

## APPENDIX A: Processed Regional Inventories

The following inventories show all of the regions currently defined within the post-processing scripts used in SAGE. Flight results (fuel burn and emissions) are attributed to these regions based on the departure and arrival airport locations as discussed in Section 3.1. The modal categories are provided below:

Ground: Ground-based movements including taxi times and delays

<=3000: Airborne movements at or below 3000 ft above AFE

>3000: Movements above 3000 ft

Total: All movements

Based on these definitions, LTO and cruise results are derived as:

LTO = “Ground” + “<=3000”

Cruise = “>3000”
