Introduction

This research user guide is produced on an annual fiscal year (FY) basis by the Veterans Affairs Information Resource Center (VIREC), a national resource center within the Health Services Research and Development Service (HSR&D) of the U.S. Department of Veterans Affairs. It contains frequency tables for selected variables in the FY2002 Medical SAS¹ Inpatient Acute Care “Main” dataset and Medical SAS Outpatient “Visit” dataset.

Common Dataset Name	Dataset 2-Character Reference	Full Dataset Name	Description
Visit	SF	MDPPRD.MDP.SAS.SF02	All encounter stop codes, patient demographics
Main	PM	MDPPRD.MDP.SAS.PM02	All demographic, clinical, stay information

For each variable, values are presented in two columns: The “*Internal Value*,” which represents the actual value stored in the dataset, and the “*Formatted Value*,” which represents the value that will appear in printouts if a permanent SAS format has been assigned to the variable. Any permanent SAS format value assigned to a variable is created by the Austin Automation Center (AAC) and may not necessarily match the literal values shown in other data sources. The formatted values can always be overwritten to appear as whatever value the programmer chooses.

Variables’ frequencies are presented in two columns: “*All Workload*,” which includes every record in the dataset, and “*Veterans Only*,” a subset of the dataset we created by selecting only records with a MEANS (MEANS Test Indicator Code) variable value of “AN”, “AS”, “C” or “CO” assigned for the health encounter. It should be noted that this method for selecting veterans’ records may not be appropriate for some purposes or when using datasets from other years.

Acknowledgements

VIREC is supported by HSR&D Grant SDR 98-004. The VIREC accepts responsibility for any errors and welcomes suggestions for improving the resource guide.
