

A Sampling of NOAA's *Best Research Accomplishments*

Richard W. Spinrad, Ph.D., CMarSci
Assistant Administrator
Office of Oceanic & Atmospheric Research
National Oceanic & Atmospheric
Administration

An informed society that uses
a comprehensive understanding of the role of
the oceans, coasts, and atmosphere in the global
ecosystem to make the best
social and economic decisions.

UNDERSTANDING GLOBAL
ECOSYSTEMS TO SUPPORT
INFORMED DECISION-MAKING

RESEARCH IN NOAA

January

Research Drivers

- Population growth
- Energy security
- Resource use
- Climate change
- Pollution

5-Year Research Plan

Research Emphases

Integration

- Understanding, analysis, modeling, advanced technologies
- Global Earth Observing System of Systems (GEOSS)

Transition

- Strategic, streamlined transition between research and development and operations and applications communities
- Use of testbeds and other vehicles

A FIVE YEAR PLAN: Fiscal Years 2008-2012

CLIMATE RESEARCH

Success

CLIMATE CHANGE ACT: Sen. Olympia Snowe

IPCC-4

WEATHER RESEARCH

Observations

Improved Observations

Improved Forecasting

Increased tornado lead time from a few minutes to 12-13 minutes

Probability of detection of tornadoes doubled to over 70%

NEXRAD Radar

Improved *Outcomes*

45% deaths

40% expected injuries

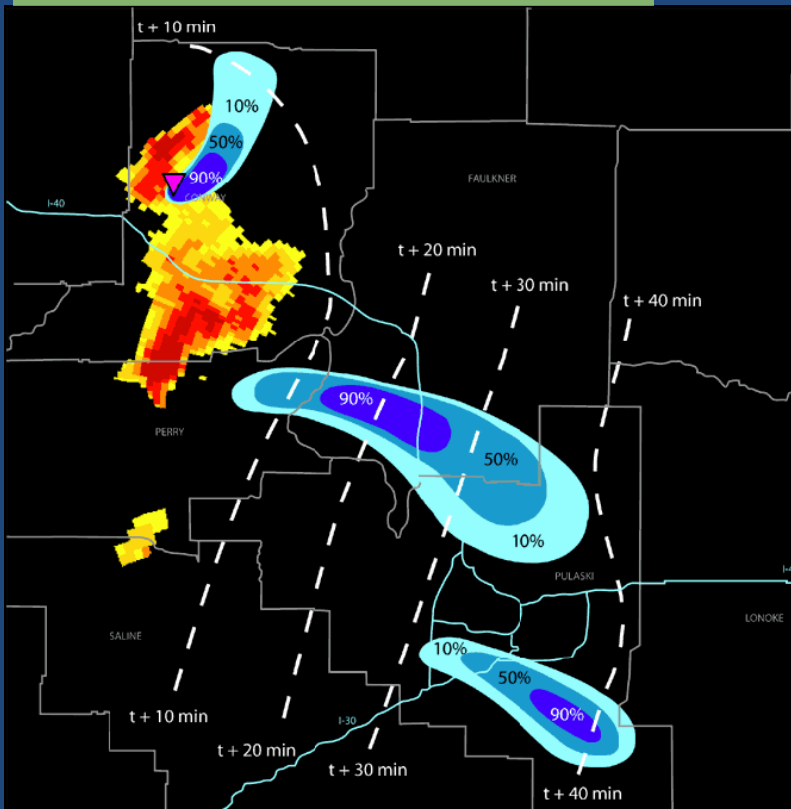

Improved Observations

Projected Improvements

- Projected new average lead time for tornado warnings 45 minutes (current = 12-13 min)
- Improved tornado tracking, strong wind gusts, hail, and locally-heavy rains (flash floods & mudslides)

WEATHER RESEARCH

Hurricane Buoy

On most days of the year, hurricanes form a narrow ribbon, 100 to 200 miles, in and about 100 miles off of the eastern coast of the United States. In a hurricane, the wind speed is measured in miles per hour. The wind speed is measured in miles per hour. The wind speed is measured in miles per hour.

Science On a Sphere®

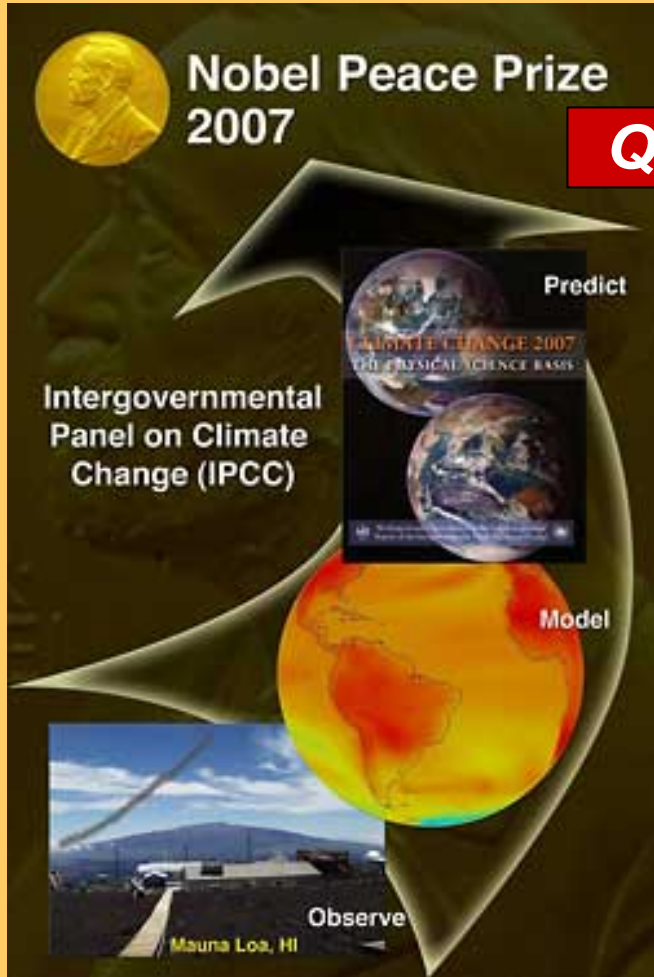

“I started thinking about this several years ago and did some experiments on the deck of my house using a beach ball. I knew that putting NOAA climate, weather, oceanic, and geophysical information on a sphere would be a spectacular tool for explaining NOAA’s science to a variety of audiences.”

*Sandy MacDonald, SoS inventor &
Deputy Assistant Administrator
of Labs & Cooperative Institutes*
