORMATION ON THE HHCF CHART, HE OR SHE DID NOT UPDATE THE INTERVIEW WITH THIS ADDITIONAL INFORMATION. IN PREPARING THE 1992 NHEFS HEALTH CARE FACILITY STAY (HCFS) TAPE, THIS WAS CODED AS A STAY FOR DIABETES AND A HEART ATTACK, WITH THE INTERVIEW AS THE SOURCE OF THIS INFORMATION. SINCE THE SUBJECT HAD NOT REPORTED A HOSPITALIZATION FOR A HEART ATTACK IN PART B OF THE INTERVIEW AT THE PROPER TIME (I.E., COL 651-652 IS CODED 2 ON THIS FILE), AN INCONSISTENCY IN INFORMATION RESULTED BETWEEN THE 1992 NHEFS INTERVIEW AND THE HCFS FILES.

THE SUMMARY VARIABLES IN COL 7955-8028 WERE CREATED FROM THE 1992 NHEFS HCFS TAPE TO HELP RECTIFY THIS SITUATION. THE CONDITIONS REPORTED DURING THE INTERVIEW FOR EACH OVERNIGHT FACILITY STAY ARE CODED IN COL 63-66, COL 97-100, COL 131-134, AND COL 165-168 ON THE 1992 NHEFS HCFS TAPE. THESE VARIABLE FIELDS ARE BLANK IF THE INTERVIEW WAS NOT THE SOURCE OF INFORMATION ON THE STAY OR IF THE REPORTED STAY WAS AT LEAST A YEAR BEFORE THE SUBJECT'S MOST RECENT INTERVIEW. THIS INFORMATION WAS RECODED INTO DICHOTOMOUS VARIABLES LOCATED IN COL 7955-8028 ON THE INTERVIEW FILE. THESE VARIABLES INDICATE WHETHER OR NOT A FACILITY STAY WAS REPORTED FOR THAT MEDICAL CONDITION.

----------------------	-------------------------	---------------	---------------------------------------

EXAMPLE: A SUBJECT HAS ONLY ONE RECORD ON THE HCFS TAPE FOR A STAY REPORTED FROM THE INTERVIEW FOR DIABETES AND A HEART ATTACK. THUS, THE SUBJECT WILL HAVE ONE RECORD ON THE HCFS TAPE WITH CODES FOR THE REPORTED CONDITION VARIABLES OF DIABETES (CODE OF 9) AND A HEART ATTACK (CODE OF 3). ON THE SUBJECT'S INTERVIEW RECORD, ALL VARIABLES IN THE 1992 NHEFS HCFS SUMMARY VARIABLE SECTION (LOCATED IN COL 7955-8028) ARE CODED AS 2, "NO, SUBJECT DOES NOT HAVE RECORD ON 1992 NHEFS HCFS FILE WITH CONDITION" EXCEPT FOR DIABETES AND HEART ATTACK (LOCATED IN 7971-7972 AND COL 7959-7960, RESPECTIVELY) WHICH ARE CODED AS 1, "YES, SUBJECT DOES HAVE RECORD ON 1992 NHEFS FILE WITH CONDITION." IF A SUBJECT DOES NOT HAVE ANY STAY RECORDS ON THE 1992 NHEFS HCFS TAPE, THEN ALL THE VARIABLES IN COL 7955-8028 ARE CODED -1. THE 1992 NHEFS HCFS SUMMARY VARIABLES PROVIDE THE MOST CORRECT INFORMATION ON THE CONDITIONS REPORTED BY THE RESPONDENT DURING THE INTERVIEW FOR WHICH THERE IS A RECORD FOR AN OVERNIGHT STAY ON THE HCFS FILE. THE INTRODUCTION TO THE INTERVIEW AND HEALTH CARE FACILITY STAY DATA TAPE DOCUMENTATION PROVIDE FURTHER INFORMATION ON THE RELATIONSHIP BETWEEN THE INTERVIEW AND HEALTH CARE FACILITY STAY DATA TAPES.
