A TECHNOLOGY ASSESSMENT AND FORECAST REPORT

ACTIVITY INDEX PROFILE REPORT

This report has been prepared from the Technology Assessment and Forecast (TAF) data base which contains selected bibliographic data for patents granted since 1963.

For a selected group of patents (e.g., patents issued to Canon Kabushiki Kaisha), the Activity Index Profile Report is useful for identifying technology areas receiving greater and lesser patenting emphasis. Technology areas which have been identified in this report are based on the U.S. Patent Classification System (USPCS) which comprises roughly 400 classes of technology (*). An activity index which is greater than "1.00" for a class indicates a greater than average patenting emphasis in that class. Similarly, an activity index for a class which is less than "1.00" indicates a less than average patenting emphasis in that class (**). Numerically larger activity index values correspond to a greater degree of patenting emphasis while numerically smaller activity index values correspond to a lesser degree of patenting emphasis.

A set of patent activity indices has been calculated for each USPCS class. Only utility patent grants, commonly known as "patents for inventions", are considered in the calculation of activity index values.

For a given time period and selected group of patents, the activity index for a class is determined by dividing a first calculated percentage by a second calculated percentage. The first calculated percentage is equal to the number of patents in the selected group which have received "original" classification that class divided by the TOTAL number of patents which have received "original" classification in that class (*). The second calculated percentage is equal to the total number of utility patents in the selected group divided by the TOTAL number of utility patents (**). See the example provided below.

The tables also include partial class titles. Full USPCS class titles are listed in an attachment included at the end of this report. Listed classes are generally those which existed in the U.S. Patent Classification System as of the end of the most recent calendar year (e.g., December 31, 1995).

Depending on the portions of this report which have been requested, any or all of the following tab sections may be included:

ACTIVITY INDEX TABLES

- Tab 1- two individual years of patent data are displayed; classes are arranged by decreasing index values for the most recently specified year; only classes in which more than 200 (this value may be changed) patents issued in the most recently specified year are displayed
- Tab 2- two individual years of patent data, arranged by class (values for all classes are calculated)
- Tab 3- two individual years of patent data, arranged by index (values for all classes are calculated)
- Tab 4- combined period patent data (e.g., 1981-85, 1986-90, and 1991-95), arranged by class (values for all classes are calculated)
- Tab 5- combined period patent data (e.g., 1981-85, 1986-90, and 1991-95), arranged by index (values for all classes are calculated)

- (*) The U.S. Patent Classification System is used to categorize patents by technology. It consists of large divisions of technology, called classes, which are further divided into smaller divisions of technology, called subclasses. Patents are assigned one or more classifications within this system in accordance to the technology disclosed in the patent. One and only one of the classifications assigned to each patent is designated the "original" classification for that patent. In the "Activity Index Report", only the "original" classification is used in assigning each patent to a USPCS class.
- (**) Please note that full information necessary for calculating the individual activity index values is presented in each table.

Example of Activity Index Calculations (Tab 1): For Canon patents which were granted in 1995, the activity index for class 354, Photography, is :

$$(58/486) / (1087/101419) = 11.135.$$

Referring to the excerpt from the activity index table, as shown below (Tab 1)--

In 1995 and in class 354, there were 486 patents granted (see data column 2) of which 58 were owned by Canon. (see data column 4). In 1995 and in all classes of technology, there were 101,419 patents granted (last row of the data in the same table, data column 2) of which 1,087 were owned by Canon (last row of data in the same table, data column 4).
