## Introduction

This research user guide is produced by the Veterans Affairs Information Resource Center (VIReC), a national resource center within the Health Services Research and Development Service (HSR&D) of the U.S. Department of Veterans Affairs. It contains frequency tables for selected variables in the VHA Decision Support System (DSS) Radiology Datasets for FY2002 and 2003. They are stored on the Austin Automation Center (AAC) mainframe, and their dataset names are as follows:

Dataset Name	Reference	File Name on AAC	Remarks
Radiology	RAD	RMTPRD.MED.DSS.SAS.FYyy.RAD	yy = 02 for FY 2002; 03 for FY 2003

For some variables, the frequency tables show both “Internal Value” and “Formatted Value”. The internal value is the value stored in the SAS datasets, while the formatted value is taken from the SAS format library “MDPPRD.MDP.FMTLIB6” stored in the AAC Mainframe. Variables with their print formats used in constructing the frequency tables are as follows:

Variable Name	SAS Print Format Name
CLSNUM	YCLINIC.
MEANS	\$MEANSG.
STA3N	STA3NL.
STA6A	\$STA6AL.
TRTSP	BEDSECN.

The Radiology Datasets include both inpatient and outpatient procedures (see the frequency table for [IN\\_OUT](#) on pages 17 and 52) and thus [STA6A](#) includes substation identifiers for both inpatient hospitals and outpatient clinics. For producing the tables for [STA6A](#), print format \$STA6AL., which is the print format for inpatient facilities (6-letter codes) was used; accordingly, no print formats for outpatient clinics (5-letter codes) were attached.

## Acknowledgements

VIReC is supported by HSR&D Grant SDR 98-004. VIReC accepts responsibility for any errors and welcomes suggestions for improving the resource guide.
