

## 8. REGULATIONS AND ADVISORIES

Available information on international, national, and state regulations and standards of pyrethrins and pyrethroids is presented in Table 8-1. Information concerning tolerances for residues of pyrethrins and selected pyrethroids is presented in Table 8-2.

ATSDR has not derived acute-, intermediate-, or chronic-duration inhalation MRLs for pyrethrins or pyrethroids because adequate data were not available for this route of exposure.

ATSDR derived an acute-duration oral MRL of 0.3 mg/kg/day for permethrin, based on a NOAEL of 25 mg/kg/day for neurological impairment in rats. An uncertainty factor of 100 was used (10 for animal to human extrapolation and 10 to account for intrahuman variation) to derive the MRL.

ATSDR derived an acute-duration oral MRL of 0.02 mg/kg/day for cypermethrin (97% purity; 50/50 cis/trans), based on a LOAEL of 20 mg/kg for neurological impairment in rats (McDaniel and Moser 1993). An uncertainty factor of 1,000 was used (10 for lack of a NOAEL, 10 for animal to human extrapolation, and 10 to account for intrahuman variation) to derive the MRL.

ATSDR derived an acute-duration oral MRL of 0.01 mg/kg/day for cyhalothrin, based on a NOAEL of 1 mg/kg/day for gastrointestinal effects in dogs. An uncertainty factor of 100 was used (10 for animal to human extrapolation and 10 to account for intrahuman variation) to derive the MRL.

ATSDR derived an intermediate-duration oral MRL of 0.2 mg/kg/day for permethrin, based on a NOAEL of 15.5 mg/kg/day for neurological impairment in rats. An uncertainty factor of 100 was used (10 for animal to human extrapolation and 10 to account for intrahuman variation) to derive the MRL.

ATSDR derived an intermediate-duration oral MRL of 0.01 mg/kg/day for cyhalothrin, based on a NOAEL of 1 mg/kg/day for gastrointestinal effects in dogs. An uncertainty factor of 100 was used (10 for animal to human extrapolation and 10 to account for intrahuman variation) to derive the MRL.
