SOI BULLETIN

A Quarterly Statistics of Income Report

Volume 14, Number 1

The *Statistics of Income (SOI) Bulletin* is issued quarterly, in July, October, January and April, by Statistics of Income of the Internal Revenue Service. The report provides the earliest published annual financial statistics obtained from the various types of tax and information returns filed, as well as information from periodic or special analytical studies of particular interest to students of the U.S. tax system, tax policymakers and tax administrators. It also includes personal income and tax data by State and historical data for selected types of taxpayers, in addition to data on tax collections and refunds and on other tax-related items.

Information on the availability of supplemental data on the topics included in this issue, special tabulations undertaken on a reimbursable basis, or other SOI subjects, may be obtained by telephoning the SOI Statistical Information Services office (202-874-0410), or by writing to the Acting Director, Statistics of Income CP:S, Internal Revenue Service, P.O. Box 2608, Washington, D.C. 20013-2608.

Robert Wilson and Beth Kilss of Statistics of Income are the technical editors of the *Bulletin*. Wendy Alvey, Clementine Brittain, Nancy Dutton, Bettye Jamerson, Ruth Schwartz, and Lisa Smith made major contributions in the production of this issue. Views expressed in the articles are those of the authors and do not necessarily represent the views of the Treasury Department or the Internal Revenue Service.

Statistics of Income Studies of Individual Income and Taxes, 1913-1992

By Peter Sailer

This article commemorates 80 years of Statistics of Income data based on individual income tax returns. The first data were for 1913, the year when modern U.S. income taxation began, and were published in the *Statistics of Income* report for 1916. When the tax was enacted in 1913, it basically applied only to the wealthy. The 358,000 returns filed represented about 643,000 taxpayers, less than 1 percent of the population. By 1948, the 131.3 million exemptions (other than age and blindness) claimed on tax returns represented 89 percent of the population. This development transformed Statistics of Income from mainly a source of tax information to a major source of economic information, as well. The article also reviews some of the major studies comprising the individual income tax return statistical program -- including the several programs for preliminary or "early" data; the programs covering sole proprietorships, sales of "capital assets," Form W-2 wage and earnings statements, high-income returns, and geographic data -- and the availability of public-use files.

Corporation Income Tax Returns, 1991

By Allison Clark and Patrice Treubert

Corporate pre-tax profits as reported on tax returns for 1991 decreased for the third consecutive year. Profits dropped by 7 percent, to \$344.9 billion, compared to 1990. Net losses of companies without net income continued to grow, from \$181.9 billion to \$190.9 billion, while the net income of companies reporting a profit declined from \$552.5 billion to \$535.8 billion. This decline in "positive" net income was accompanied by a decline in "income subject to tax," the tax base for the regular income tax, from \$366.4 billion to \$350.0 billion. As a result, the regular income tax (before credits) dropped from \$119.4 billion to \$116.3 billion. Even though credits against regular tax declined from \$31.6 billion to \$28.6 billion, the effect of the decline in the regular tax, as well as the decline in the "alternative minimum tax" (from \$8.1 billion to \$5.3 billion), was such that the total corporation income tax after credits, the amount payable to the U.S. Government, dropped for the first time since 1985, from \$96.4 billion to \$92.6 billion.

Foreign Recipients of U.S. Income, 1991

By Denise Bori

U.S.-source income paid to "foreign persons" in 1991 totaled over \$70 billion, a net increase of 27 percent or

\$15 billion over 1989. However, the \$2 billion in U.S. tax withheld on this income was 6 percent less than in 1989. This was because dividends, typically subject to high withholding rates, decreased by 21 percent, while all other income subject to withholding decreased by 9 percent; in addition, income exempt from withholding increased by 44 percent, to almost \$55 billion. Most of the increase in total income was due to payments to persons in tax treaty countries, which are often either subject to reduced withholding rates or are exempt from withholding. Foreign corporations received more income and had more U.S. tax withheld than all other recipient types combined. Recipients in Japan and the United Kingdom accounted for almost 50 percent of the U.S. income paid to foreign persons.

Individual Income Tax Rates and Tax Shares, 1990

By Sarah E. Nutter

Nearly 89.9 million of the 113.7 million individual income tax returns for Tax Year 1990 reported an income tax liability. Tax totaled \$447.1 billion, an average of \$4,976 per return. The average tax rate (based on "adjusted gross income" or AGI) was 13.55 percent, continuing a steady decline from the 13.81 and 13.71 percents for 1988 and 1989, the first 2 years of the two-bracket tax structure introduced under the Tax Reform Act of 1986. However, using a constant definition of income (based on Tax Years 1979-1986), the average tax rates were 13.56 for 1985 and 13.59 for 1986, the last 2 years under prior law; then 13.49 for 1987, 13.71 for 1988, 13.58 for 1989, and 13.41 for 1990. The tax generated for 1990 is also presented by the rates introduced starting with 1988, and the total tax reported at each marginal rate is shown. The "alternative minimum tax" (\$0.8 billion for 1990) is classified by AGI size. In addition, estimates are shown of the shares of total income tax by cumulative percentiles, based on the size of AGI for each year, 1980-1990, using the AGI definitions applicable to these years, as well as a constant income definition for years starting with 1985. For 1990, the top 5 percent of tax returns based on current definitions of AGI accounted for 43.64 percent of the tax; for 1985, the percentage was 39.28. Using the constant income definition, the top 5 percent for 1990 accounted for 43.19 percent of the tax, while the top 5 percent for 1985 accounted for 39.47 percent.

Tax-Based Research and Data on Nonprofit Organizations, 1975-1990

By Daniel F. Skelly

This article is one of several celebrating the 80th year of Statistics of Income data. Tax-exempt organizations represent a significant and growing sector within the U.S. economy. For 1990, the revenues and expenses of tax-

Bulletin Board

exempt organizations each represented 10 percent of the gross domestic product (GDP), up from less than 6 percent for 1975. Between 1975 and 1990, assets of tax-exempt organizations increased in real terms by over 150 percent, while revenues increased by over 227 percent. During the same period GDP grew by 52 percent. (Comparable data for years before 1975 are not available.) For 1990, there were about 1.4 million nonprofit organizations that were tax-exempt under Internal Revenue Code section 501(c)(3). Of these, 350,000 were churches or other religious organizations which, although tax-exempt, were not required to register or file tax returns with the Internal Revenue Service. Of the approximately 1 million organizations registered as tax-exempt, almost 455,000 were "nonprofit charitable organizations." The remainder encompassed a wide variety of voluntary and philanthropic institutions. The SOI exempt organization programs are summarized—private foundations, charitable organizations and trusts, other exempt organizations, and exempt organization "unrelated business income;" the availability of public-use files is also mentioned.

Data Release

Some Observation and Insights

Over the past year, the *Bulletin* has commemorated 80 years of producing Statistics of Income data. We began our celebration with a special article entitled "Turning Administrative Systems into Information Systems," by

Fritz Scheuren and **Tom Petska**, in the Summer 1993 issue. Since then, special feature articles have appeared highlighting 80 years of SOI data for the individual income tax program (Fall 1993 and Spring 1994), international income and taxes (Winter 1993-1994), excise taxes (Fall 1993), and from a study of business trends over time (Spring 1994). This issue draws to a close our special anniversary series of articles, with two current papers which focus on the 80-year commemoration of SOI data — "Statistics of Income Studies of Individual Income and Taxes, 1913-1992," by **Peter Sailer**, and "Tax-Based Research and Data on Nonprofit Organizations, 1975-1990," by **Dan Skelly**, our Acting Director. As a special

historical note, we are also reprinting a paper which presents one of the first uses of our data — "Income Tax Statistics," by **Roland P. Falkner** — which originally appeared in a 1915 issue of the *Journal of the American Statistical Association*. Look for this paper later in the issue, following the Data Releases.

While this concludes our "official" birthday celebration, the nature of our business is such that the 80th birthday of data for some of our programs is yet to come. So as not to leave anyone out, look for special anniversary articles that feature 1992 data in future issues. For example, 1992 SOI data on partnerships and sole proprietorships won't become available until this fall and those for corporations will not be ready until about a year from now.

We hope that this special treatment — especially overviews of some of our programs and time series data for others — has been of interest to you. Furthermore, we hope you have enjoyed the historical tidbits we have been able to dig up. We have certainly had fun reminiscing and look forward to continuing to provide you with more useful and timely data in the future.

Behind the Scenes

Estate and Wealth Report

SOI is pleased to announce the release of *Statistics of Income: Compendium of Federal Estate and Personal Wealth Studies*, edited by **Barry Johnson**. Despite the long history of the estate tax and of SOI data, this is the first compendium on this subject to be produced. It brings together data from estate tax returns, including articles on wealth estimation based on those returns. In some cases time series information is provided; in others, the focus is on recent results.

This is the first of a two-volume set on estate data. The second volume, due out in early 1995, will be titled *The Estate Fact Book, 1916-1950*. It will provide details of the estate tax in its early years, including data recently re-processed from "old" estate tax returns.

The current volume is a 447-page report, divided into four main sections. It contains papers on:

- estate tax returns;
- charitable bequests;
- personal wealth data; and
- methodological issues.

In addition, the *Compendium* contains an extensive bibliography and a copy of the 1993 estate tax return.

Bulletin Board

The report is available for sale at \$26 a copy. Copies can be obtained by contacting the SOI Statistical Information Services Office — call (202) 874-0410 or write to:

Statistics of Income CP:S:P
Internal Revenue Service
P.O. Box 2608
Washington, DC 20013-2608.

1991 Small Area Data

SOI is also pleased to inform you that both population migration data and 5-digit ZIP Code data are now available for release for 1991.

Migration Flow Data

The migration data are prepared by the Census Bureau for IRS, using individual income tax return information. They provide measures of migration from State-to-State and county-to-county, as well as aggregate income tallies by county and 5-digit ZIP Code.

The migration flow data present information based on changes in the tax return mailing address between Filing Years 1991 and 1992. They show moves in and out of each State and each county and include the number of individual income tax returns and the number of personal exemptions (the latter approximates the population). Tables of county income totals are also provided. Similar data have been released previously for selected time periods between 1978 and 1990.

Of course, all of the data are presented as statistical summaries, so as to ensure that no individual taxpayer is either directly or indirectly identified.

These data are available for sale in hard copy or on diskette by contacting the Statistical Information Services office (see above); the State data can also be accessed electronically by calling the SOI electronic bulletin board (see **Your Call**, below).

ZIP Code Data

The ZIP Code data are obtained from an IRS study of individual income tax returns filed for Tax Year 1991. They represent taxpayer-supplied mailing address ZIP Codes, as adjusted during tax return processing. These data present aggregate counts by 5-digit ZIP Code for number of returns, adjusted gross income, number of exemptions, total income tax (including alternative minimum tax), and State. State totals are also available. Any frequency count less than 10 has been deleted, to preserve confidentiality.

These data are in ASCII format and are sold only on diskette (not hard copy). To obtain information by ZIP

code, contact the Statistical Information Services Office (see above).

Your Call

Perhaps you've noticed that over the past year many of the 80th Anniversary articles have featured "time series" data. Researchers and other data users may find it more useful to be able to access these tables directly through the SOI electronic bulletin board system (EBB).

The EBB now contains over 400 data files, including many which are updated for subsequent years. For example, quite often the historical tables at the back of each *Bulletin* present data for multiple years and many of these have been loaded onto the EBB for your use — e.g., selected business data for 1970-1991 are now on file for corporations, nonfarm sole proprietorships, and partnerships. In addition, some data which appear annually in SOI publications are now available electronically, so that users can build their own time series, e.g.,

- Individual SOI income and tax data by State for 1990-1992;
- State-to-State population migration data for 1988-1991;
- individual income data for county for 1990-1991;
- corporation alternative minimum tax data by industry division for 1987-1989;
- tax-exempt organization information for 1988-1989;
- "Taxpayer Usage Study" tables presenting 1993 statistics on individual income tax returns filed by April 15, 1994; and
- estate tax return information for 1989-1991 decedents.

Only public-use files are available for access through the EBB.

In case you wondered, the SOI electronic bulletin board began in June 1992. Recently we serviced our 2,600th user. Calls come in to the EBB from far and wide —

Bulletin Board

about 12-15 calls a day are received, from as far away as Norway, Denmark, and Japan. About one third of the users call back to access the system again. In fact, a State representative from Vermont who uses SOI data from the EBB even got written up in an article in *Government Computer News!*

If you are not already a user of the SOI electronic bulletin board system, all you need is a PC, a modem, and a telephone. Four phone lines are now operating to accommodate your calls. The phone number for most callers using analog telephone lines is (202) 874-9574 — digital systems users should call (202) 874-0408. The EBB can also be accessed through “gateway” systems set up by the Small Business Administration (SBA) and by FedWorld. The SBA’s toll-free number is 1-800-827-5722. For assistance from the systems operator, contact **Jim Willis** at (202) 874-0277.

Upcoming Features

The following are some of the articles tentatively planned for inclusion in upcoming issues of the SOI Bulletin:

- Individual Income Tax Returns, 1993: Early Tax Estimates,
- Nonfarm Sole Proprietorships, 1992,
- Partnerships, 1992,
- Individual Foreign Earned Income and Foreign Tax Credit, 1991,
- Corporate Foreign Tax Credit, 1990: A Geographic Focus, and
- Self-Employed Nonfilers: Post-Audit Results, 1988.

Statistics of Income Studies of Individual Income and Taxes, 1913-1992

by Peter Sailer

This article commemorates 80 years of Statistics of Income (SOI) data based on individual income tax returns. The first data were for 1913, the year when modern U.S. income taxation began, and were included in the report, *Statistics of Income—1916*, published by the Internal Revenue Service (IRS) on June 1, 1918 [1]. Authority to publish SOI data was granted by the Revenue Act of 1916 and has been renewed since then through successive amendments to the tax laws.

Article I, Section 8 of the U.S. Constitution gave Congress the power to “lay and collect taxes, duties, imposts and excises...; but all duties, imposts and excises shall be uniform throughout the United States.” The first income tax was instituted by Congress in 1861 to help defer the cost of the Civil War. It was allowed to expire in 1872. In 1894, Congress reinstated the income tax, but in 1895, the U.S. Supreme Court ruled it was unconstitutional on grounds that it was a direct tax and had not been apportioned equally among the States according to population. It was not until February 25, 1913, with the ratification of the Sixteenth Amendment to the Constitution, that the income tax became constitutional again. The Sixteenth Amendment provided that “The Congress shall have power to lay and collect taxes on incomes ... without apportionment among the several States...”

Given the fact that “apportionment among the several States” was a major issue in the debate over the income tax, it is not surprising that the early reports in the *Statistics of Income* series strongly emphasized State data. Practically all of the items available at the national level were also shown for each State. The principal items shown were net income (including nine separate sources of income), tax, and “exemptions for normal tax.” Classifiers, aside from States, were size of net income, marital status (“conjugal condition”), and (for 1916 only) occupation of taxpayer.

Over the years, the State data waned in importance in the annual *Statistics of Income* reports, until they disappeared entirely in the report for Tax Year 1983. On the other hand, the analyses of sources of income, types of deductions, and rates of taxation became more and more detailed. In addition, a myriad of special studies focused in more closely on the treatment of various types of income. It should be noted that, due to popular demand, the publication of State data classified by size of adjusted gross income was resumed in the Fall 1990 issue of the *Statistics of Income Bulletin*, with the publication of data for Tax Years 1986-1988 [2].

Peter Sailer is Chief of the Individual Special Projects Section.

Population Coverage by Individual Income Tax Returns

One of the reasons for the shifting emphasis of the Statistics of Income program has been the increasingly comprehensive coverage of the population by the income tax. When the income tax was reinstated for 1913, it

When the income tax was reinstated for 1913, it applied only to the top 0.8 percent of the population. By 1948 though, the population coverage had grown to 89 percent.

basically applied only to the very wealthy. The 358,000 returns filed represented approximately 643,000 taxpayers (no dependent exemptions were allowed), or about 0.8 percent of the population [3]. By 1948, the 131.3 million exemptions (other than age and

blindness) claimed represented 89 percent of the population (see Figure A). This development transformed *Statistics of Income* from mainly a source of tax information to a major source of economic information as well.

The increased coverage was related mainly to changes in the filing requirements (see Figure B). For 1913, when per capita personal income stood at \$333, a “net income” (i.e. income after all deductions allowed for tax purposes, except personal exemptions) of \$3,000 was required before a return had to be filed. On the other hand, in 1948, when per capita personal income stood at \$1,426, the filing requirement was met by anybody with “gross income” (i.e., income before deductions for tax purposes and exemptions) of only \$600. While the filing requirements started to relax beginning with Tax Year 1970 (when the filing requirement was raised to \$1,700 for single person, \$2,300 for married couples, even higher in the case of the elderly), various factors kept a large proportion of the population filing tax returns. These factors included income tax withholding by employers (which caused individuals with no tax liability to file for refunds), the “earned income credit” (which caused low-income earners with children to file returns in order to obtain this refundable credit), and the self-employment tax (which required individuals with \$400 or more of net income from self-employment to file for social security tax purposes).

One caveat should be noted when comparing exemptions other than age and blindness to the population as a whole: prior to 1987, some individuals are counted twice in the exemptions data. The relaxed filing requirements beginning in 1970 did not apply to children who could be claimed as exemptions on their parents’ returns and who also received unearned income in their own names. These children were frequently required to file their own returns,

Statistics of Income Studies of Individual Income and Taxes, 1913-1992

Figure A

U.S. Population, Number of Exemptions, and Number of Returns, Tax Years 1913 to 1992

NOTE: Number of returns and exemptions are not comparable for all years. See footnote 3 at the end of this article for additional information.

on which they could claim their own exemptions. Beginning with Tax Year 1987, this double counting of exemptions was abolished by the Tax Reform Act of 1986, which prohibited dependents filing their own returns from claiming exemptions for themselves. Moreover, social security numbers had to be reported for all but the very youngest children claimed as exemptions. These two changes resulted in a decrease in exemptions (other than age or blindness) of 10.5 million between 1986 and 1987. At least 8 million of this decrease can be attributed to the elimination of the double counting [4].

Additional Studies on the Individual Income Tax

When the SOI program began, only one (annual) report was planned. It contained separate tables on individuals (which included fiduciaries, such as estates) and on corporations. Corporations were split out into a separate report beginning with Tax Year 1934. Over the years, SOI and its predecessor organizations have responded to customers' demands for additional products in the individual income tax area by issuing several series of special studies (see Figure C). Beginning in 1981, most of these special studies have been released as part of the *Statistics of Income Bulletin*.

Preliminary Reports

The first series of special studies, beginning with Tax Year 1928, was the "Preliminary Report," containing a limited number of data items, based on a sample of returns processed by late September. In producing the data, weights were adjusted to make up for returns the Service still expected to receive by the end of December, based on the previous year's October through December filings. While the major purpose of this report was to assist the Department of the Treasury in planning the Federal budget, the data have also been made available to the public—originally as a special report, more recently as part of an article in the *SOI Bulletin*.

Sales of Capital Assets Studies (SOCA)

Gains from the sales of property, generally referred to as "sales of capital assets," have been taxable since 1913. However, from 1913-1916, the only mention made of such gains in the tax return package was the instruction that business income was to include "dealings in property" along with income from "business, trade, and commerce." For 1917, a separate schedule (Schedule C) was created to report year of acquisition, cost, sales price, and nature of property. For 1921, the notion of special tax treatment for

N/A—Not applicable.

¹U.S. Department of Commerce, Bureau of Economic Analysis (BEA). This column is supplied solely to lend perspective to the filing requirements data. The definition of income by BEA (i.e., personal income) differs slightly from that used by IRS to determine filing requirements.

²The filing requirement shown for 1913 to 1920 was based on net income (gross income less deductions, before subtracting personal exemptions).

³The filing requirement shown for 1921 to 1939 was based on net income; an additional filing requirement of \$5,000 of "gross income," regardless of marital status, applied as well.

⁴A tax return had to be filed for 1943 if the taxpayer had a tax liability for 1942, regardless of size of income for 1943.

⁵Filing requirement and additional amount for age 65 or over applied separately to each spouse.

⁶If net income exceeded \$5,000, the value of the secondary taxpayer's exemption was reduced to \$1,000.

²Originally published as a separate report.

³Originally published as part of Statistics of Income--Individual Income Tax Returns.

⁴Issued as a separate report for 1974-1978; as part of Statistics of Income--Individual Income Tax Returns for 1979-1988.

⁵State data by size of income were included in Statistics of Income--Individual Income Tax Returns for 1916-1981.

long-term gains was introduced: an optional Schedule D could be used to report gains from property held for more than 2 years, and these amounts were subject to a special 12.5 percent tax, not the normal tax and surtax. From then on until 1988, some sort of special treatment was available for capital gains, either in the form of a partial exclusion or in a cap on the maximum applicable tax rate. For 1991, after a 3-year hiatus, the rate cap was reintroduced.

The purpose of the special sales of capital assets (SOCA) studies, produced for the first time for 1936, is to tabulate data on sales price, cost, expense of sale, gross gain or loss, and holding periods for various categories of assets traded [5]. Beginning with Tax Year 1985, the SOI Division has been collecting data annually for a "panel" of taxpayers (i.e., the same taxpayers for successive years). Release of data from this panel study, which will show how taxpayers reacted to a number of changes in the tax law governing sales of capital assets, should begin sometime in 1995.

Sole Proprietorship Data

It is difficult to pinpoint the exact year the sole proprietorships program began. As early as 1917, the second SOI report contained a small table classifying "business operations netting \$2,000 and over" by ten broad industrial divisions, and showing number of returns,

gross sales, business expenses, and net income for each. Sole proprietorship tables were provided each year through 1939, and sporadically between 1940 and 1956. More detailed data on sole proprietorships became available when they were featured in a separate report for Tax Year 1957, entitled *Statistics of Income--U.S. Business Tax Returns* [6]. The original report showed, in separate but similar tables, data for sole proprietorships, partnerships, and corporations. Data on sole proprietorships classified by industry, showing gross and net income and amounts and types of business deductions, are currently published in the *Statistics of Income Bulletin*.

Public Use Files

In the early 1960's, as a result of the increasing power and availability of computers, the research community made an urgent appeal to what was then called the "Statistics Division" to make a representative sample of income tax returns available for the purpose of "modelling" proposed tax law changes, i.e., applying the proposals to the earlier years' return records and determining the characteristics of the individuals who would be affected, the revenue effect, and other information. While IRS must, by law, keep information about individual taxpayers confidential, a determination was made that it would be possible to limit the data items released in such a way that the user

Statistics of Income Studies of Individual Income and Taxes, 1913-1992

would not be able to link the return to the taxpayer who had filed it, and the first public use file was released for Tax Year 1960—a subsample of the returns used to produce the regular SOI report for that year. Beginning in the early 1980's, with the increasing availability of computerized data from various sources, a determination was made to further disguise some of the data items by "blurring" them (averaging them over a number of tax returns) [7]. The public use file is made available annually.

The Taxpayer Usage Study (TPUS)

In preparation for the 1970 filing season (returns for 1969), a determination was made within the Internal Revenue Service that some statistical feedback was needed as returns were being filed, rather than at the end of the filing season. Thus was born the Taxpayer Usage Study (TPUS), which sampled returns in the service-center mail rooms, prior to any other IRS processing. The sample size for this study is relatively small (usually around 10,000 returns). Data are released weekly during the filing season, beginning in early February, and include information on the reporting of new items and the filing of new forms or schedules. Standard items included every year are form type, method of preparation (by hand, typewriter, or computer); and use of paid preparers. The two-page TPUS reports are available free of charge during the filing season from SOI's Statistical Information Services (SIS) desk.

W-2 Studies

Before Tax Year 1969, the sole source of individual income statistics published in SOI was the tax return—Form 1040 and, when applicable, shortened versions thereof, such as 1040A and 1040EZ. For 1969, and in periodic years thereafter, a new source was added: Form W-2, the wage and tax withholding statement issued by employers to employees. The major advantage of the W-2 was that it separated the salaries and wages of the two taxpayers filing a joint return. W-2 data for 1969 and 1974 were included in the regular *Statistics of Income* reports. Thereafter, they were presented in articles in the *SOI Bulletin*. Future plans include use of Forms 1099 to separate other sources of income as well. Forms 1099 are used by payers of non-wage income, including interest, pensions, dividends, social security benefits, and many others, to report these amounts to taxpayers and to the IRS.

High-Income Returns, Taxable and Nontaxable

The Tax Reform Act of 1976 mandated the creation of an annual report which would further analyze the taxation of high-income taxpayers (generally defined as those with

incomes of \$200,000 or more). For purposes of this report, "income" was to be redefined, to the extent possible, to include amounts which were excluded from "adjusted gross income," the tax return income concept used in most SOI tables. On the other hand, "investment interest" (i.e., interest on loans taken for the purpose of producing investment income) was to be deducted from the redefined income concept. (On the tax return, this is an itemized deduction which is used to reduce taxable income, but not adjusted gross income.) *High-Income Returns*, which began as a separate report issued by the Department of the Treasury for Tax Years 1974 through 1978, was then incorporated into the regular *Individual Income Tax Returns* report for 1979 through 1988, and is now presented in the *SOI Bulletin*. Beginning with the report for 1984, the concept of "taxability" was further modified to show, in separate tables, taxpayers subject to U.S. taxation and taxpayers subject to world-wide taxation. In each of these reports, part of the analysis is devoted to showing the major reasons high-income returns become nontaxable.

Geographic Data from the Individual Master File

Most SOI statistical reports are based on data from samples of tax returns that have been subjected to a good deal of testing and perfecting, which are then weighted to represent the population as a whole. However, these samples are generally too small to yield reliable data at the sub-national level. Therefore, SOI frequently uses the whole Individual Master File (IMF)—the IRS's administrative file of all individual taxpayers—to produce geographic data (albeit in less detail than the data available at the national level). The first effort of this kind was done for Tax Year 1966, the year the IMF was first established on a nationwide basis, and showed numbers of returns and amounts of income and tax by three-digit and five-digit ZIP Code. ZIP Code data at the three-digit level were subsequently repeated for 1969, 1979, and 1982. At the five-digit level, ZIP Code data were again presented for 1969 and 1991. Beginning with Tax Year 1986, the IMF has also been used to produce data by State and size of adjusted gross income, which are shown in each *SOI Bulletin*.

In addition, the Internal Revenue Service gives the Bureau of the Census an extract of selected items from the IMF each year to produce reports it uses as input to its demographic estimates program; these reports are, in turn, made available to the public by the SIS desk. One shows number of returns and amounts of income reported by taxpayers in each county in the United States. For the other two reports, Census matches together returns filed by individual taxpayers in 2 successive years, and, based on

Statistics of Income Studies of Individual Income and Taxes, 1913-1992

changes in taxpayer address, tabulates migration flows between States and between counties for pairs of years. Geographic data are available both in hard copy and on magnetic medium.

Early Tax Estimates (ETE)

For Tax Years 1980 through 1988, and again for Tax Year 1991, the Taxpayer Usage Study (TPUS) sample, described earlier in this article, was used at the end of the filing season to produce some limited summary data on timely-filed returns, which were published in the *SOI Bulletin*. While these data lacked information on a significant proportion of filers with complicated returns and high incomes, who tend to file late, they did serve as early indicators of changes in incomes and taxes when compared to similar data from the previous year. The role of making these early estimates has now been shifted from TPUS to ETE, a subsample of the sample which is eventually used to produce the regular SOI report. To IRS, ETE has three advantages over TPUS: first, statistical editing of income and tax amounts for this sample represents a cost saving, since they would eventually be edited for SOI in any case; second, since the sample is selected on the last four digits of the primary taxpayer's social security number (SSN), a large portion of the sample is a "panel" (i.e., the same taxpayers for successive years), thus reducing year-to-year variability; and third, because the ETE sample is twice as large as the TPUS sample, the sampling variability for all estimates is lower.

Future Plans

SOI entered the computer age in the mid-1950's, when it started compiling some of its files and running some of its tables on one of the Census Bureau's two "UNIVAC I" computers. With the release of the 1960 Individual Public Use file began the era of the creation of data for the public in magnetic medium. It is anticipated that many future changes in the SOI program will be driven by changes in computer technology.

One of our most recent innovations, the **SOI Electronic Bulletin Board**, was established in 1992. Through the bulletin board, users worldwide can access select SOI data 24 hours a day. Currently, the SOI bulletin board contains 275 files.

Use of the SOI bulletin board will further facilitate customers' access to SOI data without the necessity of having to contact the SIS staff or other IRS technicians. Another advantage of the board is the timeliness of the data and the fact that it is accessible constantly, which should prove valuable to customers who work outside of

official Government hours.

The bulletin board recently joined FedWorld Gateway System, a system that allows individuals to log on (by telephone or Internet Wide Area Network) to one electronic bulletin board, then without dialing any other number, log on to over 120 other Government bulletin boards. The SOI bulletin board now has a 486/33 computer with 600 megabytes of storage space and four telephone lines. Future plans include FAX-back capabilities and a CD-ROM.

Notes and References

- [1] *Statistics of Income—1916*, 1918. Beginning with Tax Year 1934, data on corporations (from Forms 1120) were published in a separate volume, and the title of the publication with data from Forms 1040 became *Statistics of Income, Individual Income Tax Returns*.
- [2] Windheim, Barry, "Individual Income Tax Return Data by State, 1986-1988," *Statistics of Income Bulletin*, Fall 1990, Volume 10, Number 2.
- [3] The "number of returns" figures are not completely comparable over the entire period covered. From 1913 to 1927, deficit returns were excluded from processing (and thus from the statistics); however, returns of estates and trusts with taxable incomes were included with individual income tax returns for tabulation purposes. From 1928 on, individual returns with deficits were included in the statistics. From 1938 on, estate and trust returns were excluded.
- [4] While there is no fool-proof method of distributing the decrease in exemptions between the tax law change and the change in the reporting requirement, the following approximation should yield reasonably accurate results. For 1987, there were 9.2 million individuals who filed without claiming a taxpayer exemption, indicating that they were being claimed as dependent exemptions on another taxpayer's return. Of these, 8 million had characteristics that would have caused them to file for 1986 as well (based either on presence of withholding or amount and type of income). It was assumed that all 8 million were dependents in 1986 and did, in fact, file for that year, thereby claiming double exemptions.

Corporation Income Tax Returns, 1991

by Allison Clark and Patrice Treubert

For Tax Year 1991, corporate pre-tax profits showed a decrease for the third consecutive year. Profits dropped by 7 percent to \$344.9 billion, as the increase in income failed to keep pace with the increase in deductions. Net losses of companies without net income continued to grow, increasing from \$181.9 billion to \$190.9 billion. Coinciding with this upsurge, the net income of companies reporting a profit again declined slightly, from \$552.5 billion to \$535.8 billion.

The decline in positive net income was accompanied by a decline in "income subject to tax" (the tax base for regular tax purposes) from \$366.4 billion to \$350.0 billion. This decline resulted in a drop in the regular income tax (before credits) from \$119.4 billion to \$116.3 billion. Due to the economic recession and an end to the growth of the "alternative minimum tax," the total income tax after credits (the amount actually payable to the U.S. Government) decreased for the first time in the past four years from \$96.4 billion to \$92.6 billion.

Number of Returns

For Tax Year 1991, the number of active corporation income tax returns increased 2.3 percent to over 3.8 million, although the rate of increase was slightly less than the 2.5 percent recorded for Tax Year 1990 [1]. Returns with net income grew by 1.7 percent, to 1.9 million. This increase was higher than that for 1990 and was the highest since 1987 (Figure A). Returns without net income grew by 3 percent, to 1.9 million, although the ratio of returns without net income to all returns remained the same as 1990, at 49 percent.

The following industrial divisions: agriculture, forestry and fishing; transportation and public utilities; and services, all showed an increase in returns of about 3 percent, while mining and manufacturing both showed decreases of about 1 percent (Figure B). For returns with net income, transportation and public utilities showed the largest increase, 8.4 percent.

By type of return, the largest increase in number was again for S Corporations (generally small corporations that elect to be taxed through their shareholders). The number of Forms 1120S increased in 1991 by nearly 8 percent to 1.7 million, a little less than the 11 percent increase for 1990 (Figure C). This increase continued a trend that began as a result of the Tax Reform Act of 1986 (TRA) which made the individual income tax rates (at which the profits of these corporations were taxed) more

favorable than the corporate tax rates. For 1991, Form 1120S returns comprised 45 percent of all returns filed by corporations.

Income Statement

Net Income

Reflecting the economic downturn, pre-tax profits reported on corporation income tax returns for Tax Year 1991 continued to decline. Compared to 1990, pre-tax profits, as computed under the Internal Revenue Code, decreased 7.0 percent to \$344.9 billion [2]. By asset size, almost 84 percent of all corporate profits for 1991 was attributable to the 5,933 returns with total assets of \$250 million or more. As in prior years, this percentage continued to rise, reflecting the growing number of returns of this size and the increasing proportion of corporate profits for which they accounted (Figure D).

¹Includes returns not allocable by industrial division.

NOTE: Excludes Foreign Sales Corporations and Interest-Charge Domestic International Sales Corporations.

Agriculture, forestry, and fishing saw the largest decrease in profits at almost 46 percent to \$625.7 million. Agricultural services (including commercial fishing, crop harvesting and forestry services) declined by 75 percent to \$73 million, despite an increase in the number of returns. The profits reported for transportation and public utilities and for finance, insurance, and real estate, however, each increased. These increases were attributable to the telephone, telegraph, and other communication services and electric services industrial groups, and to mutual (property and casualty) insurance companies and real estate operators and lessors of buildings.

Net income fell in most industrial divisions. The largest drops occurred in the manufacturing and mining divisions. In mining, the oil and gas extraction industrial group accounted for the bulk of the \$1.3 billion decrease. Similarly, petroleum refining reported the largest decline among manufacturers. Most of this decline was attributable to the economic slowdown in growth and the passage of the 1990 amendments to the Clean Air Act, which significantly impacted this sector with stricter regulations [3]. Finance, insurance, and real estate showed gains, however, especially for mutual life insurance companies. This industry group showed a sharp increase in net income, from \$1.9 billion to \$8.4 billion.

The deficit reported on returns without net income grew by almost 5 percent, from \$181.9 billion for 1990 to \$191.0 billion (Figure E). The largest percentage increase in deficit occurred in manufacturing, which was large enough to offset the gains reported for most other industrial divisions. The deficit reported for petroleum and coal industry groups nearly tripled, contrary to 1990 when the deficit reported by these companies actually declined in comparison to 1989. In addition, the deficit reported for manufacturers of fabricated metal products, \$3.5 billion, was the largest recorded for any industrial group in manufacturing.

Profits increased 115 percent for foreign companies with income "effectively connected" with a U.S. business. The increase was concentrated in finance, insurance, and real estate, as banks (except bank holding companies) increased their profits to \$1.4 billion, although the number of foreign banks was about the same as 1990. Overall, foreign banks accounted for 48.3 percent of total profits for the entire industry.

Receipts

Total receipts (Tables 1 and 2), which are the total of business receipts and investment income, increased only slightly for 1991 [4]. However, the size of the increase (0.24 percent) dropped for the third year in a row [5].

¹Includes net income or deficit not allocable by industrial division.

²Less than - 0.05 percent.

NOTES: Excludes net income or deficit of Foreign Sales Corporations and Interest-Charge Domestic International Sales Corporations.

Detail may not add to totals because of rounding.

Business receipts (in general, gross receipts from sales and operations), the principal component of total receipts, increased by only 0.05 percent to \$9,965.6 billion. Total receipts for the mining division decreased 7.3 percent, the largest percentage decrease compared to 1990, to \$103.3 billion, while receipts for the services division at \$809.7 billion showed the largest percentage increase, 3.9 percent. The manufacturing division, which accounts for a major portion of the dollar amount of total receipts, continued to do so for 1991, but the \$3,658.5 billion reported by manufacturers represented a slight decline from the \$3,688.7 billion recorded for 1990. This was the first such decline since 1986. In contrast to manufacturers, the receipts of wholesalers and retailers grew for

1991, from \$3,184.9 billion to \$3,380.6 billion.

After increasing for 1990, taxable interest showed a 6.2 percent drop to \$883.3 billion (compared to \$942.2 billion for 1990), mostly reflecting the recession and the decline in interest rates. As with prior years, most of the taxable interest was reported by corporations classified under finance, insurance, and real estate, particularly commercial banks and bank holding companies, which, combined, dropped from \$402.6 billion to \$364.3 billion. Tax-exempt interest (on State and local Government obligations), on the other hand, increased by 3.3 percent to \$36.3 billion. This was a reversal of 1990, when taxable interest received increased and tax-exempt interest decreased. It was dividends received from foreign corporations, how-

Corporation Income Tax Returns, 1991

ever, that showed the largest percentage decline, 13.5 percent. In contrast, dividends from domestic corporations (\$13.1 billion) declined only slightly from the \$13.4 billion reported for 1990.

In marked contrast to 1990, when net short-term capital gains (reduced by net long-term capital losses) decreased by 62 percent, net short-term gains for 1991 more than tripled, from \$4.1 billion to \$13.7 billion, reflecting the wide year-to-year fluctuations characterizing these short-term transactions. The majority of this increase was due to life insurance companies and regulated investment companies. In contrast, net long-term capital gains (reduced by net short-term capital losses) showed the largest dollar decline of all the sources of receipts for 1991, from \$50.9 billion to \$41.1 billion. This was a continuation of the trend that began with 1986, when the beneficial tax treatment of long-term capital gains was rescinded by TRA [6].

Deductions

Total deductions increased only slightly for 1991. However, this increase was 0.26 percent larger than the rate of increase for total receipts and was enough to cause overall net income, generally the difference between total receipts and total deductions, to drop.

Cost of sales and operations was again the largest deduction item at \$6.6 trillion, although its growth was only 0.7 percent. This small increase was related to the small increase reported for business receipts. Similar to 1990, the interest paid deduction continued to decline, falling 11.2 percent to \$735.7 billion. The largest decline was again in the finance division, where the deduction included interest paid on deposits of withdrawable shares as well on bonds, notes, loans, and mortgages. Bank holding companies again accounted for a major part of the decline, of \$31.1 billion, due to lower interest rates and the cautious credit stance of both lenders and borrowers in 1991 [7]. The interest reported by bank holding companies was \$191.0 billion for 1991, compared to \$222.1 billion for 1990.

The bad debt deduction once more increased the most in percentage terms at 20.5 percent, the same as 1990. The largest dollar increases were in finance, insurance, and real estate. Bank holding companies increased their bad debt deductions by \$9.8 billion to \$34.3 billion, an increase that paralleled that recorded for 1990. However, the greatest percentage increase was in the agriculture, forestry and fishing division, which led to the decline in profits reported for the division.

Following the first drop in more than 50 years, depreciation deductions rose slightly for 1991, from \$332.8

billion to \$333.9 billion, mirroring a rise in the net depreciable assets shown on their balance sheets. From 1980 through 1985, depreciation deductions had risen at an average annual rate of 14.1 percent. Then, between 1985 and 1989, the average annual rate of increase dropped to 2.4 percent. The lower depreciation deductions, notwithstanding recent increases reported for net depreciable assets, may be related to the changes brought about by TRA. TRA instituted a Modified Accelerated Cost Recovery System (MACRS) that lengthened the periods over which assets could be depreciated for tax purposes and changed the depreciation methods for business property placed in service after 1986. The deduction for 5-year property acquired in 1991 was the largest current year depreciation item, although depreciation of property acquired in prior years continued to account for most of the deduction [8].

Balance Sheet

Assets

For 1991, year-end net growth in the book value of total assets reported on corporation income tax returns was up slightly from 1990. The 4.6 percent increase, from \$18.2 trillion to \$19.0 trillion, represents a small increase over the 1990 growth rate of 3.1 percent, the lowest in over a decade. The increases in total assets for 1989 and 1988, for comparison purposes, were 7.0 and 8.1 percents, respectively.

The largest increase in total assets occurred in finance, insurance, and real estate, which accounted for almost two-thirds of the difference between 1991 and 1990. The finance division alone accounted for 56.7 percent of the total assets reported by all corporations for 1991. Corporations classified in finance, insurance, and real estate reported \$10.8 trillion in total assets, compared with \$10.2 trillion for 1990. Within finance, insurance, and real estate, "holding and other investment companies (except bank holding companies)" accounted for the largest portion of the increase in total assets (23.8 percent) over 1990, with assets totaling \$1.8 trillion at year end. Within this group, the total assets of regulated investment companies increased by 24.0 percent to \$1.5 trillion, which seems to reflect the continued popularity of mutual funds among small investors. Insurance companies also contributed to the increase in the finance division, with assets up by 11.3 percent to \$2.4 trillion.

The largest asset accounts on the tax return balance sheet were for "other investments" (\$4.7 trillion), notes and accounts receivable net of the allowance for bad debts (\$4.1 trillion), and net depreciable assets (\$2.5 trillion)(Figure F). For 1991, "other investments" were up

Corporation Income Tax Returns, 1991

Figure F

Total Assets by Type of Account, Tax Year 1991

NOTES: Asset accounts are listed in the order in which they appear on the corporation income tax return balance sheet, starting with "Cash."

by \$0.6 trillion, with "holding and other investment companies (except bank holding companies)," especially regulated investment companies, accounting for a large part of the increase. This gain was most likely due to the increased valuation of securities from a strong market, as well as a growth in the number of both investors and funds [9]. "Other investments" surpassed net notes and accounts receivable as the largest asset account for the first time in over a decade, as receivables declined by \$11.2 billion. The decline in receivables was particularly evident among manufacturers, especially manufacturers of motor vehicles and equipment. Total assets for motor vehicle manufacturers declined in 1991, perhaps reflecting intensified competition and declining sales, receipts, and profitability [10].

Intangible assets decreased for the first time in over a decade by 0.3 percent to \$489.8 billion for 1991. This decline followed a decreased rate of growth in these assets that began with 1989 (Figure G). These assets, which include the acquisition costs of goodwill, trademarks, copyrights and like assets, tend to increase during periods when there is a high level of mergers and acquisitions. The lower level for 1991 may signify a decline in corporate merger activity [11].

Liabilities

Due in part to a change in the statistical treatment of liabilities whereby accounts payable became the largest account for some banking and savings and loan institutions instead of "other current liabilities," accounts

Corporation Income Tax Returns, 1991

Figure G

Gross Intangible Assets, Tax Years 1983-1991

Billions of Dollars

NOTE: Excludes Foreign Sales Corporations and Interest-Charge Domestic International Sales Corporations.

payable showed the largest relative increase of all the liability accounts [12]. The 53.6 percent gain brought the total for accounts payable to \$1.7 trillion. The largest portion of the gain was reported by bank holding companies whose accounts payable increased in the aggregate by \$371.6 billion to \$443.6 billion. Insurance companies accounted for the large increase in "other liabilities." In contrast, "other liabilities" as a whole increased by 11.9 percent.

"Other current liabilities," which includes most of the deposits and withdrawable shares of banking and savings institutions, continued to be the largest account on the liabilities side of the balance sheet (Figure H). This account decreased slightly to \$4.9 trillion, 6.6 percent less than 1990, due in part to the change in statistical treatment of liabilities. Short-term debt, which includes accounts payable and "other current liabilities," along with short-term mortgages, notes, and bonds payable, decreased slightly as well, by 0.7 percent, to \$8.0 trillion. Long-term debt, which includes "other liabilities", along with bonds, notes and mortgages payable in 1 year or more and loans

from stockholders, increased \$358.7 billion to \$5.7 trillion. By comparison, long-term debt increased only \$146.6 billion for 1990.

Along with the changes in intangible assets, another possible indicator of the diminished merger activity is the slowing of the growth rate for cost of treasury stock. Cost of treasury stock is the financial account where the purchase of a corporation's own stock is recorded. The amount reported for all corporations was \$1.2 trillion, up by 8.6 percent from 1990. However, during the 1980's, the growth rate of cost of treasury stock averaged about 35 percent (tapering off in the later part of the decade). Contributing to this high growth rate, corporations in the 80's likely felt the threat of hostile takeovers and increased control of their equity by repurchasing their stock [13].

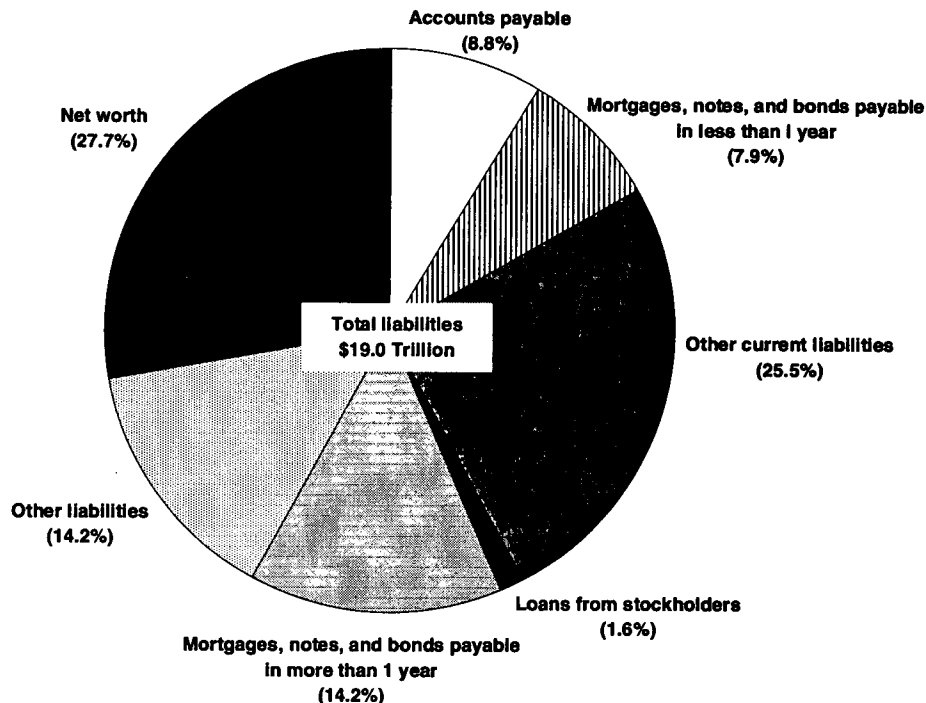

Income Tax and Tax Credits

Positive net income amounted to \$535.8 billion for 1991. Reflecting the slight decline in positive net income from 1990 to 1991, "income subject to tax" (the term used to describe the corporate regular tax base for the statistics)

Corporation Income Tax Returns, 1991

Figure H

Total Liabilities by Type of Account, Tax Year 1991

NOTES: Liability accounts and net worth are listed in the order in which they appear on the corporation income tax return balance sheet, starting with "Accounts payable." Net worth represents the stockholders' equity in the corporation. In the statistics, net worth is the sum of capital stock, paid-in or capital surplus, and retained earnings, less the cost of treasury stock. Detail may not add to total because of rounding.

declined 4.5 percent to \$350.0 billion for 1991 (Figure I). For most corporations, income subject to tax was equal to net income minus certain "statutory special deductions" [14].

Total statutory special deductions increased for 1991 by 2.7 percent to \$122.6 billion, after allowing for a change in its definition to facilitate comparison with 1990 [15]. The largest of these special deductions for 1991 was for dividends paid by regulated investment companies and, to a lesser extent, by real estate investment trusts. These deductions increased \$344.1 million to \$68.4 billion for 1991, compared with an increase of \$755.5 million for 1990.

The second largest special deduction was the net operating loss deduction or NOLD. The NOLD, for purposes of the statistics, represents certain prior-year losses carried forward and applied against current-year net income [16]. For 1991, the NOLD increased by 7.1

percent, from \$38.4 billion to \$41.2 billion. The increase was especially noticeable in banking and insurance companies. The increases for these industrial groups may reflect the increase in net income from which NOLD could be subtracted. For other industrial groups, the increase in the NOLD may only reflect an increase in prior-year losses that became eligible for carryforward.

The third biggest component of the special deductions was for intercorporate dividends received. This deduction increased from Tax Year 1990 levels, by 1.4 percent, to \$12.6 billion, reflecting an increase in dividends received from certain Foreign Sales Corporations (\$3.9 billion for 1991) and intercorporate dividends received. The largest increases in intercorporate dividends received were reported by corporations classified in manufacturing, particularly in food and kindred products and instruments and related products, followed by those classified in transportation and public utilities.

¹Includes certain other taxes, not shown below.

²For purposes of the statistics, this tax is included in both income tax before and after credits. By law, tax credits can only offset regular tax.

Note: Detail may not add to totals because of rounding.

Mainly as a result of the decline in income subject to tax, the regular income tax (before credits) dropped from \$119.4 billion to \$116.3 billion [17]. Total income tax before credits, which for Statistics of Income also includes such additional taxes as alternative minimum tax and environmental tax (see Figure I), decreased from \$128.2 billion to \$121.1 billion. Sixty-four percent of the decrease was due to manufacturers, with petroleum and coal products reporting the largest decrease.

Alternative minimum tax (AMT) decreased for the first time since its enactment in 1986, dropping by 34.4 percent from 1990 to \$5.3 billion. Manufacturing's share dropped from 42.2 percent to 35.6 percent, due in large part to manufacturers of motor vehicles and equipment. These corporations reported \$936.7 million for 1990, compared to \$30.4 million for 1991. Paper and allied products, petroleum and coal products, nonelectrical machinery, and electrical and electronic equipment each accounted for between 11 and 13 percent of the 1991 total for manufacturers. The main reason AMT decreased between 1990 and 1991 can be traced to one of the components of the AMT income base, known as the adjusted current earnings (ACE) adjustment. The calculation of ACE included special depreciation rules on certain property that contributed more to the ACE for the first year in which it applied. Therefore, the resulting ACE adjustment for 1990 was

about twice that reported for 1991, and it increased the size of "alternative minimum taxable income," and consequently, the AMT for 1990.

In determining the income tax due the U.S. Government, the regular tax was reduced by tax credits. The foreign tax credit continued to be the largest credit. For the first time since 1988 (and not since 1982 before then), the foreign tax credit decreased to \$21.1 billion for 1991. The decrease was concentrated among manufacturers, especially those producing nonelectrical machinery and motor vehicles and equipment.

The "general business credit" continued to decline, from \$2.8 billion to \$2.2 billion, reflecting changes instituted by TRA. The "investment credit," the largest component of the general business credit, was rescinded by TRA, but with exceptions that included the carryover of a gradually diminishing portion of unused credits accumulated for years prior to TRA. TRA also reduced the maximum amount of tax against which the general business credit could be applied.

The "prior-year minimum tax credit" for 1991 more than doubled to \$1.5 billion. Corporations that reported an AMT for prior years could elect to take a credit based on that AMT (subject to certain limitations) against regular tax liability, but not against their current year AMT liability. The increase for 1991, therefore, was consistent with the decline in AMT, as the credit was most likely taken by companies that reported AMT for prior tax years but not for 1991 (and they were also liable for the regular income tax for 1991). Most of the increase in this credit was due to a growth in the amounts claimed by insurance companies, which increased \$54.8 million to \$297.9 million. This was consistent with the \$216.8 million decline in the AMT reported by insurers, to \$669.8 million.

Total income tax after credits, the amount actually owed the Federal Government, decreased from \$96.4 billion for Tax Year 1990 to \$92.6 billion for Tax Year 1991. This was the first such decline since 1985.

Summary

The number of returns filed for Tax Year 1991 increased 2.3 percent. This increase was echoed by increases in all other return types. The number increased in each industrial division except mining and manufacturing.

Corporate pre-tax profits decreased for the third year in a row, dropping 7 percent to \$344.9 billion. Losses reported by corporations without net income continued to increase, growing from \$181.9 billion to 190.9 billion.

As positive net income declined, so did income subject to tax, the tax base tabulated for Statistics of Income.

Corporation Income Tax Returns, 1991

Income subject to tax decreased from \$366.4 billion to \$350.0 billion, resulting in the drop in regular income tax (before credits) from \$119.4 billion to \$116.3 billion. Since AMT also decreased substantially, the total tax after credits declined as well, to \$92.6 billion, compared to \$96.4 billion for 1990.

Data Sources and Limitations

Data for Tax Year 1991 are based on a sample of corporation income tax returns with accounting periods ended July 1991 through June 1992. These returns represented domestic corporations filing Form 1120 or 1120-A (short form); foreign corporations with income "effectively connected" with a U.S. business filing Form 1120F; life insurance companies filing Form 1120L; property and casualty insurance companies filing Form 1120-PC; S Corporations filing Form 1120S; regulated investment companies filing Form 1120-RIC; and real estate investment trusts filing Form 1120-REIT. For purposes of the 1991 statistics, Forms 1120 IC-DISC filed by certain Domestic International Sales Corporations and Forms 1120-FSC filed by Foreign Sales Corporations were excluded. The 1987 revisions to the Standard Industrial Classification are not reflected in the industry statistics.

The data were estimated based on a stratified probability sample of approximately 81,900 corporation income tax returns drawn to represent the 3,803,000 returns filed for Tax Year 1991. The sample was selected after admin-

istrative processing was complete, but before any audit examination, and was stratified based on combinations of net income and total assets at rates ranging from 0.30 percent to 100 percent.

Because the data are based on a sample, they are subject to sampling error. In order to use the statistics properly, the magnitude of the sampling error, measured by the standard error, should be taken into account. The table below contains the standard errors corresponding to the estimated number of returns for each of the categories (Figure J).

Notes and References

- [1] For 1988, the number of returns declined for the first time since the end of World War II. This decline was prompted by the Tax Reform Act of 1986, which caused some companies to be represented in the 1987 statistics twice, both by a part-year return and a full-year return, each with an accounting period that ended during the span of months July 1987 through June 1988 (the accounting periods comprising Tax Year 1987 for which statistics are presented).

The unusually large number of part-year returns filed for Tax Year 1987, in turn, led to an unusually large increase in the total number of returns for the year. The increase in part-year returns was due to many S Corporations (and Personal Service Corporations)

NOTE: Returns with total assets of \$100 million or more were sampled at the 100 percent rate and are, therefore, not subject to sampling error.

Corporation Income Tax Returns, 1991

having to change their accounting periods from a non-calendar year to a calendar year as required by the 1986 Act. In addition, other corporations changed to S Corporation status in order to take advantage of the lower individual income tax rates that applied to S Corporation profits (which are taxed through shareholders) allowed under the Act; some of these companies also had to file part-year returns if they were not already using the required calendar accounting period.

Thus, since the increase in returns for Tax Year 1987 was followed by a decline for 1988, the upsurge for the one year (1987) was an anomaly. The increases recorded for Tax Years 1989 and 1990 are only significant in that they reflect a return to the more gradual upward trend in filings that previously existed.

- [2] Starting with Tax Year 1987, statistics for net income or deficit, as well as for receipts and deductions, of S Corporations are limited to those derived from a trade or business. Investment or portfolio income (or loss), such as interest, dividends, rents, royalties and gain (loss) from sales of investment property, and the deductions related to this income, were not tabulated. Therefore, the overall statistics for receipts, deductions, and net income or deficit are slightly understated. (S Corporation net income or deficit from investment or portfolio income is allocated directly to shareholders for taxation.)
- [3] Filas, Gregory P., "Petroleum Refining," *1993 U.S. Industrial Outlook* (U.S. Department of Commerce, International Trade Administration, January 1993), p. 4-3.
- [4] See footnote 2 above.
- [5] One reason for the decline may concern the calculation of total receipts. For 1990, net long-term capital gains were included in the total receipts computation, while for 1991 such gains were excluded. If the net long-term capital gains were included in the calculation, total receipts would increase by \$12.9 billion. However, this would only have caused the percentage increase from 1990 to rise from 0.27 to 0.35 percent.
- [6] The preferential "alternative tax" rate on net long-term capital gains (reduced by net short-term capital losses) was repealed by the Tax Reform Act of 1986 for tax years that began on or after July 1, 1987, effectively taxing corporate capital gains at the regular corporate tax rates. (Also, because they were

no longer given preferential tax treatment, these gains were exempted from the "alternative minimum tax" on "tax preference" items.)

- [10] Miller, Randall and West, Heather, "Motor Vehicles and Parts," *1993 U.S. Industrial Outlook*, (U.S. Department of Commerce, International Trade Administration, January 1993), p. 35-3.
- [11] *Mergers & Acquisitions, 1991 Almanac and Index*, May/June 1990, Volume 25, Number 6.
- [12] In 1991, the statistical treatment of accounts payable and "other current liabilities" for banking and savings and loan associations was modified, resulting in a substantial increase in accounts payable and a corresponding decrease in "other current liabilities" compared to 1990. The amounts involved represented investors' deposits and withdrawable shares. For additional information, see *Statistics of Income -- 1991, Corporation Income Tax Returns*.
- [13] The behavior of a corporation reacquiring its stock to ward off hostile takeovers is well documented in financial literature. There are other possibilities for this behavior, one of which is to support the stock's price given its current value and management's expectations for its future value. For a discussion on this topic, see "Share Repurchases," *The Economist*, July 2, 1994, Vol. 332, No. 7870, pp. 70-71.
- [14] For 1991, statutory special deductions include the following: several dividends received deductions; the deduction for dividends paid on certain preferred stock of public utilities; the deduction for dividends paid by regulated investment companies and real estate investment trusts; the section 857 deduction for taxes paid by real estate investment trusts; and the deduction for small life insurance companies.
- [15] For 1990, the capital gains dividends deduction applicable to regulated investment companies (\$3.6 billion) was included in total statutory special de-

Corporation Income Tax Returns, 1991

ductions (\$122.9 billion) because it was used to offset the long-term capital gain income reported for regulated investment companies (\$7.5 billion). However, for 1991, both the long-term capital gain for regulated investment companies (\$12.8 billion) and the corresponding capital gains dividends deduction (\$12.7 billion) were excluded from the statistics. To compare the 1991 total statutory special deductions to the 1990 amount for this article, the 1990 amount was adjusted to exclude the capital gains dividends deduction (\$119.3 billion).

[16] In general, a deductible "net operating loss" must

first be carried back for a period of 3 years; only the remainder is carried forward from subsequent years to be claimed as a deduction. Carryback adjustments from future tax years could not be shown on the tax returns used for the 1991 statistics and no attempt was made to obtain them at a later date.

[17] Regular tax is the tax based on the regular corporate tax rates applied to "income subject to tax" before all tax credits. The applicable credits are foreign tax credit, U.S. possessions tax credit, orphan drug credit, research credit, nonconventional fuel source sales or production credit, general business credit, and prior-year minimum tax credit.

¹Excludes Foreign Sales Corporations (Form 1120-FSC) and Interest Charge Domestic International Sales Corporations (Form 1120 IC-DISC).

²Zero assets class includes returns of liquidating or dissolving corporations which had disposed of all assets, final returns of merging companies whose assets were included in the returns of the acquiring corporations, part-year returns (except those of newly incorporated businesses), returns of foreign corporations with income "effectively connected" with a U.S. trade or business (except foreign insurance businesses providing separate data for U.S. branches, assets for which are included in the appropriate size class).

³Includes "Nature of business not allowable," which is not shown separately.

⁴For purposes of the statistics, includes not only regular tax, but alternative minimum tax, tax from recapture of investment and low-income housing credits, and certain other taxes. By law, only regular tax could be reduced by tax credits.

NOTE: Detail may not add to totals because of rounding.

*Estimate should be used with caution because of the small number of sample returns on which it was based.

¹ Excludes Foreign Sales Corporations (Form 1120-FSC) and Interest-Charge Domestic International Sales Corporations (Form 1120-IC-DISC).

² Zero assets class includes returns of liquidating or dissolving corporations which had disposed of all assets, final returns of merging companies whose assets were included in the returns of the acquiring corporations, part-year returns (except those of newly incorporated businesses), returns of foreign corporations with income "effectively connected" with a U.S. trade or business (except foreign insurance businesses providing separate data for U.S. branches, assets for which are included in the appropriate size class).

³ Net income of S Corporations was taxed (with few exceptions) through shareholders. Therefore, the net income of these corporations was excluded from income subject to tax.

⁴ Also includes deductions for dividends paid allowed regulated investment companies and real estate investment trusts. These deductions are not shown separately.

⁵ See footnote 3.

⁶ For purposes of the statistics, all of the taxes shown below, plus certain others not shown, are included in both income tax before and after credits. By law, tax credits could only offset regular tax.

NOTE: Detail may not add to totals because of rounding.

Foreign Recipients of U.S. Income, 1991

by Denise Bori

United States source income paid to "foreign persons" in 1991 totaled over \$70 billion, a net increase of 27 percent or \$15 billion over 1989. However, the \$2 billion in U.S. tax withheld on this income was 6 percent less than that for 1989. This was because dividend payments, typically subject to high withholding rates, decreased by 21 percent, while all other income subject to withholding declined by 9 percent, and, in addition, income not subject to withholding at all increased by 44 percent to almost \$55 billion.

Most of the increase in total income for 1991 was due to payments made to persons in tax treaty countries, which are often either subject to reduced withholding rates or are exempt from withholding altogether. Even though interest, which was the principal source of income, increased by almost \$14 billion, this form of income is generally subject to reduced withholding or is tax-exempt.

Payments to Japanese persons increased by 51 percent during the 2-year period, to \$19.8 billion, making them the largest recipient group for 1991 U.S.-source income. Payments to United Kingdom recipients, the largest recipient group in 1989, remained stable, increasing by only 0.3 percent, to almost \$13.7 billion. Together, these two countries accounted for almost half of all the income paid to foreign recipients.

Background

U.S.-source income of nonresident alien individuals and other foreign persons is reported on Form 1042S, *Foreign Persons' U.S.-Source Income Subject to Withholding*. This income is taxed at a flat, statutory rate of 30 percent (or a lower tax treaty rate). The income covered by this article includes, but is not limited to, certain interest, dividends, compensation for personal services, rents and royalties, retirement payments, and capital gains. Income that is "effectively connected" with a U.S. trade or business (see "Income Effectively Connected with a U.S. Trade or Business" in the *Explanation of Selected Terms* section), including bank deposit interest, is not subject to withholding and is not reported on Form 1042S.

Even though income that is exempt from U.S. taxation under a tax treaty between the person's country of residence and the United States, or under a U.S. statutory exemption (such as portfolio interest), is also not subject to withholding, it is nevertheless reported on Form 1042S. Portfolio interest is any interest (including original issue discount) which is not derived in the ordinary course of a

trade or business. According to section 871(i) of the Internal Revenue Code, bank deposit interest (which is considered to be portfolio interest if such interest is not derived in the ordinary course of a trade or business within the United States) is exempt from withholding. The exemptions from U.S. tax vary under each treaty. (A foreign payee may claim an exemption or reduced tax rate by filing Form 1001, *Ownership, Exemption, or Reduced Rate Certificate*.)

U.S. individuals or businesses distributing U.S.-source income to foreign persons are required to withhold taxes on this income, or to appoint a withholding agent (normally a financial institution) to do so. The payer or designated agent is fully liable for all taxes owed by the recipient and reports the income paid to each foreign recipient on a Form 1042S. Without this withholding requirement there would be no way to enforce taxpayer compliance because foreign recipients are not required to file U.S. tax returns to report this income.

Data Highlights

Total U.S.-source income payments to foreign persons as reported on Form 1042S increased by \$15.1 billion to \$70.2 billion between 1989 and 1991 [1]. Interest (\$47.2 billion for 1991) accounted for \$13.9 billion of this increase. In addition to interest, total payments are comprised of dividends, capital gains, royalties, rents, pensions and annuities, scholarship or fellowship compensation, compensation for personal services, social security and railroad retirement payments, real estate distributions, and miscellaneous income. The last income category is used to report U.S.-source fixed or determinable annual income that is not reportable under any of the other income categories. Examples of such income are commissions, insurance proceeds, prizes, and racing purses. Miscellaneous income, as shown in the statistics, also includes income that taxpayers do not specifically classify as being one type or another.

Figure A depicts the percentages and Figure B shows the amounts of total income attributable to interest, dividends, and rents and royalties for 1987, 1989, and 1991. During this period there was a substantial increase in the amount of interest paid to foreigners (\$11.4 billion to \$47.2 billion), which raised the percentage of total income accounted for by interest from 50 percent to 67 percent.

The large increase in interest can be explained by many factors. The Deficit Reduction Act of 1984, which exempted most portfolio interest payments from withholding, enabled U.S. entities to compete more effectively for funds in international financial markets. Also, during the 1980's, the U.S. savings rate was one of the lowest in the

Denise Bori is an economist with the Foreign Returns Analysis Section. This article was prepared under the direction of Chris Carson, Chief.

Foreign Recipients of U.S. Income, 1991

industrialized world, about 3 percent of national income [2]. As a result of these two factors, domestic entities were forced to search abroad for investment funds, and as a result, there were large inflows of foreign capital to U.S. banks to meet the surge in credit demand. At the same time, because national savings rates were considerably higher in other countries, foreign countries were able to respond to the U.S. demand for investment funds. Moreover, the demand for investment funds by U.S. entities exerted upward pressure on interest rates, making investment in the United States more attractive [3]. Foreign holdings of U.S. Treasury bonds and other bonds, alone, increased to record levels in the late 1980's [4]. For example, it is estimated that up to one-third of new issues of Treasury securities in 1988, were purchased by foreign persons [5]. On the other hand, dividends paid increased between 1987 and 1989 and then decreased slightly between 1989 and 1991, while the percentage of total income attributable to dividends decreased steadily. Rents and royalties, both as an amount of income paid and as a percentage of total income, steadily increased over the 1987-1991 period.

For 1991, the total number of Forms 1042S fell 6 percent to 1,209,120. The average payment increased to \$58,039, up 36 percent from 1989. The average U.S. tax withheld (not including tax withheld by foreign governments and withholding agents) rose less than 1 percent to \$1,534. For 1991, the average or effective withholding rate (tax withheld as a percentage of total U.S.-source income) was less than 3 percent. However, the effective withholding rate on the \$15.5 billion of income subject to withholding tax was 12 percent, substantially less than the 30 percent statutory rate. Reasons for this are discussed in the Taxes Withheld section.

Tax Treaties

The United States participates in tax treaties with 40 of its principal trading partners (Table 1). It should be noted that during 1991 the United States exchanged instruments of ratification for new income tax treaties with Finland, Germany, India, Indonesia, Spain, and Tunisia [6]. Of these six countries, India, Indonesia, Spain, and Tunisia did not previously have treaties with the United States. Thus, in the statistics for previous years they are included in the nontreaty country total; in the 1991 data they are included as treaty countries.

The main purpose of tax treaties is to avoid international double taxation. Tax treaties typically designate primary taxing authority to the source country (the country in which the income is earned), although this authority is frequently limited. The resident country of the recipient

is then granted the residual taxing authority. Tax treaties also generally involve reciprocal reductions in tax rates (or exemptions in some cases) between the participating countries.

Most countries, including the United States, tax their residents on their worldwide income. Residents of these countries are typically allowed a credit against their "domestic" income tax for taxes paid to other countries. Certain countries, including a number in Latin America, tax only that income earned within their borders. Generally, persons in these countries are granted exemptions from domestic taxation for any foreign-source income.

Tax treaties reduce the U.S. tax liability for foreign persons earning U.S.-source income. This reduction in U.S. tax revenue is at least partially offset by the reduction in foreign tax credits of U.S. persons receiving income from, and paying taxes to, treaty countries. Fewer foreign tax credits serve to increase the revenue intake of the United States. Another effect of tax treaties is to increase revenue through improved compliance programs because of the tax information exchange that exists among treaty countries.

For 1991, persons in treaty countries received 84 percent of total U.S.-source income payments to foreign persons, while accounting for 80 percent of the total U.S. tax withheld on these payments. The nontreaty countries which received the largest amounts of U.S.-source income were Bermuda, Hong Kong, Mexico, and Singapore (Table 2). Figure C compares income, U.S. tax withheld, and effective U.S. tax rates for treaty and nontreaty country recipients for 1991.

Types of Income

For 1991, interest payments (excluding bank deposit interest) reported on Forms 1042S increased by 42 percent to \$47.2 billion, accounting for 67 percent of the total U.S.-source income paid to foreign persons. For 1989,

Foreign Recipients of U.S. Income, 1991

interest comprised 60 percent of total U.S.-source income and amounted to approximately \$33.3 billion. Dividend payments, the second largest type of payment, decreased by 21 percent to \$11.6 billion. As a result dividends accounted for only 16 percent of total income for 1991, down from 26 percent for 1989. Miscellaneous income almost doubled, from \$2.3 billion in 1989 to \$4.3 billion in 1991. Compensation for personal services also doubled, to \$1.7 billion from \$0.8 billion. Rents and royalties increased by 50 percent to \$3.9 billion for 1991. Retirement payments increased 10 percent, totaling almost \$1 billion. These payments included social security and railroad retirement benefits. Figure D details 1991 income and tax information for the different types of income.

²Less than 0.05 percent.

NOTE: Detail may not add to totals because of rounding.

Type of Recipient

Foreign corporations received 76 percent of the U.S.-source income paid in 1991, while accounting for 68 percent of the U.S. tax withheld. U.S.-source income paid to corporations totaled almost \$53.5 billion, an \$11.9 billion increase from 1989. Figure E presents percentages of total income and U.S. tax withheld by type of recipient.

In Figure E, tax withheld on corporations is low in comparison to the income earned by corporations (68 versus 76 percent of the totals for all recipients) because 78 percent of the income distributed to corporations was exempt from U.S. taxation, principally because of various tax treaties involving interest income, which made up 69

percent of the income distributed. Thus, only 1 percent of the income distributed to corporations was taxed at the maximum rate of 30 percent. In addition, "direct investment dividends" (i.e., those dividends paid on a parent company's return on investment in a subsidiary or other affiliate) were subject to a lower tax rate under some tax treaties than were portfolio dividends.

Individuals, in contrast to corporations, show a higher percentage of total taxes withheld relative to total income. Just 57 percent of the income distributed to individuals was exempt from U.S. taxation and 26 percent of this income was taxed at the maximum rate of 30 percent. Moreover, individuals received 43 percent of their income in the form of retirement benefits and dividends, two of the income types taxed at the highest effective rates, and not ordinarily covered by tax treaties.

Foreign governmental organizations received \$2,568.6 million in U.S.-source income during 1991, but less than \$0.5 million in taxes was withheld on this income. This was because income paid to these organizations was largely exempt from U.S. taxation. In 1989, the tax withheld was almost \$19.8 million on income of \$1,535.8 million. For 1991, most income received by these governmental organizations was in the form of interest (77 percent). Figures F and G show the countries whose governmental organizations received the most income and accounted for the most U.S. tax withheld, respectively.

Country of Recipient

For 1991, persons in nine countries received total payments of more than \$1 billion each. These countries represented 80 percent of the total U.S.-source income reported on Form 1042S and almost 73 percent of the total U.S. taxes withheld. Figure H ranks income and tax information for these countries according to the size of income totals.

Persons in these nine countries had an aggregate effective U.S. tax rate of 2.4 percent. The effective U.S. tax rates of persons in these countries, however, varied between 0.8 percent and 3.8 percent. This variation can best be explained by differences in tax treaty provisions and differences in U.S. taxability of certain types of income.

For 1991, Japan received more U.S.-source income than any other country. Japan also received the most income during the 1987-1991 period (with the exception of 1989 when the United Kingdom received slightly more than Japan). Payments to Japanese residents increased by 51 percent from 1989 to a total of \$19.8 billion. Most of this income, \$13.6 billion, was interest paid to corporations, including banks. Japan accounted for more than 28 percent of the total income paid to foreign recipients. The 51-percent increase may be explained, in part, by the sharp

increase in Japanese investments in the United States in recent years, in the form of both securities and direct investment, especially the latter [7].

Although the United Kingdom experienced only a slight increase in U.S.-source income received from 1989 to 1991, the total was the second largest in 1991 in comparison to other foreign countries. In 1991, nearly \$13.7 billion in income was paid to recipients in the United Kingdom (\$10.3 billion was received by corporations), \$7.8 billion of which was interest. Figure I displays the percentage of income and taxes by income type for Japanese and United Kingdom recipients.

Taxes Withheld

For 1991, the U.S. tax withheld amounted to nearly \$1.9 billion on U.S.-source income of \$70.2 billion. This translates to an effective tax rate of 2.6 percent. The overall effective tax rate was much lower than the statutory U.S. withholding rate of 30 percent for a number of reasons, some of which have previously been mentioned:

- tax treaties allow for lower tax rates on certain types of payments made to residents of treaty countries;
- under a statutory exemption, U.S.- source income paid to foreign governmental organizations is generally not taxed (although it must still be reported on Form 1042S);
- most U.S.- source income paid to foreign private foundations is taxed at a 4 percent rate;
- the effective tax rate for social security and railroad retirement benefit payments is 15 percent, because only half of these payments is subject to the full 30 percent statutory withholding rate, while the other half is not subject to the withholding tax; and
- the Tax Reform Act of 1984 rescinded the withholding tax on most interest, especially portfolio interest. However, this interest income (except bank deposit interest that is effectively connected with a business) must still be reported on Forms 1042S.

These factors result in considerable variation among countries (as well as among types of recipients and types of income paid) in terms of the effective U.S. withholding rate (tax withheld as a percentage of total income paid).

Seventy-eight percent (or \$54.7 billion) of the \$70.2 billion of total U.S.-source income reported on Form 1042S was exempt from taxation. Most of this was interest. Because of tax treaties, only \$1.9 billion of the \$15.5 billion of income subject to taxation was taxed at

foreign recipients was for income paid to corporations, compared to 13 percent for individuals and 8 percent for nominees and fiduciaries. About 64 percent of taxes withheld for corporations was for dividend payments. Of the \$1.3 billion in U.S. tax withheld on income paid to corporations, approximately half was accounted for by Japan (\$0.4 billion) and the United Kingdom (\$0.2 billion).

For 1991, about \$239 million in U.S. tax withheld was on income paid to foreign individuals. Recipients in Mexico, Canada, and Germany accounted for more U.S. taxes than persons in other countries. Taxes withheld on individuals in Mexico totaled \$35 million. Almost \$26 million of that amount was withheld on social security benefits, although only half of the amounts paid were

subject to withholding. Of the \$26 million in tax withheld on Canadian individuals, almost \$9 million was on dividends. Of the \$20 million withheld on German individuals, almost \$11 million was for dividends.

U.S. taxes withheld on foreign governmental organizations totaled almost \$450,000. The effective tax rates for these organizations was less than 0.05 percent, reflecting the fact that organizations of this type were generally exempt from tax under the Internal Revenue Code. Sixty percent of these taxes were withheld on dividend payments. Governmental organizations in the British Virgin Islands had the largest amount of U.S. tax withheld, \$133,000, mostly on interest payments. The effective tax rate for payments to governmental organizations in the British Virgin Islands was 1.85 percent. Ecuador, a nontreaty country, was the only country for which U.S. tax withheld on payments to governmental organizations was computed at the maximum 30 percent rate.

Summary

U.S.-source income paid to foreign recipients totaled nearly \$70.2 billion in 1991. U.S. tax withheld on this income amounted to nearly \$1.9 billion. Recipients in Japan and the United Kingdom accounted for almost 50 percent of U.S. income paid to foreign persons. Foreign corporations received more income (\$53.5 billion) and had more U.S. tax withheld (almost \$1.3 billion) than all other recipient types combined. Interest payments accounted for 67 percent of all income distributed, while tax on dividends accounted for 65 percent of the total U.S. tax withheld.

Data Sources and Limitations

Payers (or their authorized withholding agents) of most U.S.-source income to foreign persons must withhold tax in accordance with the Internal Revenue Code. Form 1042S, *Foreign Persons' U.S.-Source Income Subject to Withholding*, is filed by the payer to report this income and the U.S. tax withheld on it. Often a financial institution acts as the payer's withholding agent.

The statistics in this article were tabulated by calendar year, based on all Forms 1042S filed with the Internal Revenue Service in 1991. The data reflect the income that was paid and the U.S. tax that was withheld in 1991, except for U.S. tax withheld by foreign governmental organizations and their withholding agents. In a few countries, under treaty provisions, tax is withheld by foreign governmental organizations (or other authorized entities) for income paid to foreign nominees and fiduciaries if the ultimate recipient is unknown. The purpose of such tax withholding is to prevent persons in nontreaty countries from reaping treaty benefits by indirectly channeling their income through a treaty country. When the

Foreign Recipients of U.S. Income, 1991

ultimate recipient is not entitled to the treaty benefits, the foreign governmental organization (or withholding agent) remits the tax withheld back to the United States. This additional tax, therefore, is not generally attributable to specific income years. For this reason, the statistics in Tables 1 and 2 do not include tax withheld by foreign governmental organizations and foreign withholding agents (except for Canada, which remits its tax payments during the same calendar year in which the U.S. income is paid and which is, therefore, treated as if it were a domestic withholding agent for purposes of these statistics). The taxes received during 1991 from foreign governmental organizations are shown in Figure K.

Because all Forms 1042S are included in the statistics, the data are not subject to sampling error. However, the data are subject to nonsampling error, such as computer data entry errors and minor taxpayer reporting errors. A limited computerized program was used to test the data for certain basic numerical relationships, including the calculation of the correct tax withheld, but the possibility of error was not completely eliminated. In addition, Forms 1042S with income greater than \$2 million were manually verified.

Explanation of Selected Terms

Foreign Persons.— For purposes of this article, foreign persons include: (a) individuals whose residence is not within the United States and who are not U.S. citizens; and (b) corporations and other organizations (including partnerships, private foundations, estates, and trusts) created or organized outside the United States. Also, for purposes of this article, persons residing in Puerto Rico and U.S. possessions are considered foreign persons.

Income Effectively Connected with a U.S. Trade or Business.— Income that is “effectively connected” with a U.S. trade or business is exempt from the withholding tax requirements. This income is taxed at the ordinary graduated U.S. rates, in the same manner as any other income paid to U.S. citizens and residents. Foreign corporations (individuals) must report such income on a Form 1120F, U.S. Tax Return of a Foreign Corporation (Form 1040NR, U.S. Nonresident Alien Income Tax Return). Effectively connected income may be erroneously reported on Forms 1042S, but the extent of its inclusion in the statistics is believed to be insignificant although unknown.

Nominee and Fiduciary.— An entity chosen or appointed to accept income for the eventual recipient of the income. Typically, a financial institution acts as a nominee or fiduciary. A nominee differs from a fiduciary in that a nominee has little or no freedom to exercise judgment or control over income received.

Withholding Agent.— A withholding agent is any person or entity required to withhold taxes. Usually the withholding agent is the payer of the income or an entity (normally a financial institution) acting on behalf of the payer (see the Background section).

Notes and References

- [1] Statistics on foreign recipients of U.S. income are compiled yearly. Because of an error uncovered in the 1990 data published in the Spring 1993 issue of the *Statistics of Income Bulletin*, 1989 data are used for comparison purposes in this article. A revision of the 1990 data will be included in a subsequent issue of the *Bulletin*.

¹Excludes small amount of U.S. tax withheld by foreign governments and withholding agents.

²Less than \$500.

Individual Income Tax Rates and Taxes Shares, 1990

by Sarah E. Nutter

Nearly 89.9 million (79 percent) of the 113.7 million individual income tax returns filed for Tax Year 1990 reported an income tax liability. The liability shown on these "taxable returns" totaled \$447.1 billion, an average of \$4,976 per return. The "average tax rate" for these taxable returns was 13.55 percent, continuing a decline from 13.81 percent and 13.71 percent for 1988 and 1989, respectively, the first 2 years of the two-bracket rate structure (with an effective third-bracket for certain income ranges) introduced under the Tax Reform Act of 1986.

The Tax Reform Act of 1986 (TRA86) introduced many changes in the tax treatment of income, losses, and deductions, which resulted in a broader definition of "adjusted gross income" (AGI) for tax years after 1986 [1]. All other things being equal, this broadened definition of AGI would reduce the average income tax rate, even if economic income and tax rates remained the same. Thus, direct comparisons of the average tax rates for 1987 and subsequent years with those for earlier years can be misleading. To overcome this limitation and to facilitate comparisons of income and income tax rates before and after the redefinition of AGI by TRA86, the AGI statistics have also been recomputed for 1985 and subsequent years using a consistent definition of income. Using this consistent definition of income, the average tax rates were 13.56 percent for 1985; 13.59 percent for 1986; 13.49 for 1987; 13.71 percent for 1988; 13.58 percent for 1989; and 13.41 percent for 1990.

1990 Tax Law Highlights

To put the discussion of individual income tax rates and tax shares into perspective, the following sections briefly describe the Federal individual income tax structure, major individual income tax law changes for 1990, and two Statistics of Income (SOI) concepts of income (the "1979 Income Concept" and the "modified" taxable income concept) used for this article.

Income Tax Structure

Each year, taxpayers must file an income tax return if they meet certain minimum filing requirements. The filing requirements for 1990 were generally based on the amount of "gross income," filing status, marital status, age, and, to a lesser extent, on dependency, blindness, and the amount of self-employment income [2]. As defined under section 61 of the Internal Revenue Code, gross income included all income (legal or illegal), received in

For 1990, the top 10 percent of tax returns based on size of "adjusted gross income" reported 55.36 percent of the total individual income tax.

the form of money, goods, property, or services, that was not expressly exempt from tax. For example, gross income included amounts from wages and salaries, interest and dividends, alimony, bartering income, canceled

debt income, gambling winnings, rents and royalties, and gains from property sales or exchanges, as well as the gross profits from sole proprietorships and farming, income from partnerships and S Corporations, and distributions from estates and trusts [3]. Adjusted gross income (AGI), as defined under Code section 62, was equal to gross income less deductions for certain expenses, such as those incurred in the course of a trade or business or in connection with rents and royalties; losses from property sales or exchanges; and employee-related deductions, such as for contributions to an Individual Retirement Arrangement (IRA) or for the self-employed health insurance deduction.

Individuals filing income tax returns for 1990 determined their "taxable income," which equaled AGI less the amount for personal exemptions and less either the standard deduction (including the additional amounts for age and blindness) for taxpayers who did not itemize deductions, or total allowable itemized deductions for all other taxpayers. Taxable income was the base on which income tax before credits (not including additional, special taxes and the alternative minimum tax) was computed.

Tax before credits was calculated from taxable income using tax rate schedules that varied with taxpayer filing status (single persons, married persons filing joint returns or qualifying widow(er)s, married persons filing separate returns, and heads of household). For 1990, tax rates for each filing status were 15 and 28 percent. In addition, the rate structure included an effective 33 percent tax rate (i.e., a 5 percent surtax) on taxable income within the ranges shown in Figure A. This higher tax rate was designed to phase out the benefits of having part of the income taxed at the 15 percent rate rather than at the 28 percent tax rate. For taxpayers with taxable income above the ranges shown in Figure A, the 33 percent rate continued until the benefits of the deductions for personal exemptions for taxpayers and their dependents were completely phased-out. At the point where the tax-savings from phasing-out the deductions for personal exemptions were complete, the taxpayer's marginal tax rate returned to 28 percent, and the average tax rate on taxable income plus the phased-out exemption amounts

Sarah E. Nutter is an economist with the Foreign Returns Analysis Section. This article was prepared under the direction of Chris Carson, Chief.

Individual Income Tax Rates and Tax Shares, 1990

Figure A

Ranges of Taxable Income to Which the 33 Percent Rate Applied, by Filing Status, Tax Year 1990

[Money amounts are in whole dollars]

Filing status	Taxable income range
Single.....	\$ 47,050 to \$ 97,620
Head of household.....	\$ 67,200 to \$134,930
Married filing jointly.....	\$ 78,400 to \$162,770
Married filing separately.....	\$ 39,200 to \$123,570

for these returns became 28 percent [4].

To calculate their Federal income tax liability, taxpayers used either the (look-up) tax tables or the tax rate schedules. Taxpayers with taxable incomes less than \$50,000 were required to use the tax tables, while those with taxable income of \$50,000 or more were required to use the tax rate schedules. The tax tables were based on income tax "brackets" that were \$50 wide and the midpoint of the bracket was used to calculate the tax with the tax rounded to the nearest dollar. As a result, the tax tables and the tax rate schedules could produce a different amount of tax for the same amount of taxable income. The highest marginal tax rate imbedded in the tax tables was 33 percent for 1990 for taxpayers using the single or married-filing separately status; for taxpayers using the married filing jointly or head of household status, the highest imbedded marginal tax rate was 28 percent. For taxpayers (single or married filing separately) using the tax tables with taxable income that was subject to the 33 percent marginal rate, the maximum difference in tax between the tax rate schedules and the tax tables was \$8.75 [5]. However, the actual difference in tax was generally smaller for most taxpayers. Use of the tax tables could have produced either a higher or a lower amount of tax than that produced by the tax rate schedules.

Major Tax Law Changes for 1990

The legislation enacted under TRA86 continued to alter the tax treatment of certain income and deductions for 1990. The phase-in of limitations on "passive activity losses" (i.e., generally those generated by any trade, business, or rental activity in which the taxpayer did not materially participate) continued, along with the phase-out of the itemized deduction for personal interest (i.e., interest on credit cards, car loans, or personal loans).

The passive loss rules were generally effective for tax years beginning after December 31, 1986. In general, these rules required that the losses from passive activities could not be deducted from other types of income, and that tax credits from passive activities could generally offset only the tax allocable to such activities [6]. However, the restrictions on deducting passive losses were

phased-in for taxpayers who had acquired an interest in a passive activity prior to October 23, 1986. For 1990, these taxpayers could use only 10 percent of such losses to offset "active" (or "non-passive") income, but any disallowed passive losses for 1990 could generally be carried forward to offset future passive income. With the continued phase-out of the personal interest deduction, only 10 percent of personal interest expenses was deductible for 1990.

Other major changes in the tax law for 1990 included a new deduction for self-employed health insurance; an exclusion of interest income from Series EE U.S. savings bonds under certain conditions; and a deduction of one-half of the amount of an individual's self-employment tax liability. Taxpayers cashing series EE U.S. savings bonds in 1990 that were issued after 1989 could exclude part or all of the interest from income if the taxpayer paid for "qualified" higher education expenses [7]. In addition, the earned income credit, personal exemption amounts, standard deductions, and the tax bracket boundaries continued to be adjusted for inflation for 1990 [8].

Another change legislated by TRA86, which continued to have an impact for 1990, related to the treatment of investment income of minor children under 14 years of age. To moderate the use of "family income splitting," a mechanism used by higher-income tax bracket parents to reduce overall family taxes by shifting income-producing assets to dependent children in lower-income tax brackets, TRA86 included provisions that effectively taxed the unearned (investment-type) income over \$1,000 of children under age 14 at the parent's highest marginal tax rate if the parent's rate was higher than the child's rate [9]. The two methods of reporting and paying tax on this income were: (1) filing Form 8814, *Parent's Election to Report Child's Interest and Dividends*, as part of the parent's individual income tax return, or (2) filing Form 8615, *Tax for Children Under Age 14 Who Have Investment Income of More than \$1,000*, as part of the child's own individual income tax return [10]. Generally, these two methods of reporting the child's investment income would have resulted in the same amount of tax since, in either case, the income was subject to tax at the parent's highest marginal tax rate. However, because the child's deductions could not be reported on the parent's return when the child's income was included in the parent's AGI, using Form 8814 could have resulted in a higher overall family tax [11].

A parent could elect to file Form 8814 under the following conditions: (1) the child was under age 14 on January 1, 1991, (2) the child had income only from interest and dividends (including Alaska Permanent Fund dividends), (3) the dividend and interest income was

Individual Income Tax Rates and Tax Shares, 1990

more than \$500 and less than \$5,000, (4) no estimated tax payments had been made for 1990 under the child's name and social security number, and (5) no Federal income tax had been withheld from the child's income under the "backup withholding" rules [12].

SOI Income Concepts

To analyze changes in income and taxes over a period of years, a consistent definition of income should be used. Because the components of AGI vary from year to year, the "1979 Income Concept" was developed to provide a more uniform measure of income across tax years. Tax Years 1979 through 1986 were used as base years in identifying the income and deduction items included in the 1979 Income Concept. The 1979 Income Concept includes the same income and deduction items in each year's income calculation and uses only items available on Federal individual income tax returns. As noted in Figure B, the 1979 Income Concept for 1990 includes many income and deductions that are also components of AGI. However, unlike AGI, the 1979 Income Concept also includes nontaxable (i.e., tax-exempt) amounts of income reported on individual income tax returns, as well as disallowed passive loss deductions. In addition, only straight-line deductions for depreciation are included in the 1979 Income Concept [13].

Each year, a relatively small number of returns for prior years are filed during the same period in which returns for the current year are being selected for *Statistics of Income—Individual Income Tax Return* statistics. These returns are included in the statistics as proxies for current tax year returns that will be filed during a later year. Because the tax on these returns is based on a previous year's tax law, which reflects different tax rates and income concepts, the taxable income reported on these prior-year returns was "modified" for the statistics in this article by substituting the taxable income necessary to generate the amount of tax reported on the return, using the current year's tax law. For returns other than prior-year returns, "modified taxable income" is generally the same as taxable income [14].

Income Tax Rates

Discussions of income tax rates generally, either explicitly or implicitly, center on measuring two distinct tax rates: average tax rates and marginal tax rates. Average tax rates are calculated by dividing some measure of tax by some measure of income. For purposes of the statistics, the average tax rate is defined as "total income tax" divided by "adjusted gross income" reported on returns showing an income tax liability. Measures of marginal tax rates, on the other hand, focus on determin-

¹Included in Adjusted Gross Income for Tax Year 1990.

²Adjustment to add back excess depreciation (accelerated over straight-line depreciation) deducted in the course of a trade or business and included in net income (loss) amounts shown above.

³Includes taxable and tax-exempt pension and retirement distributions.

⁴Includes an adjustment to add back amounts reported for the "foreign earned income exclusion."

⁵Reported on Schedule A for those taxpayers who reported itemized deductions.

ing the tax rate imposed on the last (or next) dollar of income earned by a taxpayer. For purposes of the statistics in this article, the marginal tax rate is defined as the rate at which the last dollar of taxable income is taxed [15]. The following sections describe the measurement of the average and marginal tax rates in more detail and discuss the statistics based on these rates for 1990.

Average Tax Rates

The average tax rate, for this article, is defined as total income tax divided by the adjusted gross income reported on returns showing an amount for total income tax (i.e., "taxable returns"). Statistics on income (based on each year's definition of AGI, as well as on the common 1979 Income Concept) and taxes reported for 1985 through 1990 are presented in Figure C. These tax years can be partitioned into three distinct sub-periods: (1) Tax Years 1985 and 1986 (the last 2 years under the Economic Recovery Tax Act of 1981 or ERTA81, which indexed the tax bracket boundaries, personal exemptions, and standard

Individual Income Tax Rates and Tax Shares, 1990

deductions for inflation); (2) Tax Year 1987 (the first year under TRA86, which included a 1-year transitional five-bracket tax rate structure and a partial phase-in of new provisions that broadened the definition of AGI); and (3) Tax Years 1988 through 1990 (the first 3 years under the effective three-rate tax bracket structure, i.e., two-rate tax bracket structure coupled with the 5 percent surtax, and the continuing phase-in of the provisions of TRA86).

As shown in Figure C, about 113.7 million individual returns were filed for Tax Year 1990, an increase of 1.4 percent from 1989. As for Tax Years 1988 and 1989, less than 80.0 percent of the returns were "taxable returns," down from 81.1 percent for Tax Year 1987 (81.5 percent for Tax Years 1985 and 1986). For 1990, taxpayers reported a total income tax of \$447 billion, an increase of \$14 billion or 3.2 percent from 1989.

¹ Number of taxable returns (column 2) divided by total number of returns (column 1).

² These statistics are based on adjusted gross income (AGI) recomputed to reflect the 1979 Income Concept, thus enabling more valid comparisons to be made of the average tax rates among years. Changes in the definition of AGI among years render direct comparison of the unadjusted figures misleading. For additional information, see Statistics of Income—Individual Income Tax Returns, for 1985-1990.

³ Average tax rate is "total income tax" (column 5) as a percentage of adjusted gross income (AGI) (column 4).

⁴ The average adjusted gross income, average total income tax and average tax rate were calculated from unrounded data.

⁵ Constant dollars are based on the Consumer Price Index (CPI-U, 1982-1984=100) computed and reported by the U.S. Department of Labor, Bureau of Labor Statistics, and published in the Consumer Price Index Detailed Report, July 1993.

Individual Income Tax Rates and Tax Shares, 1990

Total adjusted gross income reported on taxable returns increased to \$3,299 billion (\$3,335 billion using the common 1979 Income Concept), an increase of approximately 4.5 percent (4.6 percent) from 1989. In current dollars, the average income and taxes also increased from 1989 to 1990; average AGI increased from \$35,415 (\$35,752 under the common 1979 Income Concept) to \$36,711 (\$37,108 under the common 1979 Income Concept), while average taxes increased from \$4,855 to \$4,976. After adjusting for inflation, however, both average AGI and taxes continued to fall from the peak levels reported for Tax Year 1988 of \$29,005 (\$29,210 under the common 1979 Income Concept) and \$4,005, respectively. For 1990, the average AGI in constant dollars was \$28,088 (\$28,392 under the common 1979 Income Concept) and the average total income tax was \$3,807. The average total income tax in both current and constant dollars for Tax Years 1980 (the year prior to the enactment of ERTA81) through 1990 for taxable returns is shown in Figure D.

Because TRA86 reduced statutory tax rates and broadened the definition of AGI (i.e., by eliminating or limiting the preferential treatment of various tax items, such as restricting the use of passive losses to offset non-passive income and eliminating the beneficial tax treatment of net long-term capital gains), multi-year comparisons of

average tax rates based on current-year definitions of AGI become less meaningful. All else being equal, the redefinition of AGI under TRA86, which increased AGI, would result in a decrease in the average tax rate. A comparison of the unadjusted average tax rates based on each year's "current" definition of AGI, presented in Figure C, does show the expected drop in the average tax rate for 1987; the average tax rates fell from 15.05 percent for 1986 (the last year prior to TRA86) to 13.67 percent for 1987 (the first transitional year following the enactment of TRA86). However, when the common 1979 Income Concept, which standardizes AGI across tax years, is used to calculate the average tax rates, the magnitude of the decrease is much smaller; the average tax rate falls from 13.59 percent for 1986 to 13.49 percent for 1987. Using either measure of income (AGI or the 1979 Income Concept), the average tax rates declined steadily from 1988 through 1990. Average tax rates based on AGI fell from 13.81 percent for 1988 to 13.55 percent for 1990, while average tax rates based on the 1979 Income Concept dropped from 13.71 percent to 13.41 percent over the same period.

Marginal Tax Rates

Under the U.S. progressive tax rate structure, different portions of taxable income are taxed at different rates. A simple example of this is illustrated in Figure E, for a

Figure D

Taxable Returns: Average Total Income Tax, Tax Years 1980-1990¹

¹Taxable returns are returns that show a tax liability based either on income tax before credits or alternative minimum tax.

NOTE: Constant dollars are based on the Consumer Price Index (CPI-U, 1982-1984=100) computed and reported by the U.S. Department of Labor, Bureau of Labor Statistics, and published in the Consumer Price Index Detailed Report, July 1993.

Individual Income Tax Rates and Tax Shares, 1990

single person using the standard deduction with an AGI of \$100,000 derived from salaries and wages. In this instance, the first \$19,450 of taxable income is taxed at the 15 per-cent rate, the next \$27,600 at the 28 percent rate, and the final \$47,650 at the 33 percent rate. As noted above, for purposes of the statistics in this article, the marginal tax rate is defined as the tax rate that applied to the last dollar of income (given certain assumptions about which source of income provided the last dollar of income subject to tax). In this example, the marginal tax rate is 33 percent.

Figure E

Income Tax Calculation for a Single Taxpayer With One Exemption who used the Standard Deduction, Tax Year 1990

[Money amounts are in whole dollars]

Item	Amount
Adjusted gross income.....	100,000.00
Less: Exemption amount.....	2,050.00
Standard deduction amount.....	3,250.00
Equals: Taxable income.....	94,700.00
Tax based on 1990 tax rates for single taxpayers:	
First \$19,450 taxed at 15 percent.....	2,917.50
Next \$27,600 taxed at 28 percent.....	7,728.00
Next \$47,650 taxed at 33 percent.....	15,724.50
Total tax from tax rate schedule.....	26,370.00

Applying this general definition of marginal tax rates to individual tax returns, however, is more complicated because the Federal individual income tax structure includes a diverse set of income types (e.g., salaries and wages and investment income of dependents under age 14), deductions (e.g., the home mortgage interest deductions and medical expense deductions), exclusions (e.g., the foreign earned income exclusion and exclusion for municipal bond interest), credits (e.g., general business credit and foreign tax credit), and taxes (e.g., "regular" tax and alternative minimum tax). Determining marginal tax rates becomes more difficult in this setting because not all income and deduction items are subject to the same tax treatment under Federal income tax law. For example, the investment income in excess of \$1,000 of a dependent under the age of 14 is treated differently from the salary and wage income of this same dependent; the first is generally taxed at the parent's highest marginal tax rate, while the latter is generally taxed at the dependent's own tax rate.

Calculating marginal tax rates for a particular indi-

vidual income tax return generally depends on the type and amount of income and the assumptions made about the order in which the income is taxed, i.e., how the income is "stacked" or ranked. These "stacking" assumptions about which dollar was earned "last" are necessary in order to calculate the tax rate on the income earned from having taken advantage of the marginal or "last" economic opportunity. However, as noted above, this determination is complicated by the presence of items such as the alternative minimum tax and tax credits.

For purposes of the statistics, it was assumed that the income taxed at the highest rate was the "last" income received (with the exception of amounts over the ceiling for the 5 percent surtax). Thus, returns with taxable income less than the amounts subject to the 33 percent tax rate would have a top marginal rate of 15 or 28 percent. Returns that had taxable income within the ranges subject to the 33 percent tax rate were considered to have a 33 percent marginal tax rate (28 percent plus the 5 percent surtax). Returns that showed taxable income in excess of the largest amount to which the 33 percent tax rate was applied were considered to have a 28 percent marginal rate [16]. In addition, because of the special tax treatment of dependents under age 14 with investment income over \$1,000, tax returns with either a Form 8615 (filed for dependents under age 14 with more than \$1,000 in investment income) or Form 8814 (filed by parents choosing to include the investment income of their dependents on their own return if they had no tax liability other than that generated by the dependents' income) attached, are presented separately.

Thus, the classification of returns into marginal rate categories for Statistics of Income purposes was essentially a function of filing status, size of taxable income, amount of personal exemptions, and presence of a Form 8615 or Form 8814. Returns were classified into one of the following six mutually exclusive marginal tax rate categories: (1) 15 percent rate; (2) 28 percent rate (below the 33 percent rate, i.e., below the 5 percent surtax); (3) 33 percent rate; (4) 28 percent rate (above the 33 percent rate, i.e., above the 5 percent surtax); (5) Form 8615 (with income taxed at any rate); and (6) Form 8814 (15 percent rate with no tax liability other than that generated by the dependent's income).

The marginal rate classifications described above were used for the statistics presented in Figures F and G, as well as in Table 1. The statistics were based on individual income tax returns showing an amount for taxable income and items of income that were subject to the regular income tax, generally those included in AGI. Nontaxable (i.e., tax-exempt) forms of income, such as interest on State and local Government obligations, were not included

¹ For 1990, the tax rate schedule provided only two basic rates: 15 percent and 28 percent. However, taxable income between certain amounts was taxed at a 33 percent effective rate. The purpose of this temporary rate was to phase out the benefits of the lower 15 percent tax rate and the deduction for personal exemptions for taxpayers and dependents. At the point where these benefits were completely phased out, the marginal rate returned to 28 percent, and the average tax rate on taxable income plus the phased-out personal exemptions was equal to 28 percent.

² Form 8615 was filed for a child under age 14 to report the child's investment income in excess of \$1,000.

³ Form 8814 was filed for a dependent child under age 14 for whom the parents made an election to report the child's investment income (if it was from interest or dividends totaling between \$500 and \$5,000) on the parents' income tax return. This rate classification is comprised of those returns with a tax liability only from the dependents' income and thus the overall total adjusted gross income for these returns is negative.

⁴ Less than 0.05 percent.

NOTE: Detail may not add to totals because of rounding.

in AGI. However, the receipt of some forms of tax-exempt income could have influenced the taxability of other income, such as social security benefits. When this occurred, the income made taxable by the receipt of other forms of nontaxable income was included in AGI. The alternative minimum tax was not included in the determination of the marginal tax rates for purposes of this article.

The amounts and percentages of modified taxable income and income tax generated (before reduction by tax credits) for the marginal rate categories defined above are presented in Figure F. For 1990, income taxes of \$452.1 billion were generated from approximately 93.1 million individual returns with total modified taxable income of \$2,268.4 billion. Approximately 70.6 percent of these individual returns, classified in the "15 percent" marginal rate category, generated 31.7 percent of the modified taxable income and 23.9 percent of the tax. The returns in the "28 percent (below the 33 percent rate)" category generated 40.3 percent of the modified taxable income and 38.4 percent of the tax. Approximately 4.1 percent of the returns, classified as "33 percent" or "28 percent (above the 33 percent rate)," accounted for 27.8 percent of modified taxable income, but 37.6 percent of the income tax generated.

These percentage shares were fairly consistent across Tax Years 1988 through 1990. As shown in Figure G, the percentages of returns in each marginal tax rate category (excluding the two special categories related to Forms 8615 and 8814) were generally steady over this period. The combined percentage shares of modified taxable income increased slightly in the "15 percent" and "28

percent (below the 33 percent rate)" categories, with an offsetting decrease from 17.3 percent to 15.1 percent in the "28 percent (above the 33 percent rate)" category. The percentage shares of income tax generated reflect this same pattern.

Statistics by marginal rate classification and filing status for returns with modified taxable income are presented in Table 1. For each marginal rate classification, modified taxable income and income tax generated were computed "at all rates" and "at marginal rate." The "at all rates" computations (e.g., Table 1, columns 3 and 5) report the total amount of modified taxable income or tax generated on the returns of taxpayers included in each of the (mutually exclusive) marginal rate classifications. The "at marginal rate" computations (e.g., Table 1, columns 4 and 6) report the specific amounts of modified taxable income taxed and the tax generated at the marginal rate shown, for all returns in each of these marginal rate classifications. For example, consider returns with the "joint returns and returns of surviving spouses" filing status in the "33 percent" marginal rate classification. The total modified taxable income and the total tax generated for the 1,966,324 returns in this classification was \$219.2 billion (Table 1, column 12) and \$56.3 billion (Table 1, column 14), respectively. Approximately \$65.0 billion (Table 1, column 13) of the \$219.2 billion total of modified taxable income was subject to tax at the "33 percent" marginal tax rate. This \$65.0 billion of modified taxable income generated \$21.5 billion (Table 1, column 15) of tax. In sum, for these returns, total modified taxable income was \$219.2 billion, of which \$65.0 billion was

Individual Tax Returns Percentage

Modified Taxable Income Percentage

Income Tax Generated Percentage

†For 1990, the tax rate schedule provided only two basic rates: 15 percent and 28 percent. However, taxable income between certain amounts was taxed at a 33 percent effective rate. The purpose of this temporary rate was to phase out the benefits of the lower 15 percent tax rate and the deduction for personal exemptions for taxpayers and dependents. At the point where these benefits were completely phased out, the marginal rate returned to 28 percent, and the average tax rate on taxable income plus the phased-out personal exemptions was equal to 28 percent.

NOTE: Returns in the "Form 8615" and "Form 8814" categories were included in the calculation of the percentages, but are not shown separately. These two categories accounted for less than 0.05 percent of the returns, 0.07 percent of the "modified" taxable income, and 0.09 percent of the income tax generated. Therefore, detail may not add to totals.

Individual Income Tax Rates and Tax Shares, 1990

subject to tax at the top marginal tax rate (for this classification) of 33 percent. About \$21.5 billion of the total \$56.3 billion in tax was generated by the 33 percent tax rate with the remainder generated by the lower (15 and 28 percent) tax rates.

Statistics on the tax generated, in total and at each marginal rate, for returns with modified taxable income are provided in Table 2. Returns are classified in this table by size of AGI rather than by the marginal rate classifications used in Table 1. The tax generated at each marginal tax rate was computed based on the modified taxable income for each individual return. For example, the 12.2 million returns included in the "\$30,000 under \$40,000" AGI-size classification showed total modified taxable income of \$280.6 billion and total tax generated of \$45.8 billion. Of the \$280.6 billion of modified taxable income, nearly \$252.4 billion was taxed at 15 percent, approximately \$28.0 billion was taxed 28 percent, and the remainder was comprised of tax related to Form 8814 or Form 8615. Approximately \$37.9 billion of the total tax generated of \$45.8 billion was generated at the 15 percent rate, \$7.9 billion was generated at the 28 percent rate, and the remainder was generated from income reported on Form 8814 or Form 8615. It should be noted that due to rounding differences, the sum of the tax generated at each rate (the sum of columns 7, 10, 13, 16, 19, and 22) may not equal the tax generated at all rates (column 4).

Statistics on the income and tax generated at each marginal rate (as in Table 2, columns 5 through 22) by filing status, instead of AGI-size, for returns with modified taxable income are presented in Table 3. In this table for example, approximately 8.7 million returns of the 39.6 million returns filed by single persons had some income taxed at the 28 percent tax rate. For these returns, the total modified taxable income subject to this rate was \$92.1 billion and the tax generated at the 28 percent rate was \$25.8 billion.

Components of Total Income Tax

Regular Tax

The marginal tax rate statistics presented in Table 1 include tax amounts for "tax generated" and "income tax after credits." The average tax rate statistics presented in Figures C and D (and in Tables 4 through 7) include an additional measure of tax, "total income tax." Total income tax is simply "income tax after credits" plus the "alternative minimum tax."

The relationship among the different tax measures used in this article, including a reconciliation of the total dollar amounts, is shown in Figure H. As shown in Figure H and also in column 5 of Table 1, the tax generated by applying

the tax rates to modified taxable income (using either the tax rate schedules or tax tables) was approximately \$452.1 billion for 1990. For most taxpayers, tax generated was equal to income tax before credits. However, for some taxpayers income tax before credits also included taxes from special computations applicable to accumulation distributions of trusts and lump-sum distributions from qualified retirement plans (when the special 5- or 10-year averaging method was used) [17]. (Since "tax generated" only shows the "regular" income tax generated, it differs from "income tax before credits.") Tax generated and tax before credits are before subtraction of the earned income credit. The earned income credit is reported in Figure H to the extent that its application did not reduce regular income tax below zero. The portion of the earned income credit used to reduce other taxes reported on the individual income tax return and the refundable portion of the credit is excluded [18]. Income tax after credits, shown in Figure H and column 7 of Table 1, amounted to \$446.3 billion. "Total income tax" of \$447.1 billion, also reported in Figure C as well as in Tables 4 through 7, is the sum of income tax after credits and the alternative minimum tax [19].

Alternative Minimum Tax

The "alternative minimum tax" or AMT provisions were originally enacted as part of the Revenue Act of 1978 (and have been subsequently modified) to help to ensure that

Individual Income Tax Rates and Tax Shares, 1990

taxpayers do not use provisions of the tax code, meant primarily to stimulate economic activity, to generate substantial "economic income" without incurring some "minimum" level of tax. Individual taxpayers determined their AMT on Form 6251, *Alternative Minimum Tax for Individuals*. As shown in Figure I, the calculation of the AMT for 1990 began with taxable income. Then, certain items that were otherwise deductible for ordinary income tax purposes were added-back to taxable income to arrive at "alternative minimum taxable income" or AMTI, the tax base used to compute the alternative minimum tax.

The items added-back generally restrict the use of certain accounting methods and disallow or limit certain deductions and exclusions. The "adjustments" (i.e., amounts due to a change, for AMT purposes, in the computation of a deduction for regular taxation) and "tax preferences" (i.e., amounts representing all or a portion of the deductions or exclusions used to compute regular tax that were disallowed for AMT purposes) are shown in Figure I. In addition, the "net operating loss deduction," which also may have "tax preference" and "adjustment" items in its computation, was recomputed to adjust for these items and reported in the AMTI calculation as the "alternative tax net operating loss deduction." Essentially, the net difference between the net operating loss deductions calculated for regular tax purposes and AMT purposes affected the size of AMTI.

For 1990, the AMTI was reduced by an exemption, subject to phase-out at higher income levels, that depended on the filing status of the individual. The AMTI exemption for single filers (and heads of household) was \$30,000; for joint filers, \$40,000; and, for married persons filing separately, \$20,000. The exemption was reduced (but not below zero) by 25 percent of the amount by which AMTI exceeded threshold levels of \$112,500 for single filers (and heads of household), \$150,000 for joint filers, and \$75,000 for married persons filing separately. The exemption was generally completely phased-out for taxpayers whose status was single, married filing jointly, and married filing separately, at \$232,500, \$310,000, and \$155,000 of AMTI, respectively.

After reduction by the exemption, the remaining AMTI was subject to tax at a 21 percent tax rate. This tax, reduced by the alternative minimum tax foreign tax credit, was equal to the "tentative minimum tax." Tentative minimum tax was then reduced by the regular tax before credits (including additional taxes from accumulation distributions of trusts or lump-sum distributions from qualified retirement plans and reduced by the foreign tax credit for regular tax purposes) to determine the alternative minimum tax or AMT. Dependents under the age of 14, with investment income over \$1,000, who filed their

own return were subject to special rules for AMT purposes. Essentially the rules required that these dependents pay the same amount of AMT that their parents would have paid had the parents included the dependent's income on their own return [20].

Statistics, by size of AGI, on the total adjustments, tax preferences, and alternative minimum tax reported by taxpayers showing an AMT liability on their returns are presented in Figure J. For 1990, an estimated 132,096 taxpayers reported an AMT liability of \$830.3 million, based on total "adjustments" of \$8,024.5 million, and "tax preferences" of \$1,432.5 million.

Income and Tax Shares

Historical statistics on income and tax by cumulative percentiles (based on numbers of returns) are presented in Tables 4 through 7. Distributions of AGI, as defined for each year, and tax by descending and ascending cumulative percentiles of returns are presented in Tables 4 and 5. These tables are useful for making comparisons across cumulative percentile classes within each year, among years within the ERTA81 period (i.e., Tax Years 1982 through 1986), and among years within the post-TRA86 period (i.e., Tax Years 1987 through 1990). Tables 4 and 5 are not as useful for comparisons between pre- and post-TRA86 years because of the redefinition of AGI under TRA86 so Tables 6 and 7, which are based on a consistent definition of income (i.e., using the 1979 Income Concept), are included to facilitate such comparisons.

Because the statistics in Tables 4 and 5 are based on returns with positive amounts of AGI, while the statistics in Tables 6 and 7 are based on all returns filed, the data in the two pairs of tables are not completely comparable. Tables 4 and 6 are based on percentiles of returns cumulated downward from the highest income returns. The data are shown for the top 1, 5, 10, 25, and 50 percent of returns. In contrast, Tables 5 and 7 are based on returns cumulated upwards for the lowest income returns. Data are shown for the bottom 50, 75, 90, 95, and 99 percent of all returns.

As an example of how to use these statistics, consider the data in Table 4 for the top 10 percent of returns based on AGI-size (reported in column 4). For 1990, there were 11,281,226 returns classified in the top 10 percentiles based on AGI. The AGI and total income tax reported on these returns was approximately \$1,338.0 billion and \$247.5 billion, respectively. The amount of AGI needed for inclusion in this 10th percentile group (i.e., the AGI floor) was \$60,287 (\$46,126 in constant dollars) and the average tax rate was 18.50 percent. Returns in this percentile group reported 38.77 percent of the total AGI and 55.36 percent of the total income tax.

Individual Income Tax Rates and Tax Shares, 1990

Figure 1

Calculation of Alternative Minimum Taxable Income (AMTI), Tax Year 1990

Taxable Income

PLUS: Net operating loss deduction

PLUS: Adjustments

- Standard deduction
- Personal exemptions
- The lesser of deductible medical and dental expenses or 2.5 percent of adjusted gross income
- Miscellaneous itemized deductions subject to the 2-percent-of-adjusted gross income limitation
- Refunds of State and local income, real estate, and foreign taxes previously deducted (negative)
- Deductions for personal interest
- Deductions for State and local income, real estate, and foreign taxes
- Other interest adjustments ¹
- Excess of depreciation on property placed in service after 1986 over less liberal methods allowed for alternative minimum tax purposes (straight-line or 150-percent declining balance method, depending on the type of property)
- Excess of circulation and research and experimental expenditures paid or incurred after 1986 over allowable amortization had the expenditures been capitalized (the result could be negative)
- Excess of mining exploration and development costs paid or incurred after 1986 over allowable amortization had costs been expenditures been (the result could be negative)
- Deferred income from long-term contracts entered into after February 28, 1986, with certain exceptions and limitations (the result could be negative)
- Excess of rapid amortization of pollution control facilities placed in service after 1986 over otherwise allowable depreciation (the result could be negative)
- Adjustment from disallowing the installment sales method of accounting for sales of inventory and stock in trade after March 1, 1986, with certain exceptions (the result could be negative)
- Adjustment of gain or loss on property disposed of after 1987, the basis of which was affected by accelerated depreciation or rapid amortization and which was reduced for alternative minimum tax purposes; and on incentive stock options which were exercised after 1987 (the amount that the value of the option when exercised exceeded the price paid by the taxpayer; the result could be negative)
- Adjustment for refigured loss from activities in which allowable losses from partnerships or S Corporations were limited by "at-risk" and other rules, taking into account alternative minimum tax adjustments and preference items (the result could be negative)
- Adjustment for refigured tax shelter farm losses, taking into account alternative minimum tax adjustments and preference items
- Passive activity loss allowed for regular tax purposes for activities acquired before October 23, 1986, taking into account alternative minimum tax adjustments and preference items
- Difference between income distributions to beneficiaries of estates and trusts for regular tax purposes and the amounts refigured for alternative minimum tax purposes

Individual Income Tax Rates and Tax Shares, 1990

Figure I

Calculation of Alternative Minimum Taxable Income (AMTI), Tax Year 1990—Continued

PLUS: Tax Preference Items

- Excess of deduction for charitable contributions of appreciated property over the basis of the property
- Tax-exempt interest from private activity bonds issued after August 7, 1986
- Excess of percentage depletion deduction for mineral reserves over their adjusted basis
- Excess of accelerated depreciation on real property placed in service before 1987 over straight-line depreciation as refigured for alternative minimum tax purposes
- Excess of accelerated depreciation on leased property placed in service before 1987 over straight-line depreciation as refigured for alternative minimum tax purposes
- Excess of rapid amortization on pollution control facilities placed in service before 1987 over allowable depreciation
- Amount by which the excess of intangible drilling costs deducted currently over allowable amortization (if these costs had been capitalized) was more than 65 percent of the taxpayer's "net income" from oil, mineral and geothermal properties, but with exceptions

MINUS: Alternative tax net operating loss deduction

EQUALS: Alternative minimum taxable income

¹ Includes interest attributable to the amount in excess of the remaining balance of a mortgage loan, when that loan had been refinanced for an amount greater than the remaining balance, and when that excess amount was not used for home improvements. Also includes the difference between the deduction for "investment interest expense" for regular tax purposes and the amount refigured for alternative minimum tax purposes.

NOTE: Detail may not add to totals because of rounding.

The estimates in Tables 4 through 7 were not derived from an actual ranking of the returns in the *Statistics of Income* sample, but were estimated instead, using a mathematical technique called "osculatory interpolation," applied to tabulations of aggregated data [21]. This technique is used to estimate the distribution of returns and amounts within each AGI-size class or within each size class under the 1979 Income Concept by percentile.

Explanation of Selected Terms

Brief explanations of the major tax concepts discussed in this article are given below. For more extensive definitions, see *Statistics of Income—1990, Individual Income Tax Returns*:

Adjusted Gross Income.—Adjusted gross income (AGI) is equal to "total income" less "statutory adjustments" (primarily business, investment, or employee-related

Individual Income Tax Rates and Tax Shares, 1990

deductions, such as contributions to a Keogh self-employed retirement plan or an Individual Retirement Arrangement, and self-employed health insurance deductions). Total income includes, for example, salaries and wages, taxable interest, dividends, alimony, and the net amounts from business income, rents and royalties, and sales of capital and other assets. See also footnote 3, at the end of this article.

Marginal Tax Rate.—The marginal tax rate for a return is defined as the rate at which the last dollar of taxable income is taxed. For purposes of this article, the marginal tax rate is defined as follows: (1) if a return showed an amount of taxable income below or equal to the maximum amount to which the 33 percent tax rate was applied, then the marginal tax rate of the return was the highest rate at which any amount of taxable income reported on the return was taxed; or (2) if a return had an amount of taxable income in excess of the amount to which the 33 percent tax rate applied, then the return was defined as having a 28 percent marginal tax rate. Returns of dependents with a Form 8615 attached are shown separately when the use of this form resulted in the taxation of the dependent's income as if it were that of the parents. Returns of parents choosing to report the interest and dividend income of their dependents under age 14 on their own (i.e., the parents') return using Form 8814 are also shown separately when the child's income generated the only tax liability on the parent's return. For purposes of this article, the alternative minimum tax and income tax credits, such as the earned income credit, were not considered in determining the marginal tax rates.

Modified Taxable Income.—Each year, a small number of returns for prior tax years are filed during the same calendar year in which the tax returns for the current tax year are being selected for *Statistics of Income*. These returns act as proxies for returns for the current tax year that will be filed during a later calendar year. The tax on these returns is based on a previous year's tax law (which may reflect different tax rates and income concepts). For purposes of the statistics, taxable income on these returns is adjusted to equal an amount necessary to generate the tax actually shown on the return using current-year rates ("modified taxable income" in the statistics).

Taxable Income.—Taxable income is AGI less the sum of personal exemption amounts and either the standard deduction for non-itemizers or total itemized deductions.

Taxable Returns.—A return is classified as "taxable" based on the presence of "total income tax" (the sum of income tax after credits and the alternative minimum tax). The following additional taxes were not taken into account for this purpose: tax from recomputing prior-year

investment or low-income housing credits, penalty taxes on Individual Retirement Arrangements, section 72 penalty taxes (for excess benefits from a qualified pension plan), "golden parachute" payments (made to key employees as compensation under certain circumstances), self-employment or Railroad Retirement Tax Act (RRTA) taxes, and uncollected employee social security tax on tips.

Tax Generated.—The tax generated was the tax calculated from either the tax rate schedules or the look-up tax tables on modified taxable income. It does not include the alternative minimum tax or the effect of tax credits. For most returns (those without the special taxes on lump-sum distributions from qualified retirement plans or on accumulation distributions of trusts), tax generated equaled "income tax before credits."

Total Income Tax.—Total income tax was the sum of income tax after credits and the alternative minimum tax.

Data Sources and Limitations

The statistics for Tax Year 1990 are based on a stratified probability sample of 104,505 individual income tax returns (Forms 1040, 1040A, and 1040EZ) selected from a population of 114,484,108 returns filed with the Internal Revenue Service in 1991. Returns in the sample were stratified based on the larger of "total income" or "total loss" amounts (adjusted gross income before subtraction of statutory adjustments), the size of business plus farm receipts, and the presence or absence of the following tax forms: Form 2555, *Foreign Earned Income*; Form 1116, *Computation of Foreign Tax Credit - Individual, Fiduciary, or Nonresident Alien Individual*; Schedule C, *Profit (or Loss) from Business or Profession*; Schedule F, *Farm Income and Expenses*; and Form 4835, *Farm Rental Income and Expenses*. Depending on the sampling class, returns were selected at rates ranging from 0.02 percent (for the more numerous, smaller-sized, homogeneous returns) to 100 percent (for the relatively few returns with large income amounts or unusual characteristics).

Because the statistics are based on a sample of returns filed, they are subject to sampling error. To properly use the statistical data provided, the magnitude of the potential sampling error must be known. (For information about the samples used for tax years other than 1990, referred to in the statistics, for example, in Tables 4 through 7, see the *Statistics of Income* reports for these years.) Coefficients of variation (CV's) are used to measure the magnitude of the potential sampling error. Approximate CV's for 1990 frequency estimates are presented in Figure K. The CV's shown are intended only as a general indication of the reliability of the data. The reliability of estimates based on samples, and the use of CV's for evaluating the precision

Individual Income Tax Rates and Tax Shares, 1990

of estimates based on samples, are discussed in the methodological appendix at the back of this issue of the *Bulletin*.

Notes and References

- [1] For further information on the Tax Reform Act of 1986, see U.S. Congress, Joint Committee on Taxation, *General Explanation of the Tax Reform Act of 1986* (H.R. 3838, 99th Congress, Public Law 99-514), May 4, 1987.
- [2] Taxpayers fall into one of five filing statuses: single, married filing jointly, married filing separately, head of household, and qualifying widow or widower. Being age 65 or older or being legally blind affects both the filing requirements and the amount of the standard deduction. For more information on the general filing requirements for 1990, see *Statistics of Income—1990, Individual Income Tax Returns* or U.S. Department of the Treasury, Internal Revenue Service, *Your Federal Income Tax—Publication 17 (1990)*.
- [3] The definition of gross income is slightly different from the Form 1040, *U.S. Individual Income Tax Return*, concept of “total income,” which is a component of the adjusted gross income (AGI) calculation on the Form 1040. Total income, used in the definition of AGI in the *Explanation of Selected Terms*, includes net amounts rather than gross amounts from items such as business income and rents and royalties, for example.
- [4] Beginning with Tax Year 1991, the 33 percent rate was eliminated by the Revenue Reconciliation Act of 1990 in favor of a new 31 percent tax bracket, a phase-out of personal exemption amounts for taxpayers with income above certain thresholds, and a reduction in the total itemized deductions allowed

taxpayers with adjusted gross income above certain thresholds.

- [5] For example, assume a taxpayer filing as “married filing separately” who reported \$39,250 of taxable income. Using the tax rate schedules the amount of tax would have been \$8,883.25 but using the tax tables the amount of tax would have been \$8,892; a difference of \$8.75.
- [6] Income from rental real estate activity was generally classified as passive source income. However, the Tax Reform Act of 1986 made an exception to the general passive loss rules for rental real estate activities. For taxpayers with modified adjusted gross income of \$100,000 or less, up to \$25,000 in rental real estate losses was allowed to offset non-passive income. (For married taxpayers filing separately and living *apart* for the entire year, the income limit was reduced to \$50,000 and the losses allowed reduced to \$12,500. Married taxpayers filing separately and living *together* for any part of the year were not eligible for this exception.) For taxpayers with income in excess of \$100,000, the \$25,000 exception was reduced by 50 percent of the income in excess of \$100,000; this effectively eliminated the \$25,000 exception for taxpayers with incomes of \$150,000 or more. All rental real estate losses in excess of the exception amount were subject to the same limitation on deductibility as other passive losses.
- [7] To qualify for this interest exclusion the following conditions must have been met: (1) the bonds must have been issued in the name of the taxpayer (or, if married, in the names of the taxpayer and spouse), and the taxpayer must have been age 24 or older before the bonds were issued, (2) the taxpayer must have paid “qualified” higher education expenses during 1990 for himself (or herself), a spouse, or a dependent, and (3) the taxpayer’s filing status must have been single, married filing jointly, head of household, or qualifying widow(er) with dependent child.
- [8] For 1990, the maximum earned income credit allowed increased to \$953 for qualified individuals whose “earned income” and AGI were less than \$20,264. The maximum earned income credit for 1989 was \$910 for qualified individuals with less than \$19,340 in AGI and earned income. The individual personal exemption increased from \$2,000 for 1989 to \$2,050 for 1990. The standard

Individual Income Tax Rates and Tax Shares, 1990

deduction increased from \$3,100 to \$3,250 for single taxpayers, from \$5,200 to \$5,450 for married persons filing joint returns, from \$2,600 to \$2,725 for married persons filing separately, and from \$4,550 to \$4,750 for heads of households.

- [9] For 1990, dependent children under age 14 were required to file an income tax return if their "gross income" included "unearned income" and exceeded \$500. In contrast, dependent children with only "earned income" (e.g., from salaries and wages) were required to file only if their gross income was more than \$3,250.
- [10] Rules governing which parent could make the election to include the child's income via Form 8814 are illustrated in U.S. Department of the Treasury, Internal Revenue Service, *Your Federal Income Tax—Publication 17 (1990)*.
- [11] For example, if the parent elected to use Form 8814 to report the child's income, deductions which could have been taken on the child's return (if a return had been filed for the child) that were not deductible on the parent's return included: a) the additional \$800 standard deduction if the child were blind; b) the deduction for the penalty on early withdrawal of the child's savings; and c) the child's itemized deductions. In addition, because the parent's AGI increased by the amount of the child's income, certain items on the parent's return that also could have been affected included: a) the deduction for contributions to an Individual Retirement Arrangement (IRA); b) itemized deductions for medical expenses, casualty and theft losses, and certain miscellaneous expenses; and c) the credit for child and dependent care expenses. Conversely, the AGI-limits on the deductions for charitable contributions could have increased resulting in a tax savings to the parent.
- [12] The Alaska Permanent Fund was created to return some of the royalties generated by the Alaska pipeline to Alaskan residents. Alaska Permanent Fund dividends are the distributions from this fund to these residents. "Backup withholding" is a withholding tax system in which the payer of interest, dividend or bond redemption income, or of income from the sale of securities, withholds tax at a 20 percent rate if the payer has not been provided with a correct taxpayer identification number or the payee has not certified to the payer that the payee is not subject to such withholding. Backup withhold
- ing also may occur if the Internal Revenue Service requests that the payer begin such withholding because the payee has persistently failed to properly report and pay taxes on interest or dividends.
- [13] For more details on the income computation under the 1979 Income Concept for 1990 and earlier years, see *Statistics of Income—Individual Income Tax Returns*, for the year concerned.
- [14] Due to the phase-out of personal exemptions for those high-income taxpayers with taxable incomes in excess of the upper limits shown in Figure A, "modified taxable income" for these taxpayers included taxable income plus some or all of the exemption amount.
- [15] For additional discussion of the measurement of average and marginal tax rates, see, for example, Bakija, Jon, and Steuerle, Eugene, "Individual Income Taxation Since 1948," *National Tax Journal*, Volume 44, Number 4, 1991; Fullerton, Don, "The Use of Effective Tax Rates in Tax Policy," *National Tax Journal*, Volume 39, Number 3, 1986; Spooner, Gillian M., "Effective Tax Rates From Financial Statements," *National Tax Journal*, Volume 39, Number 3, 1986; Bradford, David, and Stuart, Charles, "Issues in the Measurement and Interpretation of Effective Tax Rates," *National Tax Journal*, Volume 39, Number 3, 1986; and Fullerton, Don, "Which Effective Tax Rate?" *National Tax Journal*, Volume 37, Number 1, 1984.
- [16] This treatment is consistent with the analytical uses of marginal rates in testing hypotheses about the behavior of economic agents when faced with particular marginal rates. To the extent that the taxpayer can correctly predict that income will be large enough to exceed the top 33 percent bracket, the decision to undertake an economic opportunity is affected by the 28 percent rate rather than the 33 percent rate.
- [17] The income amounts on which these special computations were based were not reflected in current-year taxable income.
- [18] The total earned income credit for 1990 was \$7.5 billion. This included the amount used to reduce the regular income tax to zero (\$1.6 billion), the amount used to reduce other taxes (including the alternative minimum tax, self-employment social security tax, tax from recapture of certain prior-year tax credits,

Individual Income Tax Rates and Tax Shares, 1990

social security tax on certain tip income, and tax applicable to an Individual Retirement Arrangement) reported on individual income tax returns to zero (\$0.7 billion), and the excess which was refundable (\$5.3 billion).

- [19] Total income tax does not include certain other taxes reported on individual income tax returns, such as self-employment (social security) tax, social security tax on certain tip income, tax from recapture of prior-year investment or low-income housing credits, and tax applicable to early withdrawals from an Individual Retirement Arrangement (IRA). These taxes were included in the statistics for "total tax liability." For Tax Year 1990, total tax liability was equal to \$468.6 billion and was reported on 92.1 million returns. These taxes were reported in

Statistics of Income—1990, Individual Income Tax Returns.

- [20] For 1990, dependents filing their own returns were limited to an exemption of \$1,000 plus their "earned income." The dependent's AMT could be reduced if the parent had regular tax greater than the child's own tentative minimum tax, or if any other dependent under age 14 of the same parents had regular tax greater than this dependent's own tentative minimum tax.
- [21] For an explanation of the osculatory interpolation technique, see Oh, H. Lock, "Osculatory Interpolation with a Monotonicity Constraint," *1977 Proceedings of the American Statistical Association, Section on Statistical Computing*, 1978.

** Data are combined with data in an adjacent rate class to avoid disclosure of information for specific taxpayers.

¹ Form 8814 was filed for a dependent child under age 14 for whom the parents made an election to report the child's investment income (if it was from interest or dividends totaling between \$500 and \$5,000) on the parents' income tax return. This rate classification is comprised of those returns with a tax liability only from the dependents' income and thus the overall total adjusted gross income for these returns is negative.

² Percentage not computed.

³ For 1990, the tax rate schedule provided only two basic rates: 15 percent and 28 percent. However, taxable income between certain amounts was subject to an additional 5 percent tax, creating an effective "temporary" 33 percent marginal rate. The purpose of this temporary rate was to phase out the benefits of the lower 15 percent tax rate and the deduction for personal exemptions for taxpayers and dependents. At the point where these benefits were completely phased out, the marginal rate returned to 28 percent, and the average tax rate on taxable income plus the phased-out personal exemptions was equal to 28 percent.

⁴ Form 8615 was filed for a child under age 14 to report the child's investment income in excess of \$1,000.

NOTES: Detail may not add to totals because of rounding. Data in Table 1 reflect revisions to data in Table 3.4, Statistics of Income, 1990 -- Individual Income Tax Returns.

Individual Income Tax Rates and Tax Shares, 1990

* Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ Form 8814 was filed for a dependent child under age 14 for whom the parents made an election to report the child's investment income (if it was from interest or dividends totaling between \$500 and \$5,000) on the parents' income tax return.

² For 1990, the tax rate schedules provided only two basic rates: 15 percent and 28 percent. However, taxable income over certain levels was subject to an additional 5 percent tax, creating an effective "temporary" 33 percent marginal tax rate. The purpose behind this was to phase out the benefit of the 15 percent rate and the benefit of the deduction for personal exemptions for taxpayers and dependents. After these benefits were phased out, the marginal rate reverted to 28 percent; the average tax rate on taxable income plus the phased-out exemptions amounts was equal to 28 percent.

³ Form 8615 was filed for a child under age 14 to report the child's investment income in excess of \$1,000.

NOTE: Detail may not add to totals because of rounding.

N/A-- not applicable.

¹ The number of returns with negative adjusted gross income, i.e., returns with an adjusted gross deficit, and the corresponding amounts for adjusted gross deficit, were excluded from Table 4 and 5. By excluding deficit returns, alternative minimum tax reported on some of these returns was also excluded. For Tax Year 1990, there were 5,329 returns with no adjusted gross income that reported alternative minimum tax totaling \$41.0 million.

² Constant dollar estimates were based on the Consumer Price Index (CPI-U 1982-84=100) computed and reported by the U.S. Department of Labor, Bureau of Labor Statistics in CPI Detailed Report, July 1993.

³ See footnote 1.

⁴ Total income tax is the sum of income tax after credits and alternative minimum tax reported on returns that showed a positive amount for adjusted gross income. Therefore, total income tax excludes alternative minimum tax reported on some returns with a negative amount for adjusted gross income. See also footnote 1.

⁵ The average tax rate was computed by dividing total income tax (see footnote 4) by (positive) adjusted gross income.

⁶ The numbers of returns by ascending cumulative percentiles for Tax Years 1980-1989 in columns 2-6 represent corrections to the numbers shown in the similar table (Table 6) on page 73 of the Spring 1993 Statistics of Income Bulletin. (The numbers in Table 5, page 71, of the Spring 1993 Bulletin table were inadvertently shown as being the same as those by descending cumulative percentiles.) The corrections do not apply to the dollar amounts or to the percentages presented either in this issue of the Bulletin or in the Spring 1993 issue.

N/A--Not applicable.

¹ The number of returns in columns 2 through 6, Tables 6 and 7, were processed in thousands and, therefore, reflect differences due to rounding.

² See footnote 2 at the end of Table 5.

³ Total income tax is the sum of income tax after credits and the alternative minimum tax.

⁴ Average tax rate was computed by dividing total income tax (see footnote 3) by income, using the 1979 income concept (see text and Figure B).

NOTE: Detail may not add to totals because of rounding.

Revision to the Statistics of Income--1990, Individual Income Tax Returns

The following corrections are being published in the *Statistics of Income Bulletin* as a convenience to users of *Statistics of Income—Individual Income Tax Returns*, who are also subscribers to the *Bulletin*. *Statistics of Income—1992, Individual Income Tax Returns*, Publication 1304, in which the corrections would normally appear, will be published by the U.S. Government Printing Office at a later date.

On pages 16-18 of *Statistics of Income—1990, Individual Income Tax Returns*:

Table 1.1, which presents summary data on income and tax, classified by cumulative adjusted gross income size classes, is reproduced in full in order to correct the amounts shown in column 16, pages 16-18, for "Total income tax"; the percentages in column 15, page 18, for "Income tax after credits" in that part of the table which presents data cumulated downward from the largest size of adjusted gross income; and the description on page 18 of that same part of the table, which is incorrectly described as presenting data "cumulated from the smallest size of adjusted gross income" instead of "cumulated from the largest size of adjusted gross income." ("Total income tax" is the sum of "income tax after credits," column 14, plus the "alternative minimum tax.")

On page 24 of *Statistics of Income—1990, Individual Income Tax Returns*:

In Table 1.4, which presents data on sources of income, statutory adjustments, and tax items, classified by size of adjusted gross income, the heading above columns 5-6 should read "Taxable interest" instead of "Taxable income."

Table 1.1-Selected Income and Tax Items, by Size and Accumulated Size of Adjusted Gross Income

(All figures are estimates based on samples-money amounts are in thousands of dollars)

Tax-Based Research and Data on Nonprofit Organizations, 1975-1990

by Daniel F. Skelly

Tax-exempt organizations represent a significant and growing sector within the U.S. economy [1]. For 1990, the revenues and expenses of tax-exempt organizations each represented 10 percent of the gross domestic product (GDP), up from less than 6 percent for 1975 (Figure A). Between 1975 and 1990, assets of tax-exempt organizations increased in real terms by over 150 percent, while revenues increased by over 227 percent. This is in comparison to a growth in real GDP of 52 percent over the same period.

For 1990, there were approximately 1.4 million tax-exempt, nonprofit organizations in the "independent sector." Of these, 350,000 were churches, synagogues and other religious organizations that, although tax-exempt, were not required to register or file tax returns with the Internal Revenue Service (IRS). Of the approximately 1 million organizations registered as tax-exempt with the IRS, almost 455,000 were "nonprofit charitable organizations," exempt under Internal Revenue Code section 501(c)(3), that engaged in educational, research, scientific, religious, philanthropic, and other charitable activities [2]. The remaining organizations encompassed a vast array of voluntary and philanthropic institutions that provide a wide variety of services to the American population. These include, among others, civic leagues and social welfare organizations, business leagues, recreational and social clubs, fraternal and voluntary employees' beneficiary associations, and Federal credit unions.

Has the growth in the nonprofit sector been induced by cutbacks in Federal social programs? How has the mix of contributions received, program fees, investment income, and commercial income from unrelated activities fueled the growth in the sector? What types of organizations have exhibited the biggest growth rates and why? What role has the Government played in the growth? What policy decisions have contributed to the expansion of the sector? Tax policy issues like these can be addressed using data collected from Federal information and tax returns filed by tax-exempt organizations.

Daniel F. Skelly is currently Acting Director, Statistics of Income. This article was originally published in Voluntas, Volume 4, Number 4, International Journal of Voluntary and Non-Profit Organizations, Thematic Issue: The Not-For-Profit Sector in the National Accounts and Related Systems, Manchester University Press, Manchester, United Kingdom, 1993, and is reprinted here with permission of the National Academy of Sciences, Washington, DC. The article has been slightly edited and updated for republication in the Statistics of Income Bulletin.

Data from Federal information and tax returns of tax-exempt organizations are available from several sources [3]. First, the Statistics of Income (SOI) organization of the IRS, using sample data, conducts studies of tax-exempt, nonprofit organizations. Income statement, balance sheet, and other financial data, as well as a great amount of nonfinancial information, are collected in these SOI studies. The data are subject to comprehensive testing and correction procedures to ensure that they are of

From 1975 to 1990, the growth of tax-exempt organizations substantially exceeded the growth of the national economy.

high quality. Second, the IRS collects, for administrative purposes, selected data items from all tax-exempt organization returns filed. Only limited information (for example, total assets and total receipts) is available to the public from this

administrative file. These data are subject to limited testing; thus, taxpayer filing errors may not always be corrected. Finally, current information on tax-exempt organizations can be gathered from the actual returns filed. Copies of the publicly-disclosed tax and information returns can be obtained from the IRS district office where the organization is located or through public inspection at the organization itself.

The primary purposes of this article are to document the growth in the nonprofit sector relative to the economy as a whole and to describe ongoing SOI studies of nonprofit organizations [4]. Readers interested in the specific types of information on nonprofits available through SOI will appreciate the Products and Services section of this paper.

SOI Studies of Nonprofit Organizations

Beginning in the mid-1970's, SOI again began to collect information on nonprofit organizations, including periodic studies of private foundations and other tax-exempt organizations. Since 1982, studies of private foundations and nonprofit charitable organizations have been conducted annually (except for 1984) [5]. For 1988, the study of nonprofit charitable organizations was expanded to include organizations exempt under Code section 501(c)(4)-(9). An annual study of the "unrelated business income" of tax-exempt organizations was initiated in 1987. Together, these studies provide a basis for examining the growth in the nonprofit sector of the economy.

SOI data indicate that the growth of tax-exempt organizations from 1975 to 1990 substantially exceeded the growth of the national economy as a whole (Figure B). For example, while the real GDP grew by 51 percent in

¹ Preliminary.

² Estimated from other data included in the SOI study of nonprofit organizations.

³ Gross Domestic Product (GDP) data are from the Economic Report of the President, Table B-2, February 1994.

⁴ This number represents the sum of "Interest on savings and temporary cash investments" and "Dividends and interest from securities."

n.a.--Not available.

Tax-Based Research and Data on Nonprofit Organizations

the period from 1974 to 1990, the revenue of private foundations, adjusted for inflation, increased by 124 percent. The total revenue and total expenses of nonprofit charitable organizations, excluding private foundations, each grew by more than 225 percent from 1975 to 1990, while real GDP increased by 52 percent [6]. In current dollars, total revenue and expenses of all nonprofit charitable organizations, including private foundations, grew from less than 4 percent of GDP in 1975 to nearly 8 percent in 1990 (Figure C).

Nonprofit organizations tax-exempt under Internal Revenue Code section 501(c)

The first recent study of tax-exempt organizations conducted by SOI was for 1975 and included all section 501(c) organizations, charitable as well as other nonprofit organizations, but excluded private foundations. The most recent complete SOI financial data available for nonprofit charitable organizations are for 1989 [7]. The data base is a stratified probability sample of 11,400

organizations that includes all nonprofit charitable organizations with \$10 million or more in assets (6,900 organizations) and 4,500 organizations with less than \$10 million in assets. These data on nonprofit charitable organizations have also been classified by type of organization, including hospitals, educational institutions, and support organizations [8]. The 1989 data for Code section 501(c)(4)-(9) organizations consist of a sample of approximately 10,800 returns selected from a population of 97,300.

Administrative Data on Nonprofits

By any measure, nonprofit charitable organizations (excluding private foundations) receiving tax-exempt status under section 501(c)(3) are the largest group of tax-exempt organizations. Based on data for 1990 from IRS administrative files, returns filed by nonprofit charitable organizations represented 53 percent of the returns filed by all organizations tax-exempt under section 501(c) and

Figure C

Internal Revenue Code Section 501(c)(3) Organizations: Total Revenue and Total Expenses as Percentages of Gross Domestic Product, 1975-1990¹

¹Includes private foundations and nonprofit charitable organizations.

²1975 data for private foundations were estimated based on 1974.

³Preliminary.

Tax-Based Research and Data on Nonprofit Organizations

accounted for 66 percent of the total assets reported. Between 1975 and 1990, the number of nonprofit charitable organizations grew by 25 percent.

Over the 1975 to 1990 period, in real terms, total assets of nonprofit charitable organizations grew by 171 percent while total assets of business leagues, Code section 501(c)(6); State-chartered credit unions, section 501(c)(14); certain mutual insurance companies, section 501(c)(15); and war veterans organizations, section 501(c)(19), each grew by more than 140 percent. Total revenue for nonprofit charitable organizations grew by 275 percent over this period compared to real GDP growth of 52 percent.

Total revenue for all organizations exempt under section 501(c) (excluding private foundations) reached \$560 billion for 1990, with nonprofit charitable organizations accounting for 73 percent, while voluntary employees' beneficiary associations, section 501(c)(9), and civic leagues and social welfare organizations, section 501(c)(4), ranked second and third. Total investment income was \$33.5 billion, with \$22.6 billion coming from nonprofit charities. Ranking second were State-chartered credit unions with \$3.9 billion, followed by voluntary employees' beneficiary associations with \$2.1 billion.

Total assets for all tax-exempt organizations exceeded \$1 trillion (Figure D). Nonprofit charitable organizations held 66 percent of total assets, followed by State-chartered credit unions with 12 percent.

SOI Data on Nonprofits

More detailed information on exempt organizations is available from the SOI data files. Based on data from the 1989 SOI data file, program service revenue (fees collected to administer charitable programs) was the largest component of total nonprofit charitable organization revenue for 1989, accounting for nearly two-thirds of total revenue. Program service revenue includes a broad spectrum of revenue sources, such as hospital charges for patient care (whether paid by the patient or through third-party reimbursement); tuition, fees, and day-care charges at educational institutions; admissions to museums, concerts, and other performing arts events; educational workshop fees; charges for athletic programs and housing facilities at YMCA's; and payments received for insurance and retirement coverage by pension and annuity fund companies.

However, while program service fees were the major source of revenue for the large nonprofit charities, contributions (received directly from the public or indirectly through fundraising campaigns and Government grants) comprised the major portion of the revenues of the smaller charities. For 1989, contributions represented

about 50 percent (\$15.7 billion) of the total revenue (\$27.5 billion) of organizations with assets of less than \$1 million.

Using data from its nonprofit studies, SOI has recently been able to focus its attention on nonprofit hospitals, their financial performance, and how they compare to for-profit hospitals. Nonprofit hospitals and other health-care organizations hold over 30 percent of total nonprofit charitable organization assets and earn 45 percent of total revenue. While the nonprofit hospitals, as a group, hold over five times as much in assets as the for-profit hospitals, the assets of for-profit hospitals grew over three times as fast as those of nonprofit hospitals during the 1980's. Using data collected from IRS tax returns, along with supplementary data from the American Hospital Association and the National Center for Education Statistics, SOI has recently examined comparative financial indicators for nonprofit and for-profit hospitals, such as asset and revenue growth rates, operating margins, debt-to-equity ratios, and returns on equity. The results of the analysis show that the nonprofit hospitals earned higher operating margins, had notably lower debt-to-equity ratios, and earned similar returns on equity when compared to the for-profit hospitals. However, after accounting for the nonprofit advantage of tax-exempt bond financing, the for-profit hospitals earned higher "revised" operating margins and higher "revised" returns on equity than did the nonprofits. Figures E and F show hospital operating margins for the years 1987-1989.

Private foundations

The first SOI studies of information returns filed by private foundations were for 1974 and 1979. For 1982, an annual series was started. Included in the annual samples are the returns of all private foundations with total assets (book value) of \$10 million or more (almost 1,500 returns for 1990, the most recent year for which data are available) [9]. These 1,500 returns, representing only 4 percent of the foundation population, accounted for 82 percent of the total assets of all private foundations. The returns in the remainder of the sample were randomly selected at various rates, ranging from 5.9 percent to 15.4 percent, depending on the size of the book value of total assets. For 1990, private foundations held \$164.8 billion in assets and realized \$19.5 billion in revenues.

One of the striking characteristics of foundations is the significance of investment assets as a percentage of the fair market value of total assets (Figure G). For 1990, investment assets accounted for 94.8 percent of total assets; with investments in securities alone accounting for 76.6 percent of total assets. Of the 76.6 percent, investments in corporate stock represented 48.1 percent; investments in U.S. and State Government obligations represented 19.7 per-

¹ Revised operating margin equals total revenue minus total expenses (except interest expense), divided by total revenue.

² Small hospitals hold less than \$50 million in assets while large hospitals hold \$50 million or more.

cent; and investments in corporate bonds represented 8.7 percent.

Beginning with 1989 data, SOI again began collecting annual data on the charitable trusts included under Code section 4947(a)(1). These trusts have exclusively charitable interests, and, like foundations, file Form 990-PF. The trusts, which are presented separately from the foundations, represent only 6 percent of all Form 990-PF filers. For 1990, over 2,680 trusts held \$2.8 billion in total assets and realized \$270 million in total revenues.

Tax-exempt organizations' unrelated business income

In 1950, Congress imposed a tax on the income of tax-exempt organizations earned from a trade or business not substantially related to the organization's exempt purpose or function. The law's purpose was to restrict the potential for unfair competition between nonprofits and taxable for-profit businesses providing similar services. The Tax Reform Act of 1969 revised and expanded this tax on "unrelated business income." In more recent years, with Federal cutbacks in funding for social programs leading to increased fiscal pressure on exempt organizations, there has been an increased focus on the movement of exempt organizations into commercial activities and on the resulting impact of this movement on for-profit businesses.

SOI is currently collecting data on unrelated business income of tax-exempt organizations for Tax Years 1988 to 1990. Data are expected to be available by the fall of 1994.

Figure G

Percentage Distribution of Asset Components for Private Foundations, by Size of Fair Market Value of Total Assets, 1990

Tax-Based Research and Data on Nonprofit Organizations

Products and Services

Information on all of SOI's nonprofit studies are published in the quarterly *Statistics of Income Bulletin*. In addition, a *Compendium of Studies of Tax-Exempt Organizations: 1974-1987* was released by SOI [10,11]. This volume is comprised of articles published in the *Statistics of Income Bulletin*, the *Proceedings of the American Statistical Association*, and the *INDEPENDENT SECTOR's Spring Research Forum Working Papers*, along with facsimiles of tax forms and instructions and previously unpublished articles and tables. A second volume in SOI's tax-exempt compendium series, with updated articles on the tax-exempt sector, was published in the fall of 1993 [12]. These compendiums represent only a portion of the available statistical information that might be of value to interested users.

Copies of the microdata tapes for foundations and charitable organizations are available for purchase from Statistics of Income. Since the returns are open to public inspection, these tapes contain identifiable records. Since tax returns on the unrelated business income of organizations are not publicly disclosed, data from Form 990-T returns are not available on tape. Special tabulations can be prepared from all three sources on a reimbursable basis.

Conclusion

SOI is responding to rapid changes in the nonprofit sector with new programs for data collection and analysis. These can be classified as follows:

- *Programs to keep pace with growth and diversity in the nonprofit sector.* SOI is responding to the rapid growth and diversity of the nonprofit sector by working to improve the classification of tax-exempt organizations. This includes recoding all of the organizations registered with IRS, based on the National Taxonomy for Exempt Entities (NTEE) coding scheme. This will allow for better information about the various segments of the nonprofit sector, and will allow the IRS to identify groupings where there is a need to improve compliance through education efforts. In addition, SOI is helping with efforts to revise the Standard Industrial Classification (SIC) coding scheme to better reflect the activities of tax-exempt organizations.
- *Programs to compare for-profit and nonprofit organizations.* SOI is considering ways to expand the scope of its current statistical programs so that it would be possible to compare

for-profit and nonprofit institutions, such as hospitals, in more systematic ways. Current comparisons of nonprofit and for-profit hospitals are a first step in this direction.

- *Programs to study the commercial income of nonprofits.* SOI has efforts underway to associate unrelated (commercial) income and income related to the exempt function of organizations. In addition, there are plans to collate information on nonprofits with their for-profit subsidiaries. This would permit an examination of organizational structures composed of different business types, such as hospitals.

Notes and References

- [1] The term "tax-exempt organizations" applies to all organizations exempt from Federal income tax under Internal Revenue Code section 501(c). Tax-exempt status is accorded by the U.S. Government to organizations that engage in charitable, religious, and certain other nonprofit activities. The exemption from Federal income tax and the deduction from income allowed to individuals and businesses contributing to section 501(c)(3) organizations have been the major incentives Congress has provided to encourage these philanthropic activities.

Controlled Foreign Corporations, 1990

Data Release

For 1990, the 7,500 largest (in total assets) foreign corporations controlled by large (more than \$500 million in total assets) U.S. multinational corporations held nearly \$1.3 trillion in assets and reported receipts of over \$1.1 trillion. These amounts reflect increases from 1988 (the last year for which statistics are available) of over 30 percent in reported assets and receipts [1].

More than two-thirds of the largest 7,500 Controlled Foreign Corporations (CFC's) were in two industrial divisions, manufacturing, and finance, insurance, and real estate for 1990 (Table 1). However, over the last several years the number of top 7,500 CFC's in the manufacturing division has steadily declined, falling from 3,341 for 1986 to 2,962 for 1990, a decrease of over 11 percent. In spite of the decline, these 2,962 CFC's, nearly 40 percent of the largest 7,500, accounted for over half of the total \$88.7 billion of "current earnings and profits" (less deficit) before taxes reported by the largest CFC's for 1990. In contrast, the number of CFC's in finance, insurance, and real estate steadily increased over this same period, climbing from 1,911 for 1986 to 2,234 for 1990, an increase of nearly 17 percent. These 2,234 CFC's, nearly 30 percent of the largest 7,500, accounted for approximately 16 percent of the current earnings and profits before taxes. The number of CFC's in wholesale and retail trade and their percentage share of current earnings and profits before taxes remained fairly consistent across this same period. For 1990, approximately 15 percent of the largest 7,500 CFC's were wholesalers and retailers and these corporations accounted for slightly more than 16 percent of the current earnings and profits before taxes. The number of CFC's in the services division also increased during this period, growing from 519 for 1986 to 655 for 1990. This division accounted for 9 percent of the largest 7,500 CFC's and 3 percent of the current earnings and profits before taxes for 1990.

Over half of the receipts and current earnings and profits before taxes reported by CFC's within the manufacturing division were accounted for by three major industrial groups: motor vehicles and equipment, chemicals and allied products, and non-electrical machinery. However, the proportion of receipts and profits accounted for by each of these groups varied. Those in the motor vehicles and equipment group accounted for 20 percent of the total receipts of \$629.4 billion and 8 percent of the current earnings and profits before taxes of \$46.9 billion reported by all CFC's that were manufacturers, while those classified in chemicals and allied products accounted for 16

percent of the total receipts and 21 percent of the current earnings and profits before taxes. CFC's classified under non-electrical machinery reported 15 percent and 22 percent of the total receipts and current earnings and profits before taxes, respectively.

Sixty-six percent of the largest 7,500 CFC's were incorporated in Europe or Canada (Table 2). These CFC's accounted for 73 percent of the total assets, 75 percent of the total receipts, and 68 percent of current earnings and profits before taxes reported for the largest 7,500 CFC's. Collectively, 2,622 (35 percent) of the largest 7,500 CFC's were incorporated in just three countries: the United Kingdom, Canada, and West Germany. These corporations accounted for 47 percent of the total assets, 45 percent of the total receipts, and 35 percent of current earnings and profits before taxes.

The United Kingdom was the country of incorporation for 1,257, approximately 17 percent, of the 7,500 largest CFC's (Table 3). These CFC's were heavily concentrated in finance, insurance, and real estate; nearly 44 percent of the CFC's incorporated in the United Kingdom were classified in this industrial division. However, they accounted for only 15 percent of the \$189.8 billion in total receipts and 12 percent of the \$11.8 billion in current earnings and profits before taxes reported for all CFC's incorporated in the United Kingdom. In contrast, CFC's in the manufacturing division accounted for more than half of the total receipts and nearly half of the current earnings and profits before taxes, even though they represented only 31 percent of the CFC's incorporated in the United Kingdom.

CFC's incorporated in Canada and West Germany accounted for 11 percent and 7 percent of the largest 7,500 CFC's, respectively. In both countries, nearly half of the CFC's were in the manufacturing industrial division (374 of 819 CFC's in Canada and 264 of 546 CFC's in West Germany). In Canada, these manufacturing CFC's accounted for 63 percent of the \$174.3 billion in total receipts and 53 percent of the \$10.5 billion in current earnings and profits before taxes reported for all CFC's in that country. Even higher percentages of receipts and profits were attributable to manufacturing CFC's in West Germany. There, CFC's in manufacturing accounted for 71 percent of the \$134.4 billion in total receipts and 70 percent of the \$6.4 billion in current earnings and profits before taxes reported for all West German CFC's.

Data Sources and Limitations

The statistics are based on data collected from corporation income tax returns in the Form 1120 series and attached Form(s) 5471, *Information Return of U.S. Persons with Respect to Certain Foreign Corporations* for U.S.

This data release was written by Sarah E. Nutter, an economist with the Foreign Returns Analysis Section, under the direction of Chris Carson, Chief.

Controlled Foreign Corporations, 1990

corporations with accounting periods ending July 1990 through June 1991. These statistics report data for the largest (in terms of total assets) 7,500 foreign corporations controlled by U.S. corporations with total assets of \$500 million or more. Because the Internal Revenue Service regulations require a U.S. corporation to submit a Form 5471 for any CFC with an accounting period ending with or within the U.S. parent's accounting period, the CFC's accounting period may have ended as early as August 1989 or as late as June 1991. However, most CFC activity did occur in Calendar Year 1990. The 7,500 largest CFC's accounted for approximately 94 percent of the total assets, 90 percent of the total receipts, and 92 percent of the current earnings and profits before taxes reported by all active CFC's of these U.S. corporations. The amount of total assets for these 7,500 largest CFC's ranged from approximately \$17 million to nearly \$20 billion [2].

Several limitations must be kept in mind when making comparisons to prior-year statistics. First, changes in the composition of the largest 7,500 CFC's may have occurred. For example, it is very possible that certain foreign corporations that were among the largest 7,500 CFC's for 1988 may still exist, but not be among the largest 7,500 CFC's for 1990. Second, large CFC's tend to be engaged primarily in manufacturing or finance, insurance, and real estate. For 1990, approximately 30 percent and 21 percent of all active CFC's of U.S. corporations with \$500 million or more in assets were classified in manufacturing and in finance, insurance, and real estate, respectively. However, among the largest 7,500 CFC's, 40 percent were primarily engaged in manufacturing and 30 percent were classified in finance, insurance, and real estate. In contrast, the service and wholesale and retail trade divisions tend to be underrepresented in the largest 7,500 CFC's. Services and wholesale and retail trade accounted for 17 percent and 20 percent respectively, of all active CFC's controlled by U.S. parents with \$500 million or more in assets, but only 9 percent and 16 percent of the largest 7,500 CFC's. Third, CFC's were classified by industrial group based on their principal business activity reported on Form 5471. Thus, it is not possible to measure the extent of any secondary business activities. Finally, pre-1986 statistics also included small and inactive CFC's. Therefore, some caution should be used in comparing statistics for the largest 7,500 CFC's to previously published statistics for years prior to 1986.

Explanation of Selected Terms

Controlled Foreign Corporation.--Under Internal Revenue Code section 957, a foreign corporation is a "Controlled Foreign Corporation" if more than 50 percent of its

outstanding voting stock, or more than 50 percent of the value of all its outstanding stock is owned (directly, indirectly or constructively) by "U.S. shareholders" on any day during the foreign corporation's tax year. A "U.S. shareholder" for these purposes is defined as a U.S. person that owns 10 percent or more of the foreign corporation's total combined voting stock. (Ownership attribution rules apply here, and are discussed in Code section 958.) Apart from section 957 guidelines, a foreign corporation is "controlled," for purposes of these statistics, only if a single U.S. corporation satisfies either of the above 50 percent ownership requirements.

Country of Incorporation.--A CFC's country of incorporation was not necessarily the principal place where business was conducted. However, for 1990, less than 4 percent of the largest 7,500 CFC's reported a principal place of business other than their country of incorporation.

Current Earnings and Profits (Less Deficits) of Controlled Foreign Corporations.--The current portion of earnings and profits is the difference between beginning and end-of-year balances of accumulated earnings and profits available for distribution to the stockholders. Earnings and profits for tax purposes differs from both taxable income and income per books of account, but includes, for example, any tax-exempt income.

Distributions of Controlled Foreign Corporations.--The distributions of CFC's consisted primarily of dividends. Capital gain distributions and distributions paid out of capital (including capital stock, paid-in capital, and capital surplus) were generally not included.

OPEC Countries.--The members of the Organization of Petroleum Exporting Countries (OPEC) for 1990 were: Algeria, Ecuador, Gabon, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates, and Venezuela.

Subpart F Income.--For 1990, Subpart F of the Internal Revenue Code required certain U.S. shareholders of a Controlled Foreign Corporation to include in gross income the shareholder's ratable share of the CFC's: (1) Subpart F income, (2) increase in earnings invested in U.S. property, (3) previously excluded Subpart F income withdrawn from "qualified investments" in less developed countries and in "foreign base company" shipping operations, and (4) "factoring income." The Subpart F income of a CFC included: (1) certain insurance income, (2) "foreign base company" income, (3) international boycott participation income, (4) the sum of illegal bribes and other payments made to Government officials that would be unlawful under the Foreign Corrupt Practices Act of 1977, and (5) income derived from a country which is not recognized by the

Controlled Foreign Corporations, 1990

United States, with which the United States does not conduct or has severed diplomatic relations, which repeatedly provides support for acts of international terrorism, or, for tax years beginning after January 1, 1988, the Republic of South Africa [3]. The total amount (\$17.8 billion) reported for "Subpart F income" in Tables 1 through 3 is the shareholder's total pro rata share of includable income under the Subpart F rules. As such, the \$17.8 billion is subject to U.S. tax, and includes Subpart F income (as defined above) of \$13.5 billion, increases in earnings invested in U.S. property of \$4.3 billion, previously excluded Subpart F income of \$41.3 million, and factoring income of \$8.0 million.

Tax Haven.--Tax haven countries are characterized by income tax rates that are lower than U.S. rates. In addition, financial and commercial information is frequently kept confidential. For purposes of the statistics, the following countries were classified as tax havens for 1990: Belize, Costa Rica, Panama, Barbados, Cayman Islands, Turks and Caicos Islands, Leeward Islands, Netherlands Antilles, Windward Islands, Antigua and Barbuda, Aruba, Bahamas, Bermuda, Luxembourg, Netherlands, Austria, Gibraltar, Liechtenstein, Monaco, Switzerland, Liberia, Bahrain, Singapore, and Hong Kong.

Total Receipts.--Receipts data on Controlled Foreign Corporations for 1990 are not altogether comparable with 1988, the last year for which statistics are available. For 1990, total receipts, consistent with other Statistics of Income data on corporations, equals business receipts (gross receipts from sales and operations), plus income from investments. For 1988, total receipts, as such, were not tabulated; instead, the term "business receipts" was used to describe data based on the larger of business receipts (gross receipts from sales and operations) and "total income." The latter is a tax return concept used to describe business receipts less cost of sales and operations, i.e., "gross profit," plus income from investments.

Notes and References

[1] Statistics of Income (SOI) studies on Controlled Foreign Corporations have historically been con-

ducted every other year and, thus comparisons are made to 1988 data (see Latzy, John and Miller, Randy, "Controlled Foreign Corporations, 1988," *Statistics of Income Bulletin*, Fall 1992, Volume 12, Number 2). Previously published data for 1988 reported "business receipts," while the data included herein report "total receipts" (see "total receipts" in the *Explanation of Selected Terms* for definitions of these terms). Slight differences between these two measurements existed for 1990 as shown in Figure A. Overall, "total receipts" exceeded "business receipts" by approximately 3 percent and "total receipts" exceeded "business receipts" in all industrial divisions. Because of these differences, caution should be used when making comparisons to previous years based on receipts.

¹ Number of returns is not additive because some U.S. corporations have Controlled Foreign Corporations in more than one country of incorporation.

NOTE: Detail may not add to totals because of rounding.

¹ Number of returns is not additive because some U.S. corporations have Controlled Foreign Corporations in more than one industrial division and more than one country of incorporation.

² Includes "Nature of business not allocable," which is not shown separately.

**Not shown to avoid disclosure of information about specific corporations. However, the data are included in the appropriate totals.

NOTE: Detail may not add to totals because of rounding.

Transactions Between Foreign-Owned Corporations and Related Foreign Persons, 1990

Data Release

Since 1960, U.S. parent corporations have been required to report transactions with and between their foreign affiliates [1]. However, prior to the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA), no similar reporting requirements existed for transactions between U.S. subsidiaries of foreign corporations and their foreign affiliates. Concerned that these related party transactions could be manipulated to avoid U.S. taxation, Congress added new reporting requirements as part of TEFRA to provide the Internal Revenue Service with more information about the nature and amount of the transactions between foreign-owned domestic corporations (owned 25 percent or more by a foreign person) and their related foreign "persons."

For 1990, based on these reporting requirements, 187 large foreign-owned domestic corporations (with total receipts of \$1 billion or more) reported receipts of \$69.1 billion and payments of \$138.1 billion in transactions with related foreign persons, increases from 1989 of 160 percent and 35 percent, respectively [2]. These foreign-owned domestic corporations also reported ending balances in outstanding loans of \$49.0 billion (borrowed from related foreign persons) and \$10.2 billion (loaned to related foreign persons).

During 1990, these 187 large foreign-owned domestic corporations reduced their borrowing from related foreign persons by nearly half; loan balances declined from \$90.7 billion (beginning balances) to \$49.0 billion (ending balances). This large decrease was principally due to U.S. manufacturing corporations, which cut back their loan balances to related persons with United Kingdom residences. Overall, based on ending balances, foreign-owned corporations borrowed (\$49.0 billion) almost five times the amount they loaned (\$10.2 billion) to related foreign persons for 1990. Both interest expense and income reflected these borrowing differences; interest paid to related foreign persons of \$5.2 billion exceeded the \$0.6 billion of interest received from related foreign persons by nearly nine-fold. Overall, transactions with related foreign persons whose "primary country" or "residence" (see *Primary Country and Residence of Related Person* in the Explanation of Selected Terms) was the United Kingdom accounted for \$18.4 billion (nearly 38 percent) of the ending balance in amounts borrowed and \$6.3 billion (approximately 62 percent) of the \$10.2 billion ending balance in amounts loaned.

The bulk of the transactions (excluding ending loan balances) with related foreign persons was for sales or

purchases of stock in trade. Approximately \$124.4 billion (90 percent) of the \$138.1 billion foreign-owned domestic corporations paid to related foreign persons was for purchases of stock in trade. Receipts from sales of stock in trade to related foreign persons amounted to nearly \$60.9 billion (88 percent) of the \$69.1 billion received from related foreign persons.

Over 70 percent of the growth in receipts (which grew from \$26.5 billion to \$69.1 billion for 1990) and payments (which grew from \$102.7 billion for 1989 to \$138.1 billion for 1990) was related to U.S. corporations classified in finance, insurance, and real estate. The receipts from related foreign persons reported by these corporations increased from \$0.3 billion for 1989 to \$30.8 billion for 1990, while payments increased from \$2.3 billion to \$29.5 billion. More than 95 percent of these receipts and payments associated with U.S. corporations classified in finance, insurance, and real estate was due to transactions in stock in trade, primarily with foreign corporations whose "residence" was in the United Kingdom or Switzerland. Nearly \$19.7 billion in sales of stock in trade and \$19.4 billion in purchases of stock in trade were with related foreign persons whose residence was the United Kingdom. Sales and purchases of stock in trade with related foreign persons whose residence was Switzerland were \$9.5 billion and \$9.1 billion, respectively [3].

Nearly two-thirds of the 3,734 related foreign persons with which the 187 largest foreign-owned domestic corporations reported transactions were residents of Europe, Canada, or Japan (Table 1). Nearly 40 percent of all related foreign persons were residents of just five countries: the United Kingdom (14 percent), West Germany (9 percent), Japan (7 percent), Canada (6 percent), and Switzerland (4 percent). Nearly 88 percent (\$60.6 billion) of the \$69.1 billion in receipts was due to transactions with related foreign persons in these five countries: the United Kingdom (\$25.1 billion), Japan (\$19.6 billion), Switzerland (\$10.6 billion), Canada (\$3.5 billion), and West Germany (\$1.8 billion). Foreign-owned domestic corporations also paid nearly 83 percent (\$113.9 billion) of the total payments (\$138.1 billion) to related foreign persons that were residents of the same five countries: Japan (\$52.3 billion), the United Kingdom (\$29.7 billion), West Germany (\$13.6 billion), Switzerland (\$12.1 billion), and Canada (\$6.3 billion).

Overall, for 1990, transactions with related foreign persons whose country of residence was Japan accounted for \$19.6 billion (28 percent) and \$52.3 billion (38 percent) of receipts and payments, respectively. In percentage terms, this reflects a decrease from 1989 levels. For 1989, related foreign persons that were residents of Japan

This data release was written by Sarah E. Nutter, an economist with the Foreign Returns Analysis Section, under the direction of Chris Carson, Chief.

Transactions Between Foreign-Owned Corporations and Related Foreign Persons, 1990

accounted for \$11.3 billion (43 percent) of the \$26.5 billion in receipts reported and \$52.8 billion (67 percent) of the payments reported (\$78.9 billion) [4]. However, in absolute terms, payments to these related foreign persons remained relatively constant, falling slightly from \$52.8 billion for 1989 to \$52.3 billion for 1990.

Nearly half of the 187 largest foreign-owned domestic corporations were manufacturers (Table 2). These 91 corporations reported transactions with 2,642 (71 percent) of the 3,734 related foreign persons and engaged in the majority of the loan transactions (based on ending balances) with related foreign persons. Among U.S. manufacturers, the bulk of the outstanding loan (ending) balances resulted from transactions with related foreign persons whose country of residence was the United Kingdom. Nearly \$15.7 billion (44 percent) of the \$35.6 billion borrowed from, and \$5.6 billion (68 percent) of the \$8.2 billion loaned to, related foreign persons, were to related foreign persons that were residents of the United Kingdom. Transactions with Canadian related foreign persons accounted for the largest percentage share of the sales of stock in trade reported by U.S. manufacturers, while the largest percentage share of purchases of stock in trade was associated with Japanese related foreign persons. Approximately \$2.2 billion (31 percent) of the \$7.2 billion of sales of stock in trade was to related foreign persons that were residents of Canada and \$6.8 billion (22 percent) of the \$31.5 billion of purchases of stock in trade was associated with related foreign persons that were residents of Japan [5].

Stock in trade transactions for foreign-owned domestic corporations classified in wholesale and retail trade, and finance, insurance, and real estate were dominated by related foreign persons in Japan and the United Kingdom, respectively. About two-thirds of both the sales and purchases of stock in trade reported by foreign-owned domestic corporations classified as wholesalers and retailers was attributable to transactions with related foreign persons whose country of residence was Japan. Transactions with these Japanese related foreign persons accounted for approximately \$15.6 billion (65 percent) of the \$23.9 billion in sales of stock in trade and \$42.1 billion (67 percent) of the \$63.3 billion in purchases of stock in trade. Within finance, insurance, and real estate, approximately \$19.7 billion (67 percent) of the \$29.4 billion in sales of stock in trade and \$19.4 billion (68 percent) of the \$28.7 billion in purchases of stock in trade were with related foreign persons that were residents of the United Kingdom [6].

Data Sources and Limitations

Under Internal Revenue Code section 6038A, domestic

corporations, which were 25-percent or more owned by a foreign person, and foreign corporations engaged in a U.S. trade or business must report transactions with related foreign persons [7]. For 1990, these transactions were reported on Form 5472, *Information Return of a 25% Foreign Owned U.S. Corporation or a Foreign Corporation Engaged in a U.S. Trade or Business*.

The foreign-owned corporation statistics, collected annually starting with 1988, include data from Forms 5472 for all U.S. corporations with total receipts of \$1 billion or more that were owned (25-percent or more) by a foreign person and reported transactions with related foreign persons, and that were included in the corporation *Statistics of Income* sample of U.S. corporation income tax returns with accounting periods ending July 1990 through June 1991 [8]. The corporation *Statistics of Income* sample included approximately 82,600 corporation income tax returns chosen from the 3,716,650 returns filed for Tax Year 1990. These returns were selected after administrative processing was complete, but before any audit examinations [9].

The statistics for 1990 also include a small number (9 out of 187) of corporations with \$1 billion or more in total receipts for 1989, but with less than \$1 billion in total receipts for 1990. Once a corporation has met the criteria for inclusion in the statistics for a specific year, it is included for subsequent years as well, as long as it reports transactions with related foreign persons and is part of the *Statistics of Income* corporate sample of returns. Foreign corporations engaged in a U.S. trade or business with Forms 5472 attached to their U.S. income tax returns were excluded from the 1990 statistics altogether because so few met the \$1 billion-or-more in total receipts requirement. Thus, the statistics for 1990 include only domestic corporations that were 25-percent or more owned by a foreign person.

The statistics in this article augment the data for a portion of the returns included in the *Statistics of Income* data for domestic corporations "controlled" by foreign persons [10]. The "control" requirement for the two sets of statistics differs in that "control" for the foreign-controlled domestic corporation data is defined as ownership by any foreign person, directly or indirectly, of 50 percent or more of a U.S. corporation's voting stock at the end of the tax year, a more stringent requirement than for the foreign-owned corporation statistics reported herein, which include domestic corporations that were 25-percent or more owned by a foreign person. However, beginning with Tax Year 1991, the corporation income tax return requirements were changed to call for identification of corporations that were 25-percent-or-more foreign controlled. It is estimated that the 187 foreign-owned corporations included in the

Transactions Between Foreign-Owned Corporations and Related Foreign Persons, 1990

foreign-owned corporation statistics represented approximately 0.4 percent of returns, but 47 percent of the estimated total assets of \$1.7 trillion, and 57 percent of the estimated total receipts of \$1.1 trillion reported by the domestic corporations 25-percent or more "controlled" by foreign persons for 1990.

These statistics provide additional information about the nature and amount of the transactions between related U.S. and foreign persons and supplement the data available from the statistics on Controlled Foreign Corporations (also included in this issue of the *Bulletin*). The Controlled Foreign Corporation statistics are for the largest 7,500 (in total assets) foreign subsidiaries of U.S. parent corporations with total assets of \$500 million or more, while the statistics on foreign-owned U.S. corporations provide information on domestic corporations which are 25-percent or more foreign-owned with total receipts of \$1 billion or more (for either 1989 or 1990) that report transactions with related foreign persons. These two studies provide information about both the inbound (foreign to United States) and outbound (United States to foreign) transactions of these related parties. However, the statistics are not altogether comparable. The reported "amounts received" in the foreign-owned corporation statistics reflect receipts from foreign persons by the related foreign-owned corporations with operations in the United States (inbound transactions). In contrast, the "amounts received" from related persons in the Controlled Foreign Corporation statistics reflect amounts received from U.S. persons (as well as from other related persons) by the related controlled foreign corporation (outbound transactions).

Explanation of Selected Terms

Amounts borrowed and loaned.--Both the beginning and ending balances of amounts borrowed and loaned by foreign-owned corporations from and to, respectively, their related foreign persons, are presented in Tables 1 and 2. The ending balances are also included in the total amounts received and paid in Tables 1 and 2. However, because the ending balance reflects only the amounts outstanding at the end of the year, these amounts may not equal the actual amounts borrowed and loaned during Tax Year 1990.

Foreign Person.--The term "foreign person" generally includes (1) any partnership, association, company or corporation that was not created or organized under the laws of the United States or the laws of any State; (2) any individual who is not a citizen or resident of the United States; (3) any individual who is a citizen of a U.S. possession, but is not otherwise a U.S. citizen or resident; and (4) any foreign trust, estate or government. For the most

part, most of the foreign persons for purposes of these statistics are corporations.

Foreign-Owned Corporation.--For purposes of these statistics, a corporation was considered foreign-owned if at least 25 percent of the total voting power of all classes of stock entitled to vote, or 25 percent of the total value of all classes of stock of the corporation, was owned, directly or indirectly, at any time during the tax year by one foreign shareholder (usually a foreign parent corporation). This is in contrast to the other Statistics of Income data on foreign-owned domestic corporations which are based on 50-percent or more ownership by a foreign person.

Number of Persons.--The data shown in Tables 1 and 2 generally represent the number of Forms 5472 attached to the 187 income tax returns filed by corporations with total receipts of \$1 billion or more that were owned 25-percent or more by a foreign person. Member corporations of an affiliated group that filed a consolidated income tax return could also join in filing a consolidated Form 5472 for transactions with a given foreign related person. However, some affiliated corporations that could have filed consolidated Forms 5472 filed separate forms instead. When these forms were identified during statistical processing, the information on them was combined and the result treated as a single Form 5472. To this extent, the "number of persons" understates the actual number of Forms 5472 attached to the 187 income tax returns included in the statistics.

OPEC Countries.--Summary statistics are provided (Table 1) for the following Asian countries that were members of the Organization of Petroleum Exporting Countries (OPEC) for 1990: Iran, Iraq, Kuwait, Qatar, Saudi Arabia, and the United Arab Emirates. The other OPEC countries were: Algeria, Ecuador, Gabon, Indonesia, Libya, Nigeria, and Venezuela. Some of these countries are shown individually in Table 1.

Primary Country.--In almost all instances, the U.S. corporation filing a Form 5472 reported only one country of residence for the 25-percent-or-more foreign owner. However, approximately 1.4 percent of all Forms 5472 reported two or more countries of residence. For these Forms 5472, the primary country of residence was determined based on a comparison of the address and country where business was conducted.

Related Person.--Persons related to the corporation that filed a Form 5472 include the 25-percent foreign shareholder, any person that was related to the reporting corporation or the 25-percent shareholder (as described in Internal Revenue Code section 267(b) or 707(b)(1)), or any other person that was related to the reporting corporation within the meaning of Internal Revenue Code section 482 and the associated regulations.

Transactions Between Foreign-Owned Corporations and Related Foreign Persons, 1990

Residence of Related Person.--The income tax regulations under Code section 6038A require that "each country in which each 25-percent shareholder files an income tax return as a resident under the tax laws of that country" be reported on Form 5472 for each related foreign person (Regulation Section 1.6038A-2). The statistics in Table 1 are based on this reported residence of the related foreign person and, within this meaning, the related foreign person is a "resident" of a particular foreign country.

Notes and References

- [1] As part of Public Law 86-780, enacted in 1960, a U.S. corporation was required to furnish, as part of its tax return, information on its controlled foreign corporations. For data on these transactions for 1990, see Nutter, Sarah E., "Controlled Foreign Corporations, 1990," in this issue of the *SOI Bulletin*.
- [2] Tables 1 and 2 include total amounts "received" from and "paid" to related foreign persons of \$118.0 billion and \$148.2 billion, respectively. However, these totals include outstanding loans (ending balances) which are conceptually different from the other types of amounts reported on Form 5472, *Information Return of a 25% Foreign Owned U.S. Corporation or a Foreign Corporation Engaged in a U.S. Trade or Business*. Ending loan balances reflect amounts held as either liabilities or assets on the balance sheets of the foreign-owned corporation. As such, they do not necessarily reflect current-year payments or receipts, but rather a balance at a particular point in time.

Therefore, all references to "total" amounts "received" or "paid" exclude outstanding loans (ending balances) of \$49.0 billion (amounts borrowed) and \$10.2 billion (amounts loaned) from the total amounts "received" and "paid," respectively. The remaining amounts received (\$69.1 billion) and paid (\$138.1 billion), which were for items such as sales or purchases of stock and trade, represented receipts or expenditures for 1990.

¹ Number of reporting corporations is not additive because a given corporation could have related foreign persons in more than one country.

² Less than \$500.

³ Includes Bahrain, Cyprus, Gaza Strip, Israel, Jordan, Lebanon, Oman, Syria, and Yemen (including the former Yemen Arab Republic).

⁴ Includes Iran, Iraq, Kuwait, Qatar, Saudi Arabia, and the United Arab Emirates.

NOTE: Detail may not add to totals because of rounding.

Supplement to Statistics of Income Studies of Individual Income and Taxes, 1913-1992

While present-day users of Statistics of Income are familiar with the content and purposes of this series, they may also be interested to learn what some of the users in an earlier age expected and what their reactions were to the first Statistics of Income. The following article, published in 1915, helps to provide a perspective to the 80-year old series.

INCOME TAX STATISTICS.

By ROLAND P. FALKNER, PH.D., *Statistician, National Civic Federation.*

The adoption of a federal income tax has led students of economics and of public finance to hope for some illuminating material upon the distribution of national income and the operations of the tax. While the results as published in the annual report of the Commissioner of Internal Revenue are worthy of study, they are somewhat of a disappointment. This follows in part from the fact that the system is in its infancy, since the law as a whole affected the income of the year 1913 for ten months only and not the entire year, and since the provisions of the law regarding withholding at the source were operative for the last two months of the year only, and in part from the fact that the information given in the report is somewhat crude in form and meagre in detail.

TABLE I.
INCOME RETURNS FOR 1913.

Incomes for Ten Months, Ending December 31, 1913.		Equivalent Annual Incomes.		
Class in Thousand Dollars.	Number of Returns.	Class in Thousand Dollars.	Number of Thousand Dollars in Each Class.	Number of Income Returns per Thousand Dollars in Each Class.
2½ to 3½	79,426	3 to 4	1	79,426
3½ to 5	114,484	4 to 6	2	57,242
5 to 10	101,718	6 to 12	6	16,953
10 to 15	26,818	12 to 18	6	4,470
15 to 20	11,977	18 to 24	6	1,995
20 to 25	6,817	24 to 30	6	1,138
25 to 30	4,164	30 to 36	6	694
30 to 40	4,553	36 to 48	12	379
40 to 50	2,427	48 to 60	12	202
50 to 75	2,618	60 to 90	30	87
75 to 100	998	90 to 120	30	33
100 to 150	785	120 to 180	60	13
150 to 200	311	180 to 240	60	5
200 to 250	145	240 to 300	60	2
250 to 300	94	300 to 360	60	1.5
300 to 400	84	360 to 480	120	0.7
400 to 500	44	480 to 600	120	0.4
500 to 1,000	91	600 to 1,200	600	
1,000 and over	44	1,200 and over		

American Statistical Association.

The most general information given in the official report concerns the number of individual incomes for which returns were made.* This is given in a table and chart, the essential features of the table being reproduced in the first two columns of the accompanying Table I. The remaining columns have been added by the writer to bring out the significance of the official figures.

The fact that the returns are for a period of ten months from March 1, 1913, to December 31, 1913,† and not for the calendar year 1913, has been lost sight of in most of the popular discussion of the results. It has, therefore, seemed desirable to add a column showing the annual equivalents for the different income classes given in the table.‡

The table contains a complete showing of all income returns, the obligation to make a return being imposed upon all persons having an annual income of \$3,000 and upwards, or who had for the ten months, March to December, 1913, an income of \$2,500 or upwards. Since married persons enjoy an exemption of \$4,000, the returns include some incomes not subject to taxation. No record of this number is given in the report, information concerning the number of married and "single" persons being given not by classes of income but only for the whole number of returns.

The facts given in the second column as to the number of returns in each income group have been widely published by the press and much surprise has been expressed over the fact that the second group of the table is larger than the first. It has been cited as a very singular phenomenon, quite contrary to our general impressions, that smaller incomes are much more numerous than larger ones. The ingenious explanation

* For the United States as a whole the information is given in a chart and table facing p. 20, for collection districts on pp. 110-111, and for states on pp. 112-113.

† The chart and table facing p. 20 somewhat confuse the matter by referring to the returns as being for the taxable period, March 1 to December 31, 1914.

‡ In transforming the income classes given in the table into their annual equivalents, it has been assumed that the income reported for the ten months was five sixths of the annual income. In view of the fact that the months omitted were those of January and February, 1913, in which fall so many of the payments of interest on securities, it is more than likely that the remaining ten months represent somewhat less than five sixths of the annual income for the year. But as there is no way of estimating with precision the actual difference, we have throughout this paper generally assumed that annual incomes would be one fifth larger than those reported in 1913.

Income Tax Statistics.

has even been offered that among the smaller income group there may have been an extraordinary amount of tax dodging.

An examination of the table will show that this apparently anomalous statistical fact results merely from the irregular grouping of incomes. If attention be given to the equivalent annual incomes it will be seen that incomes of the first group have a range of \$1,000, those of the second of \$2,000, and those of the third of \$6,000. In the final column of the table here printed is a statement of the number of incomes for each \$1,000 included in each group. It will be noted that in this column the distribution of incomes accords better with our general information. Not only is the first group more numerous than the second, but the third group which, in the original statement is nearly as large as the second, becomes only slightly more than one fourth as great.

The misleading impression of the official table is heightened by the accompanying chart. For the purpose of showing how a chart should not be prepared, it is reproduced here for comparison with a chart which gives a clearer view of the distribution of incomes.

A comparison of these general results with the experience of European countries, which have long had income taxes, is tempting but difficult. The British income tax is more complicated in its details than the American tax, and the official returns show the sources of income but do not show the whole number of incomes taxed. From time to time various writers have attempted estimates of the number of persons receiving incomes of a certain size. With the aid of figures drawn from taxes on legacies and on houses, Mr. L. G. Chiozza-Money* has estimated that in 1908-09 there were in the United Kingdom 280,000 persons in receipt of incomes in excess of £700 (\$3,406). A comparison with the estimated population shows this number to be equivalent to 625 per 100,000. Though the minimum is higher in this estimate than in the United States the proportion of persons receiving these incomes is notably superior to that which results from our income tax figures. In Continental Europe incomes are taxed directly and the number of taxable incomes is available in the official records.

* *Riches and Poverty*, 1910.

American Statistical Association.

The exemptions are commonly much less than in the United States and the whole number of incomes taxed cannot therefore be compared with the similar figures here. While statements for certain countries are available by income classes, the divisions used in the foreign figures do not permit an exact comparison. The last edition of Conrad's *Handwörterbuch der Staatswissenschaften* gives a very full statement of income statistics from which some facts may be selected which at least in a rough way may be compared with the figures for the United States. Such figures are given in Table II.

TABLE II.
INCOMES IN FOREIGN COUNTRIES AND THE UNITED STATES COMPARED.

Country.	Year.	Incomes above (Dollars.)	Number.	Population.	Incomes per 100,000 of Population.
France.....	1907	4,000	64,000	(a) 39,252,267	163
Austria.....	1907	2,400	25,600	27,729,500	113
German States					
Prussia.....	1908	2,375	105,000	38,026,556	276
Hamburg.....	1901	2,500		(b) 768,349	884
Saxony.....	1906	3,000	12,500	(c) 4,508,601	287
United States (d).....	1913	3,000	356,579	96,765,563	368
	1913	4,000	277,499	96,765,563	287

a) 1906. (b) 1900. (c) 1905. (d) Excluding Alaska, Hawaii and Porto Rico.

The lowest income here noted is that which approaches most closely in the respective classifications to the United States minimum. Numbers differ widely according to the size of the countries considered, and reference to the population is necessary. France and Austria present a marked contrast, though the lower limit of incomes referred to is much higher in France, which has the largest proportion of such incomes. Austria, with a minimum income \$600 lower than the United States has not even one third as many incomes above the minimum. Comparing incomes above \$4,000, France has somewhat more than half as many as the United States. For the German Empire there is no imperial income tax, but such taxes are found in most of the states. The table shows figures for Saxony for the incomes above the \$3,000 minimum, which are a little more than three fourths as numerous as in the United States. In Prussia incomes in excess of

Income Tax Statistics.

\$2,400 in round numbers appear to be somewhat less than three fourths as frequent in proportion to the population as are incomes in excess of \$3,000 in the United States. Hamburg shows a percentage of incomes above \$2,500 much higher than the figures for the United States. This higher percentage is not due to the lower minimum but rather to the fact that Hamburg is a rich city, the centre of the lucrative foreign commerce of the Empire. In the United States no separate figures are published for corresponding city areas, such as New York, Chicago, and Philadelphia. But we shall see later that as high a proportion to the population is found in New York State as a whole as in the city of Hamburg.*

The foregoing comparisons suffer under the fact that for the different countries compared the minimum income for which figures are given differs. This inconvenience can be removed, at the cost however of accuracy of statement, by estimating the number of incomes superior to \$3,000 per annum for the purpose of comparing such estimate with the population and with the figures for the United States. In order to make such an estimate all the facts concerning the incomes in these countries were plotted in curves in such way that the height of the ordinate at any given point represented the whole number of reported incomes above that point. The curves for the different countries, with the exception of Saxony where the figure was already known, gave the following estimates of the number of incomes above \$3,000 in the various countries, by means of which we have calculated the number per 100,000

Country.	Incomes of \$3,000 and over.	
	Number.	Per 100,000 of the Population.
Austria.....	20,000	59
France.....	95,000	242
Prussia.....	75,000	197
Hamburg.....	700	700
Saxony.....	12,500	287
United States.....	350,579	368

*The second and third New York collection districts include the Borough of Manhattan. In these two districts the incomes returned numbered 50,049. If we compare this number with the population of Manhattan Borough, as returned in the Census of 1910, we find the unusual number of 2,142 returns per 100,000 inhabitants. Of course it is to be remembered that the taxes are paid at the principal place of business, and that not all who paid taxes in Manhattan are residents of that Borough.

American Statistical Association.

of the population. In more convenient form this estimate shows the larger number of incomes of \$3,000 and upwards which is reported in the United States as compared with all of the countries included in the comparison except the city of Hamburg.

In making these comparisons there is tacit assumption that the incomes reported in the United States are a full and complete indication of the wealth of individuals in this country but there is much reason to doubt whether the total number of returnable incomes actually in existence in the United States found its way into the treasury reports. The system of income taxation is in its infancy and it is more than probable that a considerable number of taxable incomes escaped the tax in the first year of its operation. Under the older and more vigilant administration of the tax in European countries a fuller report of all taxable incomes is probable. In presenting the figures given in Column 2 of Table I, the Secretary of the Treasury makes this comment upon the completeness of the returns:

“It is obvious, upon the face of the returns, that there were more than 79,426 persons out of a total population of approximately a hundred million in this country who had net incomes of from \$2,500 to \$3,333 for 10 months—the taxable period for the calendar year 1913. It may be said with equal truth that there were more than 114,484 people out of our entire population who had a net income of from \$3,333 to \$5,000, and more than 101,718 people out of our entire population who had a net income of from \$5,000 to \$10,000 for the same period. It is clear that there were thousands of persons who failed altogether to make a return as required by law.”

It will be noted that especial emphasis is laid in this statement upon the lowest income class and indeed a consideration of the figures themselves suggests that the returns in this class are not so full and complete as in the subsequent classes. Incompleteness of the returns, particularly in this class, might be due in part to a desire to evade the tax but it is much more probable that it results in large measure from ignorance of the requirements of the law. The greater number of persons whose income fell in 1913 in the first group—equivalent to

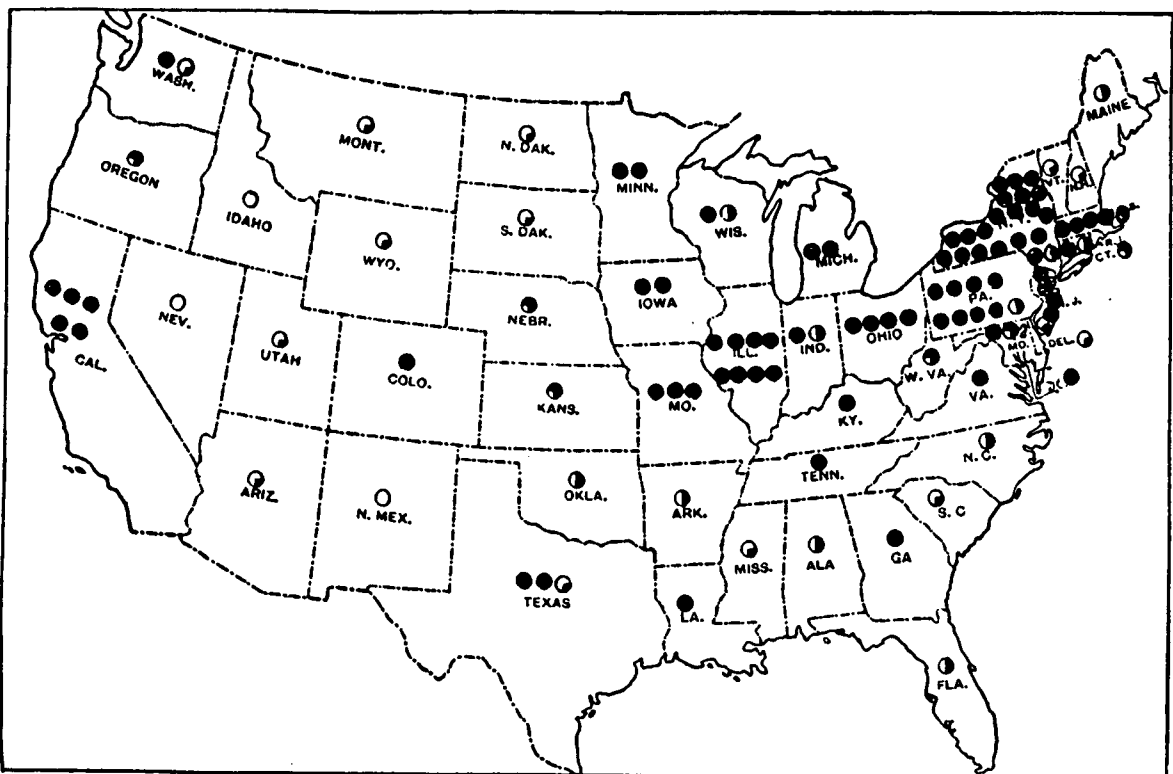

Income Tax Statistics.

\$3,000 to \$4,000 per annum—are not in fact subject to taxation because they can claim the benefit of the \$1,000 exemption accorded married persons. That such persons are required to make returns although not subject to taxation is not generally known among the public and where it is known such persons are prone to be indifferent about making returns. If we knew how many of the persons who made returns in 1913 were not subject to taxation because of this exemption, we should be able to estimate how far the factor now under consideration had been at work in reducing the whole number of returns.

Returning to the specific information available in the report of the Commissioner of Internal Revenue concerning the incomes in the United States, our attention may first be directed to the geographical distribution of the returns, which is shown by the map accompanying this paper and by the tables which follow. The map shows the income tax returns to be numerous in a group of states extending from Illinois eastward to Massachusetts and in California. Elsewhere returns are comparatively few. When information concerning the income tax returns was first given to the public it received considerable attention in the press. Each newspaper was of course especially interested in its own state, but nearly all of them called attention to the fact that New York State alone had 81,972 returns, or over one fifth of the whole number. In explaining this preponderance, the relation of New York City in the large number of returns to the state was pointed out, but the fact that New York is also the largest state in population was overlooked. The states whose income returns numbered over 10,000 are given in Table III, giving the number of returns for the leading states, and also comparisons with the population.

American Statistical Association.

DISTRIBUTION OF INCOMES SUBJECT TO INCOME TAX

Explanation:—Each dark circle represents 4,000 returns, each quadrant represents 1,000 returns, the last 1,000 being rounded off. Empty circles indicate less than 500 returns.

Other states.....	128,029	241	764	5,830	11	35

(a) Excluding Alaska, Hawaii, and Porto Rico, from which 1,019 returns were received.

The eight states named in the table contain a little more than two thirds of all incomes returned, but they comprised a little more than four tenths of the population of the country in 1910. In making comparisons with the population the figures of the 1910 census have been used. The utility of such comparisons between different states would not be greatly enhanced by estimating the population of 1913. It may be remarked that for the United States as a whole the ratio of 388 income tax returns per 100,000 of the population of 1910 becomes 368 when the estimated population of 1913 is used. In the group of states here named, the returns per 100,000 inhabitants are more than twice as numerous as in the rest of the country. New York stands at the head of the list in the ratio to the population as well as in absolute numbers, though California follows close behind in the ratio. The order in relation to population does not follow that of absolute numbers.

It cannot fail to be noticed that the states named are those

American Statistical Association.

which contain the largest cities within their limits.* As it is probable that comparatively few of the persons receiving annual incomes of \$3,000 and more live in rural communities, it has seemed desirable to establish a further ratio between the number of income tax returns and the urban population which as defined by the census comprises all persons living in communities of 2,500 inhabitants and upwards. Such a comparison shows that relatively the largest number of income tax returns is reported from California and not New York, the smallest number being from Massachusetts. Moreover there is comparatively little difference between this group of states and the rest of the country when ratios are established with the urban population only.

In the foregoing table incomes of \$20,000 and over for ten months in 1913, equivalent to annual incomes of \$24,000 and over, are shown separately. These are the incomes which in 1913 were subject to the additional tax. They are comparatively few in number, but are more frequent in the states here named than in the remainder of the United States.

The geographical distribution of \$3,000 incomes for the different sections of the country, which are familiar in census usage, with ratios to the total and urban population, is shown in Table IV.

*The results of the first assessment make it clear that the income tax is primarily an urban tax. Over 40 per cent. of the entire tax is assessed in Milwaukee city alone, and more than 80 per cent. in the seventeen Counties containing cities. . . . Measured by income there are plainly more persons capable of paying taxes in the city than in the country. . . . 6th Biennial Report of the Wisconsin State Tax Commission (1912), p. 31.

Income Tax Statistics.

 TABLE IV.
 NUMBER OF TAX RETURNS FOR INCOMES EQUIVALENT TO \$3,000 OR MORE PER ANNUM BY DIVISIONS.

Area.	Returns.					
	All Incomes.			Incomes of \$24,000 Yearly, and over.		
	Number.	Per 100,000 of the Population of April 15, 1910.		Number.	Per 100,000 of the Population of April 15, 1910.	
		Total.	Urban.		Total.	Urban.
United States (a)	356,579	388	860	23,114	25	50
The North	265,893	477	811	19,198	35	59

West of Mississippi River	87,754	322	959	3,699	14	40

(a) Excluding Alaska, Hawaii and Porto Rico, from which 1,019 returns were received.

This table confirms with greater detail that which preceded it. Returnable incomes are vastly more numerous in the North than in the South or West. But if reference be had to the total population it appears that relatively North and West have somewhere about the same number of returns, the advantage being for the West. The South falls far below. Quite different is the showing when comparisons are made with the urban population. In this comparison the South as well as the West exceeds the North in the number of returns. There is, however, less divergence among the various sections when the comparison is made with the urban population than when it is made with the general population. The distribution of returnable incomes among the different sections reflects, therefore, the distribution of urban population in those sections.

It may, however, be observed that the larger incomes are

American Statistical Association.

more frequent in the older parts of the country. The largest proportions are found in New England and the Middle States. These divisions, with the Pacific division, are the only ones which exceed the average for the United States and appear in marked contrast to the other parts of the country.

With respect to the persons who pay the income tax, the report gives us the further information that 78,763 are single and 278,835 are married. It is to be remembered that in the income tax law these words have a significance different from that of the census and similar statistics. Under the income tax law the term married is only applicable to a married person who has a wife or husband, as the case may be, living with the person making the return. All other persons, whether bachelors or spinsters, separated, widowed or divorced, are single for the purposes of the income tax law. The "single" persons of the income tax payers are 28 per cent. of the total number, and in the population twenty-five years of age and upward such "single" persons are 26 per cent. of the total. It may also be noted that the 278,835 married persons represent 272,153 households, since 6,682 married women living with their husbands made a separate return of their incomes.

Concerning the income represented by these returns the report gives no definite information, though from the number of incomes and from the product of the tax some approximations may be made. The normal tax of 1 per cent. was levied upon incomes for ten months in 1913, in an aggregate amount of \$1,272,803,802. While this is the taxable income it falls short of the true income, first by the amount of the personal exemptions, and second by the income received in the form of dividends. The personal exemptions of \$2,500 for 78,760 single persons and of \$3,333.33 for 272,152 married persons amounted to \$1,104,084,166, which added to the taxable income makes a total of about \$2,400,000,000. An additional sum to represent dividend income would have to be added to obtain the total income.

While the figures printed in the report do not give directly the total income, either for the income tax payers as a whole or for any of the different income classes represented in statistics, such information, at least so far as the larger incomes

Income Tax Statistics.

are concerned, can be derived with the expenditure of no little patience from the figures giving the results of the supertax. The supertax is paid on the entire income and is not subject to deductions either for personal exemptions or for income from dividends. It is paid at varying rates on the excess of total incomes over \$20,000. The report of the Commissioner of Internal Revenue gives the product of this tax according to the several rates of taxation, as follows:

Income Class, Thousands of Dollars.	Rate of Taxation, Per Cent.	Tax Collected.
20 to 50.....	1	\$2,934,754
50 to 75.....	2	1,645,639
75 to 100.....	3	1,323,023
100 to 250.....	4	3,835,948
250 to 500.....	5	2,334,583
500 and over.....	6	3,437,850
Total.....		\$15,511,797

The combination of the figures here given with those in a previous part of the report in regard to the number of incomes, enables us to analyze each of the several tax classes. Thus taxation at 1 per cent. falls in part on incomes exceeding \$20,000 but less than \$50,000, and in part on incomes exceeding \$50,000. We know the aggregate amount of tax which is paid at the rate of 1 per cent. It is obvious that on all incomes higher than \$50,000, the first \$30,000 over the untaxed minimum of \$20,000 is taxed at 1 per cent. As we know the number of such incomes the amount of the incomes so taxed can be determined and also the amount of the tax upon it. Having ascertained the taxation at 1 per cent. upon all incomes over \$50,000, we can deduct this from the total receipts at 1 per cent., to find how much is attributable to the first class, namely \$20,000 to \$50,000. The amount collected by this taxation multiplied by 100 represents the income which is so taxed.

A similar process can be applied to taxation at the rate of 2, 3, 4, and 5 per cent., respectively, while for the taxation at 6 per cent. no calculation is necessary, as all income above \$500,000 is taxed at this uniform rate. The results are shown in Table V.

American Statistical Association.

TABLE V.
ANALYSIS OF ADDITIONAL TAX, SHOWING UPON WHAT INCOMES EACH TAX RATE FALLS.

Line Number.	Tax Class, Thousands of Dollars.	Income Class, Thousands of Dollars.	Number of Incomes Taxed.	Amount of Each Income Higher than the Class Taxed at this Rate.	Tax paid by Each Income Class.	Total Income Taxed in Each Class at This Rate.

The figures in Table V are given by tax classes. They may be rearranged to show the incomes and the tax paid in each income class. Such a rearrangement of the material for incomes of half a million dollars and over is given in Table VI.

Income Tax Statistics.

TABLE VI.
INCOMES OF \$500,000 AND OVER (135 IN NUMBER).

Taxation Classes, Thousands of Dollars.	Rate of Tax Per Cent.	Portion of Each Income Taxed at Each Rate	Total Income Taxed at Each Rate	Tax paid at Each Rate.
Under 20	0	0	\$2,700,000	0
20 to 50 (line 8, Table V)	1	\$30,000	4,050,000	\$40,500
50 to 75 (line 12, Table V)	2	25,000	3,375,000	67,500
75 to 100 (line 17, Table V)	3	25,000	3,375,000	101,250
100 to 250 (line 21, Table V)	4	150,000	20,250,000	810,000
250 to 500 (line 24, Table V)	5	250,000	33,750,000	1,687,500
500 and over (line 26, Table V)	6	All	57,297,000	3,437,850
			\$123,057,500	\$6,145,100

Without repeating the component parts of each income class—all the materials are found in Table V—we can gather the following information for total incomes, including the untaxed minimum of \$20,000, which are subject to the additional tax.

Income Classes, Thousands of Dollars.	Number.	Income.
20 to 50	17,961	\$496,375,000
50 to 75	2,618	148,281,950
75 to 100	998	79,000,767
100 to 250	1,241	166,448,700
250 to 500	222	68,441,660
500 and over	135	123,057,500
Total	23,175	\$1,081,605,977

This leaves us with only the incomes from \$2,500 to \$20,000 to determine. An approximation to the total incomes should be obtainable from the numbers in the different income classes. The average income in each class has been estimated by adding to the minimum an amount equal to one third of the difference between the maximum and the minimum of each class. This estimate allows for the fact already noted that incomes fall off in number as they increase in amount. Whether the allowance is correctly made appears from a comparison of this estimate for figures already given for incomes over \$20,000. To permit this comparison and to secure a complete estimate of total income on this basis the estimate is made for all classes, though our special interest at present is in the incomes under \$20,000. The results are given in Table VII.

American Statistical Association.

TABLE VII.
NUMBER OF INCOMES AND ESTIMATE OF THEIR AMOUNT.

Income Classes, Thousands of Dollars.	Number of Returns.	Estimated Income.	
		Average.	Total.
2½ to 3½	79,426	\$2,778	\$220,645,428
3½ to 5	114,494	3,889	445,228,276
5 to 10	101,718	6,667	678,153,906
10 to 15	26,818	11,667	312,885,606
15 to 20	11,977	16,667	199,620,459
20 to 25	6,817	21,667	147,703,939
25 to 30	4,164	26,667	111,041,388
30 to 40	4,553	33,333	151,765,144
40 to 50	2,427	43,333	105,169,191
50 to 75	2,618	58,333	152,715,794
75 to 100	998	83,333	83,166,334
100 to 150	785	116,667	91,583,595
150 to 200	311	166,667	52,833,431
200 to 250	145	216,667	31,416,715
250 to 300	94	266,667	25,066,698
300 to 400	84	333,333	27,999,972
400 to 500	44	433,333	19,066,652
500 to 1,000	91	666,667	60,666,667
1,000 and over	44	\$1,500,000	66,000,000
Total	357,598		\$2,982,729,225

In applying the method described to the group receiving \$1,000,000 and over, which, of course, has no upper limit, it was necessary to assign to this group a purely arbitrary estimate of the average income. The aggregate of incomes under \$20,000 appears in this table as \$1,856,533,675, while the estimate for the group \$20,000 to \$500,000 is \$999,528,853. The correct figure for the group \$20,000 to \$500,000 is \$958,548,477. We have, therefore, for this large group from \$20,000 to \$500,000 a direct comparison of actual figures and the estimate, and it appears that the correct figure is 95.9 per cent. of the estimated figure. It seems proper to assume that in the estimate of incomes under \$20,000 we have the same excess. Deducting 4.1 per cent. from the estimate of such incomes and adding to the result the correct figures for incomes from \$20,000 to \$500,000, and for incomes for \$500,000 and over, as given in a former table, we have a corrected estimate of an aggregate income of \$2,862,021,776 for ten months in 1913, of all persons who had in that period a minimum income of \$2,500. From the figures of the normal tax we had already accounted for an income of \$2,370,000,000, and if this sum be deducted from

Income Tax Statistics.

our estimate of the total income it would appear that there is a difference of \$490,000,000 to be explained by the income received in the form of dividends, which is not subject to the normal tax. It will be interesting to inquire whether the corporation income tax throws any light upon this subject of dividend income.

Diagram I. Incomes reported 1913 as shown in report of Commissioner of Internal Revenue

Diagram II. Incomes reported 1913

American Statistical Association.

The tax upon the net income of corporations for ten months of 1913 produced \$32,456,662.67. As the tax is 1 per cent., it was therefore levied upon a corporate income of \$3,246,000,000. How much of this corporate income was distributed in the form of dividends we have no means of knowing. If dividends averaged only 4 per cent. of the reported capital stock of \$64,000,000,000 for all corporations paying taxes, dividend payments would have amounted to \$2,640,000,000.* Of course all dividend payments do not become personal income; a large part of it is corporate income of holding companies and to some extent of investing companies, such as savings banks and insurance companies. But it does not seem unlikely that as much as \$2,000,000,000 becomes personal income. If this be correct it must be confessed that such income is not fully accounted for in the calculation of personal income which allowed only \$490,000,000 for income of this nature to income tax payers. Of course a certain portion of this dividend income goes to persons who are not affected by the income tax, whose annual incomes are less than \$3,000, but it seems doubtful whether the greater part goes to such persons.

The foregoing computation necessarily assumes that the figures are correctly reported both for the number of incomes and for the receipts at each tax rate. It would seem unnecessary to mention this assumption were it not for the fact that a closer study of the tables showing the returns of incomes on pages 112 and 113 of the report with the table giving the tax receipts, shows many inconsistencies between the tables. It may be that for the total of the United States the inaccuracies of the tables counterbalance one another and the result which we have obtained can be regarded as substantially correct.

Unfortunately the method of ascertaining incomes which is here indicated cannot be applied to the individual states because of inconsistencies between the two tables which are combined in this operation. Some of the inconsistencies are obvious and some lie below the surface. Some of the most

*In his work on "Incomes" (New York, 1915), p. 146, Dr. Scott Nearing estimates the dividends paid in 1913 by the corporations reporting to the Commissioner of Internal Revenue as between 2,300 and 2,900 million dollars.

Income Tax Statistics.

unmistakable discrepancies between the figures are shown in the following comparison of the highest classes which are indicated by the respective tables of the Report of the Commissioner of Internal Revenue:

MAXIMUM INCOMES IN CERTAIN STATES, ACCORDING TO INCOME CLASSES SUBJECT TO ADDITIONAL TAX.

State.	Highest Income.	Group Indicated by.
	Returns of Income (pp. 112-113.)	Receipts from Additional Tax (pp. 192-193.)
District of Columbia.....	\$250,000 to \$500,000	\$500,000 and over
Florida.....	75,000 to 100,000	500,000 and over
Georgia.....	100,000 to 250,000	500,000 and over
Indiana.....	250,000 to 500,000	500,000 and over
Nevada.....	20,000 to 50,000	250,000 to \$500,000
Alaska.....	50,000 to 75,000	30,000 to 50,000
Arizona.....	100,000 to 250,000	30,000 to 50,000
Idaho.....	100,000 to 250,000	Under 20,000
Mississippi.....	100,000 to 250,000	75,000 to 100,000
Montana.....	75,000 to 100,000	Under 20,000
North Dakota.....	75,000 to 100,000	50,000 to 75,000
Utah.....	100,000 to 250,000	Under 20,000
Washington.....	250,000 to 400,000	20,000 to 50,000
Wyoming.....	100,000 to 250,000	Under 20,000

But there are other discrepancies which are not so obvious and which would be revealed only by an examination of each state. Thus for North Carolina the table on page 112 reports 2 incomes between \$250,000 and \$500,000. The additional taxation upon these 2 incomes would be as follows: At 1 per cent., \$600; at 2 per cent., \$1,000; at 3 per cent., \$1,500; and at 4 per cent., \$12,000. But the actual receipts reported from all incomes in North Carolina at the rates of 2, 3, and 4 per cent., respectively, were less than the sums here named. Again, in Michigan we find 15 incomes reported as exceeding \$250,000. Taxation at 4 per cent. falls on that part of such incomes which is above \$100,000 and below \$250,000, which, at \$6,000 for each income, should give tax receipts of \$90,000 for the 15 incomes to which reference has been made, without any consideration of other incomes which may fall between \$100,000 and \$250,000. But the receipts returned at 4 per cent. in the state of Michigan amount to only \$85,228.

American Statistical Association.

There is no clue in the report of the Commissioner of Internal Revenue as to the cause of these discrepancies. The suggestion naturally occurs that in some cases the taxes are in arrears and such an explanation would cover a number of discrepancies which have been noted, but not all of them. It would not, for instance, explain that in the state of Nevada a tax has actually been paid upon an income which can be estimated at \$256,000, while no income higher than \$40,000 appears in the tabulation of returns. Moreover there is no suggestion in the report of the treasury officials that any considerable proportion of the income tax is in arrears. According to the best information which I can obtain on the subject the discrepancies between the tables are due to the fact that they have been made by different sets of clerks, and that no effort has been made to check them one against the other. It also appears that classifications have been made at different periods of the year and that some of the discrepancies may be due to changes in the classifications which had taken place as a result of the activities of the treasury department.*

In view of the discrepancies to which attention has been called, we may well hesitate to attempt to ascertain the amount of incomes for any lesser areas than for the whole United States. With the exception of the state of New York, of which it forms a part, the Borough of Manhattan with its 50,000 taxable incomes is the largest group in the United States. The number is probably large enough to render of comparatively little significance the idiosyncrasies of the tables to which we have referred. Subject to these reservations we can, therefore, ascertain for the Borough of Manhattan the dis-

* The matter herein referred to was submitted to the Commissioner of Internal Revenue, who, under date of April 5, 1915, replied concerning the discrepancies which have been noted in part as follows:

"In reply you are advised that the table on pages 112-113 shows the correct classifications, numerically by states, and was compiled by this office from the individual returns themselves.

"The receipts shown in the table on pages 192-193, both items by states and totals, represent the actual collections for the fiscal year ended June 30, 1914, verified by this office as of that date. The classifications of income shown in this table, however, are based on the reports of Collectors of Internal Revenue from the facts before them at the time of their reports; and the exigencies of administration will not permit the office, at the present time, to trace the various changes that have since been made, or that have been required to be made, in individual returns as originally rendered."

One cannot feel that the explanation is subject to any other interpretation than that given in the text. While the writer asserts in the first paragraph that the table on pages 112 and 113 shows the correct classifications because they were compiled in the central office, one cannot feel complete assurance of this fact when we have a record of receipts on incomes higher than any of those named in the classification. The correspondence admits the discrepancies and does not, I feel, offer any explanation of their cause.

Income Tax Statistics.

tribution of incomes represented by the returns. This is shown in Table VIII.

TABLE VIII.
INCOME TAX PAYERS AND INCOMES—BOROUGH OF MANHATTAN.

Income Classes, Thousands of Dollars.	Tax Payers.		Incomes.	
	Number.	Per Cent. of U. S. Total.	Total.	Per Cent. of U. S. Total.
2.5 to 20.....	44,481	13.3	\$259,152,196 (a)	14.6(a)
20 to 50.....	4,058	22.5	109,592,400	22.1

Total.....	50,049	14.0	602,092,221(b)	21.0(b)

(a) Estimated. (b) Partly estimated.

It will be noted that while Manhattan has 14 per cent. of all the taxpayers, the income which they represent is 21 per cent. of the total estimated income in the United States. Generally speaking, the share attributable to Manhattan grows as the incomes become larger. The reader will not fail to observe that more than half of all the incomes of \$500,000 and over are in Manhattan and that the income which they represent is more than three fourths of all the income of this class in the United States.

It would fall short of a complete analysis of the available figures were we to neglect the fiscal aspects of the tax. Besides considerations affecting the distribution of incomes there are others which are derivable from the report, and concern the weight of taxation, its geographical distribution, and its future fruitfulness, which may well engage our attention.

In a taxation system as composite as the income tax with its exemptions and graduated rates, there is an interest in ascertaining the total weight of the tax with reference to the total income. The total product of the tax in 1913 was \$28,253,534, and this was levied according to our calculations upon a total

American Statistical Association.

income of \$2,862,021,776. Disregarding all exemptions, therefore, the taxes paid both as normal and as additional tax amounted to approximately 1 per cent. (0.98) of the total income of persons subject to income taxation. In the aggregate the normal tax was equivalent to 0.44 per cent. of the total income as computed. In view of the progressive taxation of the supertax, it would be desirable to carry out calculations similar to those indicated for each income class. Such a problem offers considerable difficulty on account of the scanty material at our disposal, regarding the normal tax. For the additional tax, however, exact information is available. Table IX exhibits the amount of additional tax paid by each income class and the resulting rate of taxation.

TABLE IX.
INCOMES OF \$20,000 OR MORE AND ADDITIONAL TAX PAID.

Income Class Thousands.	Incomes.		Additional Tax Paid.	
	Number.	Amount.	Amount.	Per Cent. of Total Income.
20 to 50.....	17,961	\$496,375,400	\$1,370,554	0.28
50 to 75.....	2,613	148,281,950	1,133,039	0.76
75 to 100.....	998	79,000,767	922,923	1.17
100 to 250.....	1,241	166,448,700	3,617,498	2.17
250 to 500.....	222	68,441,660	2,323,683	3.39
500 and over.....	135	123,057,500	6,145,100	4.13
Total.....	23,175	\$1,081,605,977	\$15,511,797	1.43

Our table compares the total additional tax paid with the total income of the persons subject to such tax and not with their taxable income alone. While incomes of over \$500,000 are subject to an additional tax of 6 per cent., this rate applies to the excess over \$500,000—not to the total income. A person enjoying an income in excess of \$500,000 pays his additional tax in the manner shown in Table VI, namely, no additional tax on \$20,000, 1 per cent. on the next \$30,000, 2 per cent. on the next \$25,000, 3 per cent. on the next \$25,000, 4 per cent. on the next \$150,000, 5 per cent. on the next \$250,000, and 6 per cent. on all beyond that, or beyond \$500,000. A person therefore with an income of \$600,000 would pay additional taxes to the amount of \$26,050, equiv-

Income Tax Statistics.

alent to 4.34 per cent. of his entire income. His total tax would be increased by the normal tax which by reason of the personal exemption and the omission of incomes, if any, from dividends, would be somewhat less than 1 per cent. His total taxation, if he were married and had no income whatever from dividends, would be 5.33 per cent. of his total income, while if we could assume the extreme case that all his income arose from dividends, his total taxation and his additional taxation would be identical, namely, 4.34 per cent. of his total income. Table IX refers to the additional tax only, and shows that it increases from an average of 0.28 per cent. on the incomes over \$20,000 and less than \$50,000, to 4.13 per cent. for the highest income class.

While we know that the normal tax averages 0.44 per cent. of total income of all classes, we cannot add this figure to the rates above calculated for the additional tax in the several income classes, to determine total taxation in each class. There are no figures given in the official documents showing receipts from normal tax by income classes, nor can these figures be calculated with any degree of precision. We could indeed estimate the distribution of income below the tax limit for normal taxation with a slight degree of error. For if we assume that the married and unmarried taxpayers are evenly distributed among the different income classes, we have only to distribute the exempted income (p. 532) in proportion to the number of taxpayers in each class. If we should deduct the personal exemptions, so estimated, from the aggregate income of each tax class as computed or estimated in the earlier part of this paper, we should have a series of figures from which we could derive the proportion of the normal tax receipts attributable to each tax class, always, be it noted, under the assumption that dividend income is distributed among the different classes in the same proportion as other income. By such a calculation we reach the tentative result that incomes under \$20,000 paid \$5,409,000 normal tax and incomes above that sum \$7,319,000. If such were the receipts they were equivalent to a tax of 0.30 per cent. on total income of persons with less than \$20,000, and 0.68 per cent. on total income of persons with larger incomes. But these results

American Statistical Association.

would doubtless be changed if we knew anything about the distribution of dividend income. If dividend income is more frequently a constituent part of larger than of smaller incomes, then the amount of normal tax paid by incomes under \$20,000 would be greater than the sum given above and the average rate of taxation would be also greater, while the converse would be true as respects incomes over \$20,000. How large the change might be it would be hazardous to estimate. The possible limits can be, however, pointed out. If there were absolutely no dividend income received by persons having less than \$20,000 income, the normal tax paid by such persons would have been \$7,478,763 or 0.42 per cent. of the total income of this class. And if all the dividend income belonged to those whose incomes exceeded \$20,000, their normal tax would have been \$5,249,275 or 0.48 per cent. of the total income of this class. It is clear that whatever the distribution of dividend incomes, as between these two groups, the normal tax would always form a larger percentage of the total income of the group with higher incomes, than of the group with lower incomes.

The conclusion seems to be warranted that for incomes of less than \$20,000 the total taxation which is all normal tax probably does not exceed four tenths of 1 per cent. of the total income of this group. It is further clear that to the rates for the additional tax shown in Table IX for incomes of \$20,000 and over, there must be added for the normal tax a figure which is somewhere between 0.45 and 0.65 per cent. of the total income, if we are to ascertain the total rate of income taxation for these classes.

If for reasons already stated we must forego an attempt to compare geographically the number of incomes with the amount of such income, the tax receipts throw some light upon how far the distribution of income by numbers differs from that by amounts. In Tables X and XI figures are given for the amount of tax receipts, both for the normal tax and the additional tax, with relative figures showing also the distribution of taxable incomes, for the same geographical areas as figured in our previous tables.

American Statistical Association.

Table X shows that New York and Pennsylvania, of all the states named, pay a larger proportion of the normal tax than their proportion of the total number of incomes. This points, of course, to larger average incomes than elsewhere. In like manner these two states pay a larger percentage of the supertax than their share of the number of incomes subject to such tax. It is, however, both as respects normal tax as well as supertax, only in the case of New York that the discrepancy is marked.

Table XI showing geographical divisions, emphasizes the fact that tax receipts not only for the normal tax but especially for the additional tax, are more concentrated in the North, and particularly in the Middle Atlantic section, than are the incomes subject to taxation.

The total receipts for the first ten months' experience in the tax were, as has already been stated, upwards of \$28,000,000. It may be noted that for the year 1914 the Secretary of the Treasury estimates the receipts from the personal income tax at \$40,000,000. At the first blush it might seem that the estimated increase was somewhat excessive but there are several factors which enter into the probabilities of the case. Some of them are indicated by the Secretary of the Treasury, and others are not mentioned though doubtless they contributed towards forming his judgment of the probable income.

There are at least six factors which would lead us to anticipate greater receipts from the personal income tax in 1914 than in 1913:

1. The tax in 1914 will affect the whole year's income and this in itself would account for an addition of one fifth to the receipts were no other persons taxed than those who made returns in 1913.

2. The returns for 1914 will include the income for January and February of that year, months which were omitted in 1913 and also months in which certain kinds of income, especially receipts from interest upon securities, are abnormally heavy.

3. The system of taxation at the source will be in full vigor in 1914. Apart from the fact that this may lead to a more ac-

Income Tax Statistics.

curate ascertainment of incomes, there can be no doubt that such taxation at the source will affect the incomes of persons not really subject to taxation because of the failure of large numbers of persons who are receiving income in comparatively small quantities from interest on securities to make the necessary declarations of exemption.

4. With the natural growth of population, other things being equal, a larger number of persons would probably be subject to the income tax in 1914 than in 1913.

5. The tax for 1914 will probably be levied more fully than in 1913 and the evasions of the tax, either through willful tax dodging or through ignorance of the law, will be less frequent.

6. As the incomes for the year will be larger, they will, so far as the additional tax is concerned, often be subject to taxation at higher rates. Thus a person whose income in 1913 was exactly \$20,000 was not subject to the additional tax, but his income for 1914 will be at least \$24,000 and the excess over \$20,000 will be taxable at 1 per cent.

As a partial offset to these various factors which will tend to increase the productivity of the income tax in 1914 as compared with 1913, we must take into account the fact that the general condition of business was less prosperous in 1914 than in 1913. That this element will have some effect can hardly be doubted although the extent of its influence is not susceptible of measurement.

From the meagre and incomplete figures which we have attempted to analyze in this paper, the most obvious conclusion is the need for far more complete information in regard to incomes and the income tax than we now possess. Returns for the year 1914 are now in the hands of the internal revenue officials. Let us hope that next year the Commissioner of Internal Revenue will tell us what these returns really contain. The system of taxation at the source will be in full vigor and new and interesting questions will arise which can only be answered by a much more detailed analysis of the figures. There seems to be no reason why the public should not know for each income class not only the number of persons included in it, but also how many are single, how many are married, what is the amount of exempted income, what the amount of

American Statistical Association.

dividend income, what the amount taxed at the source, the amount of taxable income and the product of the tax. Such an analysis would be easily derivable from the income tax returns. If the information given is to be valuable, considerable attention must be given to taxation at the source, and salary payments should be distinguished from interest payments. If this is done we should be able to distinguish income from salaries and similar sources, that from dividends and that from interest. Furthermore it would seem a comparatively simple thing to ascertain revenues from business undertakings.

There are also some special questions on which the public is entitled to information. One of them concerns particularly the income received from dividends. Such an analysis of the net income of corporations as would show how much of this income is distributed in the form of dividends, is highly desirable. It is also important to ascertain how much of such dividend income goes to other corporations and is taxed again through their income tax, and how much of it goes to individuals. If the latter point were ascertained and the declarations of the individual income tax properly tabulated, we should be able to see how much of the tax on the dividends falls upon those persons who are liable to income taxation, and how much falls upon persons who are not so liable, either because their income is less than \$3,000 per annum or because they are educational and other institutions exempted from the payment of the tax. A further question which will be of particular interest in the coming year, when the system of taxation at the source is in full swing, relates to the payment of interest by corporations. Under the law the tax on such interest must be paid at the source unless there is filed for the individual recipients declarations of exemption. It is undoubtedly a fact that a considerable number of holders of small amounts will not file such notices of exemption and that consequently so far as the interest on the securities is concerned it will really be paid for persons who are not subject to the personal income tax. If the amount of tax paid at the source by corporations should be compared with the aggregate interest noted in the individual returns as taxed at the source, we

Income Tax Statistics.

should then be able to ascertain how far the former exceeded the latter.

These are simple illustrations of the kind of information which could be derived from the income tax returns if they were properly systematized and presented to the public. They are in fact a veritable mine of economic information, but it is a mine which needs to be worked. Surely the government must have at its disposal the advice of expert economists and statisticians who could show what facts ought to be presented to the public, and how the material should be analyzed to obtain such information. Unless appearances are misleading, the Commissioner of Internal Revenue did not seek such advice in preparing his first report. With a full year's returns for 1914, and with the system in complete operation, it is to be hoped that these problems will receive more adequate attention.

See notes on following page.

Notes to Selected Historical and Other Data Tables

General notations and statement

N/A - Not applicable.

n.a. - Not available.

p - Preliminary.

r - Revised.

* - Estimate should be used with caution because of the small number of sample returns on which it is based. See "Appendix—SOI Sampling Methodology and Data Limitations."

** - Not shown to avoid disclosure of information about specific taxpayers. However, the data are included in the appropriate totals.

Detail may not add to totals because of rounding.

Table 1

- [1] Less deficit. Starting with 1987, data are not comparable with earlier years because of major changes in the law, many of which are referred to in other footnotes.
- [2] Not included in AGI.
- [3] Starting with 1987, represents total dividends; previously, represented total dividends after statutory exclusion.
- [4] Starting with 1987, losses are after "passive loss" limitation.
- [5] Starting with 1987, represents total capital gains; previously, represented total capital gains after statutory exclusion. For other changes affecting capital gains, see *Statistics of Income—Individual Income Tax Returns*, various years.
- [6] Before 1980 and starting again after 1987, excludes Individual Retirement Arrangement (IRA) distributions; for intervening years, pensions and IRA distributions in AGI were reported together on the tax return. Effective during 1986, the more liberal of the two methods of computing the nontaxable portion of pensions and annuities (representing taxpayer contributions to certain pension plans) was repealed.
- [7] Starting with 1987, represents total unemployment compensation; previously, all or part was excludable under certain conditions.
- [8] Excludes sole proprietorship (including farm) rental income or loss. Starting with 1987, rental losses are before "passive loss" limitation and, therefore, exceed

the amount included in AGI.

- [9] Excludes certain royalties included in computations of capital gain or loss and of ordinary gain or loss, sales of noncapital assets.
- [10] Prior to 1981, amounts for net income are actually for net income (less loss). Net income and loss were not separately tabulated. Also, for these years, the number of returns shown with net income was rounded to millions during processing; the more exact number was not tabulated.
- [11] See footnote 4.
- [12] See footnote 10.
- [13] See footnote 4.
- [14] Includes adjustments not shown separately in Table 1. Starting with 1987, excludes employee moving and certain other business-related expenses, deduction for married two-earner couples, and certain alimony payments, but includes self-employed health insurance deduction; see also footnote 15. (The latter deduction expired July 1992, but was later reinstated retroactively; however, resulting deductions, reported on amended returns, are not reflected in the 1992 statistics.) Starting with 1990, adjustments include deduction for one-half of self-employment (social security) tax. For changes in adjustments for earlier years, see *Statistics of Income—Individual Income Tax Returns*.
- [15] Deductible Individual Retirement Arrangement (IRA) contributions, reflected in adjustment statistics starting with 1980, were limited starting with 1987.
- [16] Includes exemptions for blindness repealed effective 1987. Deduction for exemptions was limited for higher-income taxpayers starting with 1991. Exemption amounts were indexed for inflation starting with 1985 and were limited for certain high-income taxpayers starting with 1987.
- [17] In general, represents the sum of standard and itemized deductions. For 1980 and 1985 data, includes total itemized deductions before subtraction of "zero bracket amount," plus, for non-itemized deduction returns, the zero bracket amount and, for 1985 data only, charitable contributions deduction. Starting with 1987, includes revised itemized deductions (see also footnotes 19-22), "basic" standard deduction and "additional"

Notes to Selected Historical and Other Data Tables

standard deductions for age 65 or over for blindness (for changes in the standard deduction and its relation to the zero bracket amount, see *Statistics of Income—Individual Income Tax Returns*, for appropriate years). Starting with 1991, total itemized deductions are after statutory limitation (see footnote 19).

[18] For 1980 and 1985 data, represents "zero bracket amount" used on returns of non-itemizers; see also footnote 23. Zero bracket amount for 1985 and standard deduction, starting with 1986, were indexed for inflation.

[19] Includes itemized deductions not shown separately in Table 1, including revised deductions, starting with 1987, for "miscellaneous expenses" after limitation and for employee moving expenses; see also footnotes 20-22. In general, total itemized deductions were limited for certain high-income taxpayers starting with 1991. For changes in deductions for earlier years, see *Statistics of Income—Individual Income Tax Returns*.

[20] Deductible medical and dental expenses were limited, starting with 1987, based on a revised percentage of AGI. For changes in the deduction for 1987 and earlier years, see *Statistics of Income—Individual Income Tax Returns*.

[21] Starting with 1987, State sales taxes were no longer deductible.

[22] Starting with 1987, deductions for "personal" interest and mortgage real estate loan interest were limited and, starting with 1991, personal interest was no longer deductible.

[23] For 1980 and 1985 data, taxable income *includes* the "zero bracket amount," repealed effective 1987 and partially replaced by standard deductions which were *subtracted* in computing taxable income. A standard deduction was similarly used prior to 1980. For the percentages of AGI used for the standard deduction and the limitation on the deduction, see *Statistics of Income—Individual Income Tax Returns*.

[24] Different tax rate structures applied to Tax Years 1970, 1971-1978, 1979-1981, 1982-1986, 1987, and 1988-1992. Indexing of tax rate boundaries for inflation was introduced starting with 1985. The preferential maximum tax rate on long-term capital gains under "alternative tax" was revised over the years. Alternative tax was abolished effective 1987, but a maximum capital gains tax rate slightly less

than the maximum regular tax rate continued to apply under certain conditions starting with 1991. For additional information on changes affecting tax computations, see *Statistics of Income—Individual Income Tax Returns*.

[25] For 1970, includes tax surcharge of \$2,018,078,000.

[26] Includes credits not shown separately in Table 1, such as the political contributions credit (repealed effective 1987), earned income credit (liberalized starting with 1987 and 1991), and low-income housing credit (introduced effective 1987); see also footnote 27. For changes in credits allowed for earlier years, see *Statistics of Income—Individual Income Tax Returns*.

[27] Investment credit was included in the more-inclusive general business tax credit starting with 1984. With exceptions, investment credit was repealed effective 1986.

[28] Includes income tax after credits and additional tax for tax preferences, i.e., "minimum tax" or "alternative minimum tax" (see footnote 29).

[29] The add-on "minimum tax" on "tax preferences" (chief among which were long-term capital gains) was introduced starting with 1970. (This tax was formerly described in *Statistics of Income* as the "additional tax for tax preferences.") The minimum tax computation, using a base related to taxable income, was revised and the tax rate increased effective 1976. The number of preferences subject to tax was also revised effective 1976 and 1981. Starting with 1979, two major preferences formerly subject to minimum tax (including long-term capital gains) were subjected, instead, to the new "alternative minimum tax" (AMT) which required taxpayers to pay the larger of the regular income tax or AMT. Computation of AMT was revised effective 1980 (to allow tax to be reduced by certain credits) and, again, effective 1981 (to modify the graduated rate structure). Minimum tax was abolished effective 1983 and many of the tax preferences subject to this tax subjected, instead, to a revised AMT. AMT was increased starting with 1983 by introduction of a single tax rate which replaced the two graduated rates that were lower; the single rate was increased effective 1987 and 1991. (Preferential tax treatment of long-term capital gains was removed effective 1987, and the gains exempted from AMT as a result.)

Notes to Selected Historical and Other Data Tables

[30] Includes refunds and credits to the following year's estimated tax, and refundable portion of earned income credit. Reflects overpayments of income tax, tax recapture of certain prior-year tax credits, tax applicable to Individual Retirement Arrangements (IRA's), self-employment (social security) tax, social security tax on certain tip income, and certain other income-related taxes (for the taxes applicable to the years shown, see *Statistics of Income—Individual Income Tax Returns*).

[31] Reflects taxes mentioned in footnote 30.

SOURCE: *Statistics of Income—Individual Income Tax Returns*, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific *Statistics of Income* reports for a description of sampling error and of the changes mentioned above.

Table 2

[1] Includes returns with adjusted gross deficit.

[2] U.S. totals in Table 2 do not agree with Tables 1 and 3 mostly because Table 2 also includes (a) "substitutes for returns," whereby the Internal Revenue Service constructs returns for certain known nonfilers on the basis of available information and imposes an income tax on the resulting estimate of "taxable income," and (b) returns of nonresident or departing aliens. In addition, for purposes of Table 2:

- a. "Number of exemptions" also includes responses of taxpayers who checked the boxes on their tax return for age 65 or over or for blindness in order to claim the additional standard deductions for age or blindness. This treatment enables some comparability to be maintained between State data starting with 1987 and data for years prior to 1987. Number of exemptions are still understated, however, because these boxes are not checked if taxpayers itemize deductions. (Prior to 1987, checking these boxes entitled taxpayers to additional personal exemptions.)
- b. "Itemized deductions" includes any amounts reported by the taxpayer, even if they were not used in computing taxable income, e.g., amounts reported on returns with no adjusted gross income.
- c. "Total tax liability" includes income tax after credits, alternative minimum tax, tax recapture of prior-year investment or low-income housing credits, tax applicable to Individual Retirement

Arrangements (IRA's), self-employment (social security) tax, social security tax on certain tip income, and certain other income-related taxes. Total tax liability is before reduction by earned income credit (see footnotes 2(d) and 3, below).

d. "Earned income credit" includes both the refundable and nonrefundable portions. The nonrefundable portion could reduce income tax and certain related taxes to zero. See also footnote 3.

[3] "Excess earned income credit" represents the refundable portion of the credit (see footnote 2(d)) and equals the amount in excess of total tax liability (defined in footnote 2(c)), including any advance earned income credit payments for those returns which had such an excess.

[4] Includes, for example, returns filed from Army Post Office and Fleet Post Office addresses by members of the armed forces stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto Rico with income from sources outside of Puerto Rico or with income earned as U.S. Government employees.

NOTE: This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 1993. Data have not been edited for *Statistics of Income* purposes.

SOURCE: Internal Revenue Service, Corporate Systems, Individual Statistics Branch.

Table 3

- [1] There were major changes in filing requirements and conceptual changes in the definitions of adjusted gross income (AGI) and taxable income starting with 1987. Percentages based on AGI starting with 1987 are therefore not comparable with 1986 and earlier years. For explanations, see "Individual Income Tax Returns, Preliminary Data, 1987," *Statistics of Income Bulletin*, Spring 1989, Volume 8, Number 4, and *Statistics of Income—1987, Individual Income Tax Returns*.
- [2] Includes income tax after credits and the "alternative minimum tax" (see footnote 3).
- [3] In addition to low-income taxpayers, this size class (and others) includes taxpayers with "tax preferences," not reflected in adjusted gross income or taxable income, which are subject to the "alternative minimum tax" (included in "total income tax") defined in footnote 29, Table 1.

Notes to Selected Historical and Other Data Tables

SOURCE: *Statistics of Income—Individual Income Tax Returns*, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

Table 4

- [1] Represents "income" from owner-occupied nonfarm housing (less actual rental income and subsidies); proprietors' income; services to individuals furnished without payment by financial intermediaries (except life insurance carriers and private non-insured pension plans); employment-related food to employees, including that related to military and domestic service; standard military clothing issued to military personnel; and employees' lodging. Excludes employer-paid health and life insurance premiums.
- [2] Represents imputed interest received by persons from life insurance carriers and private non-insured pension plans.
- [3] Starting with 1990, the procedure for estimating the difference between NIPA and IRS treatment of depreciation was revised. Therefore, the data for years before 1990 are not comparable to data for later years.
- [4] Represents income of low-income individuals not required to file individual income tax returns, unreported income, and statistical errors or omissions and effects of errors in data for adjusted gross income or personal income.

SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis, *The National Income and Product Accounts of the United States, Volume 1, 1929-58, 1993*, and *Volume 2, 1959-88, 1992*; for years after 1988, *Survey of Current Business*, various issues. Statistics of Income data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

Tables 5 and 6

- [1] See Table 4 for the differences between personal income and adjusted gross income.
- [2] Beginning with 1987, data are not comparable with earlier years because of major changes in the definition of adjusted gross income.

SOURCE: U.S. Department of Commerce, Bureau of

Economic Analysis, *The National Income and Product Accounts of the United States, 1929-58, Volume 1, 1993*, and *Volume 2, 1959-88, 1992*; for years after 1988, *Survey of Current Business*, various issues. Statistics of Income data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

Table 7

- [1] Returns with standard deduction, starting with 1955, include a small number with no adjusted gross income and no deductions. (For 1977-1986, standard deduction is the "zero bracket amount," which was also reported on a small number of returns included in the 1987-1988 statistics; see footnote 2.) For 1944-1954, returns with no adjusted gross income are included in the number of returns with itemized deductions.
- [2] Amount of standard deduction for 1944-1957 was estimated by Joseph A. Pechman, The Brookings Institution, on the basis of the distribution of the number of returns by income class and marital status in *Statistics of Income—Individual Income Tax Returns*, and, starting with 1958, was obtained directly from Statistics of Income tabulations for these years. Represents "zero bracket amount" for 1977-1986. Starting with 1987, represents the sum of "basic" and "additional" standard deductions (for age 65 or over and for blindness); also includes zero bracket amount reported on the small number of prior-year returns filed in 1988-1989 that were included in the 1987-1988 statistics.
- [3] For 1977-1986, itemized deductions are before subtraction of "zero bracket amount."
- [4] Sum of standard and itemized deductions, plus charitable deduction reported on standard deduction returns for Tax Years 1982-1986. For 1987-1988, total deductions also include "zero bracket amount" reported on a small number of returns (see footnote 2).
- [5] See footnote 2, Tables 5 and 6.

SOURCE: Except as indicated in footnote 1, *Statistics of Income—Individual Income Tax Returns*, and unpublished tables, appropriate years. Data are subject to sampling error. Tax law and form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

Notes to Selected Historical and Other Data Tables

Table 8

- [1] See Table 4 for the differences between personal income and adjusted gross income.
- [2] Excludes the "zero bracket amount" for 1977-1986. Because of major changes in law, taxable income starting with 1955 and 1987 is not comparable with earlier years. See also footnote 23, Table 1.
- [3] For the definition of total income tax, see footnote 28, Table 1.

SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis, *The National Income and Product Accounts of the United States, Volume 1, 1929-58, 1993, and Volume 2, 1959-88, 1992*; for years after 1988, *Survey of Current Business*, various issues; and *Statistics of Income—Individual Income Tax Returns*, appropriate years. Statistics of Income data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

Table 9

- [1] Starting with 1975, includes refundable portion of the earned income credit.

SOURCE: *Statistics of Income—Individual Income Tax Returns*, and unpublished tables, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

Table 10

- [1] Includes deductions not shown separately. After 1986, total deductions includes disallowed "passive losses." Therefore, business receipts minus total deductions do not equal net income (less deficit), which excludes disallowed amounts, but which also is after subtraction of passive loss carryover from prior years. (Net income or deficit also excludes disallowed passive losses, and is after subtraction of passive loss carryover.)

SOURCE: *Statistics of Income—Sole Proprietorship Returns*, appropriate years, and *Statistics of Income Bulletin*, Summer issues (for most years). Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

Table 11

- [1] Includes assets and liabilities not shown separately. Totals are somewhat understated because not all partnership returns included a complete balance sheet.
- [2] Short-term debt is the abbreviated title for mortgages, notes, and bonds payable in less than 1 year.
- [3] Long-term debt is the abbreviated title for mortgages, notes, and bonds payable in 1 year or more. In addition, for Tax Year 1975, long-term debt included nonrecourse loans.
- [4] "Total receipts" and "total deductions" include amounts not shown separately. Prior to 1981, "total receipts" included *gross* income from farming, rents, and royalties. Expenses related to this income were included under "total deductions." Starting with 1981, only the *net* incomes or deficits from farming, rents, and royalties were tabulated; the positive amounts were included under "total receipts" and the negative amounts, under "total deductions." The related expenses were not tabulated. Because of a redesign of the partnership return, starting with 1987, total receipts was computed as the sum of "total income from a trade or business;" "portfolio income" distributed directly to partners, from interest, dividends, royalties, and "other" (omitted from the receipts shown in certain other Statistics of Income tables), but not from net capital gains; rental real estate income (positive amounts only); and income from other rental activities (positive amounts only). Most, but not all, of these types of income were included in receipts data for 1986 and earlier years. Portfolio income from capital gains, starting with 1987, was intentionally omitted to improve the comparability of the data with earlier years.
- [5] Starting with 1987, "business receipts" represents gross receipts from sales and operations and, for partnerships in finance, insurance, and real estate, investment income, such as interest, dividends, and rents (but not capital gains). Also, in finance, insurance, and real estate prior to 1981, only gross rentals reported as investment income were treated as business receipts and only if they were the principal operating income.
- [6] For 1982-1986, also includes certain dividends reported in combination with interest.
- [7] After 1980, represents the more complete amounts reported in depreciation computation schedules

Notes to Selected Historical and Other Data Tables

rather than the amounts reported as the depreciation deduction (augmented by depreciation identified for the statistics in cost of sales and operations schedules).

SOURCE: *Statistics of Income—Partnership Returns*, appropriate years, and *Statistics of Income Bulletin*, Summer or Fall issues (for most years). Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific *Statistics of Income* reports for a description of sampling error and of the changes mentioned above.

Table 12

- [1] Size classes are based on "business receipts," i.e., gross amounts from sales and operations, for industries except those in finance, insurance, and real estate. For the latter industries, "total receipts," which is the sum of business receipts and investment income, was used. For partnerships, comparability of data by size of receipts is affected by revisions to the definition of receipts; see also footnotes 4 and 5, Table 11. To help minimize the break in comparability caused by the change in statistical treatment of partnership farm and rental income, an effort was made for 1981-1987 only, to include rental (though not farm) gross income in the receipts used for the size distribution in Table 12. Starting with 1988 though, only partnership net rentals are reflected in the size distribution.
- [2] Includes returns with no business receipts.
- [3] Includes corporations and partnerships with zero assets and liabilities. In addition, for partnerships, includes partnerships without balance sheet information (see also footnote 5, below).
- [4] See footnote 4, Table 11.
- [5] Prior to 1979, partnerships that had liquidated were assumed to have zero assets and liabilities, even if their balance sheets showed otherwise, and were included in the "under \$25,000" asset size class. Beginning with 1980, balance sheet data for liquidated partnerships were tabulated as reported and were included in the appropriate asset size classes.
- [6] For the difference between the number of business returns and the number of businesses, see Table 10.

SOURCE: *Statistics of Income—Corporation Income Tax Returns*; *Statistics of Income—Partnership Returns, Sole Proprietorship Returns*, and *Business Income Tax Returns*, depending on the year; and *Statistics of Income*

Bulletin, Summer or Fall issues (for most years). Tax law and tax form changes affect the year-to-year comparability of the data. See the appropriate *Statistics of Income* reports for a description of sampling error and of the changes mentioned above.

Table 13

- [1] Starting with 1985, number of returns excludes taxable cooperatives, and, starting with 1988, excludes returns filed by Foreign Sales Corporations (FSC's) and Interest Charge-Domestic International Sales Corporations (IC-DISC's); see also footnotes 5 and 6, below. Because of the omission of these returns, totals for all income and financial items shown in the statistics (except those not applicable to IC-DISC's and FSC's, such as "income subject to tax," "income tax," and tax credits) are slightly understated.
- [2] Consolidated returns were filed on an elective basis for groups of affiliated corporations (with exceptions), in general, if 80 percent or more of the stock of the affiliates was owned within the group and a common parent corporation owned at least 80 percent of the stock of at least one of the affiliates.
- [3] Included in "number of returns, total" and "number with net income."
- [4] In general, certain small, closely-held corporations that elected to be taxed at the shareholder level, with no more than 35 shareholders (25 for 1982; 15 for 1979-1981; 10 or 15 for 1977-1978, depending on conditions contained in the law; and 10 for earlier years).
- [5] Domestic International Sales Corporations (DISC's) were designed to promote U.S. exports. They were taxed through parent corporations, but only when profits were distributed or deemed distributed to them. This system of tax deferral was generally replaced after 1984 with a new system of Foreign Sales Corporations (FSC's); see footnote 6. Tax benefits of DISC's remaining after 1984 were limited and an interest charge for tax-deferred amounts was imposed on the parent corporations whose DISC subsidiaries were unable to meet the FSC requirements and that elected to continue as IC-DISC's. Counts presented for DISC's after 1984 are, therefore, limited to IC-DISC's.
- [6] Foreign Sales Corporations (FSC's) generally replaced DISC's as a means of promoting U.S. exports (see footnote 5). Under the FSC provisions, a

Notes to Selected Historical and Other Data Tables

portion of these subsidiaries' "foreign trade income" was exempt from U.S. income tax.

- [7] Starting with 1985, inventories includes amounts reported by real estate subdividers and developers previously included in "other investments."
- [8] For 1980 and 1985 data, tax-exempt securities, representing investments in State and local Government obligations, were reported with investments in U.S. Government obligations as a combined total on the tax return. Starting with 1989, tax-exempt securities were again reported separately, but were defined to include, not only investments in State and local Government obligations, but also stock in investment companies that distributed dividends during the current year representing tax-exempt interest on such obligations.
- [9] Starting with 1991, accounts payable of banking and savings and loan institutions includes deposits and withdrawable shares previously reported in "other current liabilities."
- [10] In general, starting with 1983, statistics for receipts, deductions, and net income (or deficit) of S Corporations are limited to those attributable to a trade or business. Therefore, most investment income or loss, such as from taxable interest, dividends, rents, royalties, and gain (loss) from sales of investment property; the deductions related to this income; as well as deductions for charitable contributions, intangible drilling and development costs, oil and gas depletion, foreign taxes paid, and the limited expensing of the cost of depreciable assets (Code section 179), are not reflected in net income (because they were allocated directly to shareholders, instead). See also footnote 11.
- [11] Starting with 1987, "business receipts" includes the full amount reported by stock and commodity brokers and exchanges, and by real estate subdividers, developers and operative builders, even when they bought and sold securities, commodities and real estate on their own account. Previously, such transactions were treated as "net gain (loss), noncapital assets."
- [12] See footnote 10.
- [13] Starting with the 1985 statistics, includes any dividends reported in combination with interest on Form 1120-S by S Corporations, i.e., certain corporations that elect to be taxed through shareholders (see footnote 4). Based on prior years when Form 1120-S required each to be reported separately, nearly all of the combined amount represents interest.
- [14] For the 1985 statistics, "other deductions" includes depletion and employer contributions to pension, profit-sharing, stock bonus, and annuity plans, and to employee benefit programs, reported on the Form 1120-A short form. Starting with 1988, identifiable amounts reported on Form 1120-A for any of these items are included in the statistics for the appropriate deduction. See footnote 10.
- [15] In general, "total receipts less total deductions" includes nontaxable interest on State and local Government obligations, but excludes income from related foreign corporations only "constructively" received. As such, total receipts less total deductions" represents all income, taxable and nontaxable, "actually" received by the corporation, as reported on the corporation income tax return, and excludes all income only "constructively" "received. In contrast, "net income (less deficit)" represents all taxable income, actually or constructively received. Therefore, in the statistics, "total receipts less total deductions" minus "nontaxable interest on State and local Government obligations" and "constructive taxable income from related foreign corporations" equals "net income (less deficit)." For the exception, see footnote 16.
- [16] "Net income (less deficit)," "net income," and "deficit" for 1988 and 1990-1991 exclude net long-term capital gain reduced by net short-term capital loss reported by regulated investment companies. See also footnote 15.
- [17] For most years, "income subject to tax" (the corporate tax base) exceeds "net income (less deficit)" chiefly because of the deficits reported on returns without net income. Moreover, it is the sum of the several tax bases applicable over time to different classes of corporations, not all of which were directly related to net income. Income subject to tax thus includes the "taxable income" base used by most companies (and defined as net income minus certain statutory special nonbusiness deductions); prior to 1988, a variation of this base in combination with net long-term capital gains in certain situations where the lower capital gains tax applied; and the special tax bases applicable to S Corporations (otherwise taxed through their shareholders), insurance businesses, and certain investment companies. Profits of Domestic International Sales Corporations were tax-deferred; most of those of

Notes to Selected Historical and Other Data Tables

qualifying Foreign Sales Corporations were tax-exempt and those of S Corporations were taxed through their individual shareholders. Therefore, the net income of all these corporations is excluded from income subject to tax for years for which data for these companies are included in the statistics (see also footnote 1.)

- [18] For 1970, includes tax surcharge of \$784,437,000. For 1975-1980, includes tax from recapture of Work Incentive Program (WIN) credit; starting with 1985, includes Personal Holding Company tax; starting with 1988, includes tax on "branch profits" of foreign corporations with U.S. operations; and, starting with 1989, includes certain lesser taxes, including special taxes applicable to real estate investment trusts and foreign corporations with U.S.-source income.
- [19] Different tax rate structures applied for Tax Years 1970, 1971-1974, 1975-1978, 1979-1981, 1982, 1983-1986, and 1987-1991. In general, starting with tax years beginning in 1987, "alternative tax" was repealed. This tax included a maximum rate on long-term capital gains that produced a tax that was less than that produced by the regular tax rates.
- [20] Effective during 1987, the "alternative minimum tax" replaced the "minimum tax" (formerly referred to in the statistics as the "additional tax for tax preferences"), which was introduced for tax years that ended in 1970. The tax rate for minimum tax was increased and the computation revised starting with Tax Year 1976; computation was further modified effective with Tax Years 1977, 1983, 1984, and 1990. Tax preferences subject to the tax were redefined starting with Tax Year 1976, and slightly expanded starting with Tax Year 1977. The alternative minimum tax rate exceeded that applicable under the former minimum tax.
- [21] Starting with the 1985 statistics, general business credit includes alcohol fuel, investment, jobs and employee stock ownership plan (ESOP) credits which were reported separately for previous years. Also included are the research credit (starting 1986) and the low-income housing credit (starting 1987). With exceptions, investment credit was repealed effective 1986; employee stock ownership plan contributions credit was repealed effective 1987. For changes in definitions of component credits, see *Statistics of Income—Corporation Income Tax Returns*, for the years concerned.

SOURCE: *Statistics of Income—Corporation Income Tax Returns*, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the appropriate Statistics of Income reports for a description of sampling error and of the changes mentioned above.

Table 14

- [1] See footnote 1, Table 13.
- [2] See footnote 10, Table 13.
- [3] See footnote 11, Table 13.
- [4] See footnote 13, Table 13.
- [5] See footnotes 18 and 19, Table 13.
- [6] In addition to regular (and alternative tax, for years prior to 1988), includes certain other taxes either shown in Table 13, or specified in footnote 18, Table 13. See *Statistics of Income—Corporation Income Tax Returns*, for the years concerned for more detailed explanations.

Notes to Selected Historical and Other Data Tables

Income reports for a description of sampling error and of the changes mentioned above.

Table 16

- [1] Total adult deaths represent those of individuals age 20 and over, plus deaths for which age was unavailable.
- [2] Prior to 1982, number of taxable returns by year of death is only approximate because, while the majority of returns filed in a given calendar year represent estates of decedents who died in the immediately-preceding year, many represent estates of decedents who died in earlier years. Therefore, the number of taxable returns shown as for 1976 decedents are actually the number of taxable returns filed in 1977, regardless of year of death. Starting with 1982, statistics for year of death are more accurate, since they are based on year of death as reported on return filings over a period of 3 successive years. Thus, returns of 1989 decedents, for example, are based on the year of death reported on returns that were filed in 1989-1991.

Data for 1965 and subsequent years are not altogether comparable with earlier years. Starting with 1965, the number of taxable returns with taxable estate was based on estate tax *after* credits; previously, it was based on estate tax *before* credits.

Year-to-year comparability is affected by changes in the gross estate filing threshold which is based on date of death: 1934 (\$50,000); 1935 (\$50,000 changing to \$40,000); 1936-1941 (\$40,000); 1942 (\$40,000 changing to \$60,000); 1943-1976 (\$60,000); 1977 (\$120,000); 1978 (\$134,000); 1979 (\$147,000); 1980 (\$161,000); 1981 (\$175,000); 1982 (\$225,000); 1983 (\$275,000); 1984 (\$325,000); 1985 (\$400,000); 1986 (\$500,000); and 1987 and thereafter (\$600,000).

SOURCE: For years after 1953, *Statistics of Income -- Estate Tax Returns; Estate and Gift Tax Returns; Fiduciary, Estate and Gift Tax Returns*, depending on the year; or the *Statistics of Income Bulletin*, selected issues. For years prior to 1954, *Statistics of Income--Part 1*. Adult deaths are from National Center for Health Statistics, Public Health Service, U.S. Department of Health and Human Services, *Vital Statistics of the United States*, unpublished tables.

Tables 17 and 18

- [1] Includes that portion which was designated for the

Presidential election campaign fund by taxpayers on their tax returns. Also included is the fiduciary income tax collected (from estates and trusts). Fiduciary income tax collected *in* 1993 was \$6.0 billion; *in* 1992, \$6.1 billion; *in* 1991, \$4.8 billion; *in* 1990, \$5.9 billion; *in* 1989, 6.0 billion; *in* 1988, \$6.5 billion; and, *in* 1987, \$8.4 billion. Presidential election campaign designations amounted to \$24.9 million *in* 1993; \$29.6 million *in* 1992; \$32.3 million *in* 1991; \$32.5 million *in* 1990; \$32.3 million *in* 1989; \$33.2 million *in* 1988; and \$33.2 million *in* 1987.

- [2] Includes various taxes applicable to tax-exempt organizations, including the tax on "unrelated business income." Total taxes collected from tax-exempt organizations were \$173.6 million *in* 1993, \$181.6 million *in* 1992, \$155.6 million *in* 1991, \$127.9 million *in* 1990, \$115.6 million *in* 1989, \$137.5 million *in* 1988, and \$119.9 million *in* 1987.
- [3] Excise taxes are imposed on selected products, services and activities, such as on alcohol and tobacco products and on gasoline. Statistics shown in Table 17 have been revised, starting with Fiscal Year 1988, to include alcohol and tobacco taxes, collection of which was transferred from the Internal Revenue Service to the Bureau of Alcohol, Tobacco, and Firearms, starting with that year. Collections of manufacturers tax on recreational products include taxes on firearms, responsibility for which was transferred from the Internal Revenue Service to the Bureau of Alcohol, Tobacco, and Firearms starting January 1991. Collections exclude taxes on cargoes paid to the U.S. Customs Service.
- [4] Employment taxes include payroll taxes levied on salaries and wages, such as social security, railroad retirement, and unemployment taxes; plus the self-employment tax imposed on "self-employment income."

NOTES: Refunds in Table 18 are associated with the taxes (including alcohol, tobacco, and firearms taxes) described in footnotes 1-4, Table 17. Collections (or refunds) are those made during time periods indicated, regardless of the year or other period during which the tax liability was incurred (or to which the refund applied).

Collections represent the gross amounts before refunds and include amounts paid with the tax return; prior to filing the return (as applicable, income tax withheld by employers and estimated tax payments); and subsequent to filing the return (chiefly the result of initial return processing or of examination and enforcement activities).

Notes to Selected Historical and Other Data Tables

Collections also include interest and penalties.

Refunds result chiefly from tax overpayments determined at time of filing a return. Also included are amounts subsequently determined as due the taxpayer as a result of an amended return or a claim for refund (including those produced by "net operating loss" and other carryback adjustments from future taxable years); or as a result of initial return processing or of IRS examination and other activities. Individual income tax refunds are net of offsets under laws which require IRS to act as collecting agent for delinquent payments owed various U.S. Government agencies under specific programs. All refund data include interest paid by IRS (*in* 1993, \$2.1 billion; *in* 1992, \$3.2 billion; *in* 1991, \$2.8 billion; *in* 1990, \$2.4 billion; *in* 1989, \$0.5 billion; *in* 1988, \$0.4 billion; and, *in* 1987, 0.4 billion).

For 1970 and 1975, the fiscal year was defined as July of the previous calendar year through June of the year noted. Starting with 1980, the fiscal year was redefined as October of the previous calendar year through September of the year noted. (For Fiscal Year 1976, data are not shown for the interim period, July-September 1976.)

Starting with Fiscal Year 1988, additional detail on manufacturers excise taxes, retail and special fuel taxes, and miscellaneous excise taxes is available in the fourth quarter *Internal Revenue Report of Excise Taxes*; previously this information was published in the *Internal Revenue Service Annual Report*. For additional detail on alcohol, tobacco, and firearms taxes, see the Statistical Release, *Alcohol and Tobacco Tax Collections*, Bureau of Alcohol, Tobacco, and Firearms, U.S. Department of the Treasury.

SOURCE: U.S. Department of the Treasury, Internal Revenue Service, Case Processing, Accounting Branch.

Table 19

- [1] Alcohol and tobacco taxes each include special (occupational) taxes prior to Fiscal Year 1988. Starting with Fiscal Year 1988, occupational taxes are excluded from the separate amounts shown for alcohol and for tobacco taxes, although they are reflected in the combined total for *all* alcohol and tobacco taxes.
- [2] Also includes lubricating oil taxes. Effective January 7, 1983, taxes on lubricating oil were repealed.
- [3] Effective January 1, 1984, taxes on tubes and tread rubber were repealed.
- [4] Effective January 7, 1983, the manufacturers excise taxes on parts and accessories for trucks and buses,

which are included in this classification, were repealed. Beginning with the quarter ending December 1983, taxes on motor vehicles are excluded.

- [5] Includes taxes on diesel and special motor fuels which were classified as miscellaneous excise taxes in 1970. Starting with the quarter ended December 1983, includes taxes on motor vehicles and, starting with the quarter ended March 1990, leaking underground storage tank trust fund tax (except for fuel used in aviation, which is classified under environmental excise taxes).
- [6] Repealed effective August 23, 1988. Amounts reported for more recent time periods result from amended filings, delinquent taxes, examination activities and refunds of tax deposited in excess of tax liabilities.
- [7] Environmental "Superfund" tax expired September 1985, but was reimposed January 1987. Data include oil spill trust fund and ozone-depleting chemical taxes, effective January 1990. Also includes leaking underground storage trust fund tax for quarters ended March 1988 through December 1989; thereafter, except for the tax on aviation fuel use, this tax is classified under special fuels tax.

NOTE: Amounts reported for specific excise taxes are the total tax liabilities reported on returns processed during the period shown and thus differ from amounts collected during the same period through deposits and payments attached to returns, some of which were processed in other quarters. Gross excise tax collections are shown in Table 17.

SOURCE: U.S. Department of the Treasury, Internal Revenue Service, Case Processing, Accounting Branch; and Financial Management Service.

Table 20

- [1] Form 1040 is the "long form;" Form 1040A, the "short form." Prior to 1994, Form 1040EZ was a special short form for single taxpayers with no dependents; starting with 1994, certain married taxpayers with no dependents could also file on this form. Starting with Calendar 1992, each of these three categories exclude "paper" returns (so-called Form 1040PC returns), filed by taxpayers (or tax preparers) using an IRS-approved computer software-generated format. "Other" includes Form 1040C (departing aliens) in years before 1992; 1040NR (nonresident aliens); 1040PR (self-employment tax, Puerto Rico); and 1040SS (self-employment tax, Virgin Islands, Guam, and American Samoa). However, "other" excludes Form 1040X (amended returns) and "substitutes for returns" (returns "con-

Notes to Selected Historical and Other Data Tables

structed" by the Internal Revenue Service for certain known nonfilers on the basis of available information).

Totals for Forms 1040, 1040A, and 1040EZ (including so-called Forms 1040PC) are comprised of "business" and "nonbusiness" returns. "Business" returns are filed on Form 1040 (or on "Form 1040PC," starting with the statistics for Calendar year 1993); "nonbusiness" returns are filed on Forms 1040, 1040A, and 1040EZ (or on "Form 1040PC," also starting with Calendar Year 1993). Schedule C is for reporting nonfarm sole proprietorship businesses and Schedule F is for reporting farm income and expenses.

Starting in 1986, totals for Forms 1040, 1040A, and 1040EZ, as well as for nonbusiness and nonbusiness Form 1040 returns, are comprised of "paper returns" (including those classified as "Form 1040PC," starting in 1993), plus "standard" electronically-filed (ELF) returns (usually filed by tax preparers). Starting in 1992, the totals also include returns filed by telephone ("TeleFile").

- [2] Form 1120 is the basic corporation income tax return; Form 1120A is the short form; and Form 1120S is for S Corporations (certain small companies electing to be taxed through their shareholders, no more than 35 shareholders starting with 1983, and either 15 or 10, for earlier years). "Other" includes Forms 1120F (most foreign companies with U.S. income); 1120L (life insurance companies) starting in 1992 (included in the statistics for Form 1120 in the earlier years); 1120 POL (certain political associations); 1120H (homeowners associations); 1120-FSC (Foreign Sales Corporations or FSC's) starting in 1986; starting in 1988, 1120-REIT for real estate investment trusts, 1120-RIC for regulated investment companies (both of which formerly filed on Form 1120), and 1120-PC for property and casualty insurance companies (which formerly filed on Form 1120 or 1120M, described below). "Other" also includes Form 1120 DF (for designated funds) starting in 1988; and for years before 1988, Form 1120M, discontinued, for mutual non-life insurance companies which now file on Form 1120 or Form 1120-PC (and are included in the statistics for Form 1120 in the earlier years). "Other" excludes Forms 1120-DISC for Domestic International Sales Corporations or DISC's, discontinued after 1985 and mostly replaced by FSC's (see above); 1120 IC-DISC for Interest Charge-Domestic International Sales Corporations, which replaced certain DISC's after 1985; and 1120X, amended returns.

- [3] Form 1041 is the regular fiduciary income tax return filed for estates and trusts. For 1988-1990, includes Form 1041S (short form). For 1970, includes Form 1041A (trust accumulation of charitable trusts, information return).
- [4] Form 706 is the regular estate tax return; Form 706NA is for U.S. estates of nonresident aliens.
- [5] Form 990 is for tax-exempt organizations, except private foundations (Form 990-PF). Form 990EZ is the short form. Form 990-T is the income tax return filed for businesses conducted by tax-exempt organizations. Form 990-C is for farmers' cooperatives. Form 4720 is for computing the special excise taxes applicable to certain private foundations and Form 5227 is for split-interest trusts treated as private foundations. The 1970 total on the line for Forms 990 and 990EZ also includes Forms 990A filed for tax-exempt charitable organizations.

SOURCE: U.S. Department of the Treasury, Internal Revenue Service, Compliance Research, Projections and Forecasting Group.

Table 21

- [1] Number of returns with a paid preparer signature is based on different sources, depending on the year. Data for 1988 are estimated based on the Statistics of Income sample for that year. Data for 1989-1992 are from the Individual Master File of all individual income taxpayers, with the following exceptions: starting with 1989, the number of returns with itemized deductions; starting with 1990, the number of returns that were filed electronically. These latter numbers were estimated from the Statistics of Income—Taxpayer Usage Study (TPUS) samples of returns filed during the first 4 months for these years.
- [2] Data on electronically-filed returns are included in the counts of Form 1040 returns shown above in Table 21, for all years. Starting with Tax Year 1990, data are based on the TPUS sample (see footnote 1) of returns filed, extended to cover the first 8 months of the filing year. No adjustment was made for the returns filed after the first 8 months on the assumption that few were likely to have been filed electronically during these months.
- [3] Data on IRS Taxpayer Service Programs are collected either on a fiscal-year or calendar-year basis, depending on the program. In general, assistance rendered in a given fiscal year may be related to returns due on

Notes to Selected Historical and Other Data Tables

April 15th during that fiscal year and is for the tax year ending with the previous December. As a result, data in Table 21 on telephone and written inquiries; office walk-in's, information; and taxpayer contacts through community classes and seminars, which are presented on a tax year basis, are actually for a fiscal year. Therefore, data for these contacts shown as for Tax Year 1992, for example, are actually for Fiscal Year 1993.

NOTE: Data on IRS assistance represent taxpayer contacts. Some taxpayers make more than one contact. The number of taxpayers assisted (in contrast to the number of contacts made) is not known.

SOURCE: Data on paid preparers were obtained from Statistics of Income; and Corporate Systems, Individual Systems Branch. Data on IRS assistance were obtained from Taxpayer Service.

SOI Sampling Methodology and Data Limitations

Appendix

This appendix discusses typical sampling procedures used in most Statistics of Income (SOI) programs. Aspects covered briefly include sampling criteria, selection techniques, methods of estimation and sampling variability. Some of the nonsampling error limitations of the data are also described, as well as the tabular conventions employed.

Additional information on sample design and data limitations for specific SOI studies can be found in the separate SOI reports (see the References at the end of this appendix). More technical information is available, upon request, by writing to the Acting Director, Statistics of Income CP:S, Internal Revenue Service, P.O. Box 2608, Washington, DC 20013-2608.

Sample Criteria and Selection of Returns

Statistics compiled for the SOI studies are generally based on stratified probability samples of income tax returns or other forms filed with the Internal Revenue Service (IRS). The statistics do not reflect any changes made by the taxpayer through an amended return or by the IRS as a result of an audit. As returns are filed and processed for tax purposes, they are assigned to sampling classes (strata) based on criteria such as: industry, presence or absence of a tax form or schedule, accounting period, State from which filed and various income factors or other measures of economic size (total assets, for example, is used for the corporation and partnership statistics). The samples are selected from each stratum over the appropriate filing periods. Thus, sample selection can continue for a given study for several calendar years — 3 for corporations because of the prevalence of fiscal (non-calendar) year reporting. Because sampling must take place before the population size is known precisely, the rates of sample selection within each stratum are fixed. This means, in practice, that both the population and the sample size can differ from that planned. However, these factors do not compromise the validity of the estimates.

The probability of a return being designated depends on its sample class or stratum and may range from a fraction of 1 percent to 100 percent. Considerations in determining the selection probability for each stratum include the number of returns in the stratum, the diversity of returns in

the stratum and interest in the stratum as a separate subject of study. All this is subject to constraints based on the estimated cost or the target size of the total sample for the program.

For most SOI studies, returns are designated by computer from the IRS Master Files based on the taxpayer identification number (TIN), which is either the social security number (SSN) or the employer identification number (EIN). A fixed and essentially random number is associated with each possible TIN. If that random number falls into a range of numbers specified for a return's sample stratum, then it is selected and processed for the study. Otherwise, it is counted (for estimation purposes), but not selected. In some cases, the TIN is used directly by matching specified digits of it against a predetermined list for the sample stratum. A match is required for designation.

Under either method of selection, the TIN's designated from one year's sample are for the most part selected for the next year's, so that a very high proportion of the returns selected in the current sample are from taxpayers whose previous years' returns were included in earlier samples. This longitudinal character of the sample design improves the estimates of change from one year to the next.

Method of Estimation

As noted above, the probability with which a return is selected for inclusion in a sample depends on the sampling rate prescribed for the stratum in which it is classified. Weights are, in general, computed by dividing the count of returns filed for a given stratum by the count of sample returns for that same stratum. "Weights" are used to adjust for the various sampling rates used — the lower the rate, the larger the weight. For some studies, it is possible to improve the estimates by subdividing the original sampling classes into "post-strata," based on additional criteria or refinements of those used in the original stratification. Weights are then computed for these post-strata using additional population counts. The data on each return in a stratum are multiplied by that weight. To produce the tabulated estimates, these weighted data are summed to produce the published statistical totals.

Sample returns are designated by computer from the IRS Master Files based on the taxpayer identification number.

Information for this appendix was compiled by Bettye Jamerson, Coordination and Publications Staff, under the direction of Robert Wilson, Technical Advisor. Major contributions were made by Paul McMahon, Mathematical Statistics Team.

SOI Sampling Methodology and Data Limitations

Sampling Variability

The particular sample used in a study is only one of a large number of possible random samples that could have been selected using the same sample design. Estimates

In transcribing and tabulating data from tax returns, checks are imposed to improve the quality of the statistics.

derived from the different samples usually vary. The standard error of the estimate is a measure of the variation among the estimates from all possible samples and is used to measure the precision with which an estimate from a particular sample approximates the average result of the possible samples.

The sample estimate and an estimate of its standard error permit the construction of interval estimates with prescribed confidence that this interval includes the actual population value.

In SOI reports the standard error is not directly presented. Instead, the ratio of the standard error to the estimate itself is presented in decimal form. This ratio is called the coefficient of variation (CV). The user of SOI data may multiply an estimate by its coefficient of variation to recreate the standard error and to construct confidence intervals.

For example, if a sample estimate of 150,000 returns is known to have a coefficient of variation of 0.02, then the following arithmetic procedure would be followed to construct a 68 percent confidence interval estimate:

$$\begin{aligned} &150,000 \text{ (sample estimate)} \\ &\times 0.02 \text{ (coefficient of variation)} \\ &= 3,000 \text{ (standard error of estimate)} \\ &150,000 \text{ (sample estimate)} \\ &+ \text{ or } - 3,000 \text{ (standard error)} \\ &= 147,000-153,000 \text{ (68 percent confidence interval).} \end{aligned}$$

Based on these data, the interval estimate is from 147 to 153 thousand returns. A conclusion that the average estimate of the number of returns lies within an interval computed in this way would be correct for approximately two-thirds of all possible similarly selected samples. To obtain this interval estimate with 95 percent confidence, the standard error should be multiplied by 2 before adding to and subtracting from the sample estimate. (In this particular case, the resulting interval would be from 144 to 156 thousand returns.)

Generally in the *Statistics of Income Bulletin* only conservative upper limit CV's are provided for frequency

estimates. These do, however, provide a rough guide to the order of magnitude of the sampling error.

Further details concerning sample design, sample selection, estimation method and sampling variability for a particular SOI study, may be obtained on request by writing the Acting Director, Statistics of Income Division, at the address given above.

Nonsampling Error Controls and Limitations

Although the previous discussion focuses on sampling methods and the limitations of the data caused by sampling error, there are other sources of error that may be significant in evaluating the usefulness of SOI data. These include taxpayer reporting errors, processing errors and effects of an early cut-off of sampling. More extensive information on nonsampling error is presented in SOI reports, when appropriate.

In transcribing and tabulating the information from the returns or forms selected for the sample, checks are imposed to improve the quality of the resultant estimates. Tax return data may be disaggregated or recombined during statistical "editing" in order both to improve data consistency from return to return and to achieve definitions of the data items that are more in keeping with the needs of major users. In some cases not all of the data are available from the tax return as originally filed. Sometimes the missing data can be obtained through field follow up. More often, though, they are obtained through imputation methods. As examples, other information in the return or in accompanying schedules may be sufficient to enable an estimate to be made; prior-year data for the same taxpayer may be used for the same purpose; or data from another return for the same year that has similar characteristics may be substituted. Research to improve methods of imputing data that are missing from returns continues to be an ongoing process [1].

Quality of the basic data abstracted from the returns is subjected to a number of quality control steps including 100-percent key verification. The data are then subjected to many tests based on the structure of the tax law and the improbability of various data combinations. Records failing these tests are then subjected to further review and any necessary corrections are made. In addition, the Statistics of Income Division in the National Office conducts an independent reprocessing of a small subsample of statistically-processed returns as a further check [2].

SOI Sampling Methodology and Data Limitations

Finally, before publication, all statistics are reviewed for accuracy and reasonableness in light of provisions of the tax laws, taxpayer reporting variations and limitations, economic conditions, comparability with other statistical series and statistical techniques used in data processing and estimating.

Tabular Conventions

Estimates of frequencies and money amounts that are considered unreliable due to the small sample size on which they are based are noted in SOI tables. The presence of the indicator means that the sampling rate is less than 100 percent of the population and that there are fewer than 10 sample observations available for estimation purposes.

A dash in place of a frequency or amount indicates that no sample return had that characteristic. In addition, a dash in place of a coefficient of variation for which there is an estimate indicates that all returns contributing to the estimate were selected at the 100-percent rate.

Whenever a weighted frequency in a data cell is less than 3, the estimate is either combined with other cells or deleted in order to avoid disclosure of information about individual taxpayers or businesses. These combinations and deletions are indicated in the tables.

Notes

- [1] See, for example, Hinkins, Susan M., "Matrix Sampling and the Effects of Using Hot Deck Imputation," in *1984 Proceedings of the American Statistical Association, Section on Survey Research Methods*.

Other research efforts are included in *Statistical Uses of Administrative Records: Recent Research and Present Prospects*, Volume 1, Internal Revenue Service, March 1984.

- [2] Quality control activities for all SOI studies are published from time to time in a series of separate reports. These reports provide detailed information relating to quality in all phases of SOI processing.

SOI Projects and Contacts

General Statistical Information: (202) 874-0410 Fax: (202) 874-0922

Project	Primary Analysts	Frequency and Program Content
Americans Living Abroad: 1991 Program	Melissa Redmiles	This periodic study is conducted every 4 years (every 5 years, after 1991). It covers foreign income and taxes paid, and foreign tax credit shown on individual income tax returns. Data are by size of adjusted gross income and country.
Corporation Foreign Tax Credit: 1991 Program 1992 Program 1993 Program	Kimberly Veleto Bill States	This annual study provides data on foreign income and taxes paid and foreign tax credit reported on corporation income tax returns. Data are classified by industry (all years) and country (even-numbered years).
Corporation Income Tax Returns: 1991 Program 1992 Program 1993 Program	Patrice Treubert Allison Clark Janice Washington Jonathan Shook Ellen Legel Victor Rehula	Basic data are produced annually and cover complete income statement, balance sheet, tax and tax credits, and detail from supporting schedules. Data are classified chiefly by industry group or asset size. (Beginning with the 1992 program, S Corporations are a separate study.)
Environmental Excise Taxes (Superfund) Study: 1992 Program 1993 Program	Sara Boroshok	The Superfund Amendments and Reauthorization Act of 1986 (SARA) replaced the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA), authorizing the collection of environmental taxes, a type of excise tax. This study, published annually, is the only source of data that provides detailed tabulations by type of chemical.
Estate Collation	Barry Johnson	This periodic study links estate tax return data for decedents and beneficiaries. Income information for beneficiaries is available both for years preceding and following the decedent's death. Information on gift tax returns is available for the last 2 years of the decedent's life. The most recent study is based on decedents who died in 1982. The next study will be for decedents who died in 1989.
Estate Tax Returns: 1992-1994 Program	Barry Johnson	This annual study includes information on gross estate and its composition, deductions, and tax; and information on the age, sex, and marital status of the decedents. Basic estate tax return data by year in which returns are filed are produced every year. Other statistics are available on a year-of-death basis (approximately every 3 years). The most recent study is based on decedents who died in 1989 with returns filed in 1989-91.
Exempt Organizations Business Income Tax Returns: 1990 Program 1991 Program	Peggy Riley Sara Boroshok	This annual study includes tabulations of "unrelated business" income and deductions for organizations classified as tax-exempt under the Internal Revenue Code. The data file will also be linked with the Forms 990 and 990-PF data files of tax-exempt organizations and private foundations.

SOI Projects and Contacts

General Statistical Information: (202) 874-0410 Fax: (202) 874-0922

Project	Primary Analysts	Frequency and Program Content
Foreign Controlled Corporations: 1990 Program 1991 Program 1992 Program	John Latzy Dan Holik	This annual study includes data on transactions between U.S. corporations and their foreign owners. Data are classified by country and industry.
Foreign Corporations: 1990 Program 1992 Program 1993 Program	Bill States Randy Miller Maggie Lewis	This annual study (as of 1992) provides data on activities of foreign corporations that are controlled by U.S. corporations. Data are classified by industry and country.
Foreign Recipients of U.S. Income: 1991 Program 1992 Program	Denise Bori	This annual study provides data by country on income paid to nonresident aliens and the amount of tax withheld for the U.S. Government.
Foreign Sales Corporations (FSC): 1992 Program	Dan Holik	These corporations replaced the Domestic International Sales Corporation, or DISC, as of January 1, 1985. Balance sheet, income statement, and export-related data are tabulated annually through 1987, and then on a 4-year cycle after 1992.
Foreign Trusts: 1990 Program	Randy Miller	This periodic study, conducted every 4 years, provides data on foreign trusts that have U. S. persons as grantors, transferors, or beneficiaries. Data include country where trust was created, value of transfer to the trust and the year the trust was created.
Individual Income Tax Return Public Use File	Mario Fernandez	Microdata magnetic tape files, produced annually, contain detailed information obtained from the individual statistics program, with identifiable taxpayer information omitted to make the file available for public dissemination, on a reimbursable basis. (In addition to microdata files, specific tabulations from them are produced, also on a reimbursable basis.)
Individual Income Tax Returns: 1991 Program 1992 Program 1993 Program	Michael Strudler Marty Shiley	Basic data are produced annually and cover income, deductions, tax, and credits reported on individual income tax returns and associated schedules, chiefly by size of adjusted gross income.
Interest-Charge Domestic International Sales Corporations (IC-DISC): 1991 Program	Dan Holik	These corporations replaced the Domestic International Sales Corporation, or DISC, as of January 1, 1985. Balance sheet, income statement, and export-related data are tabulated annually through 1987, and then on a 4-year cycle.
Intergenerational Wealth	Barry Johnson Marvin Schwartz	This on-going study involves estate returns filed since the inception of the estate tax (1916), and focuses on changes in the concentration of wealth and the intergenerational transfer of wealth, as well as the history of the estate tax system. The asset composition, available demographic information, and an analysis of beneficiaries of estates will be emphasized.

SOI Projects and Contacts

General Statistical Information: (202) 874-0410 Fax: (202) 874-0922

Project	Primary Analysts	Frequency and Program Content
International Boycott Participation: 1991 Program 1992 Program	Melissa Redmiles	This study provides data on business operations of U.S. persons in boycotting countries, as well as the requests and agreements to participate in, or cooperate with, international boycotts not sanctioned by the U.S. Government.
Migration Flow and County Income Data	Sandy Byberg	Migration flow data (based on changes in individual income tax return addresses) and county or State income data are available annually on a reimbursable basis. The most recent data are for 1991-92.
Nonprofit Charitable and Other Organizations: 1990 Program 1991 Program	Cecelia Hilgert	This annual study includes balance sheet and income statement data for organizations classified as tax-exempt under subsections 501(c)(3)-(9) of the Internal Revenue Code.
Nonresident Alien Estates: 1990 Program	Randy Miller	This periodic study, planned for every 4 years, provides data on estates of nonresident aliens who had more than \$60,000 of assets in the United States. The estates are subject to U.S. estate taxation on U.S. property.
Occupation Studies	Bobby Clark Dodie Riley	This periodic study, based on availability of outside funding, is designed to classify individual income tax returns by occupation and to develop a dictionary of occupation titles that can be used to enhance the economic data of many other individual income tax return studies.
Partnership Returns of Income: 1992 Program 1993 Program	Tim Wheeler Elaina Shekhter	Basic data, produced annually, cover income statement, balance sheet, and details from supporting schedules. Data are classified chiefly by industry group.
Partnership Withholding Study: 1991 Program	Kimberly Veletto	This annual study includes data on U.S. partnership payments to foreign partners. Data are classified by country and recipient type.
Personal Wealth Study: 1992 Program	Barry Johnson Marvin Schwartz	This periodic study provides data estimates of personal wealth of top wealth-holders that are generated from estate tax return data using the "estate multiplier" technique, in conjunction with both filing-year and year-of-death estate data bases. The most recent data (1989) are based on returns filed from 1989 to 1991. The 1992 program will be based on returns filed from 1992-1994.
Private Foundations: 1990 Program 1991 Program	Alicia Meckstroth	This annual study includes balance sheet and income statement data for private foundations and charitable trusts filing a Form 990-PF.

SOI Projects and Contacts

General Statistical Information: (202) 874-0410 Fax: (202) 874-0922

Project	Primary Analysts	Frequency and Program Content
S Corporations: 1992 Program 1993 Program	Amy Gill	Annual study data are collected for the income statement, balance sheet, and from supporting schedules. Data are classified by industry group or by asset size.
Sales of Capital Assets: 1985 Program 1985-1993 Panel Study	Barbara Longton Janette Wilson	<p>This periodic study provides detailed data on the sales of capital assets reported on Schedule D of the individual income tax return, sales of residences, and personal or depreciable business property.</p> <p>A panel study provides the same data on capital asset transactions for a subsample of the returns in the Sales of Capital Assets basic study, over a period of years.</p>
Sales of U.S. Real Property Interests by Foreign Persons: 1992 Program	Chris Carson	This annual study will provide data on transfers of U.S. real property interests, when these interests are acquired from foreign persons. Data include the amount realized on transfers, U.S. tax withheld, and the country of foreign persons.
Sole Proprietorships: 1991 Program 1992 Program 1993 Program	Jeffrey A. Hartzok	Basic program data, produced annually, cover the business receipts, deductions and net income reported on Schedule C (for nonfarm proprietors), by industry group. Similar data from Schedule F (for farmers) are available on an occasional basis.
State Data: 1985 Program 1988 Program	Mario Fernandez	Special tabulations of selected individual income, deduction, and tax data by State are produced on a reimbursable basis. (The data file for 1988 is the most recent.)
Statistical Subscription Services: Corporation Source Book	Sandy Byberg	Annual data by more detailed industry groups than are used for the regular corporation statistics are produced by asset size.
Tax-exempt Bond Issues: 1991 Program 1992 Program	Marvin Schwartz	This annual study provides information on private activity and governmental bond issues by type of property financed, size of face amount and State.
Taxpayer Usage Study: 1993 Program	Laura Prizzi	Basic data, produced annually, provide weekly frequencies of specific line entries made by taxpayers, the use of various return schedules and associated forms, and general characteristics of the individual taxpayer population for returns received during the primary filing season (January through April).
U.S. Possessions Corporations: 1989 Program	Randy Miller	This periodic study, planned for every 4 years, provides data on income statement, balance sheet, tax, and "possessions tax credit" data for "qualifying" U. S. possessions corporations. (Most of these corporations are located in Puerto Rico.)

Publications & Tapes

Statistical Information Services

For questions about the availability of SOI data, other statistical services, or release dates for new publications, please contact the Statistical Information Services Office on (202) 874-0410 or FAX (202) 874-0922. As its name implies, this office is best able to answer questions about data. It is not the place to call to obtain tax forms or information about the status of an individual's tax refund or audit examination. Also, all requests from the media should be directed to the IRS Public Affairs Office on (202) 622-4000.

The following *Statistics of Income* reports and tapes can be purchased from Statistics of Income (unless otherwise indicated). Prepayment is required, with checks made payable to the IRS Accounting Section. Please write:

Washington, DC 20013-2608

Compendiums

Studies of Tax-Exempt Organizations, 1974-1987

Publication 1416 - Price \$26.00

This publication presents 22 articles from *Statistics of Income* studies on tax-exempt organizations. The articles emphasize important issues within the nonprofit sector, and also include several other articles previously unpublished in the *SOI Bulletin*, as well as papers published in proceedings of the American Statistical Association and the Independent Sector Research Forum. Topics featured are:

- nonprofit charitable organizations (primarily charitable, educational and health organizations);
- private foundations and charitable trusts; and
- unrelated business income of exempt organizations.

Studies of Tax-Exempt Organizations, 1986-1992

Publication 1416 - Price \$26.00

This is the second volume in a series of *Statistics of Income* (SOI) publications on tax-exempt, nonprofit organizations. The volume includes data covering 1986-1992

and contains 12 previously-published articles from SOI studies, including articles from the *SOI Bulletin*, as well as papers prepared for the *Journal of Nonprofit Management and Leadership*, *Trusts and Estates*, the Independent Sector Research Forum, the National Research Council's Committee on National Statistics, and the American Statistical Association.

Studies of International Income and Taxes, 1984-1988

Publication 1267 - Price \$26.00

This report presents information from 13 *Statistics of Income* studies in the international area (many of them previously published in the *SOI Bulletin*), including:

- foreign activity of U.S. corporations;
- activity of foreign corporations in the United States;
- foreign controlled U.S. corporations;
- statistics related to individuals, trusts and estates; and
- data presented by geographical area or industrial activity, as well as other classifiers.

Compendium of Federal Estate Tax and Personal Wealth Studies

Publication 1773 -- \$26.00

Part I of this report focuses on data from estate tax returns, describing decedents, their beneficiaries, and the composition of their estates. It contains a methodological discussion of the strategy used in weighting the sample data for the estate studies, and also statistics on selected components of decedents' estates, 1916-1990. Information on charitable giving is also included.

Part II presents a series of articles describing the estate-multiplier technique and its applications for personal wealth estimates, estimates of personal wealth for selected years, 1962-1989, as well as a discussion of the relationship among realized income, wealth, and well-being.

Reimbursable Services

Corporation Source Book, 1990

Publication 1053 - Price \$175

This 479-page document presents detailed income state-

Publications & Tapes

ment, balance sheet, tax, and selected other items, by major and minor industrial groups and size of total assets, for all returns and separately for returns with net income. The report, which underlies the *Statistics of Income-- Corporation Income Tax Returns* publication, is part of an annual series and can be purchased for \$175 (issues prior to 1982 are for sale at \$150 per year). A magnetic tape or diskette containing the tabular statistics for 1990 can be purchased for \$1,500.

Public Use Magnetic Tape Microdata Files

(Price depends on the request.)

This includes individual income tax returns for 1979-1990. A limited number of files for 1989 are also available on CD-ROM. (Individual income tax returns for 1966-1978 are available for sale by writing to the Center for Electronic Records (NNX) of the National Archives and Records Administration, Washington, DC 20408.) Files containing more limited data for each State are also available for 1985 and 1988. All of these files have been edited to protect the confidentiality of individual taxpayers. Files for private foundations for 1982-1983 and 1985-1991 and nonprofit charitable organizations for 1982-1983 and 1985-1990 are also available from *Statistics of Income*. The individual, private foundation and charitable organization files are the only microdata files that can be released to the public.

Migration Data

(Price depends on the request.)

Compilations are available showing migration patterns, from where to where, by State and county, based on year-to-year changes in the individual income tax return address. Data are also available for selected time periods (according to the years in which the returns were filed) between 1978 and 1992 and include counts of the number of returns and the number of personal exemptions (which can be used to approximate population). Tabulations are available as hard copy for all years, on magnetic tape for all years except 1983, and diskette starting with 1989. (Compilations showing State-to-State migration flows only are also accessible through the SOI electronic bulletin board starting with 1988; see below.)

County Income Data

(Price depends on the request.)

Tables present adjusted gross income by source and

number of personal exemptions (which can be used to approximate population) reported on individual income tax returns for Income Years 1982 and 1984 through 1991. Data are available as hard copy or on magnetic tape for each year, or on diskette starting with 1988.

ZIP Code Area Data

(Price depends on the request.)

Recent statistics are available for Income Year 1991 only, either on computer tape or diskette, showing the number of individual income tax returns, the number of personal exemptions (which can be used to approximate population), adjusted gross income, and income tax, by 5-digit ZIP Code.

Other Unpublished Tabulations

(Price depends on the request.)

Unpublished tabulations are also available, including detailed tables underlying those published in the *SOI Bulletin*. Special tabulations may also be produced, depending on the availability of resources.

Other Publications

The following *Statistics of Income* publications are available from the Superintendent of Documents, U.S. Government Printing Office. For copies, please use the order form following this section or write:

Superintendent of Documents
P. O. Box 371954
Pittsburgh, PA 15250-7954.

If you determine from the Government Printing Office that any of the next three items is out-of-print, please telephone the Statistical Information Services Office on (202) 874-0410, for assistance.

Statistics of Income (SOI) Bulletin

Quarterly Publication 1136, Stock No. 748-005-00000-5
Subscription price, \$25.00; Single copy price, \$13.00

Provides the earliest published financial statistics from individual and corporation income tax returns. The *Bulle-*

Publications & Tapes

tin also includes annual data on nonfarm sole proprietorships and on partnerships, as well as from periodic or special studies of particular interest to tax analysts and administrators and to economists. Historical tables include data from SOI, as well as on tax collections and refunds by type of tax.

Statistics of Income – 1990, Corporation Income Tax Returns

Publication 16, Stock No. 048-004-02322-9
Price \$19.00

This report presents more comprehensive and complete data on corporation income tax returns with accounting periods ended July 1990 through June 1991, than those published earlier in the *SOI Bulletin*.

Presents information on:	Data are classified by:
<ul style="list-style-type: none"> ■ receipts; ■ deductions; ■ net income; ■ taxable income; ■ income tax; ■ tax credits; ■ assets; and ■ liabilities. 	<ul style="list-style-type: none"> ■ industry; ■ accounting period; ■ size of total assets; and ■ size of business receipts.

Statistics of Income – 1991, Individual Income Tax Returns

Publication 1304, Stock No. 048-004-02326-1
Price \$11.00

This report presents more comprehensive and complete data on individual income tax returns for 1990 than those published earlier in the *SOI Bulletin*.

Presents information on:	Data are presented by:
<ul style="list-style-type: none"> ■ sources of income; ■ exemptions; ■ itemized deductions; and ■ tax computations. 	<ul style="list-style-type: none"> ■ size of adjusted gross income; and ■ marital status.

The following *Statistics of Income* publication is available

from *Statistics of Income*. For copies, please write to the Acting Director at the address shown at the beginning of this section.

Turning Administrative Systems Into Information Systems: 1993

Publication 1299 – Free of Charge

This report is the second edition of the IRS' methodology reports series which documents technological and methodological changes in *Statistics of Income* programs and other related statistical uses of administrative records. Previous volumes in the series were called *Statistics of Income and Related Administrative Record Research*. Topics featured are:

- reinvention of the Federal statistical system;
- data on individuals from the IRS population -- filers and nonfilers;
- data on economic conditions;
- sample design issues;
- methodological approaches to analysis;
- quality measurement and productivity; and
- technological improvements.

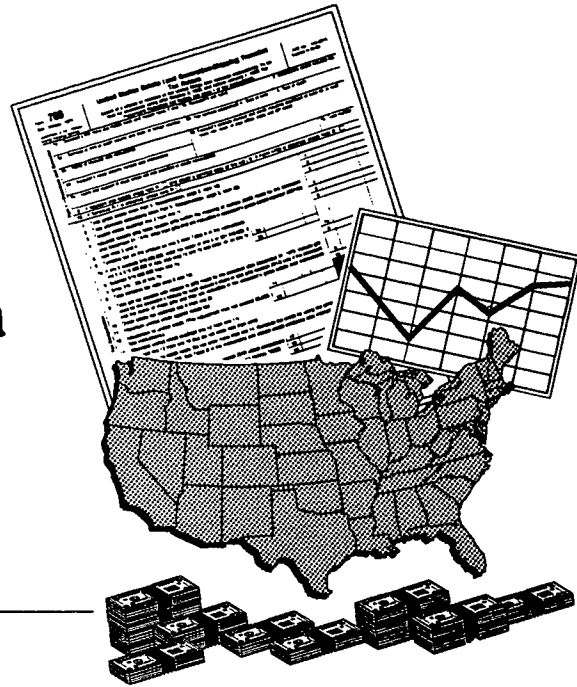

SOI Electronic Bulletin Board

Since June 1992, over 460 files have been added to the SOI electronic bulletin board system (BBS) and are available for access. They include data from recent *SOI Bulletin* publications for returns covering individuals, corporations, partnerships, sole proprietorships and estates. The BBS also contains files on personal wealth and international topics, such as foreign tax credits and Controlled Foreign Corporations, as well as tax collections and refunds from the IRS administrative system.

Electronic Bulletin Board Numbers:
(202) 874-9574 (Analog – Most Users)

Systems Administrator: Jim Willis (202) 874-0277
Systems Coordinator: Jim Hobbs (202) 874-0268.

Compendium of Federal Estate Tax and Personal Wealth Studies

In this publication, Statistics of Income (SOI) of the Internal Revenue Service has assembled, for the first time, the complete record of its efforts to estimate the wealth of the Nation's living population using Federal estate tax returns. In addition, papers are presented discussing the most recent Federal estate tax studies, as well as new tabulations of historical estate tax data collected between 1963 and 1990.

The volume contains statistical data and articles on these subjects:

- Personal Wealth Estimates, 1962-1989
- The Relationship Between Income and Wealth
- Charitable Bequests and Lifetime Gifts
- Federal Estate Tax Data
- The Estate Multiplier Technique

For further information or to order copies, please contact SOI's Statistical Information Services Office at (202) 874-0410, or write to:

Statistics of Income CP:S
Internal Revenue Service
P.O. Box 2608
Washington, DC 20013-2608.
