

This map illustrates the return period in years for Category 3 hurricanes across the Eastern United States, from Florida to New England. The data is presented by county, with colors and numbers indicating the return period range. A legend in the bottom right corner defines the color coding for five return period ranges. The return periods generally decrease from the north and west towards the south and east coast, with the highest values (9-22 years) found in the southernmost coastal counties and the lowest values (33-44 years) found in the northernmost coastal counties.

# Return Period In Years For Category 3 Hurricanes

## Category 3 (years)

- 9 - 22
- 24 - 32
- 33 - 44
- 46 - 74
- 79 - 370
