1.	1. Change To A Previously Programmed Channel:		
	1)	Press M.UP or M.ON.	
	Or		
	1)	Press RCL.	
	2)	Press desired preset channel number such as RCL TONE 4 (for channel 24) and press #ENTER.	
2.	Load	A New Channel Into Memory:	
	1)	Press then Prog.	
	2)	Press keys corresponding to desired receive frequency "RX" (omitting the 1) and press ENTER.	
	3)	Press keys corresponding to desired transmit frequency "TX" (omitting the 1) and press entired automatically copies receive frequency settings to transmitter setting as a default.	
	4)	Press M.UP or M.ON to select 12.5 (normal) or 25.0 bandwidth and press ENTER.	
	5)	Press M.UP or M.ON to change left most "MN" display character (A-Z, +-/ (etc.), and 0-9 available)	
		and press ENTER. Continue step 5 until all nine spaces are filled. You may also skip this step by	
		pressing nine times. Blank space located between 9 and A. Press to backup curser (F14 only).	
	6)	Set scan as either scan off "LOCKOUT" or scan on "SCAN". On older TFM-138B radios, the scan is either on or off. Scan on newer F14 radios can be off or in any of the five scan banks.	
		a. Older TFM-138B radios: Press or M.UP or to change from scan off "LOCKOUT" or scan on	
		"SCAN" and press	
		b. Newer F14 radios: Press M.ON for scan off "LOCKOUT" or one or more of the scan banks 1, TONE, 3 LOCK, M.UP, or SCAN and press ENTER.	
	7)	Save settings to a preset channel by pressing keys representing where you want information saved to	
		such as RCL RCL Gor channel 6) then press ENTER.	
	8)	Program GD frequencies and display (no bandwidth capability here) if desired and press ENTER.	
3.	Load	New Frequency – Direct Channel Method (Channel 000):	
	1)	Press then 1.	
	2)	Press keys corresponding to desired frequency (omitting the 1) and press ENTER.	
	3)	Press M.UP or M.DN to select 12.5 (normal) or 25.0 bandwidth and press ENTER.

4.	Load CTCSS Tone:		
	1)	Press then then tone.	
		Receive tones are normally set to TONE 64, or no tone. If a receiver tone is desired, press or until desired receive tone displayed and press or Some radios will skip this step.	
	3)	Press M.UP or M.DN until desired transmit tone displayed and press ENTER.	
	4)	Change guard "G1" or "G2" tone, if desired, and press until radio returns to normal operation.	
	5)	If radio displays "DPL", enter 000. CTCSS tones and DPL cannot operate simultaneously.	
5.	Ch 1)	To change a channel's bandwidth that is already in main memory, follow Section 2.	
	2)	To change guard bandwidth, you must copy main channel information into a guard selection. You cannot change guard bandwidth directly. Ensure radio Configuration settings are properly set by:	
		a. Turn radio off and set all three toggle switches up.	
		b. Press and hold ENTER RCL FUNC simultaneously while turning radio on.	
		c. Once "CONFIGURATION" is displayed, release the three buttons.	
		d. Press until "FUNC 7" is displayed and press or until FUNC 7 is "ON".	
		e. Continue to press until radio starts up normally.	
		f. Program guard frequency, bandwidth, display, and tone into any main channel, follow Section 2.	
		g. Press FUNC then M.ON and main channel information will copy into selected guard channel.	
opera main	atio tra	Pral Information: Tones are assigned by channel. Never use a tone on a receive frequency unless nally required. The guard receiver is independent from the main receiver; however, they both use the nsmitter. Set guard to 168.6250 MHz (Air Guard) with a transmitter tone of 110.9 Hz. There are 120 main pre-set channels. TFM-138B radios cannot be programmed through the C-130 SCNS system.	
	1)	Determine if you have an F14 radio by turning the radio on. Look at the lower right display. F14 will be displayed on newer radios. Older radios will not display anything in this area during boot-up.	
	2)	Adjust display brightness with (brighter) and (dimmer).	
	3)	The radio keypad can be locked out. Lock keypad by pressing then then Lock keypad by	
		holding until "UNLOCK" is displayed.	
	4)	Channels capable of being scanned are identified with a "+". Shortcut (F14 only) – Clear a channel of	
		all scan data or enter scan data into a main channel by pressing then then then then then then then the then then
