INSTRUCTIONS FOR CLASSIFYING MULTIPLE CAUSES OF DEATH, 2005

SECTION I

Introduction

A. INTRODUCTION

This manual provides instructions to mortality medical coders and nosologists for coding multiple causes of death from death certificates filed in the states. These mortality coding instructions are used by both the State vital statistics programs and the National Center for Health Statistics (NCHS), which is the Federal agency responsible for the compilation of U.S. statistics on causes of death. NCHS is part of the Centers for Disease Control and Prevention.

In coding causes of death, NCHS adheres to the World Health Organization Nomenclature Regulations specified in the most recent revision of the International Statistical Classification of Diseases and Related Health Problems (ICD). NCHS also uses the ICD international rules for selecting the underlying cause of death for primary mortality tabulation in accordance with the international rules.

Beginning with deaths occurring in 1999, the Tenth Revision of the ICD (ICD-10) is being used for coding and classifying causes of death. This revision of the Classification is published by the World Health Organization (WHO) and consists of three volumes. Volume 1 contains a list of three-character categories, the tabular list of inclusions, and the four-character subcategories. The supplementary Z code appears in Volume 1 but is not used for classifying mortality data. Optional fifth characters are provided for certain categories and an optional independent four-character coding system is provided to classify histological varieties of neoplasm, prefixed by the letter M (for morphology) and followed by a fifth character indicating behavior. These optional codes, except those for place of occurrence of external cause and activity code related to external cause codes, are not used in NCHS. The place code and activity code are used as supplementary codes rather than as additional characters. Volume 2 includes the international rules and notes for use in classifying and tabulating underlying cause-of-death data. Volume 3 is an alphabetical index containing a comprehensive list of terms for use in coding. Copies of these volumes may be purchased in hard-copy or on diskette from the following address:

INSTRUCTIONS FOR CLASSIFYING MULTIPLE CAUSES OF DEATH, 2005

SECTION I

Introduction

NCHS has prepared an updated version of Volume 1 and Volume 3 to be used for both underlying and multiple cause-of-death coding. The major purpose of the updated version is to provide a single published source of code assignments including terms not indexed in Volume 3 of ICD-10. NCHS has included all nonindexed terms encountered in the coding of deaths during 1979-1994, under the Ninth Revision of the International Classification of Diseases (ICD-9). With the availability of the updated Volumes 1 and 3, NCHS will discontinue publishing the Part 2e manual, Nonindexed Terms, Standard Abbreviations, and State Geographic Codes Used in Mortality Data Classification, which was first published in 1983. Due to copyright considerations, the updated Volumes 1 and 3 may not be reproduced for distribution outside of NCHS and State vital statistics agencies.

The basic purpose of this manual is to document concepts and instructions for coding multiple causes of death, which were developed by NCHS for use with the Eighth Revision of the ICD adapted for use in the United States (ICDA-8), and which were updated to ICD-9, and subsequently to ICD-10. The coding concepts are generally consistent with provisions of ICD-10. Thus, this manual should be used with ICD-10, Volumes 1 and 3 as updated by NCHS. The list of abbreviations used in medical terminology (Appendix A), the list of synonymous sites (Appendix B), and the list of geographic codes (Appendix C) are included in this publication.

NCHS does not use the “dagger and asterisk” system which WHO introduced in ICD-9 and continued in ICD-10. For some medical conditions, this system provides two codes, which distinguish between the etiology or underlying disease process and the manifestation or complication for selected conditions. The etiology or underlying disease codes is denoted with a dagger (†) and the manifestation or complication code by an asterisk (*) following the code. For example, Coxsackie myocarditis has a code (B33.2†) marked with a dagger in the chapter for infectious and parasitic diseases and a different code (I41.1*) marked with an asterisk in the chapter for diseases of the circulatory system. Similarly, diabetic nephropathy has a dagger code (E14.2 †) in the chapter relating to endocrine disease and an asterisk code (N08.3*) in the genitourinary system chapter. Under ICD-9, limited use was made of the asterisk codes in classifying mortality data for data years 1979-1982. Effective July 1982 the use of asterisk codes in mortality coding was discontinued and will not be used in the 10th revision for mortality coding. NCHS assigns only the dagger code to such conditions.

INSTRUCTIONS FOR CLASSIFYING MULTIPLE CAUSES OF DEATH, 2005

SECTION I

Introduction

The multiple cause-of-death codes are used as inputs to the ACME program (Automated Classification of Medical Entities) developed by NCHS to automatically select the underlying cause of death, and the TRANSAX program (Translation of Axes) used to produce multiple cause-of-death statistics, beginning with deaths occurring in 1968. As inputs, the computer programs require codes for each condition reported on the death certificate, usually in the order in which the information is recorded.

The outputs of the ACME program are the traditional underlying cause-of-death codes selected according to the selection and modification rules of the Classification, the same cause that would be selected using manual underlying cause-of-death coding instructions specified in Instruction Manual Part 2a. Thus, a single cause is associated with each decedent.

Using the same input codes, the TRANSAX program generates two sets of outputs: “entity-axis” codes that reflect the placement of each condition on the certificate for each decedent; and “record-axis” codes that, where appropriate, link two or more diagnostic conditions to form composite codes that are classifiable to a single code, according to the provisions of the Classification. Record axis codes are preferred for multiple cause tabulation to better convey the intent of the certifier, and to eliminate redundant cause-of-death information (see Instruction Manual Part 2f).

Medical Certification

B. MEDICAL CERTIFICATION

The U. S. Standard Certificate of Death provides spaces for the certifying physician, coroner, or medical examiner to record pertinent information concerning the diseases, morbid conditions, and injuries which either resulted in or contributed to death as well as the circumstances of the accident or violence which produced any such injuries. The medical certification portion of the death certificate includes items 32-44. It is designed to obtain the opinion of the certifier as to the relationship and relative significance of the causes, which he reports.

A cause of death is the morbid condition or disease process, abnormality, injury, or poisoning leading directly or indirectly to death. The underlying cause of death is the disease or injury, which initiated the train of morbid events leading directly or indirectly to death or the circumstances of the accident or violence, which produced the fatal injury. A death often results from the combined effect of two or more conditions. These conditions may be completely unrelated, arising independently of each other or they may be causally related to each other; that is, one cause may lead to another which in turn leads to a third cause, etc.

The order in which the certifier is requested to arrange the causes of death upon the certification form facilitates the selection of the **underlying cause** when two or more causes are reported. He is requested to report in Part I on line (a) the immediate cause of death and the antecedent conditions on lines (b), (c), and (d) which gave rise to the cause reported on I(a), **the underlying cause** being stated lowest in the sequence of events. However, no entry is necessary on I(b), I(c), or I(d) if the immediate cause of death, stated on I(a) describes completely the sequence of events. If the decedent had more than four causally related conditions relating to death, the certifier is requested to add lines (e), (f), etc., so all conditions related to the immediate cause of death are entered in Part I with only one condition to a line.

Any other significant condition which unfavorably influenced the course of the morbid process and thus contributed to the fatal outcome but not resulting in the underlying cause given in Part I is entered in Part II.

REV. 11/2003

INSTRUCTIONS FOR CLASSIFYING MULTIPLE CAUSES OF DEATH, 2005

SECTION I

Medical Certification

In the following example, there are three causes reported. On line I(c) the underlying cause is entered—congenital heart disease. Congenital heart disease gave rise to congestive heart failure (line I(b)) which in turn led to a myocardial infarction (line I(a)) -- the immediate cause of death.

- I (a) Myocardial infarction
- (b) Congestive heart failure
- (c) Congenital heart disease
- (d)

II

As demonstrated by the following example, the certifier may not always list one cause per line:

- I (a) Myocardial infarction and pulmonary embolism with congestive heart failure
- (b)
- (c)
- (d)

II

Likewise, the causes may not be reported in an acceptable sequence. In the following example, cancer is reported as due to diabetes.

- I (a) Cancer
- (b) Diabetes
- (c)
- (d)

II

To date, the causes of the majority of cancers are still unknown so the causal relationship tables stored in the NCHS computers preclude the assumption that diabetes caused the cancer. Cancer is selected as the underlying cause of death from this certification for statistical purposes. However, the selection of the underlying cause of death is not relevant for this manual. For coding purposes, the order and position of each cause of death reported on the death certificate must be interpreted accurately so the computer software can then determine the correct underlying cause of death.

INSTRUCTIONS FOR CLASSIFYING MULTIPLE CAUSES OF DEATH, 2005

SECTION I

Medical Certification

There is an average of three causes listed per certificate. Approximately 20 percent have only one cause of death and 45 percent have three or more causes. Frequently, a cause will be reported on I(a) in Part I and a cause in Part II with no other reported causes. For other records, several causes may all be reported on a single line of the certificate or they may be entered on several lines in Part I. Rarely, the only cause(s) reported may be in Part II. Representative examples follow.

- I (a) Pneumonia
- (b)
- (c)
- (d)
- II Diabetes

- I (a) Cancer
- (b)
- (c)
- (d)
- II

- I (a)
- (b)
- (c)
- (d)
- II Diabetes

- I (a)
- (b) Acute myocardial infarction
- (c)
- II Renal disease

- I (a) AMI, renal disease, pulmonary embolism

A. Introduction

Code all information reported in the medical certification section of the death certificate and any other information pertaining to the medical certification, when reported elsewhere on the certificate. In Volumes 1 and 3 of ICD-10, the fourth-character subcategories of three-character categories are preceded by a decimal point. For coding purposes, omit the decimal point.

Enter codes in the same order and location as the entries they represent appear on the death certificate. Enter the codes for entries in Part II in the order the entries are reported, proceeding from the entry reported uppermost in Part II downward and from the left to right. If the uppermost line in Part II is an obvious continuation of a line below, enter the codes accordingly.

For instructions on placement of codes when the certifier states or implies a “due to” relationship between conditions not reported in sequential order, refer to Section II, Part C, Format. For instructions on placement of nature of injury (N-code) and external cause codes (E-codes), refer to Section V, Part B, Placement of Nature of Injury and External Cause Codes.

When an identical code applies to more than one condition reported on the same line, enter the code for the first-mentioned of these conditions only. When conditions classifiable to the same code are reported on different lines of the certificate, enter the code for each of the reported conditions. (This does not apply to external cause of morbidity and mortality (E-codes)).

1. Excessive Codes

- a. When a single line in Part I or Part II requires more than eight codes, delete the excessive codes (any over eight) for the line using the following criteria in the order listed:
 - (1) Delete ill-defined conditions (I469, I959, I99, J960, J969, P285, R00-R94, R96, R98) except when this code is the first code on a line, proceeding right to left.
 - (2) Delete nature of injury codes (S000-T983) except for the first one entered on a line, proceeding right to left.
 - (3) If, after applying the preceding criteria, any single line still has more than eight codes, delete beginning with the last code on the line until only 8 remain.

3. “Dagger and asterisk” codes

ICD-10 provides for the classification of certain diagnostic statements according to two different axes—etiology or underlying disease process and manifestation or complication. Thus, there are two codes for diagnostic statements subject to dual classification. The etiology or underlying disease codes are marked with a dagger (†) and the manifestations or complication codes are marked with an asterisk (*) following the code. The terms classified to codes with an asterisk are to be coded to the dagger code for the term only. These codes will not appear in official tabulations on multiple cause data.

I (a) Salmonella meningitis A022

Use only the dagger code for multiple cause-of-death coding.

Do not use the following ICD-10 codes for multiple cause coding:

D63*	H03*	I68*	M36*
D77*	H06*	I79*	M49*

B. General coding concept

The coding of cause-of-death information for the ACME system consists of the assignment of the most appropriate ICD-10 code(s) for each diagnostic entity that is reported on the death certificate. In order to arrive at the appropriate code for a diagnostic entity, code each entity separately. Do not apply provisions in ICD-10 for linking two or more diagnostic terms to form a composite diagnosis classifiable to a single ICD-10 code.

I (a) Cholecystitis with cholelithiasis K819 K802

Code each entity separately even though the Index has provided for a combination code for cholecystitis with cholelithiasis.

I (a) Malignant neoplasm of colon with rectum C189 C20

Code malignant neoplasm of colon and malignant neoplasm of rectum separately even though the Index has provided for a combination code for malignant neoplasm of colon with rectum.

<u>Place</u> 9	I (a) Injury of intra-abdominal and intrathoracic organs	S369	S279
	II	&X59	

Code injury of each site separately even though the Index has provided for a combination code for intra-abdominal and intrathoracic injury.

1. Definitions and types of diagnostic entities

A diagnostic entity is a single term or a composite term, comprised of one word or of two or more adjoining words, that is used to describe a disease, nature of injury, or other morbid condition. In this manual diagnostic entity and diagnostic term are used interchangeably. A diagnostic entity may indicate the existence of a condition classifiable to a single ICD-10 category or it may contain elements of information that are classifiable to different ICD-10 categories. For coding purposes, it is necessary to distinguish between two different kinds of diagnostic entities – a “one-term entity,” and a “multiple one-term entity.”

a. One-term entity

- (1) A one-term entity is a diagnostic entity that is classifiable to a single ICD-10 code.

I (a) Pneumonia	J189
(b) Arteriosclerosis	I709
(c) Emphysema	J439

These terms are codable one-term entities.

I (a) Allergic vasculitis D690

This condition is indexed as one-term entity under “vasculitis.”

I (a) Cerebral arteriosclerosis I672

This condition is indexed as one-term entity.

- (2) A diagnostic term that contains one of the following adjectival modifiers indicates the condition modified has undergone certain changes and is considered to be a one-term entity.

adenomatous	hypoxemic
anoxic	hypoxic
congestive	inflammatory
cystic	ischemic
embolic	necrotic
erosive	obstructed, obstructive
gangrenous	ruptured
hemorrhagic	

(These instructions apply to these adjectival modifiers **only**).

For code assignment, apply the following criteria in the order stated.

- (a) If the modifier and lead term are indexed together, code as indexed.

I (a) Embolic nephritis N058

Code Nephritis, embolic. The adjectival modifier “embolic” is indexed under nephritis.

- (b) If the modifier is not indexed under the lead term, but “specified” is, use the code for specified (usually .8).

I (a) Obstructive cystitis N308

Code Cystitis, specified NEC. The adjectival modifier “obstructive” is not indexed under cystitis.

- (c) If neither the modifier nor “specified” is indexed under the lead term, refer to Volume 1 under the NOS code for the lead term and look for a specified 4th character subcategory.

I (a) Hemorrhagic cardiomyopathy I428

Code hemorrhagic cardiomyopathy to I428, Other cardiomyopathies. “Hemorrhagic” is not indexed under cardiomyopathy, neither is Cardiomyopathy, specified NEC indexed. The Classification does provide a code, I428, for “Other cardiomyopathies” in Volume 1.

- (d) If neither (a), (b), or (c) apply, code the lead term without the modifier.

I (a) Adenomatous bronchiectasis J47

“Adenomatous” is not an index term qualifying bronchiectasis. Code bronchiectasis only, since there is no provision in the Classification for coding “other bronchiectasis.”

b. Multiple one-term entity

A multiple one-term entity is a diagnostic entity consisting of two or more contiguous words on a line for which the Classification does not provide a single code for the entire entity but does provide a single code for each of the components of the diagnostic entity. Consider as a multiple one-term entity if each of the components can be considered as separate one-term entities, i.e., they can stand alone as separate diagnosis. Code each component of the multiple one-term entity as indexed and on the same line where reported.

I (a) Myocardial infarction I219
 (b) Uremic acidosis N19 E872
 (c) Chronic nephritis N039

“Uremic acidosis” is not indexed as a one-term entity. Code “uremia” and “acidosis” as separate one-term entities, each of which can stand alone as a diagnosis.

I (a) Uremia N19
 (b) Diabetic heart disease E149 I519
 (c)

“Diabetic heart disease” is not indexed as a one-term entity. Code “diabetic” and “heart disease” as separate one-term entities, each of which can stand alone as a diagnosis.

Part B

General Coding Concept

I (a) Senile cardiovascular disease, MI	R54	I516	I219
(b)			
(c)			

“Senile cardiovascular disease.” is not indexed as a one-term entity. Code “senile” and “cardiovascular disease” as separate one-term entities each of which can stand alone as a diagnosis.

Exception:

When any condition classifiable to I20-I25, except I250, or I60-I69 is qualified as “hypertensive,” code to I20-I25 or I60-I69 **only**.

I (a) Hypertensive arteriosclerotic cerebrovascular disease	I672
---	------

I (a) Hypertensive myocardial ischemia	I259
--	------

(1) Code an adjective reported at the end of a diagnostic entity as if it preceded the entity. This applies whether reported in Part I or II.

I (a) Arteriosclerosis, hypertensive	I10	I709
(b)		
(c)		

The complete term is not indexed as a one-term entity. “Hypertensive” is an adjectival modifier; code as if it preceded the arteriosclerosis.

I (a) MI	I219	
(b)		
(c)		
II Coronary occlusion, arteriosclerotic	I709	I219

“Coronary occlusion, arteriosclerotic” is not indexed as a one-term entity. Arteriosclerotic is an adjectival modifier; code as if it preceded the coronary occlusion.

- (2) When a multiple one-term entity indicates a condition involving different sites or systems for which the Classification provides different codes, code the condition of each site or system separately. Where there is provision for coding the condition of one or more but not all of the sites or systems, code the conditions of the site(s) or system(s) that are indexed. Disregard the site(s) or system(s) for which the Classification does not provide a code.

I (a) Cardiac, respiratory, hepatic, renal failure I509 J969 K7290 N19

Code each site separately since the Classification provides a different code for each site.

I (a) Cerebro-hepatic failure K7290

“Hepatic failure” is the only term indexed. Do not enter a code for “cerebral failure.”

I (a) Cardiopulmonary dysfunction I518
(b)

“Cardiac dysfunction” is the only term indexed. Do not enter a code for “pulmonary dysfunction.”

c. Adjectival modifier reported with multiple conditions

- (1) If an adjectival modifier is reported with more than one condition, modify only the first condition.

I (a) Arteriosclerotic cardiomyopathy I251 N059
and nephritis

I (a) Diabetic coma and gangrene E140 R02

- (2) If an adjectival modifier is reported with one condition and more than one site is reported, modify all sites.

I (a) Diabetic gangrene of hands and feet E145

I (a) Arteriosclerotic cardiovascular and I250 I672
cerebrovascular disease

3. Special diagnostic entities

a. When a condition is qualified as “HIV-related,” “AIDS-related,” or is modified by “AIDS,” or “HIV,” disregard the indexing of these conditions and code as separate one-term entities.

I (a) HIV-related encephalopathy	B24	G934
I (a) AIDS-related tuberculosis	B24	A1690
I (a) AIDS encephalopathy	B24	G934
I (a) HIV encephalopathy	B24	G934

b. Alzheimer’s dementia: Consider the following terms as one term entities and code as indicated:

When reported as:

Code

Endstage Alzheimer’s, senile dementia	}	G301
Senile dementia, Alzheimer’s		
Senile dementia, Alzheimer’s type		
Senile dementia of the Alzheimer’s		

When reported as:

Alzheimer’s, dementia	}	G309
Alzheimer’s; dementia		
Dementia Alzheimer’s		
Dementia, Alzheimer’s		
Dementia-Alzheimer’s		
Dementia, Alzheimer’s type		
Dementia of Alzheimer’s		
Dementia-Alzheimer’s type		
Dementia; Alzheimer’s type		
Dementia, probable Alzheimer’s (disease)		
Dementia syndrome, Alzheimer’s type		
Endstage dementia (Alzheimer’s)		

4. Plural form of disease

Do not use the plural form of a disease or the plural form of a site to indicate multiple.

I (a) Cardiac arrest	I469
(b) Congenital defects	Q899

Code I(b) Q899 (congenital defect); do not code as multiple (Q897).

5. Implied “disease”

When an adjectival form of a word, including one relating to a site or organ, is entered as a separate diagnosis, i.e., it is not part of an entry preceding or following it, assume the word “disease” after the adjective and code accordingly.

I (a) Congestive heart failure	I500
(b) Myocardial	I515

Code I(b) to I515, myocardial disease.

I (a) Coronary	I251
(b) Hypertension	I10

Code I(a) to I251, coronary disease. Coronary hypertension is not indexed.

C. Format1. “Due to” relationships involving more than **four** causally related conditions

Four lines, (a), (b), (c), **and (d)** have been provided in Part I of the death certificate for reporting conditions involved in the sequence of events leading directly to death and for indicating the causal relationship of the reported conditions. In cases where the decedent had more than four causally related conditions leading to death, certifiers have been instructed to report all of these conditions and to add line, (e), to indicate the relationship of the conditions. In the ACME system, provision has been made for identifying conditions reported on the additional “due to” line in Part I. Code conditions reported on line (e) or in equivalent “due to” positions as having been reported on separate lines. (Refer to Section II, Part I, 2, Reject code 9 – More than four “due to” statements, for instructions for coding certificates with conditions reported on more than **five** “due to” lines.)

I (a)	Shock due to pneumonia	R579
(b)	Rupture of esophageal varices	J189
(c)	Cirrhosis of liver due to alcoholism	I859
(d)		K746
(e)		F102

2. Connecting termsa. “Due to” written in or implied

When the certifier has stated that one condition was due to another or has used another connecting term that implies a due to relationship between conditions in Part I, enter the codes as though the conditions had been reported, one due to the other, on separate lines. Code the conditions on each of the remaining lines in Part I, if there are any, as though they had been reported on the succeeding line. (Refer to Section II, Part I, 2, Reject code 9 – More than four “due to” statements for instructions for coding certificates with more than four “due to” statements).

I (a)	Myocardial infarction as a result of	I219
(b)	ASHD	I251

Interpret “as a result of” as “due to” and code the ASHD on I(b).

I (a)	Stomach hemorrhage from gastric ulcer	K922
(b)	Cholecystitis	K259
(c)		K819

Because of the implied “due to,” code the gastric ulcer on I(b) and the cholecystitis on I(c).

- (1) The following connecting terms should be interpreted as meaning “due to” or “as a consequence of” when the entity immediately preceding and following these terms is a disease condition, nature of injury, or an external cause.

after	incident to	received in
arising in or during	incurred after	resulting from
as (a) complication of	incurred during	resulting when
as a result of	incurred in	secondary to (2°)
because of	incurred when	subsequent to
caused by	induced by	sustained as
complication(s) of	occurred after	sustained by
during	occurred during	sustained during
etiology	occurred in	sustained in
following	occurred when	sustained when
for	occurred while	sustained while
from	origin	
in	received from	

- | | |
|---------------------------------------|------|
| I (a) Myocardial infarction | I219 |
| (b) Nephritis due to arteriosclerosis | N059 |
| (c) Hypertension from toxic goiter | I709 |
| (d) | I10 |
| (e) | E050 |

Both “due to” and “from” indicate the conditions following these terms are moved to the next due to position.

- | | |
|---------------------------------------|------|
| I (a) Multi-organ failure due to ASHD | |
| (b) | I251 |

Multi-organ failure is a disease condition. Move ASHD down to the next due to position.

- | | |
|-------------------------------|------|
| I (a) Death from heart attack | I219 |
| (b) | |

Death is not a disease condition, nature of injury, or external cause. Do not reformat heart attack.

- | | |
|----------------------------------|------|
| I (a) Complication from diabetes | E149 |
|----------------------------------|------|

Complication is not a disease condition, nature of injury, or external cause. Do not reformat diabetes.

Part C

Format

- (2) When one of the previous terms is the first entry in Part II, indicating that the following entry is a continuation of Part I, code in Part I in next due to position.

I (a) Respiratory failure	J969
(b) Cardiac arrest	I469
(c) Coronary occlusion	I219
(d)	I251
II due to ASHD	

Since Part II is indicated to be a continuation of Part I, code the ASHD on I(d).

- (3) Certain connecting terms imply that the condition following the connecting term was “due to” the condition preceding it. In such cases, enter the code for the condition following the connecting term on the line above that for the condition that preceded it.

Interpret the following connecting terms as meaning that the condition following the term was due to the condition that preceded it:

as a cause of	led to
cause of	manifested by
caused	producing
causing	resulted in
followed by	resulting in
induced	underlying
leading to	with resultant
	with resulting

I (a) Myocardial infarction	I469
(b) followed by cardiac arrest	I219
(c)	

Code the cardiac arrest on I(a) since “followed by” indicates it was due to the myocardial infarction.

I (a) Respiratory arrest	R092
(b) Pulmonary edema	J81
(c) Bronchitis with resulting pneumonia	J189 I469
(d) and cardiac arrest	J40

Code the pneumonia and cardiac arrest on I(c) since “with resulting” indicates they were due to the bronchitis.

b. Not indicating a “due to” relationship

When conditions are separated by “and” or by another connecting term that does not imply a “due to” relationship, enter the codes for these conditions on the same line in the order that the conditions are reported on the certificate.

The following terms imply that conditions are meant to remain on the same line. They are separated by “and” or by another connecting term that does not **imply** a “due to” relationship:

and	consistent with
accompanied by	with (\bar{c})
also	precipitated by
complicated by	predisposing (to)
complicating	superimposed on

I (a) Acute bronchitis superimposed on	J209	J439
(b) Emphysema		
(c) Tobacco abuse (smokes 3 packs a day)	F171	F179

Interpret “superimposed on” as “and.” Enter the code for the condition on I(b) as the second code on I(a). Do not enter a code on I(b).

I (a) MI	I219
(b) ASHD	I251
(c) Hypertension	I10
(d) Diabetes	E149 E142
II also diabetic nephropathy	

Consider “also” as a connecting word that does not imply “due to” and code Part II as a continuation of I(d).

3. Condition entered above line I(a)

When a condition is reported on the certificate above line I(a), enter the code for this condition on I(a). Code the condition(s) entered on line I(a) on line I(b); then code the conditions entered on each of the remaining line(s) in Part I as though they had been reported on the succeeding lines.

Part C

Format

Myocardial infarction

- I (a) Pulmonary embolism I219
- (b) Congestive heart failure I269
- (c) Congenital heart disease I500
- (d) Q249

Code the condition entered above I(a) on I(a), then code the condition entered on I(a) on I(b); then code the conditions entered on each of the remaining line(s) in Part I as though they had been reported on the succeeding lines.

4. Condition reported between lines in Part I

When a condition is reported between I(a) and I(b) or I(b) and I(c) or I(c) and I(d), without a connecting term, enter the code for this condition on the following “due to” line. Code the conditions entered on each of the remaining line(s) in Part I as though they had been reported on the succeeding line.

- I (a) Pneumonia J189
- Bronchitis
- (b) Emphysema J40
- (c) Cancer of lung J439
- (d) C349

Code the condition reported between lines I(a) and I(b) in the next “due to” position, and move the codes for conditions reported on lines I(b) and I(c) downward.

When a condition is reported between I(a) and I(b) or I(b) and I(c) or I(c) and I(d) with a connecting word, consider as a continuation of the line above and code accordingly unless there is a definite indication that it is a continuation of the line below.

- I (a) Cerebral hemorrhage I619 I64
- c̄ CVA
- (b) Cerebral arteriosclerosis I672

Code the condition entered between I(a) and I(b) as a continuation of I(a).

- I (a) Cerebral hemorrhage I619
 - c̄ CVA
 - (b) Cerebral arteriosclerosis I672 I64
- 

Since the certifier indicated by an arrow that the condition entered between I(a) and I(b) was a continuation of I(a), code the CVA on I(a).

Part C

Format

I (a)	Cerebrovascular accident due to cerebral hemorrhage	I64
(b)	Cerebral arteriosclerosis	I619
(c)		I672

Consider the condition entered between I(a) and I(b) as a continuation of I(a) and code accordingly.

5. Condition reported as due to I(a), I(b), or I(c)

When a condition(s) in Part I is reported with a specific statement interpreted or stated as “due to” another on lines I(a), I(b), I(c), or I(d), rearrange the codes according to the certifier’s statement. **Do not apply** this instruction to such statements reported in Part II.

I (a)	Myocardial failure	I249
(b)	Pneumonia	I509
(c)	Myocardial ischemia	J189
	due to (a) 3wks	

Accept the certifier’s statement that the condition reported on I(c) is “due to” the condition on I(a). Move the codes for conditions reported on I(a) and I(b) downward. (Apply the duration on I(c) to the myocardial ischemia).

I (a)	Heart failure	I509	N19
(b)	Pneumonia	J189	
(c)	Uremia due to (b)		

Take into account the certifier’s statement on I(c) and code the condition reported on I(c) as the second entry on I(a).

I (a)	Carcinomatosis	I469
(b)	Cancer of lung	C80
(c)	Cardiorespiratory arrest due to above	C349

Take into account the certifier’s statement and code the cardiorespiratory arrest on I(a), then move the codes for the remaining conditions downward.

I (a)	Coronary thrombosis	I219
(b)	Chronic nephritis	N039
(c)	Arteriosclerosis	I709
II	Uremia caused by above	N19

Disregard the certifier’s statement, “caused by above,” reported in Part II.

6. Conditions reported in Part II

Enter the codes for entries in Part II in the order the entries are reported, proceeding from the entry reported uppermost in Part II downward and from left to right, if there is more than one entry on the same line. If the conditions are numbered, code in numerical order.

I (a) MI	I219		
(b) ASHD	I251		
(c) Pneumonia			
II Heart murmur, arteriosclerosis	J189	R011	I709

7. Deletion of “due to” on the death certificate

When the certifier has indicated that conditions in Part I were not causally related by marking through items I(a), I(b), I(c), and /or I(d), or through the printed “due to, or as a consequence of” which appears below items I(a) – I(c) on the death certificate, proceed as follows:

- a. If the deletion(s) indicates that none of the conditions in Part I were causally related, consider as though all of the conditions had been reported on the uppermost used line. In determining the order of the codes, proceed from I(a) downward and from left to right if more than one condition is reported on a line.

I (a) Heart disease	I519	I10	N039
(b) Malignant hypertension			
(c) Chronic nephritis			
II Cancer of kidney	C64		
I (a) Cardiac failure	I509	I251	J439 J40
(b) Arteriosclerotic heart disease			
(c) Emphysema and bronchitis			
(d)			

- b. If only item I(b), I(c), or I(d) or the printed “due to, or as a consequence of” which appears below lines I(a), I(b), or I(c) is marked through, consider the condition(s) reported on the crossed out line as though reported as the last entry (or entries) on the preceding line.

Part C

Format

I	(a) Diabetes (b) (e) BPH	E149	N40
I	(a) Cardiac arrest (b) Cirrhosis of liver (c) Alcoholism	I469	K746 F102

II	Pneumonia	J189	
I	(a) Heart block (b) Degenerative myocarditis (e) Cerebral hemorrhage	I459 I514	I619
II	Bronchopneumonia	J180	

- c. If only one part of the printed “due to, or as a consequence of” which appears below I(a), I(b), and I(c) is marked through, consider the condition(s) reported on that line as though reported as the last entry (or entries) on the preceding line.

I	(a) Cardiorespiratory failure Due to, or as a consequence of	R092	
	(b) Infarction of brain Due to, or as a consequence of	I639	I259
	(c) Ischemic heart disease Due to, or as a consequence of		

Code ischemic heart disease as though reported as second entry on I(b).

8. Deletion of “Part II” on death certificate

When the certifier has marked through the printed Part II, code the condition(s) reported in Part II as the last entry on the lowest used line in Part I.

I	(a) Apoplectic coma	I64	
	(b) Ruptured aneurysm, brain	I6090	
	(c) Arteriosclerosis	I709	
	(d) ESRD	N180	I10
II	and hypertension		

Since Part II is indicated to be a continuation of I(d), code hypertension as last entry on I(d).

Part C

Format

I	(a) Myocarditis	I514	I219	I500	I250	E149
	(b) M.I.

	(b) Uremia		N19			
	(c) Arteriosclerosis		I709			
	(d) Hypertension		I10	N059		
H	Nephritis					

9. Numbering of causes reported in Part I

- a. When the certifier has numbered all causes or lines in Part I, that is 1, 2, 3, etc., code these entries as if reported on the same line. This instruction applies whether or not the numbering extends into Part II, and it also applies whether or not the “due to” below lines I(a) and/or I(b) and/or I(c) are marked through.

I	(a)	1. Coronary thrombosis	I219	I250	I10	I709	N289	J1110
		(b) 2. ASCVD						
		(c) 3. Hypertension and arteriosclerosis						
		(d) 4. Renal disease						
II		5. Influenza						

Code all the entries on I(a).

- b. When part of the causes in Part I are numbered, make the interpretation for coding such entries on an individual basis.

I	(a)	1. Bronchopneumonia	J180	C169
		(b) 2. Cancer of stomach		
		(c) Chronic nephritis	N039	

Enter the codes for the conditions numbered “1” and “2” on I(a) in the order indicated by the certifier. Do not enter a code on I(b); however, enter the code for the condition on I(c) on that line.

I	(a)	Bronchopneumonia	J180
	(b)	1. Cancer of stomach	C169 N039
	(c)	2. Chronic nephritis	

Enter the codes for conditions numbered “1” and “2” on I(b) in the order indicated by the certifier. Do not enter a code on I(c).

Part C

	(d)	2. COPD			
II		3. Cancer of lung			

Enter the codes for the conditions numbered 1, 2, and 3 on I(c) in the order indicated by the certifier. Do not enter a code on I(d) or in Part II.

- c. When the causes in Part I are numbered, and an entry is stated or implied as “due to” another, enter the code(s) connected by the stated or implied “due to” in the next “due to” position, followed by the codes for the **remaining numbered** causes.

I	(a)	1. Bronchopneumonia due to	J180		
	(b)	influenza	J1110	J841	J40
	(c)	2. Pulmonary fibrosis 3. Bronchitis			

Enter the code for the condition followed by the stated “due to” on I(b), followed by codes for the conditions numbered “2” and “3.” Do not enter a code on I(c).

I	(a)	1. Pneumonia	J189		
	(b)	MI	I219	I251	
	(c)	2. ASHD			

Code the condition numbered “2” as a continuation of I(b). Leave I(c) blank.

10. Punctuation marks

- a. Disregard punctuation marks such as a period, comma, semicolon, colon, dash, slash, question mark, or exclamation mark when placed at the end of a line in Part I. Do not apply this instruction to a hyphen (-), which indicates a word is incomplete.

I	(a)	Myocardial infarct?	I219		
	(b)	Meningitis, mastoiditis	G039	H709	
	(c)	Otitis media	H669		

Disregard the punctuation marks and code the conditions reported on I(a), I(b), and I(c) as indicated by the certifier.

Part C

Format

I (a)	Chronic rheumatic	I099	I958
(b)	heart disease, chronic hypotension		
(c)	Cancer	C80	

Regard the conditions reported on I(b) as a continuation of I(a). Do not enter a code on I(b).

- b. When conditions are separated by a slash (/), code each condition as indexed.

I (a)	Cardiac arrest/respiratory arrest/pneumonia	I469	R092	J189
(b)	ASHD	I251		

Disregard the slash and code conditions as indexed.

11. Conditions in the duration box

When a condition is entered in the duration block, code the condition on the same line where it is reported.

		<u>Duration</u>		
I (a)	Arteriosclerotic heart disease	CVA	I251	I64
(b)				
(c)				
II	Arteriosclerosis		I709	

Code the condition reported in the duration block as the last entry on I(a).

Part D

Doubtful Diagnosis

D. Doubtful diagnosis1. Doubtful qualifying expression

- a. When expressions such as “apparently,” “presumably,” “?”, “perhaps,” and “possibly,” qualify any condition, disregard these expressions and code condition as indexed.

I (a) ? hemorrhage of stomach	K922
(b) Possible ulcer of stomach	K259

Disregard “?” and code hemorrhage of stomach on I(a) as reported.
Disregard “possible” and code ulcer of stomach on I(b) as reported.

I (a) Heart disease, probable ASHD	I519	I251
------------------------------------	------	------

Disregard “probable” and code heart disease and ASHD on I(a).

<u>Place</u> 9	I (a) Pneumonia, probably aspiration	J189	T179	&W80
-------------------	--------------------------------------	------	------	------

Disregard the “probably” and code both pneumonia and aspiration as indexed.

- b. When these expressions are reported at the end of a line in Part I, **do not** consider to be a continuation of the next lower line.

I (a) Heart disease probably	I519
(b) Acute myocardial infarction	I219

Disregard “probably” and code heart disease on I(a) and acute myocardial infarction on I(b).

I (a) Cardiovascular disease presumably	I516
(b) Cerebral thrombosis	I633

Disregard “presumably” and code each condition on the line where it is reported.

Part D

Doubtful Diagnosis

- c. When these expressions are reported at the beginning of a line in Part I, **do not** consider to be a continuation of the line above it.

I (a)	Heart disease	I519
(b)	Possibly acute myocardial infarction	I219

Disregard “possibly” and code each condition on the line where it is reported.

- d. When these expressions are reported at the beginning of Part II, **do not** consider to be a continuation of Part I.

I (a)	Heart disease probably	I519
(b)		
(c)		
II	Probably MI	I219

Disregard “probably” and code heart disease on I(a) and MI in Part II.

2. Interpretation of “either...or...”

Consider the following as a statement of “either or:”

- Two conditions reported on **one** line and **both** conditions qualified by expressions such as “apparently,” “presumably,” “?,” “perhaps,” and “possibly”
- Two or more conditions connected by “or” or “versus”

Code using the following instructions:

- a. When a condition of more than one site is qualified by a statement of “either...or...” and both sites are classified to the **same system**, code the condition to the residual category for the **system**.

I (a)	Pneumonia	J189
(b)	Cancer of kidney or bladder	C689

Code I(b) C689, malignant neoplasm of other and unspecified urinary organs.

I (a)	Heart failure	I509
(b)	Coronary or pulmonary blood clot	I749

Code I(b) I749, blood clot.

Part D

Doubtful Diagnosis

- b. When a condition of more than one site is qualified by a statement of “either...or...” and these sites are in different systems, code to the residual category for the disease or condition specified.

I	(a) Cardiac arrest	I469
	(b) Carcinoma of gallbladder or kidney	C80

Code I(b) C80, malignant neoplasm without specification of site.

I	(a) Respiratory failure	J969
	(b) Congenital anomaly of heart or lungs	Q899

Code I(b) Q899, anomaly, congenital, unspecified.

- c. When conditions are qualified by a statement of “either...or...” and **only one site/system** is involved, code to the residual category for the site/system.

I	(a) Apparently stroke, perhaps heart attack	I99
---	---	-----

Since both conditions are preceded by a doubtful qualifying expression, consider as a statement of “either...or...” Stroke and heart attack are classified to the circulatory system. Code to Disease, circulatory system, NEC.

I	(a) Pulmonary edema	J81
	(b) Tuberculosis or cancer of lung	J9840

Code I(b) J9840, lung disease NOS.

- d. When conditions are classified to the same three character category with different fourth characters, code to the three character category with fourth character “9.”

I	(a) ASCVD vs ASHD	I259
---	-------------------	------

Code to I259 the residual category. ASCVD and ASHD are both classified to 125.-, chronic ischemic heart disease.

Part D

Doubtful Diagnosis

- e. When conditions are classified to different three character categories and Volume 1 provides a residual category for the diseases in general, code to that residual category.

I (a) MI vs coronary aneurysm I259

Code to I259 the residual category for ischemic heart disease. MI and coronary aneurysm are both classified as “ischemic heart diseases.”

- f. When conditions involving different systems are qualified by “either... or...,” and cannot be classified to the residual category for the disease, code R688, other specified general symptoms and signs.

I (a) Coma R402
 (b) ? gallbladder colic ? coronary R688
 thrombosis

Code I(b) R688, other ill-defined conditions. (Consider the two question marks on a single line as “either...or...”).

- g. When diseases and injuries are qualified by “either... or...,” code R99, other unknown and unspecified cause, provided this is the only entry on the certificate. When other classifiable entries are reported, omit R99.

I (a) Head injury or CVA R99

Code I(a) R99, other unknown and unspecified cause.

- h. For doubtful diagnosis in reference to “either... or...” **accidents**, **suicides**, and **homicides**, refer to Section V, Part A, External Cause Code Concept.

Part E

Conditions Specified as “Healed” or “History of”

E. Conditions specified as “healed” or “history of”

The Classification provides sequela categories for certain conditions qualified as “healed.” or “history of.” Refer to Section IV, Part F, Sequela. When the Classification does not provide a code or a sequela category for a condition qualified as “healed” or “history of,” code the condition as though not qualified by this term.

I (a) Myocardial infarction	I219
(b)	
(c)	
II Gastritis, healed	K297

Code K297, gastritis NOS in Part II.

Part F

Coding Entries Such as “Same,” “Ditto (” “As Above”

F. Coding entries such as “same,” “ditto (”,” “as above”

When the certifier enters “same,” “ditto mark (”,” “as above,” etc., in a “due to” position to a specified condition, do not enter a code for that line.

I (a) Coronary occlusion	I219
(b) Same	
(c) Hypertension	I10

Do not enter a code on I(b) for the entry “same.”

I (a) Pneumonia	J189
(b) ”	
(c) Emphysema	J439

Do not enter a code on I(b) for the “ ditto mark (”.”

Part G

Conditions Qualified by “Postmortem,” “Ruled Out” “R/O”

G. Condition qualified by “postmortem,” “rule out,” “ruled out,” “r/o”

When a condition is qualified by “postmortem,” “rule out,” “ruled out,” or “r/o,” etc., **do not** enter a code for the condition.

H. Nonindexed and illegible entries1. Terms that are not indexed

When a term is reported that does not appear in the ICD-10 Index, refer the term to the supervisor.

2. Illegible entries

When an illegible entry is the **only** entry on the certificate, code R99. When an illegible entry is reported with other classifiable entries, disregard the illegible entry and code the remaining entries as indexed.

Part I

Coding One-Character Reject Codes

I. Coding one-character reject codes

When a death record qualifies for more than one reject code, code only one in this order: 1, 2, 3, 4, 5, 9.

1. Reject code 1-5-Inconsistent duration

When a duration of an entity in a “due to” position is shorter than that of an entity reported on a line above it and only **one** codable entity is reported on each of these lines, enter a reject code (1-5) in the appropriate data position. When more than one codable entity is reported on the same line, disregard the duration entered on that line. Use the appropriate reject code even though there are lines without a duration or with more than one codable entity between the entities with the inconsistent duration; in such cases, consider the inconsistency to be between the line immediately above and the line with the shorter duration.

If the inconsistent duration is between:

Lines	<u>Enter Reject Code</u>
I (a) and I (b).....	1
I (b) and I (c).....	2
I (c) and I (d).....	3
I (d) and I (e)	4
Inconsistent durations between more than two lines in Part I, or any situation where reject codes 1-4 would not be applicable	5

Do not enter a reject code if the only inconsistency is between the durations of malignant neoplasms classifiable to C00-C96.

I (a) ASHD	10 yrs.	I251
(b) Chronic nephritis and hypertension	5 yrs.	N039 I10
(c) Diabetes	5 yrs.	E149

Reject 2

Disregard the duration on I(b), since more than one codable entity is reported on this line. Only **one** codable entity is reported on lines I(a) and I(c) and the duration of the diabetes was shorter than that of ASHD. For the purposes of assigning the reject code, consider the duration on I(b) to be at least as long as the duration on I(a). Therefore, enter reject code 2 denoting an inconsistency between I(b) and I(c).

Part I

Coding One-Character Reject Codes

I (a) ASHD	5 yrs	I251	
(b) Chronic nephritis and hypertension	10 yrs	N039	I10
(c) Diabetes	5 yrs	E149	

Do not enter reject code 2. The duration on I(b) is disregarded. The duration of diabetes on I(c) was not shorter than that of ASHD on I(a).

I (a) Cardiac arrest		I469	
(b) Congestive heart failure	1 week	I500	
(c) Cancer of stomach	1 year	C169	
(d) Metastatic cancer of lung	6 months	C780	

Do not use reject code 3 since the inconsistent duration is between malignant neoplasms.

I (a) Basilar artery thrombosis	7 weeks	I630	
(b) Renal failure	4 weeks	N19	
(c) Pneumonia	1 week	J189	

Reject 5

Enter reject code 5 since the inconsistent durations are between more than 2 lines.

Age 1 yr.

I (a) Congenital nephrosis	life	N049	
(b)			
(c) Intestinal hemorrhage	1 day	K922	

Reject 5

Enter reject code 5 since reject codes 1-4 are not applicable.

Part I

Coding One-Character Reject Codes

2. Reject code 9 – More than four “due to” statements

When certifier’s entries or reformatting result in more than **four** statements of “due to,” continue the remaining codes horizontally on the **fifth** line and enter reject **code 9** in the appropriate position.

I (a)	Terminal pneumonia	J189
(b)	Congestive heart failure	I500
(c)	Myocardial infarction	I219
(d)	ASHD	I251
(e)	Generalized arteriosclerosis	I709 E039
(f)	Myxedema	

Reject 9

Enter the code for the myxedema reported on the fifth “due to” line, I(f), following the code for the condition reported on this line (generalized arteriosclerosis). Enter reject code 9 in the appropriate data position.

If there are more than four “due to” statements in Part I and there is no codable condition reported on one or more lines, consider the condition(s) on each subsequent “due to” line as though reported on the preceding line. Enter reject code 9 only if, after reformatting, there are codable conditions on more than five lines.

I (a)	Pneumonia	J182
(b)	Bedfast	G839
(c)	Paralysis following CVA	I64
(d)	Hypertension due to	I10
(e)	adrenal adenoma	D350

Do not enter reject code 9. Since bedfast is not a codable condition, enter the code for paralysis on I(b), the code for CVA on I(c), etc. As a result of the rearrangement of the conditions, there are codable conditions on only five lines.

When a death record qualifies for more than one reject, prefer a reject code for inconsistent durations over reject code 9.

Part J

Inclusion of Additional Information (AI)
to Mortality Source DocumentsJ. Inclusion of additional information (AI) to mortality source documents

Code supplemental information when it modifies or supplements data on the original mortality source document.

1. When additional information (AI) **states** the underlying cause of a **specified disease in Part I**, code the additional information (AI) in a “due to” position to the specified disease.

I	(a) Pulmonary edema	J81
	(b) Congestive heart failure	I500
	(c) Arteriosclerosis	I251
	(d)	I709

II

AI The underlying cause of the congestive heart failure was ASHD.

Since the certifier **states** the underlying cause of the congestive heart failure is ASHD, code I251 on I(c) and move the condition on I(c) to the next “due to” position.

2. When additional information (AI) **modifies** a disease condition, use the AI and code the disease modified by the AI in the position **first** indicated by the certifier.

I	(a) Pneumonia	J181
	(b)	
	(c)	
	AI Lobar pneumonia	

Code lobar pneumonia as the **specified** type of pneumonia on I(a) only.

3. When there is a stated or implied complication of surgery and the additional information indicates the condition for which surgery was performed, code this condition in a “due to” position to the surgery when reported in Part I and following the surgery when reported in Part II. Precede this code with an ampersand (&).

I	(a) Coronary occlusion	T818
	(b) Gastrectomy	&Y836
	(c)	&K259

(b)	Septicemia	T814		
(c)				
II	Uremia, cholecystectomy	N19	&Y836	&K802
AI	Surgery for gallstones			

Code the condition necessitating the surgery following the E-code for surgery in Part II.

4. When additional information (AI) **states** a certain condition is the **underlying cause** of death, **code** this condition in Part I in a “due to” position (on a separate line) to the conditions reported on the original death record.

I (a)	Cardiac arrest	I469		
(b)	MI	I219		
(c)	ASHD	I251		
(d)		E149		
II				
AI	U.C. was diabetes			

Accept the certifier’s statement that the underlying cause of death was “diabetes,” and code this condition on I(d) in a “due to” position to the conditions originally reported in Part I.

5. When any morphological type of neoplasm is reported in Part I with no mention of a “site” and additional information specifies a site, **code** the specified site **only** on the line where the morphological type is reported.

I (a)	Cancer	C349		
(b)				
(c)				
II				
AI	Cancer of lung			

Code only the specified cancer (lung) on I(a).

Part J

Inclusion of Additional Information (AI)
to Mortality Source Documents

6. When additional information states the primary site of a malignant neoplasm, code this condition in a “due to” position to the other malignant neoplasms reported in Part I.

I	(a) Metastatic neoplasm	C80
	(b) Metastasis to liver	C787
	(c)	C189

II

AI Colon was primary site.

Code the stated primary site on I(c) in a “due to” position to the other neoplasms reported in Part I.

I	(a) Carcinomatosis	C80
	(b)	C61
	(c)	

II

AI Prostate was probably the primary site.

Code the presumptive primary site (prostate) on I(b) in a “due to” position to the stated neoplasm reported on the original death certificate.

7. When the additional information **does not modify** a condition on the certificate, or **does not state** that this condition is the underlying cause, code the AI as the last condition(s) in Part II. Code AI reported on the certificate beginning with the uppermost downward and from left to right.

I	(a) Coronary thrombosis	I219
	(b) HASCVD	I119
	(c)	
II	Hypertension	I10 I709 I64 I252
AI	Arteriosclerosis, CVA, old MI	

The additional information does not modify conditions on the certificate. Code as the last entries in Part II.

	Male, 30 minutes-Twin B	
I	(a) Immature	P073
600 gm	(b)	
	(c)	
II	Atelectasis	P281 P015 P070

Code the additional information in the order reported, uppermost downward and from left to right.

K. Amended certificates

When an “amended certificate” is submitted, **code** the conditions reported on the amended certificate only.

Part L

Effect of Age of Decedent on Classification

L. Effect of age of decedent on classification

Always note the **age of the decedent** at the time the causes of death are being coded. Certain groups of categories are provided for certain age groups. There are several conditions within certain categories which cannot be properly classified unless the **age** is taken into consideration. Use the following terms to identify certain age groups:

1. NEWBORN OR NEONATAL means **less than 28 days** of age at the time of death. Code any index term with the indentation of “newborn,” “neonatal,” “perinatal,” “perinatal period,” “fetus or newborn,” or “fetal” (in this priority order) to the newborn category if the decedent is less than 28 days of age or there is evidence the condition originated in the first 27 days of life, even though death may have occurred later.

Female, 4 hours

I (a) Anoxia		P219
(b) Cerebral hemorrhage		P524

Since the age of decedent is less than 28 days, code anoxia of newborn, and cerebral hemorrhage of newborn.

Male, 31 days

	<u>Duration</u>	
I (a) Pulmonary hemorrhage	26 days	P269
(b)		

Since the condition originated in the first 27 days of life, code as a newborn.

2. INFANT or INFANTILE means **less than 1 year** of age at the time of death.

Male, 9 months

I (a) Pneumonia		J189
(b) Hemiplegia		G802

Since the decedent is less than 1 year of age at the time of death, code Hemiplegia, infantile.

Male, 11 years

I (a) Asthma J450

Code as Asthma, childhood.

4. Congenital anomalies (Q00-Q99)

Regard the conditions listed below as congenital and code to the appropriate congenital category if death occurred within the age limitations stated, provided there is no indication that they were acquired after birth.

- a. Less than 28 days:

heart disease NOS
hydrocephalus NOS

Male, 27 days

I (a) Renal failure N19
(b) Hydrocephalus Q039

Code the hydrocephalus as congenital since the decedent was less than 28 days of age at the time of death.

Female, 3 months

I (a) Pneumonia J189
(b) Cyst of brain Q046

Code cyst of brain as congenital since the age of the decedent is less than 1 year.

Part L

Effect of Age of Decedent on Classification

5. Congenital syphilis

Code congenital syphilitic pneumonia since age is less than 2 years.

Part L

R99

Code other ill-defined and unspecified causes of mortality (R99).

Part N

Effect of Duration on Assignment of Codes

N. Effect of duration on assignment of codes

Before assigning codes, take into account any statements entered on the certificate in the spaces for duration since these statements may affect the code assignments for certain conditions.

1. Qualifying conditions as acute or chronic

- a. Usually the duration should **not** be used to qualify the condition as “acute” or “chronic.”

	<u>Duration</u>	
I (a) Nephritis	2 years	N059

Code nephritis as indexed. Do not use the duration to qualify the nephritis as chronic.

- b. However, when assigning codes to certain conditions classified as “ischemic heart diseases” the Classification provides the following specific guidelines for classifying a condition with a **stated** duration as acute or chronic:

- acute or with a stated duration of 4 weeks or less
- chronic or with a stated duration of over 4 weeks

	<u>Duration</u>	
I (a) Acute myocardial infarction	3 mos.	I258
(b)		
(c)		

Code Infarction, myocardium, chronic or with a stated duration of over 4 weeks, I258.

Part N

Effect of Duration on Assignment of Codes

3. Acute exacerbation

Code “acute exacerbation” of a chronic specified disease to the acute and chronic stage of the disease if the Classification provides separate codes for “acute” and “chronic.”

I (a)	Acute exacerbation of leukemia	C950	
(b)	Chronic lymphocytic leukemia	C911	
(c)			
I (a)	Acute exacerbation of chronic	C910	C911
(b)	lymphocytic leukemia		
I (a)	Acute exacerbation of bronchitis	J209	
(b)			
(c)			
I (a)	Acute exacerbation of chronic	N10	N119
(b)	pyelonephritis		
I (a)	Acute exacerbation of chronic	J209	J42
(b)	bronchitis		
(c)			
I (a)	Chronic leukemia with conversion to acute phase	C951	C950
I (a)	Acute exacerbation of chronic obstructive lung disease	J441	J449

Code the preceding examples to the acute and chronic stages of each specified disease since the Classification provides separate codes for the “acute” and “chronic.”

4. Acute and chronic

Sometimes the terms acute and chronic are reported preceding two or more diseases. In these cases, use the term (“acute” or “chronic”) with the condition it **immediately** precedes.

I (a)	Chronic renal and liver failure	N189	K7290
-------	---------------------------------	------	-------

Code renal failure, chronic and liver failure NOS.

Part N

Effect of Duration on Assignment of Codes

5. Qualifying conditions as congenital or acquired

Code conditions classified as congenital in the Classification as congenital, even when not specified as congenital if the interval between onset and death and the age of the decedent indicate that the condition existed from birth.

	<u>Duration</u>	
Female, age 2 years		
I (a) Pneumonia	1 week	J189
(b) Heart disease	2 years	Q249

Code the condition on I(b) as congenital since the age of the decedent and the duration of the condition indicate that the heart disease existed at birth.

Do not use the interval between onset and death to qualify conditions that are classified to categories Q00-Q99, congenital anomalies, as acquired.

	<u>Duration</u>	
Male, 62 years		
I (a) Renal failure	3 months	N19
(b) Pulmonary stenosis	5 years	Q256

Do not use the duration to qualify the pulmonary stenosis as acquired.

6. Two conditions with one duration

When two or more conditions are entered on the same line with one duration, disregard the duration and code the conditions as indexed.

	<u>Duration</u>		
I (a) Myocardial ischemia and congestive heart failure	3 weeks	I259	I500
(b) Hypertension	5 years	I10	

Disregard the duration on I(a) and code the myocardial ischemia as indexed.

Part N

Effect of Duration on Assignment of Codes

7. Conflict in durations

When conflicting durations are entered for a condition, give preference to the duration entered in the space for interval between onset and death.

		<u>Duration</u>	
I (a) Ischemic heart disease	2 weeks	years	I259

Use the duration in the block to qualify the ischemic heart disease.

8. Span of dates

Interpret dates that are entered in the spaces for interval between onset and death separated by a slash (/), dash (-), etc., as meaning from the first date to the second date. Disregard such dates if they extend from one line to another and there is a condition reported on both of these lines since the span of dates could apply to either condition.

Date of death		<u>Duration</u>	
10-6-98	I (a) MI	10/1/98-	I219
	(b) Ischemic heart disease	10/6/98	I259

Disregard duration and code each condition as indexed since the dates extend from I(a) to I(b).

Date of death		<u>Duration</u>	
10-6-98	I (a) Aneurysm of heart	10/1/98 – 10/6/98	I219
	(b)		

Since there is only one condition reported, apply the duration to this condition.

Date of death		<u>Duration</u>	
10-6-98	I (a) Ischemic heart disease	10/1/98 – 10/6/98	I249
	(b) Arteriosclerosis		I709

Apply the duration to I(a).

Part O

Relating and Modifying Conditions

O. Relating and modifying conditions1. Implied site of disease

Certain conditions are classified in the ICD-10 according to the site affected, e.g.:

atrophy	enlargement	obstruction
calcification	failure	perforation
calculus	fibrosis	rupture
congestion	gangrene	stenosis
degeneration	hypertrophy	stones
dilatation	insufficiency	stricture
embolism	necrosis	

(This list is not all inclusive)

Occasionally these conditions are reported without specification of site. Relate conditions such as these for which the Classification does not provide a NOS code and conditions, which are usually reported of a site. Generally, it may be assumed that such a condition was of the same site as another condition if the Classification provides for coding the condition of unspecified site to the site of the other condition. These coding principles apply whether or not there are other conditions reported on other lines in Part I. Apply the following instructions when relating a condition of unspecified site to the site of a specified condition:

a. General instructions for implied site of a disease(1) Conditions of unspecified site reported on the same line:

- (a) When conditions are reported on the same line, with or without a connecting term that implies a due to relationship, assume the condition of unspecified site was of the same site as the condition of specified site.

I (a) Congestive heart failure	I500
(b) Infarction with myocardial	I219 I515
(c) degeneration	
(d) Coronary sclerosis	I251

I (a) CVA	I64
(b) Thrombosis	I829
(c) ASHD	I251

Code Thrombosis NOS on I(b). Do not relate the thrombosis since the Classification provides codes for both sites reported.

Part O

Relating and Modifying Conditions

Do not relate encephalopathy to liver since the name of the disease implies a disease of a specific site, brain.

I (a) Pulmonary embolism I269
(b) Thrombophlebitis I809

Code thrombophlebitis (I809) as indexed. Do not relate thrombophlebitis since it is not usually reported of any site other than extremities.

I (a) Cerebral hemorrhage c̄ herniation I619 G935

Relate herniation to brain since hernia NOS is classified to a disease of the digestive system (K469) and it seems illogical to have a brain disease paired with a digestive system disease.

2. Coding conditions classified to injuries as disease conditions

- a. Consider “injury,” “hematoma,” “laceration,” (or other condition that is usually but not always traumatic in origin) of a specified organ to be qualified as nontraumatic when it is reported due to or on the same line with a disease, provided there is no statement on the death certificate that indicates the condition was traumatic. If there is provision in the Classification for coding the condition that is considered to be qualified as nontraumatic as such, code accordingly. Otherwise, code to the category that has been provided for “Other” conditions of the organ (usually.8).

I (a) Laceration heart I518
(b) Myocardial Infarction I219
(c)

Consider laceration of heart as nontraumatic and code to other ill-defined heart diseases.

In order to assign the most appropriate code for a given diagnostic entity, it may be necessary to take other recorded information and the order in which the information is reported into account. It is important to interpret this information properly so the meaning intended by the certifier is correctly conveyed. The objective is to code each diagnostic entity in accordance with the intent of the certifier without combining separate codable entities. The following instructions help to determine the intent of the certifier. Apply Intent of Certifier instructions to “See also” terms in the Index as well.

I (a) Cytomegaloviral pneumonia B250

Code as indexed under Pneumonia, cytomegaloviral.

- (ii) If (i) does not apply, refer to Volume 1, Chapter I to determine if the Classification provides an appropriate fourth character. Indications of appropriate fourth characters for sites would be “of other sites,” “other specified organs,” or “other organ involvement.”

I (a) Candidiasis peritonitis B378

Since this term is not indexed together, refer to Volume I, Chapter I and select the fourth character, .8, candidiasis of other sites.

- (iii) If (i) and (ii) do not apply, code as two separate conditions.

I (a) Mononucleosis pharyngitis B279 J029

General information

Separate categories are provided in ICD-10 for coding malignant primary and secondary neoplasms (C00-C96), carcinoma in situ (D00-D09), benign neoplasms (D10-D36), and neoplasms of uncertain or unknown behavior (D37-D48). Categories and subcategories within these groups identify sites and/or morphological types.

Morphology describes the difference in type and structure of cells or tissues (histology) as seen under the microscope and behavior. The ICD classification of neoplasms consists of several major morphological groups (types) of neoplasms including the following:

- Carcinomas including squamous cell carcinoma and adenocarcinoma
- Sarcomas and other soft tissue tumors including mesotheliomas
- Lymphomas including Hodgkin's lymphoma and non-Hodgkin's lymphoma
- Site specific types (types that indicate the site of the primary neoplasm)
- Leukemias
- Other specified morphological groups

The morphological types of neoplasms are listed in ICD-10 following Chapter XX in Volume 1 and also appear in Volume 3. Morphology, behavior, and site must all be considered when coding neoplasms. This may take the form of a reference to the appropriate column in the "Neoplasm" listing in the Index when the morphological type could occur in several organs. For example:

Adenoma, villous (M8261/1) - see Neoplasm, uncertain behavior

Or to a particular part of that listing when the morphological type originates in a particular type of tissue. For example:

Fibromyxoma (M8811/0) - see Neoplasm, connective tissue, benign

The Index may give the code for the site assumed to be most likely when no site is reported in a morphological type. For example:

- Adenocarcinoma
- pseudomucinous (M8470/3)
- - specified site - see Neoplasm, malignant
- - unspecified site C56

Part A

Neoplasms (C00-D48)

Or the Index may give a code to be used regardless of the reported site when the vast majority of neoplasms of that particular morphological type occur in a particular site. For example:

Nephroma (M8960/3) C64

Always look up the morphological description in the Index before referring to the listing under “Neoplasm” for the site.

The morphological code numbers consist of five characters: the first four identify the histological type of the neoplasm and the fifth, following a slash, indicates its behavior. These morphological codes (M codes) are not used by NCHS for coding purposes.

The behavior of a neoplasm is an indication of how it will act. The following terms describe the behavior of neoplasms:

Benign (nonmalignant)	D10-D36
Uncertain or unknown behavior (undetermined whether benign or malignant)	D37-D48
In-situ (confined to one site)	D00-D09
Malignant, primary site (capable of rapid growth and of spreading to nearby and distant sites)	C00-C76, C80-C96
Malignant secondary (spread from another site; metastases)	C77-C79

Unless it is specifically indexed, code a morphological term ending in “osis” in the same way as the tumor name to which “osis” has been added is coded. For example, code neuroblastomatosis in the same way as neuroblastoma. However, do not code hemangiomatosis that is specifically indexed to a different category in the same way as hemangioma.

All combinations of the order of prefixes in compound morphological terms are not indexed. For example, the term “chondrofibrosarcoma” does not appear in the Index, but “fibrochondrosarcoma” does. Since the two terms have the same prefixes (in a different order), code the chondrofibrosarcoma the same as fibrochondrosarcoma.

Part A

Neoplasms (C00-D48)

A. Malignant neoplasms (C00-C96)

The categories that have been provided for the classification of malignant neoplasms distinguish between those that are stated or presumed to be primary (originate in) of the particular site or types of tissue involved, those that are stated or presumed to be secondary (deposits, metastases, or spread from a primary elsewhere) of specified sites, and malignant neoplasms without specification of site. These categories are the following:

C00-C75 Malignant neoplasms, stated or presumed to be primary, of specified sites and different types of tissue, except lymphoid, hematopoietic, and related tissue

C76 Malignant neoplasms of other and ill-defined sites

C77-C79 Malignant secondary neoplasm, stated or presumed to be spread from another site, metastases of sites, regardless of morphological type of neoplasm

C80 Malignant neoplasm of unspecified site (primary) (secondary)

C81-C96 Malignant neoplasms, stated or presumed to be primary, of lymphoid, hematopoietic, and related tissue

In order to determine the appropriate code for each reported neoplasm, a number of factors must be taken into account including the morphological type of neoplasm and qualifying terms. Assign all malignant neoplasms to the appropriate category for the morphological type of neoplasm, e.g., to the code shown in the Index for the reported term.

Morphological types of neoplasm include categories C40-C41, C43, C44, C45, C46, C47, C49, C70-C72, and C80. Specific morphological types include:

5. Independent (primary) sites

The presence of more than one primary neoplasm could be indicated in one of the following ways:

- mention of two different anatomical sites
- or two distinct morphological types (e.g., hypernephroma and intraductal carcinoma)
- or by a mix of a morphological type that implies a specific site, plus a second site.

It is highly unlikely that one primary would be due to another primary malignant neoplasm except for a group of malignant neoplasms of lymphoid, hematopoietic, and related tissue (C81-C96), within which, one form of malignancy may terminate in another (e.g., leukemia may follow non-Hodgkin's lymphoma).

- a. If two or more sites are mentioned in Part I and there is no indication that either site is primary or secondary, code each site as indexed.

I (a) Cancer of stomach 3 months C169
 (b) Cancer of breast 1 year C509

Code to primary malignant neoplasm of each site mentioned, since it is unlikely that one primary malignant neoplasm would be due to another.

Code both sites as primary and enter both on I(a).

Part A

Neoplasms (C00-D48)

- b. If two or more morphological types of malignant neoplasm occur, one reported due to the other or reported anywhere on the record, code each as indexed.

I (a) Lymphosarcoma of mesentery	C850
II Adenocarcinoma of cecum	C180

6. Metastases

Metastases is the spread of a primary malignant neoplasm to another site; therefore, metastases of a site is always secondary.

- a. When malignancy NOS or any morphological type classifiable to C80 is reported with metastases of a site on a line, code C80 and the secondary neoplasm.

I (a) Malignancy with metastases C80 C791
of bladder

Code malignancy as first entry on I(a) and code secondary bladder neoplasm as the second neoplasm on I(a).

- b. Although malignant cells can metastasize anywhere in the body, certain sites are more common than others and must be treated differently. If one of the common sites of metastases (excluding lung) is qualified by the word “metastatic,” it should be coded as secondary (see other neoplasm instructions). However, if one of these sites appears alone on a death certificate and is not qualified by the word “metastatic,” it should be considered primary.

Common sites of metastases:

Bone	Lymph nodes
Brain	Mediastinum
Central nervous system	Meninges
Diaphragm	Peritoneum
Heart	Pleura
Liver	Retroperitoneum
Lung	Spinal cord
Ill-defined sites (sites classifiable to C76)	

I (a) Cancer of brain C719

Code primary cancer of brain since it is reported alone on the certificate.

■ (1) Special Instruction: Lung

The lung poses special problems in that it is a common site for both metastases and primary malignant neoplasms. Lung should be considered as a common site of metastases whenever it appears in Part I with sites not on this list. If lung is mentioned anywhere on the certificate and the only other sites are on the list of common sites of metastases, consider lung primary. However, when the bronchus or bronchogenic cancer is mentioned, this neoplasm should be considered primary.

I (a) Carcinoma of lung C349

Code primary malignant neoplasm of lung since it is reported alone on the certificate.

I (a) Cancer of bone C795
(b) Carcinoma of lung C349

Code primary malignant neoplasm of lung on I(b) since bone is on the list of common sites of metastases and lung can, therefore, be assumed to be primary.

I (a) Carcinoma of bronchus C349
(b) Carcinoma of breast C509

Code primary malignant neoplasm of bronchus on I(a) and primary malignant neoplasm of breast on I(b). Do not code I(a) as secondary malignant neoplasm, because bronchus is excluded from the list of common sites.

■ (2) Special Instruction: Lymph Node

Malignant neoplasm of lymph nodes not specified as primary should be assumed to be secondary.

I (a) Cancer of cervical lymph nodes C770

Code secondary malignant neoplasm of cervical lymph nodes.

7. Multiple sites

- a. If all sites reported (anywhere on certificate) are on the list of common sites of metastases, code to secondary neoplasm of each site of the morphological type involved, unless lung is mentioned, in which case code to (C349) primary malignant neoplasm of lung.

I (a) Cancer of liver	C787

8. Metastatic neoplasms

The adjective “metastatic” is used in two ways—sometimes meaning a secondary neoplasm from a primary elsewhere and sometimes denoting a primary that has given rise to metastases. Neoplasms qualified as metastatic are **always** malignant, either primary or secondary. In order to avoid confusion, use the following to determine whether to code a metastatic neoplasm as primary or secondary.

- a. Malignant neoplasm described as “from” or “metastatic from” a specified site should be interpreted as primary of that site and all other sites should be coded as secondary unless stated as primary whether in Part I or Part II.

I (a)	Metastatic teratoma from ovary	C80
(b)		C56

Interpret as: I (a) Metastatic teratoma
(b) Primary ovary teratoma

Then, code I(b) to primary malignant neoplasm of ovary since it states metastatic from ovary. Code I(a) to C80, malignant neoplasm, unspecified site.

I (a)	Metastatic cancer from kidney	C80
(b)		C64

Interpret as: I (a) Metastatic cancer

SECTION IV

Classification of Certain ICD Categories

Part A

Neoplasms (C00-D48)

-
- | | | |
|-------|--|-----------|
| I (a) | Metastatic squamous cell carcinoma of head | C449 C798 |
| (b) | Metastatic squamous cell carcinoma of neck | C798 |

Since the reported sites are marked with a # sign in the Index, code the morphological type to malignant neoplasm of skin, C449, and code the reported sites as secondary neoplasms. Enter C449 for the morphological type as first code on I (a) preceding the first secondary site. Enter only the secondary code on line b.

9. Primary site unknown

Consider the following terms as equivalent to “primary site unknown:”

- ? Origin (Questionable origin)
- ? Primary (Questionable primary)
- ? Site (Questionable site)
- ? Source (Questionable source)
- Undetermined origin
- Undetermined primary
- Undetermined site
- Undetermined source
- Unknown origin
- Unknown primary
- Unknown site

- a. When the statement, “primary site unknown,” or its equivalent, appears anywhere on the certificate with a site specific neoplasm or a neoplasm classifiable to C81-C96, code the neoplasm as though the statement did not appear on the certificate.

- | | | |
|-------|----------------------|-----|
| I (a) | Renal cell carcinoma | C64 |
| (b) | Primary site unknown | |

Code renal cell carcinoma (C64) as though the statement “primary site unknown” was not on the certificate.

- | | | |
|-------|------------------------|------|

Code reticulum cell sarcoma (C833) as though the statement “undetermined source” was not on the certificate.

Part A

Neoplasms (C00-D48)

- b. When primary site unknown or its equivalent appears on the certificate with a morphological type of neoplasm classifiable to C40, C41, C43, C44, C45, C46, C47, C49, C70, C71, and C72, add an additional code to identify the morphological type of neoplasm. Code the morphological type of neoplasm to the unspecified site category. This additional code should be entered on the same line with and preceding the code for the first mentioned secondary site.

- | | | | |
|---|----------------------------|------|------|
| I | (a) Generalized metastases | C80 | |
| | (b) Melanoma of back | C439 | C798 |
| | (c) Primary site unknown | | |

Code I(b) melanoma, unspecified site, followed by the code for the secondary site reported.

- c. When “primary site unknown,” or its equivalent, appears on the certificate with neoplasms classified to morphological type C80, (classifiable to C00-C76), code all reported sites as secondary and precede the first neoplasm code with C80.

- | | | | |
|---|----------------------------------|-----|------|
| I | (a) Secondary carcinoma of liver | C80 | C787 |
| | (b) Primary site unknown | | |

| | (b) and abdomen | | | | |
| | (c) Unknown primary | | | | |

Code all sites as secondary; precede the first code with C80.

10. Implication of malignancy

Mention on the certificate that a neoplasm has produced metastases (secondaries) means it must be coded as malignant, even though this neoplasm without mention of metastases would be classified to some other section of Chapter II.

Code neoplasms indexed to D00-D09 (in situ neoplasms), D10-D36 (benign neoplasms), or D37-D48 (neoplasms of uncertain or unknown behavior) to a primary malignant neoplasm category in C00-C76 if reported on the record with the following conditions:

a. Metastases NOS and metastases of a site

I (a) Breast tumor with metastases C509 C80

Code I(a) to primary malignant neoplasm of breast and code metastases NOS. Code breast tumor as malignant neoplasm of breast since it is reported with metastases NOS.

I (a) Brain metastasis C793
(b) Lung tumor C349

Code I(a) secondary neoplasm of brain and I(b) primary malignant neoplasm of lung since the lung tumor is reported with metastases of a site.

b. Any neoplasm indexed to C77-C79 in Volume III

I (a) Lymph node cancer C779
(b) Carcinoma in situ of breast C509

Code the carcinoma in situ of breast as primary malignant neoplasm of breast since it is reported with a neoplasm that is indexed to C779. Malignant neoplasm of lymph node is indexed to secondary neoplasm.

c. A common site of metastases (excluding lung) qualified by the word "metastatic"

I (a) Metastatic liver cancer C787
(b) Small intestine tumor C179

Code I(a) as secondary neoplasm of liver and code primary malignant neoplasm of small intestine on I(b), since the small intestine tumor is reported with a common site of metastases qualified by the word "metastatic."

d. If a, b, or c do not apply, code the neoplasm in D00-D09, D10-D36, D37-D48 as indexed.

11. Sites with prefixes or imprecise definitions

Neoplasms of sites prefixed by “peri,” “para,” “supra,” “infra,” etc. or described as in the “area” or “region” of a site, unless these terms are specifically indexed, should be coded as follows: for morphological types classifiable to one of the categories C40, C41, C43, C44, C45, C46, C47, C49, C70, C71, and C72, code to the appropriate subdivision of that category; otherwise, code to the appropriate subdivision of C76 (other and ill-defined sites).

I (a) Fibrosarcoma in the region of the leg C492

Code I(a) fibrosarcoma in the region of the leg to the appropriate subdivision of the category, malignant neoplasm of connective and soft tissue of lower limb.

I (a) Carcinoma in lung area C761

Since the morphological type of the term “carcinoma” is C80, code I(a), carcinoma in lung area, to the appropriate subdivision of C76 (other and ill-defined sites).

12. Malignant neoplasms described with “either/or”

Malignant neoplasms of more than one site described as “or” and both sites are classified to the same anatomical system, code the residual category for the system. If the sites are in different systems, and are in the same morphological category, code to the residual category for the morphological type.

I (a) Cancer of kidney or bladder C689

Code C689, malignant neoplasm of other and unspecified urinary organs.

I (a) Cancer of gallbladder or kidney C80

Code to C80, malignant neoplasm without specification of site since there is more than one site qualified by the statement “or” and the sites are in different systems.

I (a) Osteosarcoma of lumbar vertebrae C419
(b) or sacrum

Code to malignant neoplasm of bone unspecified (C419). Both sites separated by the “or” are indexed to bone.

13. Mass or lesion with malignant neoplasms

When mass or lesion is reported with malignant neoplasms, code mass or lesion as indexed.

- | | |
|--------------------|-----|
| I (a) Lung mass | R91 |
| (b) Carcinomatosis | C80 |

Code mass as indexed. Do not consider as malignant mass.

- | | |
|---------------------------------|------|
| I (a) Metastatic lung carcinoma | C349 |
| II Lung lesion | J984 |

Code lung lesion as indexed.

B. Rheumatic heart diseases1. Heart diseases considered to be described as rheumatic

- a. When rheumatic fever (I00) or any heart disease that is specified as rheumatic is reported anywhere on the death certificate, consider conditions listed in categories I300-I319, I339, I340-I38, I400-I409, I429, and I514-I519 to be described as rheumatic unless there is indication they were due to a nonrheumatic cause.

I	(a) Myocarditis	I090
	(b) Rheumatic heart disease	I099

Consider “myocarditis” to be described as “rheumatic” since reported with a heart disease specified as rheumatic.

I	(a) Cardiac tamponade	I092
	(b) Rheumatic endocarditis	I091
	(c)	

Consider “cardiac tamponade” to be described as “rheumatic” since reported with a heart disease specified as rheumatic.

- b. When rheumatic fever and a heart disease are jointly reported, enter a separate code for the rheumatic fever only when it is not used to qualify a heart disease as rheumatic. This applies whether or not the heart disease is stated or classified as rheumatic.

I	(a) Heart disease	I099
	(b) Rheumatic fever	

Consider “heart disease” to be described as “rheumatic.” Do not enter a separate code for rheumatic fever since it is used to qualify the heart disease as rheumatic.

I	(a) Rheumatic heart disease	I099
	(b) Rheumatic fever	

Code “rheumatic heart disease” as indexed. Do not enter a separate code for rheumatic fever since the heart disease is qualified as rheumatic.

I	(a) Cardiac arrest	I469
	(b) Rheumatic fever	I00

Cardiac arrest is not one of the conditions considered to be described as rheumatic when reported with rheumatic fever. Code each condition as indexed.

Part B

Rheumatic Heart Diseases

- c. When a condition listed in category I50 is indicated to be due to rheumatic fever and there is no mention of another heart disease that is classifiable as rheumatic, consider the condition in I50 to be described as rheumatic.

I	(a) Heart failure	I099
	(b) Rheumatic fever	

Since there is no other heart disease classified as rheumatic, use the rheumatic fever to qualify the heart disease on I(a) as rheumatic.

I	(a) Heart failure	I509
	(b) Rheumatic heart disease	I099

Since there is a heart disease qualified as rheumatic reported on the record, code heart failure, I509.

2. Distinguishing between active and chronic rheumatic heart disease

Rheumatic heart diseases are classifiable to I010-I019, Rheumatic fever with heart involvement, or to I050-I099, Chronic rheumatic heart diseases, depending upon whether the rheumatic process was active or inactive at the time of death.

- a. When rheumatic fever or any rheumatic heart disease is stated to be active, recurrent, or recrudescing, code all rheumatic heart diseases as active. Conversely, code all rheumatic heart diseases as inactive if rheumatic fever or any rheumatic heart disease is stated to be inactive.

I	(a) Endocarditis	I011
	(b) Active rheumatic fever	

Code I(a), active rheumatic endocarditis since the rheumatic fever is stated as active. Leave I(b) blank.

I	(a) Heart failure	I509
	(b) Inactive rheumatic heart disease	I099
	(c)	

Code I(a) as indexed since another heart classified as rheumatic is reported. Code I(b) as indexed since stated as inactive.

Part B

Rheumatic Heart Diseases

b. When there is no statement of active, recurrent, recrudescing, or inactive, code all heart diseases that are stated to be rheumatic or that are considered to be described as rheumatic as active if any of the following instructions apply:

(1) The interval between onset of rheumatic fever and death was less than one year.

I (a) Endocarditis - 6 months	I011
(b) Rheumatic fever - 9 months	

(2) One or more of these heart diseases (listed in Section IV, Part B, 1, a) is stated to be acute or subacute.

(b) Rheumatic heart disease	I019

(4) At least one of these heart diseases is “carditis,” “endocarditis” (any valve), “heart disease,” “myocarditis,” or “pancarditis” with a stated duration of less than one year.

I (a) Endocarditis - 9 months	I011
(b) Rheumatic heart disease	I019

(5) At least one of these heart diseases is “carditis,” “endocarditis” (any valve), “heart disease,” “myocarditis,” or “pancarditis” without a duration and the age of the decedent was less than 15 years.

Age: 10 years

I (a) Rheumatic heart disease	I019
(b) Rheumatic fever	

Part B

Rheumatic Heart Diseases

- c. In the absence of the previous mentioned indications of an active rheumatic process, consider all heart diseases that are stated to be rheumatic or that are considered to be described as rheumatic as inactive and code to categories I050-I099.

Age: 75 years

- | | | |
|---|-----------------------------|------|
| I | (a) Rheumatic heart disease | I099 |
| | (b) Rheumatic fever | |

Code I(a) as indexed, there is no indication the rheumatic process was active. Leave line I(b) blank.

3. Valvular diseases jointly reported

- a. When diseases of the mitral, aortic, and tricuspid valves, not qualified as rheumatic, are jointly reported, whether on the same line or on separate lines, code the disease of all valves as rheumatic unless there is indication to the contrary.

- | | | | |
|---|--|------|------|
| I | (a) Mitral insufficiency and aortic stenosis | I051 | I060 |
| | (b) | | |

Code both valvular diseases as rheumatic since there is no indication to the contrary.

- | | | | |
|---|------------------------------|------|------|
| I | (a) Aortic insufficiency | I061 | |
| | (b) Mitral endocarditis with | I059 | I051 |

- | | | | | |
|----|----------------------------|------|------|-----|
| I | (a) Mitral valve disease | I059 | I051 | I48 |
| | (b) with insufficiency and | | | |
| | (c) atrial fibrillation | | | |
| II | Aortic stenosis | I060 | | |

Code the diseases of both valves as rheumatic since there is no indication to the contrary.

Part B

Rheumatic Heart Diseases

- b. When mitral insufficiency, incompetence, or regurgitation is jointly reported with mitral stenosis NOS (or synonym), code all these conditions as rheumatic unless there are indications to the contrary.

I (a) Mitral insufficiency with mitral stenosis I051 I050

Code the mitral insufficiency as rheumatic since it is reported with mitral stenosis and there is no indication to the contrary.

4. Valvular diseases not indicated to be rheumatic

In the Classification, certain valvular diseases, i.e., disease of mitral valve (except insufficiency, incompetence, and regurgitation without stenosis) and disease of tricuspid valve are included in the rheumatic categories even though not indicated to be rheumatic. This classification is based on the assumption that the vast majority of such diseases are rheumatic in origin. Do not use these diseases to qualify other heart diseases as rheumatic. Code these diseases as nonrheumatic if reported due to one of the nonrheumatic causes on the following list.

I (a) Pericarditis I319
 (b) Mitral stenosis I050

Although mitral stenosis is classified to a rheumatic category, do not use it to qualify the pericarditis as rheumatic.

Part B

Rheumatic Heart Diseases

- a. When valvular heart disease (I050-I079, I089 and I090) not stated to be rheumatic is reported due to:

Code I(a) to nonrheumatic mitral insufficiency since it is reported “due to” a nonrheumatic condition. Apply this instruction even though rheumatic heart disease is entered as the second entry on I(b).

Part B

Rheumatic Heart Diseases

- b. Consider diseases of the aortic, mitral, and tricuspid valves to be nonrheumatic if they are reported on the same line due to a nonrheumatic cause in the previous list. Similarly, consider diseases of these three valves to be nonrheumatic if any of them are reported due to the other and that one, in turn, is reported due to a nonrheumatic cause in the previous list.

I (a) Mitral disease	I349
(b) Aortic stenosis	I350
(c) Arteriosclerosis	I709

Classify both valvular diseases as nonrheumatic. The mitral disease is reported due to the aortic disease which is, in turn, reported due to a nonrheumatic cause.

I (a) Congestive heart failure	I500
(b) Mitral stenosis	I342
(c) Arteriosclerosis	I709

Code the mitral stenosis as nonrheumatic since the certifier indicated it was due to a nonrheumatic cause.

I (a) Aortic and mitral insufficiency	I351 I340
(b) Subacute bacterial endocarditis	I330

Code the valvular diseases as nonrheumatic since they are reported due to a nonrheumatic cause.

C. Pregnancy, childbirth, and the puerperium (O00-O99)1. General information

Conditions classifiable to categories O00-O99 are limited to deaths of females of childbearing age. Some of the maternal conditions are also the cause of death in newborn infants. Always refer to the age and sex of the decedent before coding a condition to O00-O99.

Obstetric deaths are classified according to time elapsed between the obstetric event and the death of the woman:

- O95 Obstetric death of unspecified cause
- O96 Death from any obstetric cause occurring more than 42 days but less than one year after delivery
- O97 Death from sequela of direct obstetric causes (death occurring one year or more after delivery)

The standard certificate of death contains a separate item regarding pregnancy. Any positive response to one of the following items should be taken into consideration when coding pregnancy related deaths:

- Pregnant at time of death
- Not pregnant, but pregnant within 42 days of death
- Not pregnant, but pregnant 43 days to 1 year before death

Consider the pregnancy to have terminated 42 days or less prior to death unless a specific length of time is written in by the certifier. Take into consideration the length of time elapsed between pregnancy and death if reported as more than 42 days.

Maternal deaths are subdivided into two groups:

Direct obstetric deaths (O00-O97): those resulting from obstetric complications of the pregnant state (pregnancy, labor and puerperium), from interventions, omissions, incorrect treatment, or from a chain of events resulting from any of the above.

Indirect obstetric deaths (O98-O99): those resulting from previous existing disease or disease that developed during pregnancy and which was not due to direct obstetric causes, but which was aggravated by physiologic effects of pregnancy.

When coding pregnancies, code any direct obstetric cause to O00-O97 and any indirect obstetric cause to O98-O99.

B91	Sequela of acute poliomyelitis
B92	Sequela of leprosy
B940-B949	Sequela of other and unspecified infectious and parasitic diseases

E68	Sequela of hyperalimentation
G09	Sequela of inflammatory diseases of central nervous system
I690-I698	Sequela of cerebrovascular disease
O97	Death from sequela of direct obstetric causes
T900-T983*	Sequela of injuries, of poisoning, and of other consequences of external causes
Y850-Y859*	Sequela of transport accidents

NOTE: When conditions in categories A00-B19, B25-B49, B58-B64, B99 are mentioned on the record with HIV (B20-B24, R75), do not consider the infectious or parasitic condition as a sequela.

When there is evidence death resulted from residual effects rather than the active phase of conditions for which the Classification provides a sequela code, code the appropriate sequela category. Code specified residual effects separately. Apply the following instructions to the sequela categories.

Effects of External Cause of Injury and External Causes of Injury and Poisoning External Cause Code Concept

Part A

In ICD-10, the Nature of Injury Chapter (XIX) is part of the main Classification but certain effects of external causes are classified in Chapters I-XVIII. The external cause codes (Chapter XX) are intended for use, where relevant, to identify the external cause of conditions classifiable to Chapters I-XVIII, as well as to Chapter XIX. While not all external causes will have a corresponding code in Chapter XIX, an external cause code is required when a code from Chapter XIX is applicable.

A. External cause code (E-Code) concept

An external cause of injury may be classified to Accidents (V01-X59), Intentional self harm (X60-X84), Assault (X85-Y09), Event of undetermined intent (Y10-Y34), Legal intervention and operations of war (Y35-Y36), Complications of medical and surgical care (Y40-Y84), and Sequela of external causes (Y85-Y89). When unspecified, assume all external cause one-term entities to be accidental unless the External Causes of Injury Index provides otherwise.

The objective in assigning the external cause codes is to combine into the entity being coded any related entries on the record that will permit the assignment of the most specific external cause codes in accordance with the intent of the certifier. After the determination of the most specific external cause code is made, enter this code where it is first encountered on the record. Do not repeat the same external cause code when it is reported on other lines. When more than one external cause is reported, code each external cause code where it is first encountered on the certificate.

The death certificate provides a specific place for information concerning the external cause of injury that is usually entered on the lines below the line labeled "Part II." However, a description of the external cause is reported frequently in Part I and may be repeated in the space provided for this information.

When such statements as: "jumped or fell," "don't know," "accident or suicide," "accident or homicide," "undetermined," or "open verdict" are reported, code the external cause as "undetermined." The "undetermined" categories include self-inflicted injuries, except poisoning, when not specified whether accidental or with intent to harm.

1. Use of Index

ICD-10 provides separate indexing in Volume 3, Section II for the external causes of injury, with frequent references to Volume 1. The External Causes of Injury Index provides a double axis of indexing — descriptions of the circumstances under which the accident or violence occurred and the agent involved in the occurrence. Usually, the “lead terms” in the External Causes of Injury Index describe the circumstances of the injury with a secondary (indented) entry naming the agent involved.

Fall from building W13

Locate the E-code for “fall”:

Fall, falling
- from, off
- - building W13.-

2. Use of Tabular List

After locating the external cause code in the Index, always refer to Volume 1 since certain external cause codes for transport accidents require a fourth character not provided for in the Index. When ICD-10 provides a fourth character subcategory for an external cause code, always code the fourth character.

Fell from boat V929

Locate the E-code for “fall”:

Fall
- from
- - boat, ship, watercraft NEC (with drowning or submersion) V92.-

In Volume 1, the fourth character describes the type of boat. Code the fourth character “9,” unspecified watercraft.

**Effects of External Cause of Injury and
External Causes of Injury and Poisoning
External Cause Code Concept**

Part A

- (5) Enter a code for an entry in a check box for “natural cause” only if this is the only codable entry on the certificate or the only other codable entry is “unknown cause” (R97).

b. As a separate variable

Enter an alpha character manner of death code (N, A, S, H, P, or C) in the appropriate data position for any entry in the manner of death check box. **Use only the information reported in the manner of death box to assign the code.**

Code the manner of death as:

Natural	N
Accident.....	A
Suicide	S
Homicide	H
Pending Investigation	P
Could not be determined	C
Blank.....	Blank

5. Nature of injury and external cause code lists

Since certain entities state or imply cause (E-code) and effect (N-code), ICD-10 provides both N-codes and E-codes for many terms. Determination must be made whether to code nature of injury code only, external cause code only, or both nature of injury and external cause codes for such terms. Use the following lists as **guides** in classifying these terms. When ICD-10 provides a nature of injury code for an entity that does **not** appear on either list, use the nature of injury code only.

The E-code is only coded the first time external information is mentioned. A term requiring a N-code is coded each time it is reported.

Placement of N-Code and E-Code**

Part B

B. Placement of nature of injury and external cause codes

When a nature of injury code and an external cause code are required for an entity, enter the nature of injury code followed by the external cause code on the same line.

<u>Place</u>	I	(a) Gunshot wound of chest	S219	&W34	
9		(b)			
		(c)			
<u>MOD</u>	II				
A		<table border="1"><tr><td>Accident</td></tr></table>	Accident		
Accident					

Since “gunshot wound” requires a nature of injury and an E-code, enter on I(a) the nature of injury code for wound of chest followed by the most specific E-code for gunshot, accidental. Code place of occurrence as 9 (unspecified). Code manner of death as A (accident).

When entries requiring nature of injury codes and external cause codes are reported on the same line in Part I, code **the first nature of injury code** followed by the **most specific external cause code**; then code any remaining conditions for the line in the order indicated by the certifier.

<u>Place</u>	I	(a) Laceration of throat	S118			
9		(b) Dog bite of shoulder,	S410	&W54	T111	S119
		(c) arm and neck				

Code the nature of injury code only for I(a). On I(b), code the nature of injury code for “bite of shoulder” followed by the E-code for dog bite followed by the remaining nature of injury codes for “bite arm and neck.” Code place of occurrence as 9 (unspecified).

<u>Place</u>	I	(a) Fracture skull	S029			
9		(b) Fell from window, crushed	S280	&W13	S381	
		(c) chest and abdomen				

I(a) requires a nature of injury code only. I(b) requires both nature of injury and E-code since the external cause and injuries are reported on this line. Code first nature of injury code followed by the external cause code, followed by the remaining nature of injury codes. Code place of occurrence as 9 (unspecified).

<u>Place</u>	I	(a) Renal failure	N19			
0		(b) Injury kidney, liver and	S370	&W11	S361	S360
		(c) spleen. Fell from ladder at home				

Code I(b) injury kidney followed by external cause code for the fall, followed by the remaining injuries. Code place of occurrence as 0 (home).

SECTION V

**Effects of External Cause of Injury and
External Causes of Injury and Poisoning
Placement of N-Code and E-Code**

Part B

<u>Place</u> 9	I (a) Cerebral laceration & contusion (b) Blow to right temporal area	S062 &X59
-------------------	--	--------------

Code I(a) to the nature of injury code only, and I(b) to the external cause code only. Code place of occurrence as 9 (unspecified).

In Part II, code each entry in the same order as entered on the certificate. For entities requiring both nature of injury and external cause codes, enter the nature of injury code followed by the external cause code. Enter the information recorded in the special spaces that have been provided on the medical certification form for recording information about external causes of injury following any codes that are applicable to Part II.

<u>Place</u> 9	I (a) Crushed chest (b) Broken rib (c)	S280 S223
43	II Fracture hip and arm <div style="border: 1px solid black; padding: 2px; display: inline-block;">Run over by a forklift</div>	S720 T10 &W24

In Part II, code each entry in the order entered on the certificate. Code place of occurrence as 9 (unspecified).

<u>Place</u> 9	I (a) Subdural hematoma II Blunt impact injury to head	S065 S099 &Y00
<u>MOD</u> H	<div style="border: 1px solid black; padding: 2px; display: inline-block;">Homicide</div>	
43	<div style="border: 1px solid black; padding: 2px; display: inline-block;">Struck on head with a blunt object by another person</div>	

Since the entry in Part II requires both nature of injury and external cause codes, enter the nature of injury code followed by the most specific external cause code. Code place of occurrence as 9 (unspecified).

<u>Place</u> 9	I (a) Head wound II	S019 &W34 S062 S019
<u>MOD</u> A	<div style="border: 1px solid black; padding: 2px; display: inline-block;">Accident</div>	
43	<div style="border: 1px solid black; padding: 2px; display: inline-block;">Cerebral laceration, GSW of head</div>	

Code external cause code first in Part II since manner of death box requires an external cause code. Code place of occurrence as 9 (unspecified).

Part C

C. Use of ampersand

Use an ampersand to identify the following:

1. The most specific external cause code causing injuries or poisoning.
2. Certain localized effects of poisonous substances (X45-X49) or aspiration (W78, W79, W80) when classifiable to Chapters I-XVIII.
3. Ampersand the E-code for aspiration (W78-W80) anytime it is reported.

<u>Place</u>	I	(a) Aspiration	T179	&W78
	0	(b) Vomitus		
	II	Fx Hip	Fall at home	S720 &W19

Ampersand both the E-code for aspiration and the E-code for fall at home.

Exceptions to 3:

- a. When reported **due to** nature of injury codes or other external causes.
- b. When a nature of injury code other than T179 is reported as the **first** condition on the lowest used line in Part I.

<u>Place</u>	I	(a) Aspiration of vomitus	T179	W78
	0	(b) Fx hip	S720	
	II	Fall at home		&W19

Do not ampersand the E-code for aspiration since both Exception 3(a) and 3(b) apply.

SECTION V

**Effects of External Cause of Injury and
External Causes of Injury and Poisoning
Use of Ampersand**

Part C

In determining the most specific external cause code, consider all of the information reported on the record. If two or more external causes are reported and the nature of the injuries and/or the order in which the conditions are reported indicates that one of the external causes led to the condition that terminated in death, precede the code for this external cause by an ampersand. If no determination can be made, precede the code for the first mentioned external cause with an ampersand.

<u>Place</u>	I	(a) Aspiration of vomitus	T179	W78
9		(b) Internal chest injury	S279	
		(c) Fall down stairs	&W10	

The order in which the conditions are reported indicates that the fall down stairs led to aspiration; therefore, the ampersand precedes the code for this external cause.

<u>Place</u>	I	(a) Gunshot wound of head	S019	&X95
9		(b) Stab wound of chest	S219	X99
<u>MOD</u>	II			
H		Homicide		

The order in which the external causes are reported does not indicate which event occurred first; therefore, precede the code for the gunshot wound with an ampersand since it is the first external cause reported.

SECTION V

**Effects of External Cause of Injury and
External Causes of Injury and Poisoning
Certifications with Mention of Nature of Injury and
without Mention of External Cause**

Part D

D. Certifications with mention of nature of injury and without mention of external cause

All certifications that have an entry classifiable to Chapter XIX must have an external cause code. When only one type of injury is reported without indication of the external cause and the External Cause Index provides a code for this type of injury, code accordingly. If the External Cause Index does not provide a code for the type of injury, code to Accident, unspecified (X59). When no external cause is reported and the external cause code must be assumed, code the external cause code as the last entry in Part II.

<u>Place</u>	I	(a) Crushed chest	S280
9	II		&X59

Code Crushed (accidentally), X59 as indexed.

<u>Place</u>	I	(a) Fracture of hip and arm	S720	T10
9	II		&X59	

Code Fracture (circumstances unknown or unspecified), X59 as indexed.

<u>Place</u>	I	(a) Penetrating wound of abdomen	S318	S219
9		(b) and chest		
	II		&X59	

Code Wound (accidental) NEC, X59 as indexed.

If different types of injuries are reported without indication of the external cause, use the injury reported in the lowest due to position to assign the appropriate external cause code for this injury. If more than one injury is reported on the lowest line, assign the appropriate external cause code for the first mentioned injury.

<u>Place</u>	I	(a) Brain injury	S069
9		(b) Fracture of skull	S029
	II		&X59

Code Fracture (circumstances unknown or unspecified), X59.

<u>Place</u>	I	(a) Fracture of hip	S720

Part D

<u>Place</u>	I	(a) Cerebral concussion and	S060	S062
9		(b) laceration of brain		
	II		&X59	

Concussion is not indexed in External Cause Index. Code to Accident, unspecified, X59.

These generalizations do not apply if the place of occurrence of the injury was highway, street, road, or alley. Refer to instructions for transport accidents in Section V, Part J.

Implied site of injury

Relate most injuries of an unspecified site to a condition of a specified site, whether or not qualified as generalized, multiple, or stated plural, following general instructions for relating disease conditions.

Exceptions:

Do not relate

- Injury(ies) (generalized) (internal) (multiple)
- Trauma(s) (generalized) (internal) (multiple)
- Wound(s) (generalized) (internal) (multiple)

<u>Place</u>	I	(a) Crushed skull with multiple fractures	S071	S029
9	II		&X59	

Code crushed skull followed by multiple skull fractures relating the injury of unspecified site to the site of the injury that is reported on the same line. Since there is no external cause reported, code Crushed (accidentally) as indexed in Part II.

<u>Place</u>	I	(a) Fractured neck and contusions	S129	S109
9	II		&X59	

Code fractured neck followed by neck contusion relating the injury of unspecified site to the site of the injury that is reported on the same line. Since there is no external cause reported, code Fracture (circumstances unknown or unspecified) as indexed in Part II.

SECTION V

**Effects of External Cause of Injury and

Certifications with Mention of Nature of Injury and
without Mention of External Cause**

Part D

<u>Place</u>	I	(a) Fracture of hip	S720
9		(b) Crushing injury	S770
	II		&X59

Code crushing injury hip since there is only one site reported either on the line above or below the fracture. Since there is no external cause reported, code Crushed (accidentally) as indexed in Part II.

<u>Place</u>	I	(a) Fracture of skull with generalized trauma	S029	T07
9	II		&X59	

Code the generalized trauma as indexed. Do not relate to the site of the injury reported on the same line with it. Since there is no external cause reported, code Fracture (circumstances unknown or unspecified) as indexed in Part II.

<u>Place</u>	I	(a) Skull fracture	S029
9		(b) Wound	T141
	II		&X59

Code I(b) to Wound as indexed. Do not relate to the site of the fracture reported on the upper line. Since there is no external cause reported, code Wound (accidental) NEC, X59 as indexed in Part II.

SECTION V

Effects of External Cause of Injury and External Causes of Injury and Poisoning Conditions Qualified as Traumatic

Part E

E. Conditions qualified as traumatic

1. Some conditions are indexed directly to a nontraumatic category but the Classification also provides a traumatic code. Consider these conditions to be traumatic and code as traumatic:

a. When they are qualified as “traumatic”

b. Or they are reported on the certificate with:

- Injury NOS
- Trauma NOS
- Any specified injury (injuries)
- The **Manner of Death** is Accident, Homicide, Suicide, Pending Investigation or Undetermined.
- An external cause

Exception: Do not apply this instruction if the condition is reported due to a nontraumatic condition or poisoning is reported.

<u>Place</u>	I	(a) Pneumothorax	S270
6		(b) Fracture rib	S223
	II		&X59
		Place of injury- Factory	

Since pneumothorax is reported on the certificate with an injury, code pneumothorax as traumatic.

<u>Place</u>	I	(a) Cerebral hemorrhage	S062
9		(b)	
		(c)	
<u>MOD</u>	II		&X59

Part E

	I	(a) Cardiorespiratory failure	R092
		(b) Intracerebral hemorrhage	I619

<u>MOD</u>	II		
A		Accident	

Since intracerebral hemorrhage is reported due to a disease condition, code as nontraumatic. Do not enter an E-code for Accident reported in the check box since no condition is coded to Chapter XIX.

<u>Place</u>	I	(a) Subarachnoid hemorrhage	S066
9		(b) Fall	&W19
<u>MOD</u>	II		
N		Natural	

Code subarachnoid hemorrhage as traumatic since it is reported on the certificate with an external cause, disregarding Natural in the Manner of Death box.

Exceptions:

- a. Code emphysema, encephalitis, and meningitis to the nature of injury code only when they are stated to be “traumatic” or are reported **due to** or **on the same line with** an injury or external cause.

<u>Place</u>	I	(a) Emphysema	T797
9		(b) Injury chest	S299

<u>Place</u>	I	(a) Internal injury	T148
9		(b) Fall from ladder	&W11

Assumption of Nature of Injury Code**

Part F

F. Assumption of nature of injury code

1. When a condition classifiable to Chapters I-XVIII, excluding J680-J709, is reported due to an external cause not considered to be medical or surgical care, code both a nature of injury code and an external cause code. Assume the nature of injury to be Injury NOS, T149.

<u>Place</u>	I	(a) Respiratory failure	J969

		(c) Fall	T149 &W19

Do not code the hemorrhage on I(a) as traumatic since it is reported due to a nontraumatic condition.

2. When an external cause does not result in a condition classifiable to Chapters I – XVIII, do not assume a nature of injury code.

I	(a) Struck by falling tree	W20
II	Respiratory failure	J969

2. Anthrax is reported with accident, suicide, homicide or undetermined

When anthrax (A220-A229) is reported with accident, suicide or homicide anywhere on the record (including in the check box) or undetermined in the check box only, code the anthrax as indexed and code the external cause code as:

- Accident specified (X58)
- Suicide specified (X83)
- Homicide specified (Y08)
- Undetermined specified (Y33)

Anthrax designated as an act of terrorism is classified to U016.

<u>MOD</u>	I	(a) Inhalation anthrax	A221

Code I(a) as indexed under Anthrax, inhalation. Code an E-code only in Part II for homicide based upon the check box entry. Also enter a H for Homicide in the Manner of Death item.

I	(a) Anthrax	A229
	(b) Homicide	Y08

Code I(a) as indexed. Code an E-code only on I(b); do not assume an injury code.

Part G**G. Multiple injuries (T00-T07)**

When injury (of a site) or specified type of injury (of a site) is:

J. Transportation accidents (V01-V99)

The main axis of classification for land transports (V01-V89) is the victim's mode of transportation. The vehicle, which the injured person is an occupant, is identified in the first two characters since it is seen as the most important for prevention purposes.

Definitions and examples relating to transport accidents are in Volume 1, pages XX-9 - XX-17. Refer to these definitions when any means of transportation (aircraft and spacecraft, watercraft, motor vehicle, railway, other road vehicle) is involved in causing death.

For classification purposes, a motor vehicle not otherwise specified is **NOT** equivalent to a car. Motor vehicle accidents where the type of vehicle is unspecified are classified to V87-V89.

A vehicle not otherwise specified is **NOT** equivalent to a motor vehicle **unless** the accident occurred on the street, highway, road(way), etc. Vehicle accidents where the type of vehicle is unspecified are classified to V87-V89.

Additional information about type of transports are given below:

- (1) Car (automobile) includes blazer, jeep, minivan, sport utility vehicle
- (2) Pick-up truck or van includes ambulance, motor home, or truck
- (3) Heavy transport vehicle includes armored car, dump truck, fire truck, panel truck, semi, tow truck, tractor trailer, 18-wheeler
- (4) A special all-terrain vehicle (ATV) or motor vehicle designed primarily for off-road use includes dirt bike, dune buggy, four-wheeler, go cart, golf cart, race car, snowmobile, three-wheeler,
- (5) Motor vehicle includes passenger vehicle (private)

1. Use of the Index and Tabular List

The Classification provides a Table of land transport accidents in Volume 3, Section II. This table is referenced with any land transport accident if the mode of transport is known. Since the Index does not always provide a complete code, reference to Volume 1, Chapter XX is required.

For V01-V09, the fourth character indicates whether a pedestrian was injured in a nontraffic accident, traffic accident, or unspecified whether traffic or nontraffic accident.

For V10-V79, the fourth character represents the status of the victim, i.e., whether the decedent was driver, passenger, etc. For each means of transportation, there is a different set of fourth characters. Each means of transportation is preceded by its set of fourth characters in Volume 1.

- Car overturned, killing driver V485

In the Index refer to:

Overturning

- transport vehicle NEC (see also Accident, transport) V89.9

Accident

- transport (involving injury to) (see also Table of land transport accidents) V99

In the Table of land transport accidents, select the intersection of:

Under **Victim and mode of transport**, select

Occupant of:

- car (automobile)

Under **In collision with or involved in**: select

Noncollision transport accident

The code is V48.-. From Volume 1 the fourth character is 5, driver injured in traffic accident.

- Auto collision with animal V409

In the Index refer to:

Collision (accidental) NEC (see also Accident, transport) V89.9

Accident

- transport (involving injury to) (see also Table of land transport accidents) V99

In the Table of land transport accidents, select the intersection of:

Under **Victim and mode of transport**, select

Occupant of:

- car (automobile)

Under **In collision with or involved in**: select

Pedestrian or animal

The code is V40.-. From Volume 1, determine the fourth character is 9, unspecified car occupant injured in traffic accident.

2. Classifying accidents as traffic or nontraffic.

If an event is unspecified as to whether it is a traffic or nontraffic accident, it is assumed to be:

- a. A traffic accident when the event is classifiable to categories V02-V04, V10-V82 and V87.
- b. A nontraffic accident when the event is classifiable to categories V83-V86. These vehicles are designed primarily for off-road use.
- c. Consider category V05 to be unspecified whether traffic or nontraffic if no place is indicated or if the place is railroad (tracks).

7. Traffic accident of specified type but victim’s mode of transport unknown (V87)
Nontraffic accident of specified type but victim’s mode of transport unknown (V88)

a. If more than one type of vehicle is mentioned, do not make any assumptions as to which vehicle was occupied by the victim unless the vehicles are the same. Instead, code to the appropriate categories V87-V88. Statements such as these do not indicate status of victim:

- Auto (passenger) vs. truck
- Car vs. truck-driver
- Driver, car vs. truck
- Passenger car vs. truck
- Car vs. truck, driver
- Driver-car vs. truck

- I (a) Intrathoracic injury S279

 (c) Auto vs. motor bike accident &V870

Do not make any assumption as to which vehicle the victim was occupying. Using the Index, code:

- - person NEC (unknown means of transportation) (in) V99
- - - collision (between)
- - - - car (with)
- - - - - two- or three-wheeled motor vehicle (traffic) V87.0

- I (a) Driver - collision of car and bus V873

- I (a) Bus and pick-up truck collision, driver V877
- (b)

Do not make any assumption as to which vehicle the victim was driving. Collision between bus and pick-up is not indexed under Accident, transport, person, collision. Code V877.

8. Water transport accidents (V90-V94)

The fourth character subdivision indicates the type of watercraft. Refer to Volume 1, Chapter XX, Water transport accidents for a list of the fourth character subdivisions.

- I (a) Drowning T751 &V929
- (b) Fell over-board

<u>MOD</u>	II
A	Accident

Code drowning, due to fall overboard. Use fourth character “9,” unspecified watercraft.

9. Air and space transport accidents (V95-V97)

For air and space transport accidents, the victim is only classified as an occupant. Military aircraft is coded to V958, Other aircraft accidents injuring occupant, since a military aircraft is not considered to be either a private aircraft or a commercial aircraft. Where death of military personnel is reported with no specification as to whether the airplane was a commercial or private craft, code V958.

d. Homicide, suicide or undetermined in manner of death

- (1) When “undetermined” is reported in the manner of death box with transport accidents, code the external cause as accidental unless a statement on the certificate **clearly establishes** an investigation has not determined whether accidental, homicidal, or suicidal.

e. Garbage /dump truck accidents

When accidents involving garbage/dump trucks are reported and information indicates the mechanism of the body or truck bed caused the injuries, assign the E-code based on reported information. Usually, the statement of events will be falling on, struck by, or caught in and external codes W20, W22, or W23 will be used.

SECTION V

Effects of External Cause of Injury and External Causes of Injury and Poisoning Guides for Differentiating Between Effects of External Causes Classifiable to Chapters I - XVIII and Chapters XIX

Part O

O. Guides for differentiating between effects of external causes classifiable to Chapters I - XVIII and Chapter XIX

Categories in Chapters I-XVIII and XIX are mutually exclusive. Where provision has been made for coding effects of an external cause to Chapters I-XVIII, do not use a nature of injury code.

The effects of external causes classifiable to Chapters I-XVIII are primarily those associated with drugs, medicaments and biological substances, surgical procedures, and other medical procedures. Refer to Section V, Part R, Complications of medical and surgical care (Y40-Y84).

A limited number of conditions that can result from other external causes, e.g., certain localized effects of fumes, vapors and nonmedicinal chemical substances and respiratory conditions from aspiration of foreign substances are also classified to Chapters I-XVIII. It is intended that Chapters I-XVIII be used to identify the localized effects and the substance be identified by the external cause code in Chapter XX.

To determine if the conditions reported due to external causes, other than drugs, medicaments, and biological substances, surgical procedures, and other medical procedures, are classified to localized effects in Chapters I-XVIII or to the nature of injury in Chapter XIX – look up the stated condition in the Index and scan the listing under this condition for qualifying terms that relate to the reported external cause. For example, to determine whether pneumonia due to aspiration of vomitus should be coded to Chapter X or to Chapter XIX, look up “Pneumonia, aspiration, due to, food (regurgitated), milk, vomit.” This determination cannot be made by looking up “Aspiration.” Where there is provision in the Index for coding a condition due to an external cause to Chapter I-XVIII, take the external cause into account if it modifies the coding.

I (a) Pneumonia	&J690
(b) Aspiration of vomitus	W78

Code Pneumonia, aspiration due to, vomit. Code “aspiration of vomitus” as an external cause code only.

I (a) Pneumonia	&J690
(b) Aspiration	W80
(c) Cancer of lung	C349

Code Pneumonia, aspiration. Code I(b) “aspiration” as an external cause code only.

SECTION V

Effects of External Cause of Injury and External Causes of Injury and Poisoning Threats to Breathing

Part P

P. Threats to breathing

Certain effects of external causes can be classified to more than one nature of injury code depending on the type of external cause. Some of these effects are “anoxia,” “asphyxia,” “aspiration,” “choking,” “compression of neck,” “obstruction of a site,” “strangulation,” “stricture of neck,” and “suffocation.”

The most frequently reported external causes which result in these effects are “aspiration, ingestion, and inhalation of objects and substances,” “drowning,” “fires,” “fumes, gases and vapors,” “hanging,” “mechanical strangulation and suffocation,” and “submersion.”

The following pages contain tables that are used as guides in coding these types of external causes and effects.

In general, if the specific external cause is not in Tables 1-5, it will most likely be in Table 6, which contains the most frequently reported external causes which result in asphyxia, suffocation, etc. If not in any of the tables, code the effect as indexed.

Table	Title

Q. Poisoning

When poisoning (any) is reported, code nature of injury code and external cause code for the substance.

When poisoning by fumes, gas, liquids, or solids is reported, refer to Index under "Poisoning (acute)" to determine the nature of injury code for the substance.

To determine the external cause code when a poisonous substance is ingested, inhaled, injected, or taken, refer to the description of such circumstances (acts) for example, Ingestion, Inhalation, or Took.

When a condition is reported due to poisoning and the Index provides a code for the condition qualified as "toxic," use this code. If the Index does not provide a code for the condition qualified as "toxic," code the condition as indexed.

SECTION V

Effects of External Cause of Injury and External Causes of Injury and Poisoning Complications of Medical and Surgical Care

3. Complications of medical procedures other than surgical (Y84)

Medical procedures are any type of nonsurgical procedures used in the treatment of diseases or injuries. The external cause is classified to Y840-Y849. Although almost any condition reported due to medical procedures other than surgical is regarded as a complication, there are a few diseases that are not considered complications. Do not code the conditions listed under 2. a. (1) (a) and (b) in Section V, Part R as complications of medical procedures. The medical procedure other than surgical is not coded when there is no evidence of a complication. If the reason for the medical procedure is not reported, do not assume a disease condition.

- a. When a condition is reported due to a named medical procedure other than a surgical operation or is modified by a named procedure and can be considered as a complication(s) or adverse effect, code as follows:

STEP 1: Determine if the complication is in the Index qualified by the specific procedure reported.

I (a) Kidney blockage	&N990
(b) Postcystoscopic procedure	Y848

Code I(a) as indexed using **Step 1:**

Block
- kidney
- - postcystoscopic or postprocedural N99.0.

SECTION V

**Effects of External Cause of Injury and
External Causes of Injury and Poisoning

SECTION V

Effects of External Cause of Injury and External Causes of Injury and Poisoning Complications of Medical and Surgical Care

Part R

When the Index does not provide for the term as specified in **STEP 1** and **STEP 2**, code the complication as if procedure NOS was reported instead of the named medical procedure as defined in the following instructions:

NOTE: Before continuing to **STEP 3**, it is important to determine the nature of the named procedure.

The procedure peritoneal lavage is not indexed under Complications (from) (of) in Section II. To code the complication and procedure correctly, the type of procedure reported must be determined. Peritoneal lavage is defined in Dorland's Illustrated Medical Dictionary as "dialysis by installation into the peritoneal cavity.....". Following this definition, peritoneal lavage should be coded as dialysis.

SECTION V

**Effects of External Cause of Injury and
External Causes of Injury and Poisoning
Sequela of Injuries, Poisonings, and
Other Consequences of External Causes**

Part S

S. Sequela of injuries, poisonings, and other consequences of external causes

A sequela is a late effect, an after effect, or a residual of a nature of injury or external cause. The Classification provides categories T900-T983 for sequela of nature of injury codes and Y850-Y899 for sequela of external causes. There are separate instructions for determining if the nature of injury or the external cause should be coded as sequela. **If either the nature of injury or the external cause requires a sequela code, both the nature of injury and the external cause must be coded to a sequela category.**

1. Sequela of injuries, poisoning, and other consequences of external causes (T900-T983)

Use these categories for the classification of injuries and poisonings (conditions in S00-T88) if:

- a. A statement of sequela of the condition in S00-T88 is reported unless the interval between date of injury and date of death is less than 1 year.

I	(a) Sequela of hip fracture	T931
	(b)	
	(c)	
II		&Y86

Code I(a) to T931 since it is stated as a sequela of hip fracture. Code Part II as sequela of accident NEC.

- b. The condition in S00-T88 is stated to be ancient, chronic, healed, history of, late effect of, old, remote, regardless of reported duration, or the interval between onset of this condition and death is indicated to be 1 year or more, whether or not the residual (sequela) effect is specified.

	Date of death 12/1/98	
	I (a) Old head injury	T909
<u>MOD</u>	II	&Y86

Activity Codes

The ICD-10 provides a subclassification for use with external causes and injuries to indicate the activity of the injured person at the time the event occurred. This appendix is designed to document the ICD-10 activity code information but it is not entered in manual coding.

Information may be scattered over different parts of the medical certification, Part I, Part II, 41, 43, etc. However, do not use the information in “Injury at work?” block to code this variable.

If no information concerning the activity of the injured person is reported on the certificate, the item is left blank. “While drinking alcohol” or “while driving” is not considered as a codable activity. When two or more codes appear to be appropriate for the information reported, activity code 8 is assigned.

Codes for Special Purposes (U00 - U99)

Provisional assignment of new codes (U00-U99)

1. Terrorism Classification (*U01 - *U03)

NCHS has developed a set of new codes within the framework of the ICD that will allow the identification of deaths from terrorism reported on death certificates through the National Vital Statistics System. Terrorism-related ICD-10 codes for mortality have been assigned to the “U” category which has been designated by WHO for use by individual countries. The asterisk preceding the alphanumeric code indicates the code was introduced by the United States and is not officially part of the ICD.

To classify a death as terrorist-related, it is necessary for the incident to be designated as such by the Federal Bureau of Investigation (FBI). Neither a medical examiner nor a coroner who would be completing/certifying the death certificate, nor the nosologist coding the death certificate would determine that an incident is an act of terrorism. If an incident or event is confirmed by the FBI as terrorism, it may be so described on the certificate. If the incident is confirmed as terrorism after the death certificate is completed, the certificate can be recoded at a later date.

Not to be used unless notified by NCHS.
