

the airport noise program and the decibels from flight are arrived at by a convoluted program that does everything it can to be dishonest. the program the faa uses to measure noise calculates it over 24 hours, which is absolutely stupid, since the sound can be so loud at 10 pm that it has no business being averaged with sound at 1 pm. it is a scam on the American public to allow aviation to get away with the awful noise, danger and air pollution that they currently get away with. the faa is supposed to represent the public, but they don't. this agency has been captured by aviation profiteers and they are ruining the air we breathe and the noise they create harms and injures our physical being even when we sleep. faa needs to be broken up. one part for the aviation business. The other part needs to represent those of us who suffer from aviation operations.
