

I live in Aurora right under the flight path. The real problem is the landings at an hour when people are trying to sleep ( 12am - 6am).

Why does the airport have to be open during that time period?

I can understand if its an emergency flight, but I fail to understand why a non-emergency plane has to land at 1:30am, followed by another at 2am, and another at 3am, especially in August.

I have written before to City Council people , with no result, and no answers to that question. Instead of focusing on just the landing patterns, why not focus on the airport's hours of operations?

Thank You
