

I have read, reviewed and agree with all 12 approved recommendations as submitted by Centennial Airport in its Part 150 study. As you know, Centennial Airport has aircraft of all types and being a resident in Heritage Hills I hear this noise frequently during the day and night. I greatly appreciate Centennial Airport taking this initial step to correct the adverse impact of the noise to our Heritage Hills community.

I fell strongly about the recommendations for:

- periodic reviews of plans and operational procedures
- the acquisition and installation of a radar-linked noise monitoring system
- FAA adopt the recommendation to fly a 170-degree departure heading for approximately 4 miles before executing a (+ or -) 20-degree turn. (I would also appreciate this same standard for approaches to the airport)

I may be contacted at 303-471-1123 or return email, if there are any additional questions or concerns. Thank you for the opportunity to comment on identifying existing and future projected aircraft noise levels associated with the Centennial Airport.

Sincerely,
Michael Kirk
