# SOI BULLETIN

A Quarterly Statistics of Income Report

## Volume 16, Number 2

The *Statistics of Income (SOI) Bulletin* is issued quarterly, in July, October, January and April, by the Statistics of Income Division of the Internal Revenue Service. The report provides the earliest published annual financial statistics obtained from the various types of tax and information returns filed, as well as information from periodic or special analytical studies of particular interest to students of the U.S. tax system, tax policymakers and tax administrators. It also includes personal income and tax data by State and historical data for selected types of taxpayers, in addition to data on tax collections and refunds and on other tax-related items.

Information on the availability of supplemental data on the topics included in this issue, special tabulations undertaken on a reimbursable basis, or other SOI subjects, may be obtained by telephoning the SOI Statistical Information Services office (202-874-0410), or by writing to the Director, Statistics of Income Division CP:R:S, Internal Revenue Service, P.O. Box 2608, Washington, D.C. 20013-2608.

Beth Kilss and Tom Petska of the Statistics of Income Division are the editors of the *Bulletin*. Wendy Alvey, Clementine Brittain, James Hobbs, Bettye Jamerson, Lisa Smith, Michael Strudler and also Bob Wilson, as a private contractor, made major contributions in the production of this issue. Views expressed in the articles are those of the authors and do not necessarily represent the views of the Treasury Department or the Internal Revenue Service.

## This Issue at a Glance

### Individual Income Tax Returns, 1995: Early Tax Estimates

by Daryl E. Cronk and Maureen Keenan

Taxpayers filed 109.3 million individual income tax returns for Tax Year 1995 by the end of April 1996, with another 8.5 million expected by the end of December. Data for 1995, for returns filed through April, show that "adjusted gross income," or AGI, increased at a faster rate for 1995 (compared to 1994) than it had for 1994 (compared to 1993). AGI for 1995 totaled \$3,670.6 billion, up by 6.0 percent, as salaries and wages, the principal source of income, grew by 7.2 percent. "Taxable income" (the amount remaining after subtracting personal exemption amounts and nonbusiness deductions) increased 6.4 percent to \$2,396.6 billion, while total income tax (after reduction by tax credits) grew 7.8 percent to \$485.1 billion. The "earned income credit" showed a sizable increase (24.5 percent), from \$19.9 billion for 1994 to \$24.8 billion for 1995, primarily a result of recent tax legislation and indexing adjustments for inflation. The number of low-income wage earners claiming the credit grew 3.2 percent, from 17.7 million to 18.3 million. For the 1995 filing period, traditional "paper" methods of filing returns declined by almost 6 percent, while the combined usage of Form 1040PC and electronic methods of filing rose by nearly 50 percent.

### Sole Proprietorship Returns, 1994

by Shawn M. Harwood

Profits reported by the Nation's 16.2 million nonfarm sole proprietors grew 6.6 percent for 1994 to \$166.8 billion. With the exception of finance, insurance, and real estate, all industrial divisions saw improved growth in profits that exceeded the rates of increase for 1993. Proprietorships classified in transportation and public utilities, as well as those that were primarily wholesalers and retailers, led the way, with increases in profits of 19.6 and 12.2 percent, respectively. Profits reported for the services division, while accounting for nearly three-fifths of the total, grew by only 3.6 percent over 1993. Both total business deductions and receipts showed stronger growth than for 1993. Deductions grew 3.8 percent, to \$623.8 billion, the largest annual growth since 1988. This increase was surpassed by a 4.4 percent increase in receipts to \$790.6 billion, \$11.4 billion higher than 1993. Sole proprietorships in the services division demonstrated the greatest dollar increase in receipts.

### Partnership Returns, 1994

by Timothy D. Wheeler

Partnership net income (less deficit) for 1994 increased 23 percent to \$82.2 billion, continuing the recent trend of growing profits and reflecting the effects of the improved economy, as well. Partnerships classified as operators and lessors of buildings or as holding and other investment companies accounted for almost half of the increase for 1994. Operators and lessors of buildings, the largest single contributor, reported "positive" net income for the first time since 1967. It was this group which historically reported the large losses that had dominated the partnership profits of previous years. Although limited partnerships reported positive net income for the second consecutive year, those classified in real estate continued to report a loss. "Total receipts" reported by partnerships increased 15 percent to \$844.4 billion. Although partnerships classified in the services industrial division have historically accounted for the largest share of total receipts (which totaled \$215.2 billion for 1994), for 1994 they were replaced by partnerships classified in the finance, insurance, and real estate division (with \$228.3 billion). Activity by general partners who were individuals continued to dominate the statistics for partnership income (less loss) available for distribution to partners, with \$31.0 billion of the \$126.9 billion reported by all partnerships. The number of partnerships increased for the first time since 1988, while the number of partners dropped for the fifth straight year.

### Foreign-Controlled Domestic Corporations, 1993

by James R. Hobbs

There were 54,001 foreign-controlled domestic corporations (FCDC's) for Tax Year 1993, each controlled by a foreign "person." These companies generated \$1.3 trillion of total receipts and reported total assets of \$2.1 trillion. At least 90 percent of these amounts were reported by the 2,401 companies with assets of \$250 million or more or total receipts of at least \$50 million. FCDC's comprised only 1.4 percent of all U.S. corporations, but accounted for 10.2 percent of the receipts and 9.6 percent of the assets reported on corporation income tax returns. Their combined net income (less deficit) nearly doubled to \$11.2 billion for 1993, compared to \$5.7 billion for 1992. Uncombined, net income (less deficit) reflected both an increase in positive net income, from \$32.0 billion to \$35.9 billion, and a decrease in negative net income, i.e., in net losses, from \$26.4 billion to \$24.7 billion. Reflecting the increase in positive net income, total income tax

## Bulletin Board

(after credits) increased from \$7.1 billion to \$8.2 billion. Two industrial classifications (manufacturing and wholesale trade) accounted for nearly 75 percent of total FCDC receipts. From a country perspective, domestic corporations controlled by a "person" in Japan accounted for 28 percent of the total receipts of FCDC's, followed by the United Kingdom, the Netherlands, and Germany, with 15, 12, and 10 percent of the total, respectively.

### **Transactions Between Large Foreign-Owned Domestic Corporations and Related Foreign Persons, 1992**

by Daniel S. Holik and Sarah E. Nutter

For Tax Year 1992, large foreign-owned domestic corporations reported having received amounts of \$63.1 billion and amounts paid of \$139.2 billion in transactions with 6,708 related foreign persons. These 366 large domestic corporations (with "total receipts" of \$500 million or more) also reported outstanding balances at the end of their accounting periods of \$67.9 billion in loans received from, and \$19.2 billion in loans granted to, the same related foreign persons. Sales of stock in trade dominated both the total amounts received and the total amounts paid. Although foreign-owned domestic manufacturers reported the largest number of related foreign persons, foreign-owned domestic wholesalers and retailers reported the largest dollar volume of transactions. Transactions reported by foreign-owned domestic wholesalers and retailers accounted for over half of the total amounts received and the total amounts paid. Almost 80 percent of the 366 large foreign-owned domestic corporations were classified in the manufacturing and wholesale and retail trade industrial divisions. Over 50 percent of the related foreign persons were "residents" of one of the following eight countries: Australia, Canada, France, Germany, the Netherlands, Japan, the United Kingdom, and Switzerland. Japanese related foreign persons were the largest source of amounts received and amounts paid, with 36 and 47 percent of the totals.

Data Release

#### **Some Observations and Insights**

#### **Budget Cuts Impact Individual Income Tax Return Statistics**

In the Summer 1996 issue, we reported to you on how our reduced budget for Fiscal Year 1996 was affecting the Statistics of Income program. We mentioned that the

principal casualty was the size of the sample used for the tax-exempt organization programs, which were to have been increased. There are two other changes that we need to bring to your attention at this time, although these changes actually result from the SOI budget for Fiscal Year 1997, and, therefore, to some of the articles and statistics

published in this issue of the *Bulletin*. The first is that measures of sampling variability with which to assist users in evaluating the precision of the SOI estimates may not be available, if the tables used for the articles were run during the current fiscal year. The second and perhaps more notable change is that the individual income tax return preliminary statistics program has been cancelled. In a future issue of the *Bulletin* we will report to you more fully on the effects of the Fiscal Year 1997 budget cut on SOI.

For recent years, it has become an SOI practice to release the popular individual income tax return statistics in three installments. The first installment, a fairly recent innovation beginning with Tax Year 1991, has been to publish a limited amount of data for *most* of the tax year, as an early indication of what data for the *full* tax year might look like. These data have been based on a small sample that produced results for only that part of the year's totals covered by returns filed through April. While these returns represent over 90 percent of the expected total for a given year, their coverage is much less for certain groups of taxpayers, such as those with high incomes, many of whom obtain extensions of time in which to file their returns, and those with certain less frequently reported income, deduction, or tax items. This early release has then been followed by the traditional "preliminary" statistics for the *full* tax year, based in more recent years on an early cut-off of the SOI sample of the returns processed by the Internal Revenue Service through September. Then, at a much later date, the preliminary statistics have been replaced by the "complete" statistics for the year, based on the complete SOI sample of returns processed throughout the entire calendar year.

The "preliminary" statistics have been part of an SOI tradition that dates back to the late 1920's. However, these statistics will no longer be available, starting with the Tax Year 1995. In the recent past, they have been published in the Spring issues of the *Bulletin*. Therefore, the revised plan for individual income tax return data calls for continuing the release the "early tax estimates" in the Fall issue (see, for example, the current issue of the *Bulletin*, for Tax Year 1995) followed at a later date (one

## Bulletin Board

year to 18 months, depending upon the availability of resources) by the separate *Statistics of Income* publication presenting the complete statistics for the full tax year, with no publication of preliminary statistics in-between. (However, some of the complete statistics will also be reflected in the historical tables published in the *Bulletin*, the same as in the past.)

### Excise Tax Data

Some good news though. With the Fall and Winter issues of the *Bulletin*, the Internal Revenue Service resumes publication of annual and quarterly statistics on excise taxes by type of tax. At the request of the Office of Tax Analysis of the Treasury Department, the *Bulletin* now becomes the vehicle for publication of these data, instead of the separate press releases formerly issued by the Service.

Starting with the Winter issue, these data will also be published by quarter in the historical tables, as the data become available. Once data for all four quarters of the fiscal year become available, there will also be an article presenting the annual totals. Excise tax data by type were last published by the Internal Revenue Service in early 1995 in an IRS press release covering the quarter ending December 1993. Operating problems then delayed updating the data until now; although total excise tax collections have long since been published in the *Bulletin* and elsewhere, currently through the quarter ending June 1996.

The annual statistics by type of tax being published for Fiscal Years 1994 and 1995 also include the taxes on alcohol, tobacco, and firearms, in order to provide a more complete picture of the excise taxes for which the Treasury Department is responsible. Collection of these latter taxes is actually a joint responsibility of the Customs Service and the Bureau of Alcohol, Tobacco, and Firearms (BATF), rather than of the Internal Revenue Service. BATF also publishes data on these taxes in a separate issuance, most recently for the quarter ending March 1996.

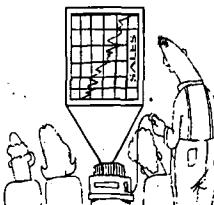

Table 20 in the historical section of the *Bulletin*, which traditionally has presented a limited amount of data on excise taxes by type, including the taxes on alcohol, tobacco, and firearms, is currently being redesigned to include the updated quarterly (for Fiscal Year 1996) and annual (for Fiscal Years 1994 and 1995) totals. Consequently, there is no Table 20 in this issue.

Those of you who are used to seeing the former separate IRS press release on excise taxes issued each quarter will note that the *Bulletin* release, in addition to including

alcohol, tobacco, and firearms taxes, also reorganizes the various types of taxes so that they appear in the same sequence as they do in the Internal Revenue Code. This rearrangement involved grouping some of the taxes into what students of the tax system regard as a more rational order. This order was followed, with some exceptions, in the presentation on excise taxes by type that appeared in the Fall 1993 *Bulletin* article for Fiscal Year 1992. The "new" series now being initiated also more accurately "matches" the quarter of the year in which the excise tax "liability" was reported by type of tax and the quarter in which the total of these taxes was actually "collected." (Total excise taxes are only available for the amount "collected"; the tax by type of tax is available only for the tax "reported." The separate IRS press release, for Fiscal Year 1993, followed the previous format and did not recognize the lag between the time when the liability was incurred and the time when the tax was actually collected. Detailed data for Fiscal Year 1993 have not been republished in the *Bulletin*, except as data from the IRS press release have been incorporated into historical Table 20.) The reasons for these changes are presented in the "data release" that appears in this issue. If you have any comments about the revised table presentation, we would appreciate receiving them.

### Behind the Scenes

#### Joint Statistical Meetings

Chicago, Illinois, was the site this year of the annual meetings of the American Statistical Association. Those present at the ASA meetings included representatives of Government, academia, and industry, from the United States and other countries.

Eight of the papers presented at the meetings were either authored or co-authored by SOI staff members. As in the past, most of the papers were methodological in nature, covering a broad range of topics on ongoing statistical and related research.

- A status report on "telefile," the new IRS program permitting certain types of individual income tax-payers to file returns using a touch-tone telephone, by Glenn White (co-authored by Jeri Mulrow, formerly of SOI);

## Bulletin Board

- Non-sampling error in data abstracted from administrative records, such as tax returns, by **Paul McMahon**;
- An automated telephone system within the IRS, by **Mary Batcher**, co-authored by **Kevin Cecco** (and Dennis Lin of Pennsylvania State University);
- Creating household data from individual income tax returns, by **Peter Sailer**, co-authored by **Michael Weber**;
- Disclosure review and its implications for the 1992 *Survey of Consumer Finances*, by Gerhard Fries (Federal Reserve Board), co-authored by SOI staff members **Louise Woodburn** and **Barry Johnson**;
- Order statistics from inverse Gaussian distribution (tables of means, variances, and co-variances), by **William Chen**;
- A semi-variance estimator of self-employment income reporting, by Chih-Chin Ho (IRS Research Division) and **William Chen**; and
- Replicate variance estimation in stratified sampling with permanent random numbers, by **Susan Hinkins** (co-authored by Fritz Scheuren, The George Washington University and a former SOI Director).

In addition, **Wendy Alvey** of SOI organized a panel discussion on the effect of downsizing on Federal statistics, which included commentaries by Ivan Fellegi, chief statistician, Statistics Canada, and Katherine Wallman, U.S. Government chief statistician, Office of Management and Budget. Wendy was also involved in a number of business and committee meetings, including the Government statistics section to which she was recently elected publications officer, and the ASA Committee on Confidentiality. **Mary Batcher**, in addition to presenting a paper (and serving as an associate editor of the *Journal of the American Statistical Association*), participated in a special panel discussion on customer satisfaction surveys and organized a panel on evaluating the Family and Medical Leave Act of 1993.

The SOI papers will be published later this year in the IRS Methodology Report series, *Turning Administrative Systems Into Information Systems*, as well as in the Ameri-

can Statistical Association proceedings to be published in 1997.

### Upcoming Features

The following are some of the articles and "data releases" planned for inclusion in upcoming issues of the *SOI Bulletin*:

- High-income individual income tax returns, 1993;
- Private foundations and charitable trusts, 1993;
- Estate tax returns, 1992-1994;
- Foreign Sales Corporations, 1992;
- Foreign recipients of U.S. income, 1994; and
- Projections of returns to be filed, 1997-2003.

### Your Call

#### Data Release Dates

The table on the following page presents SOI's most recent annual goals for completing its major statistical programs, including the month in which we now expect to be able to release data to users, ahead of publication, upon request. The table includes some of the critical dates that precede the dates at which data can be released, to help show some of the constraints under which we must operate in order to make data available. While we may not always achieve some of the dates, we will make every effort to meet them so that we may continue to provide you, the public, with timely and accurate data.

Overall, SOI is an annual program, so many of its data requirements are unchanged from year to year. Even so, some of the requirements do change because of changes in law, in the tax return forms, or in the needs of the tax policy makers in the Treasury Department and Congressional Joint Committee on Taxation and to the national income economists in the Commerce Department. Moreover, each year invariably brings new challenges or changes, including those in the system of processing tax returns for administrative purposes on which SOI "piggy-backs."

<sup>1</sup> Excludes the Early Tax Estimates (ETE) program, which provides data for less than the full tax year, based on returns received through April of the filing year. The ETE release date is September of the filing year, ahead of the preliminary data for the full tax year, which are available for release at a later date in the month shown. However, there will be no preliminary statistics starting with 1995.

<sup>2</sup> Corporation statistics for 1994 represent accounting periods ended July 1994 and June 1995. Other "years" are similarly defined.

<sup>3</sup> Dates coincide with the Corporation Statistics of Income program because these programs are based on schedules attached to the corporation income tax return.

<sup>4</sup> Estate tax return statistics are processed on a filing-year, rather than on a year-of-death basis. At a later stage (not shown here), the underlying data from several filing years are combined by year-of-death.

r - Revised.

N/A - Not applicable. See footnote 1.

## Revision to the Summer 1996 Issue

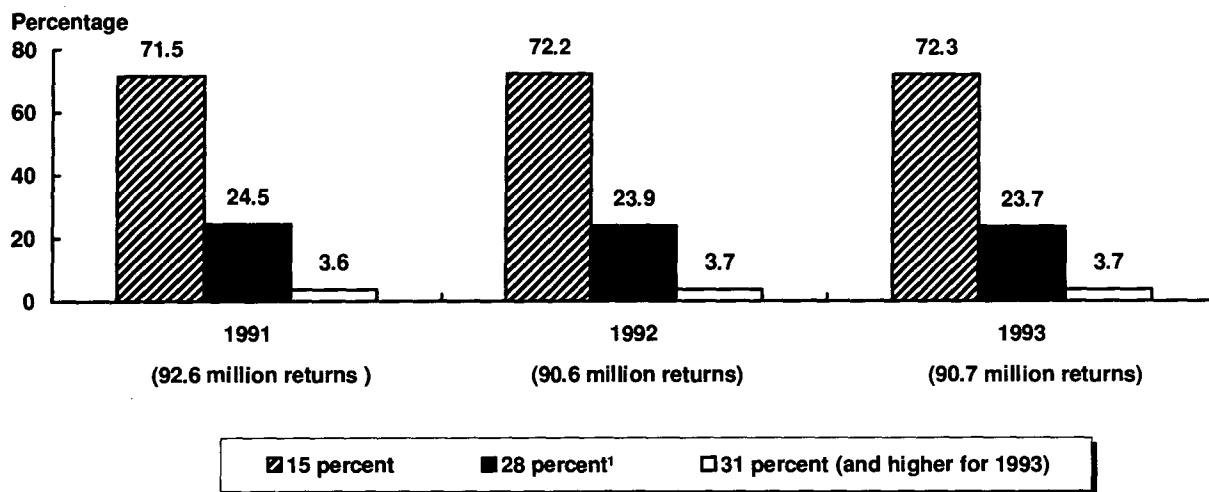

### Individual Income Tax Rates and Tax Shares, 1993

*On page 11:*

Figure D-1 is partially reproduced to correct the percentage of returns for 1993 with tax generated by the 28 percent rate. The correct percentage is 23.7, rather than 28.7.

### Percentages of Returns with Modified Taxable Income: Income Tax Generated by Marginal Rate Classification, Tax Years 1991-1993

#### Individual Tax Returns

<sup>1</sup>Includes 28 percent, with net long-term capital gains.

NOTE: Returns in the "Form 8615" and "Form 8814" categories were included in the calculation of the percentages, but are not shown separately. For 1993, these two categories accounted for less than 0.30 percent of the returns, 0.06 percent of the "modified" taxable income, and 0.09 percent of the income tax generated. Therefore, detail may not add to totals.

# Individual Income Tax Returns, 1995: Early Tax Estimates

by Daryl E. Cronk and Maureen Keenan

**E**arly estimates for Tax Year 1995, based on individual income tax returns filed through April 1996, reveal that both adjusted gross income (AGI) and taxable income grew at a faster rate between 1994 and 1995 than between 1993 and 1994. AGI increased 6.0 percent (4.0 percent for 1994), from \$3,461.5 billion for 1994 to \$3,670.6 billion for 1995, due in part to the 7.2 percent rise in salaries and wages. Taxable income increased 6.4 percent (4.8 percent for 1994), from \$2,252.8 billion to \$2,396.6 billion. In conjunction with these increases, total income tax grew by approximately 7.8 percent to \$485.1 billion. The earned income credit (EIC) showed a sizable increase (24.5 percent), rising from \$19.9 billion for 1994 to \$24.8 billion for 1995, primarily as a result of tax legislation and indexing for inflation. In addition, the number of taxpayers claiming an EIC grew by 3.2 percent, from 17.7 million to 18.3 million. For the 1995 filing period, traditional "paper" methods of filing (Forms 1040, 1040A, and 1040EZ) declined 5.8 percent, while Form 1040PC and electronic methods of filing rose a combined 49.7 percent.

Data for this article were derived from the "Early Tax Estimates" (or ETE) subset of returns included in the full sample used for *Statistics of Income--Individual Income Tax Returns* for 1995. The ETE sample is designed to provide estimates as soon as possible following the close of the regular tax return filing season. In contrast to the estimated 113,300 individual income tax returns expected for the full Statistics of Income (SOI) sample, the size of the 1995 ETE subset of returns filed through the end of April 1996 was 20,573. While 1995 represents the fourth time this sample was used for the early tax data, the taxpayers included in the ETE subsample were part of the SOI sample each year since Tax Year 1979, provided that they filed a return for the given year.

In order to provide some insight into how the ETE subset of returns filed through April relates to the full-year SOI sample, Figure A compares estimates of key income and other items from both samples for Tax Year 1994. For many items, such as salaries and wages and total earned income credit, the ETE sample of returns provides fairly comparable results. For other items, however, the ETE sample provides less comparable estimates. These items include partnership, S Corporation, and sole proprietorship (farm and nonfarm) net income or loss; capital gains and losses reported on the Schedule D; and the alternative minimum tax. These items are often reported in sizable but varying amounts on returns filed after April. The

returns on which they appear are mainly those for which filing extensions have been taken, and many are for high-income taxpayers. As a result, early tax estimates for these items (and for high-income returns in general) should be used with caution.

The estimates from high-income returns are also subject to relatively high sampling variability. Since the ETE subset of returns is not stratified to favor high-income taxpayers, there may be an insufficient number of high-income returns filed through April for ETE to present an accurate picture of this part of the individual income tax return population. The discussion that follows, therefore, focuses only on those tax return items and those taxpayer characteristics for which the ETE sample is believed to offer good estimates. Also, comparisons of data between Tax Years 1994 and 1995 in this article use the early estimates for both years.

## Selected Sources of Income and Statutory Adjustments

Adjusted gross income (AGI) grew 6.0 percent for 1995, increasing from \$3,461.5 billion for 1994 to \$3,670.6 billion, while the total number of returns filed increased by only 1.9 percent (Figure B). Salaries and wages, the primary income source, rose 7.2 percent from \$2,735.6 billion to \$2,932.9 billion. This percentage increase was the highest in recent years and, along with the 6.0 percent growth of AGI, far outpaced the 2.8 percent annual rate of inflation for 1995 [1].

The principal components of AGI and statutory adjustments to AGI are shown in Tables 2 and 3, respectively. Besides the increase in salaries and wages, other sources of income showed major changes from 1994 to 1995, as well (Figure B). Capital gains distributions reported on the Form 1040 more than doubled the 1994 increase of 14.9 percent by rising 30.8 percent for 1995, while the number of returns reporting these capital gain distributions increased 16.4 percent [2]. These increases may reflect the higher level of inflows into mutual funds during 1995. Capital gains distributions reported on the Form 1040 are frequently gains realized from mutual funds and are common among smaller investors who have no other capital gains and thus no need to file a Schedule D. Taxable interest reversed a 4-year downward trend by rising 12.9 percent to \$120.7 billion, partially due to interest rates being higher during most of 1995 than they were for 1994 [3]. In addition, taxable social security benefits increased by 16.3 percent, and taxable pensions and annuities rose by 8.5 percent.

Statutory adjustments, which reduce adjusted gross income, decreased by 6.2 percent for 1995. Payments to Individual Retirement Arrangements (IRA's), which

<sup>1</sup> Data are based on the Early Tax Estimates (ETE) subsample of returns used for Statistics of Income--Individual Income Tax Returns.

<sup>2</sup> Includes income not shown below.

<sup>3</sup> Not tabulated.

<sup>4</sup> To improve comparability, 1994 includes moving expenses reported as an itemized deduction plus moving expenses reported as a statutory adjustment.

<sup>5</sup> This deduction, which expired December 31, 1993, was retroactively extended, allowing taxpayers to claim this deduction for 1994 by filing an amended return. However, 1994 ETE figures do not include amounts from amended returns.

NOTE: All data are for returns filed through April.

decreased every year since 1986, fell 2.4 percent to \$7.6 billion [4]. In contrast, moving expenses increased by 8.3 percent.

For Tax Year 1995, Congress reinstated and made permanent the self-employed health insurance deduction, which had expired on December 31, 1993, and raised the deduction limit from 25 to 30 percent of the amount paid for health insurance. These changes contributed to the increase in the self-employed health insurance deduction, which reached \$1.8 billion for 1995.

### Itemized Deductions

After slight declines for 1994, both the number of taxpayers itemizing deductions and the amount they claimed increased for 1995 (Figure C). The number of returns with itemized deductions grew 2.3 percent, and total itemized deductions rose 6.7 percent.

The largest itemized deduction for 1995 was the interest paid deduction, with \$180.2 billion claimed, a 9.0 percent increase from the \$165.3 billion recorded for 1994. The largest component of this deduction, home mortgage interest paid to financial institutions, rose 8.9 percent, from \$154.8 billion for 1994 to \$168.6 billion for 1995. Also contributing to the increase in itemized deductions was the deduction for medical and dental expenses, which rose 7.2 percent, and the deduction for charitable contributions,

which rose 4.1 percent. Additional data on itemized deductions, classified by size of adjusted gross income, are presented in Table 4.

### Taxable Income and Total Income Tax

Taxable income grew by 6.4 percent, from \$2,252.8 billion for 1994 to \$2,396.6 billion (Figure D). This was the third consecutive year for which taxable income not only grew, but grew at a faster rate than the previous year; the 6.4 percent increase was slightly higher than the 6.0 percent increase in AGI. Part of this difference was due to the fact that income increased at a faster rate than the inflation-adjusted amounts for the standard deduction and for the deduction for personal exemptions. Although itemized deductions rose 6.7 percent, this increase was still not large enough to offset the slower growth rate for the standard deduction and personal exemption amounts.

Total income tax also increased for 1995, by 7.8 percent to \$485.1 billion, up from \$449.9 billion for 1994 [5]. Figure E compares total income tax as a percentage of AGI, by size of AGI for 1994 and 1995. Even though total income tax grew by 7.8 percent between 1994 and 1995, all but two of the AGI-size classes used for the statistics show the same or lower ratio of tax to AGI as for 1994. The "\$200,000 or more" AGI-size class showed a higher ratio of tax to AGI for 1995 compared to 1994.

## Individual Income Tax Returns, 1995: Early Tax Estimates

**Figure C**

### Returns with Itemized Deductions: Comparison of Adjusted Gross Income and Selected Itemized Deductions, Tax Years 1994 and 1995

[Number of returns is in thousands--money amounts are in millions of dollars]

Item	1994 ETE <sup>1</sup>		1995 ETE <sup>1</sup>		Percentage increase in amount
	Number of returns <sup>2</sup>	Amount	Number of returns <sup>2</sup>	Amount	
	(1)	(2)	(3)	(4)	
<b>Adjusted gross income (less deficit).....</b>	<b>29,137</b>	<b>1,952,106</b>	<b>29,805</b>	<b>2,108,712</b>	<b>8.0</b>
Total itemized deductions <sup>3</sup> .....	29,137	414,585	29,805	442,496	6.7
Medical and dental expense.....	4,571	22,184	4,609	23,784	7.2
Taxes paid deduction.....	28,766	148,857	29,403	158,823	6.7
Total interest paid deduction.....	24,609	165,312	24,997	180,220	9.0
Home mortgage interest:					
Paid to financial institutions.....	23,766	154,795	24,200	168,636	8.9
Paid to individuals.....	1,934	5,489	1,783	5,005	-8.8
Contributions deduction.....	26,383	57,111	26,891	59,460	4.1

<sup>1</sup> Data are based on the Early Tax Estimates (ETE) subsample of returns used for Statistics of Income--Individual Income Tax Returns.

<sup>2</sup> Returns with no adjusted gross income are not included in the deduction counts. For this reason, the sum of returns with total itemized deductions after limitation and returns with total standard deduction is less than the total number of returns for all filers.

<sup>3</sup> Includes deductions not shown separately below.

NOTE: All data are for returns filed through April.

Much of the increase in the average tax rate for this AGI-size class maybe due to the fact that the average taxable income for the "\$200,000 or more" AGI-size class grew by 16.3 percent between 1994 and 1995, while overall average taxable income grew by only 3.7 percent. Therefore, more of the income of these taxpayers was taxed at the highest tax rate. Also, there was a slight increase in the ratio of tax to AGI for the "under \$5,000" AGI-size class.

### Earned Income Credit and Other Tax Credits

For Tax Year 1995, approximately 18.3 million taxpayers claimed an earned income credit (EIC), up by 3.2 percent compared to 1994 [6]. The total amount of EIC rose \$4.9 billion, or 24.5 percent, to \$24.8 billion for 1995. For comparison, the percentage change in the amount of EIC between 1993 and 1994 was 36.3 percent. As Figure F shows, the most dramatic increase for 1995 occurred on

**Figure D**

Total income tax <sup>3</sup> .....	80,428	449,908	82,338	485,090	7.8
Income tax after credits.....	80,418	448,871	82,332	484,564	8.0
Alternative minimum tax.....	294	1,037	224	525	-49.4

<sup>1</sup> Data are based on the Early Tax Estimates (ETE) subsample of returns used for Statistics of Income--Individual Income Tax Returns.

<sup>2</sup> Includes earned income credit used to offset income tax before credits.

<sup>3</sup> The number of returns with total income tax is less than the sum of returns with income tax after credits and returns with alternative minimum tax because some returns reported both. Total income tax is the sum of income tax after credits and alternative minimum tax less the total earned income credit as reported on the tax return (if the result was negative, total income tax was made equal to zero).

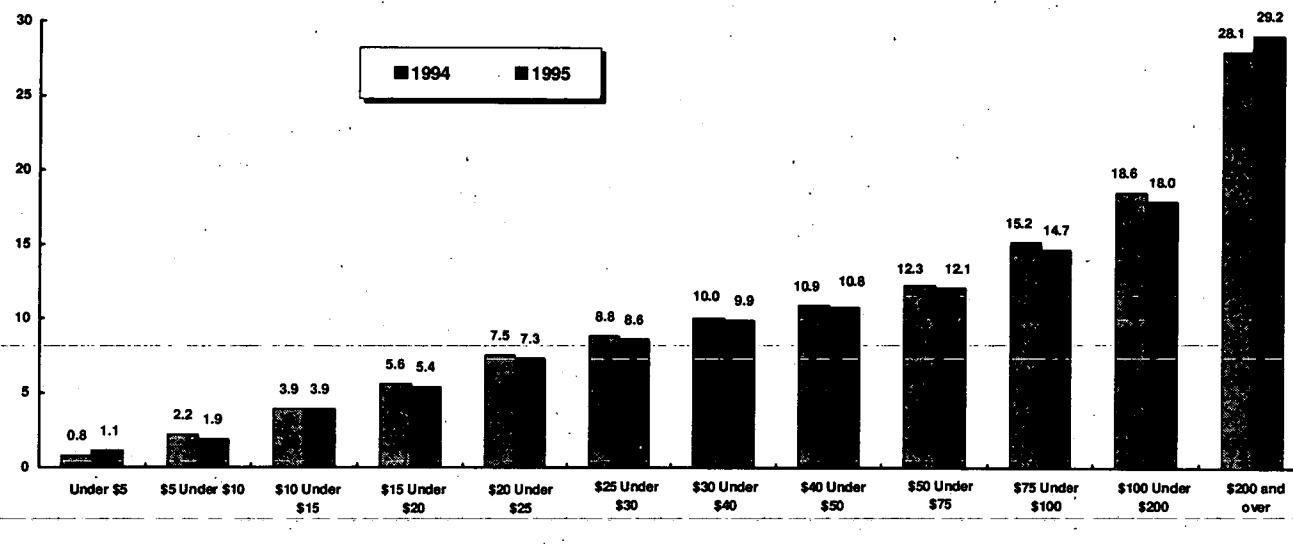

NOTE: All data are for returns filed through April.

## Individual Income Tax Returns, 1995: Early Tax Estimates

**Figure E**

### Total Income Tax as a Percentage of Adjusted Gross Income (AGI), by Size of AGI, Tax Years 1994-1995

Percentage

Notes: Total income tax represents income tax after credits and alternative minimum tax, less total earned income credit (if the result was negative, total income tax was zero). All data are based on returns filed through April.

returns with two or more qualifying children. The number of EIC returns that fell into this category grew by 14.6 percent, and the amount of EIC claimed on these returns increased 43.1 percent, from \$9.2 billion to \$13.2 billion. In comparison, the number of returns with one eligible child grew only slightly (1.8 percent), and the amount of EIC claimed by these taxpayers grew at a slower annual rate (9.7 percent) than for taxpayers with at least two eligible children.

The differential in both the number of EIC returns and the EIC amount for taxpayers with two or more eligible children versus those with just one child was partly the result of "phase-in" features of tax law changes contained in the Omnibus Budget Reconciliation Act of 1993 (OBRA'93)(see the 1995 Tax Law Changes section of this article). For Tax Year 1995, the maximum amount of EIC allowed for taxpayers with two or more qualifying children increased 23.0 percent, from \$2,528 to \$3,110, while the

<sup>1</sup> Data are based on the Early Tax Estimates (ETE) subsample of returns used for Statistics of Income--Individual Income Tax Returns.

NOTE: All data are for returns filed through April.

## Individual Income Tax Returns, 1995: Early Tax Estimates

maximum credit for taxpayers with one qualifying child only increased 2.7 percent, from \$2,038 to \$2,094. Moreover, the maximum amount of "earned income" a taxpayer with two or more qualifying children could earn and still qualify for the EIC was \$26,672, a 5.4 percent increase from the previous year. This increased income eligibility level allowed more taxpayers with two or more qualifying children to take advantage of the EIC, resulting in a sharp increase in the number of EIC returns in this category. For taxpayers with only one eligible child, the income ceiling for qualifying for the EIC grew only half as much (2.7 percent) to \$24,395, thus the smaller growth in the number of EIC returns with one qualifying child.

In contrast, the number of EIC returns of taxpayers with no eligible children dropped 13.0 percent, while the amount of credit claimed by these taxpayers declined 11.0 percent to \$0.6 billion.

Unlike other tax credits, the EIC not only offsets income tax before credits (as well as certain additional income-related taxes), but also has a refundable portion for any "excess" credit, i.e., for the credit that exceeded these taxes. The refundable portion, the largest segment of the EIC, totaled \$20.2 billion for 1995, up 28.1 percent from the \$15.8 billion reported the previous year.

Total tax credits, which includes the EIC to the extent that it could be used to offset income tax before credits, rose by 14.7 percent to \$7.0 billion for Tax Year 1995 (Figure D). The EIC and the child care credit, the two largest credits (accounting for nearly 76 percent of total tax credits), both increased for 1995. The EIC used to offset income tax before credits grew by 13.8 percent to \$3.0 billion, while the child care credit rose 2.9 percent to \$2.3 billion. Table 5 presents more detailed data on tax credits, as well as on selected deductions, taxes and tax payments, classified by size of adjusted gross income.

### Filing Patterns and Characteristics of Returns

As of April 26, 1996, when the sampling of tax returns for Tax Year 1995 ETE was completed, 109.3 million returns

had been filed with the Internal Revenue Service (IRS), up 1.9 percent compared to 1994 (Figure G). Despite the increase in number of returns filed through April, the percentage of returns filed through April remained relatively constant. Based on IRS projections of the total number of returns expected to be filed for the 1995 Tax Year, 92.8 percent of the expected returns were filed by the end of April, an increase of just 0.3 percent over the 92.5 percent filed through April for Tax Year 1994 [7].

For 1995, traditional "paper" filing methods declined, while alternative methods of filing rose dramatically (Figure H). The number of Forms 1040 fell 5.0 percent, Forms 1040A by 8.0 percent, and Forms 1040EZ by 5.8 percent. The drop in the number of 1040EZ's filed would have been greater if not for a tax form change permitting unemployment compensation to be reported on the 1040EZ for the first time. Approximately 778,000 taxpayers filed Form 1040EZ with unemployment compensation for 1995; without these returns the number of Forms 1040EZ would have dropped by 10.2 percent. New for 1995, Form 1040T was only available in the Austin, Texas, IRS District. The Form 1040T was a computer-ready, simplified Form 1040 designed to facilitate use of electronic scanning, rather than manual key entry, for capturing taxpayer entries during processing.

Electronically-filed (ELF) returns rose 26.6 percent, the sixth increase in seven years. This total includes Form 1040TEL, a Form 1040EZ equivalent that may be filed over the telephone. The Form 1040TEL was available nationwide for 1995 for the first time, and its use rose to 2.8 million returns from 0.7 million for 1994, when the 1040TEL was only offered in limited areas of the country [8]. Including Form 1040TEL, 14.8 million taxpayers filed their 1995 returns electronically, up from 11.7 million for 1994. Excluding 1040TEL's, ELF returns still rose 9.3 percent, from 11.0 million to 12.0 million.

Filing of the Form 1040PC, an IRS-approved computer format which allows the taxpayer to print out only those items for which he or she provides information, more than

N/A-- Not applicable.

NOTES: Detail may not add to totals because of rounding. All data are for returns filed through April.

doubled; from 2.6 to 6.7 million [9]. After being introduced for 1991, the number of 1040PC's filed increased through 1993, declined for 1994, then increased sharply for 1995 [10]. Even after taking into account the decline for 1994, the number of 1040PC's filed increased by 64.4 percent between 1993 and 1995. The growing popularity of home computers and tax software packages and of 1040PC filing by tax preparation firms are some of the reasons behind this rapid growth. For 1995, these nontraditional methods of filing (electronic filing, including Form 1040TEL, and Form 1040PC) accounted for 19.7 percent of all returns, up from 13.4 percent for 1994. For a detailed breakdown of the various filing methods, by AGI size and filing status, see Table 1 at the end of this article.

### Summary

For Tax Year 1995, AGI and taxable income grew at faster rates, 6.0 and 6.4 percent, respectively, than for 1994. These increases contributed to total income tax growing by 7.8 percent to \$485.1 billion. Also, salaries and wages, the principal source of income, increased 7.2 percent for 1995. This was the second year in a row that the growth rate of both AGI and salaries and wages exceeded the rate of inflation. In addition to salaries and wages, other income

items contributed to the growth of AGI. Capital-gain distributions reported on Form 1040 rose 30.8 percent, taxable social security benefits 16.3 percent, and taxable interest 12.9 percent.

Total earned income credit (EIC) also increased for 1995, accounting for part of the 14.7 percent increase in total tax credits. The number of returns claiming the EIC grew by 3.2 percent and the amount of credit increased 24.5 percent from \$19.9 billion to \$24.8 billion. Changes in the tax law, as well as indexing for inflation, were largely responsible for the modest growth in the number of returns claiming the EIC and the more substantial growth in the credit itself.

Finally, for Tax Year 1995, there was a shift away from traditional "paper" filing methods towards alternative methods of filing. The number of returns filed electronically increased 26.6 percent, largely as a result of the nationwide introduction of the Form 1040TEL. These alternative methods of filing (including Form 1040PC) combined to account for nearly 20 percent of all returns.

### 1995 Tax Law Changes

Standard deductions, personal exemptions, tax rate bracket boundaries, and the earned income credit are all indexed, as required by Federal tax law, to avoid their erosion by

## Individual Income Tax Returns, 1995: Early Tax Estimates

inflation. Without indexing, annual increases in inflation would diminish the real value of these items.

The following is a list of Federal tax law changes and IRS administrative changes that had a major impact on the 1995 Early Tax Estimates presented in this article:

**Earned Income Credit**--As with previous years, the maximum earned income credit increased, as did the amount of "earned income" and AGI an individual could have and still claim the credit. For one qualifying child the maximum credit was \$2,094, up from the maximum credit of \$2,038 for Tax Year 1994. For two or more qualifying children, the maximum credit increased to \$3,110, up from \$2,528 for Tax Year 1994. The maximum credit for taxpayers with no qualifying children increased to \$314 from \$306. To be eligible for the credit, a taxpayer's "earned income" and AGI had to be less than \$24,396 (\$23,755 for 1994) with one qualifying child, or less than \$26,673 (\$25,296 for 1994) with two or more qualifying children. For those with no qualifying children, earned income and AGI had to be less than \$9,230, compared to \$9,000 for 1994.

**Standard Deductions**--For Tax Year 1995, the basic standard deduction increased for each filing status. Standard deductions rose to \$3,900; \$5,750; \$6,550; and \$3,275, for a single person, for a head of household, for married persons filing jointly or a qualifying widow(er), and for married persons filing separately, respectively. For comparison, Tax Year 1994 standard deductions were \$3,800; \$5,600; \$6,350; and \$3,175, respectively. The basic standard deduction claimed by filers who were dependent children of other taxpayers increased to \$650 for 1995, compared to \$600 for 1994. The additional standard deductions for the aged and blind remained at \$950 for single and head of household filers, and \$750 for married persons filing jointly, married persons filing separately, and qualified widow(er)s.

**Itemized Deductions**--As with previous years, itemized deductions were limited for some high-income taxpayers based on their AGI. For Tax Year 1995, the AGI threshold for the limitation increased to \$114,700 from \$111,800 for all filers, except married persons filing separately, for whom it increased from \$55,900 to \$57,350. The limitation did not apply to deductions for medical and dental expenses, "investment interest" expenses, casualty or theft losses, and gambling losses. To arrive at allowable itemized deductions, total itemized deductions were reduced by the smaller of: a) 80 percent of the "non-limited" deductions, or b) 3 percent of the amount of AGI in excess of the AGI threshold.

**Personal Exemptions**--Like standard and itemized deductions, the amount allowed for personal exemptions

also increased for Tax Year 1995. For each qualified exemption, a filer could deduct \$2,500, up from \$2,450 for Tax Year 1994.

**Social Security Numbers**--Taxpayers were required to provide the social security number of each dependent claimed on their tax return and for each qualifying child listed on the Schedule EIC (filed by earned income claimants), unless the child was born after October 1995.

**Form 1040EZ**--For the first time, taxpayers were allowed to report unemployment compensation on Form 1040EZ.

**Self-employed health insurance deduction**--This deduction, which expired December 31, 1993, was retroactively extended and made permanent. In addition, the percentage of health insurance premiums that self-employed taxpayers were able to deduct rose from 25 to 30 percent of the amount paid for health insurance.

**Self-employment tax**--The maximum "net earnings" subject to the social security tax portion of the self-employment tax (12.4 percent) was increased from \$60,600 to \$61,200. In addition, all "net earnings" of at least \$400 (\$108.28 for church employees) were subject to the Medicare tax portion (taxed at 2.9 percent of the earnings).

**Form 8615, Tax for Children Under Age 14 Who Have Investment Income of More Than \$1,300**--For 1995, the amount of investment income a child under age 14 could have without having to file Form 8615 increased to \$1,300 from \$1,200.

**Household Employment Taxes**--For 1995, taxpayers paying domestic employees more than \$1,000 generally had to pay social security and Medicare taxes for these employees with their income tax return by filing the new Schedule H, *Household Employment Taxes* [11].

**Tax brackets**--Tax rates remained the same as 1994 at 15, 28, 31, 36, and 39.6 percents, but the tax bracket boundaries increased because of inflation indexing (Figure I).

### Data Sources and Limitations

The statistics presented in this article were derived from a sample of all individual income tax returns received in the ten IRS service center mailrooms from January 2 through April 26, 1996 [12]. The sample was selected based on the primary social security number (SSN) (i.e., the SSN of the "primary" or first listed taxpayer in the case of joint returns) ending in one of two predefined orders of the last four digits. Two numbers between 0000 and 9999 were chosen, and all return SSN's ending in one of these two numbers were sampled. Electronically-filed returns with a primary SSN ending in one of these

36 percent.....	\$70,001 to \$125,000	\$71,801 to \$128,250	\$127,501 to \$250,000	\$130,801 to \$256,500
39.6 percent.....	\$125,001 or more	\$128,251 or more	\$250,001 or more	\$256,501 or more

two four-digit combinations were also included. The same SSN endings have been used every year since 1979. This method of sampling provides results that are similar to those produced from a random sample. The returns studied for the ETE statistics are a subset of the returns included in the sample used for *Statistics of Income -- 1995, Individual Income Tax Returns*.

Since two SSN endings out of a possible 10,000 were selected, each return represented 1 out of 5,000 returns in the population. The size of the entire ETE sample from January 2 through April 26, 1996 was 20,573 returns. Sample weights were adjusted to compensate for returns identified as missing from the sample.

Because the data presented in this article are estimates based on a sample, they are subject to sampling (as well as non-sampling) error. Non-sampling error will be higher for ETE data than for other SOI data because approximately 20 to 25 percent of the returns included had not yet been subjected to any of the regular IRS return processing steps, which would have identified and corrected many taxpayer reporting errors. Such returns show a tax due at time of filing and are typically processed after April 15 so that refund returns can be given priority. Sample returns with a tax due were identified when they were received at the IRS centers and forwarded for SOI processing prior to regular administrative processing. During SOI processing

these returns were tested for internal consistency; and the more obvious taxpayer omissions and math errors were corrected for the statistics.

Figure J presents estimated coefficients of variation (CV's) for the number of returns and money amounts for selected income items. The reliability of estimates based on samples, and the use of CV's for evaluating the precision of estimates based on samples, are discussed in the appendix to this issue of the *Bulletin*.

### Notes and References

- [1] U.S. Department of Labor, Bureau of Labor Statistics, *Monthly Labor Review*. The consumer price index (CPI-U) represents annual averages of monthly figures and reflects buying patterns of all urban consumers  
 (1982-84=100):  
 1995 CPI-U = 152.4;  
 1994 CPI-U = 148.2; and  
 1993 CPI-U = 144.5.
- [2] Early tax estimates for capital gain distributions reported on the Schedule D have not been tabulated. Final SOI data show that capital gain distributions reported on Schedule D declined 8.5 percent between 1993 and 1994, from \$9.4 billion for 1993 to \$8.6 billion for 1994.

Total income tax <sup>2</sup> .....	82,338	0.37	485,090	6.60

<sup>1</sup> Includes earned income credit used to reduce total income tax to zero plus the amount used to offset any additional taxes; plus the refundable portion.

<sup>2</sup> Total income tax is the sum of income tax after credits and alternative minimum tax, less the total earned income credit as reported on the tax return (if the result was negative, total income tax was made equal to zero).

- [3] "A26 Domestic Financial Statistics, Interest Rates," *Federal Reserve Bulletin*, July 1995, September 1995, December 1995, Volume 81; and March 1996, Volume 82.

- [4] The ETE sample only goes back as far as Tax Year 1992, therefore, preliminary data based on the more complete Statistics of Income sample were used to note the change in IRA payments for Tax Years 1986 through 1991. See Cruciano, Therese M., "Individual Income Tax Returns, Preliminary Data, 1994," *Statistics of Income Bulletin*, Spring 1996, Volume 15, Number 4.

- [5] Total income tax is the sum of income tax after credits (including the subtraction of the earned income credit) and the alternative minimum tax. If the result was negative, total income tax was limited to zero.

- [6] For Statistics of Income tabulations, the earned income credit is divided into three parts: an amount used to offset income tax before credits (limited to the amount needed to reduce income tax after credits to zero); an amount used to offset all other taxes (limited to the amount needed to reduce total tax

liability to zero); and a refundable portion (the excess of credit over total taxes).

- [7] Taxpayers could file, without incurring any penalty, after April 15, 1996, if:

- (a) they lived outside the United States and Puerto Rico and their main place of business or military post of duty was outside the United States and Puerto Rico (these taxpayers were permitted an automatic extension to June 15, 1996);
- (b) they filed a Form 4868 for an automatic extension of the filing deadline, paying the estimated tax balance due with this form (these taxpayers were permitted an automatic extension to August 15, 1996); or
- (c) they filed a Form 2688 for an additional extension of time to file (these taxpayers were granted an extension of 2 or more additional months, provided that there was a good reason why the previous 4-month extension was inadequate).

- [8] For Tax Year 1994, Form 1040TEL was tested in the following areas: Colorado, Florida, Indiana, Kentucky, Michigan, Ohio, South Carolina, and West

## Individual Income Tax Returns, 1995: Early Tax Estimates

Virginia, and in the Sacramento, California, and Austin, Texas, Internal Revenue Districts.

- [9] Form 1040PC returns are computer-generated returns which present only line numbers and data entries. Only those lines of the tax form for which the taxpayer has an entry appear on the Form 1040PC, resulting in a return with fewer pages than if the same return had been prepared using the standard IRS tax forms and schedules.
- [10] For more information on Form 1040PC filing for 1994, see Keenan, Maureen and Curry, Jeffrey B., "Individual Income Tax Returns, 1994: Early Tax

Estimates," *Statistics of Income Bulletin*, Fall 1995, Volume 15, Number 2.

- [11] The number of tax returns reporting household employment tax was 162,123, and the amount of the tax, which was included in the statistics for "total tax liability," totaled \$460.5 million.
- [12] The ETE sample was derived from the following types of individual tax returns: Form 1040, Form 1040A, Form 1040T, Form 1040EZ, Form 1040PC, and electronically-filed returns, which included Form 1040TEL.

<sup>1</sup> Includes 229,000 Form 1040T returns not shown separately.

<sup>2</sup> Includes returns with adjusted gross deficit.

<sup>3</sup> Excludes electronically-filed returns and computer-generated returns (Form 1040PC), shown separately.

<sup>4</sup> Includes 2,814,000 Form 1040TEL returns, not shown separately.

\* Estimate should be used with caution because of the small number of sample returns on which it is based.

N/A - Not applicable since Form 1040EZ could only be filed by either single persons or married couples filing a joint return.

NOTES: Detail may not add to totals because of rounding. All data are for returns filed through April.

<sup>1</sup> The sum of all sources of income less loss, before reduction by statutory adjustments. Total income minus statutory adjustments equals adjusted gross income.

<sup>2</sup> Not included in total income or adjusted gross income.

<sup>3</sup> Includes returns with adjusted gross deficit.

<sup>4</sup> Net capital gain (columns 19-20) excludes capital gain distributions (columns 23-24).

<sup>5</sup> Includes estate or trust net income not shown separately.

<sup>6</sup> Less than \$500,000.

<sup>7</sup> Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTES: Detail may not add to totals because of rounding. All data are for returns filed through April.

<sup>1</sup> Includes both the regular standard deduction and any additional standard deduction for age 65 or over or for blindness.

<sup>2</sup> Includes returns with adjusted gross deficit.

<sup>3</sup> Less than \$500,000.

<sup>4</sup> For SOI tabulations, the earned income credit is divided into three parts: an amount used to offset income tax before credits (limited to the amount needed to reduce income tax after credits to zero); an amount used to offset all other taxes (limited to the amount needed to reduce total tax liability to zero); and a refundable portion (the excess of credit over total taxes).

<sup>5</sup> Includes the credit for prior year minimum tax, the credit for interest on certain home mortgages, the Empowerment Zone credit, the nonconventional source fuel credit, and other credits.

<sup>6</sup> Income tax after credits plus alternative minimum tax.

<sup>7</sup> Total tax liability is the sum of income tax after credits, plus any other additional taxes, e.g., self-employment tax, alternative minimum tax, household employment tax, tax on an Individual Retirement Arrangement (IRA), less all but the refundable portion of the earned income credit.

\* Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTES: Detail may not add to totals because of rounding. All data are for returns filed through April.

<sup>1</sup> Excludes electronically-filed returns and computer-generated returns (Form 1040PC), shown separately.

<sup>2</sup> Excludes Form 1040TEL returns.

\* Estimate should be used with caution because of the small number of returns on which it is based.

N/A - Not applicable.

NOTES: Detail may not add to totals because of rounding. All data are for returns filed through April. Differences exist between the number of returns with a specific characteristic and the number with a specific form or schedule in support of the characteristic, e.g., an individual may attach Schedule A for itemized deductions, but use the standard deduction on the Form 1040 instead. Therefore, data in this table do not necessarily agree with data in other tables.

# Sole Proprietorship Returns, 1994

by Shawn M. Harwood

**N**onfarm sole proprietorship profits grew 6.6 percent, to \$166.8 billion for 1994. Using constant dollars, profits grew 4.2 percent, the second largest annual increase since 1988. This (constant dollar) growth reversed the 1.0 percent decline in 1993 profits. With the exception of a decline in (current dollar) growth rate for the finance, insurance, and real estate division, increasing rates of growth were exhibited in each industrial division for 1994. At 19.6 percent, the transportation and public utilities division produced the largest annual growth in profits among the industrial divisions, followed by the wholesale and retail trade and construction divisions at 12.2 and 12.1 percent, respectively. Services, while producing a 3.6 percent increase in profits from 1993, accounted for 57.4 percent of total 1994 sole proprietorship profits.

For 1994, both total business deductions and receipts demonstrated stronger growth than for 1993. Deductions grew 3.8 percent, the largest annual growth since 1988. However, this increase in deductions (to \$623.8 billion) was surpassed by a 4.4 percent increase in receipts to \$790.6 billion. The transportation and public utilities division saw the largest percentage growth in both receipts and deductions, 12.5 and 11.4 percent, respectively.

## Receipts

The number of individual income tax returns reporting nonfarm sole proprietorship activity for 1994 increased 1.9 percent, from 15.8 million for 1993 to 16.2 million (Figure A) [1]. The two largest industrial divisions, services and wholesale and retail trade, showed moderate increases in the number of sole proprietorship returns for 1994 (1.1 percent and 3.3 percent, respectively). Sole proprietorship business receipts for all industries (the sum of "income from sales and operations" and "other business income") increased 4.4 percent from the 1993 level of \$757.2 billion to \$790.6 billion for 1994 (Figure B) [2]. Despite decreases in some component industrial groups, all principal industrial divisions reported growth in business receipts. Sole proprietorships in the transportation and public utilities division produced a 12.5 percent increase, the largest percentage growth in 1994 business receipts. Construction division receipts grew 7.9 percent, an \$8.5 billion increase, representing the second largest percentage increase as well as the second largest dollar increase. With a 4.4 percent increase yielding receipts \$11.4 billion higher than 1993, sole proprietorships in the services

*Shawn M. Harwood is an economist with the Individual Returns Analysis Section. This article was prepared under the direction of Jeff Hartzok, Chief.*

**Figure A**

All other industries.....	265,262	167,005	-37.0

NOTE: Detail may not add to totals because of rounding.

division demonstrated the greatest dollar increase for 1994:

After the economy recovered from the recession of the early 1980's, sole proprietorship receipts grew annually from 1983 through 1988 (Figure C). Since 1988, the consistent growth in receipts stopped, resulting in year-to-year fluctuations between gains and losses. For 1994, total receipts grew 2.0 percent (in constant 1992 dollars), the largest percentage increase since 1988 [3].

## Deductions

Total business deductions (cost of sales and operations, plus business expenses, including expenses for a home office) for 1994 increased 3.8 percent from their 1993 level of \$600.8 billion to \$623.8 billion (Figure B) [4,5]. In constant dollars, deductions grew 1.5 percent (Figure C). This growth represents the largest percentage increase since 1988. All of the principal industrial divisions saw increased growth in business deductions for 1994. Sole proprietorships in the services division reported \$176.0 billion in deductions for 1994, a 4.8 percent increase (in current dollars) from 1993 (in contrast to the 0.9 percent increase from 1992 to 1993) (Figure D). This division accounted for 28.2 percent of all sole proprietorship deductions and was the largest contributor to the growth in 1994 deductions.

Representing 48.3 percent of total 1994 business deductions, the cost of sales and operations deduction grew 3.9 percent from 1993 to \$301.0 billion (Figure E). This growth was smaller than the 5.6 percent increase of 1993. Comprising 71.9 percent of the cost of sales and operations, purchases grew only 2.9 percent for 1994 (Figure F).

<sup>1</sup> Constant dollars are based on the overall implicit price deflator for gross domestic product computed and reported by the U.S. Department of Commerce, Bureau of Economic Analysis in the Survey of Current Business, January-February, 1996. The deflator represents the annual average of current-weighted prices, based on 1992=100.

<sup>2</sup> Percentage not computed.

Because it represents such a large proportion of the total cost of sales and operations, the low growth in purchases was only moderately offset by stronger relative growth in the cost of labor and in materials and supplies (13.6 and 4.9 percent, respectively).

Total business "expenses" (total business deductions, excluding cost of sales and operations) grew 3.7 percent from 1993, to \$322.8 billion. Net salaries and wages grew 3.1 percent from 1993, to \$53.6 billion (Figure G). Comprising 16.6 percent of total expenses, this was the largest

NOTE: Detail may not add to totals because of rounding.

<sup>1</sup> Less than .05 percent

business expense for 1994. Car and truck expenses, the second largest business expense with 9.6 percent of the total, grew 15.5 percent from its 1993 level of \$26.7 billion to \$30.8 billion. For Tax Year 1994, the standard mileage rate rose one cent, to \$0.29 per mile. This increase may have had a small impact on the increased car and truck expense deduction. Business expenses were further affected by the Omnibus Reconciliation Act of 1993 (OBRA '93), which reduced the deductible amount of meals and entertainment expenses from 80 to 50 percent. This change generated a 30.5 percent decrease in meals and entertainment expenses deducted, a \$649.5 million decline from their 1993 level.

Accounting for 8.1 percent of total business expenses, the depreciation deduction grew to \$26.2 billion. This growth represented a 2.4 percent increase (in constant dollars) from 1993 (Figure H). While smaller relative to the 4.6 percent annual increase of 1993, this growth was the second largest expansion of the depreciation deduction since 1985. The increase may be attributable in part to the provision of OBRA '93, that increased the maximum amount of investment certain small businesses could immediately deduct (according to Internal Revenue Code section 179) from \$10,000 to \$17,500 [6]. The depreciation deduction first began to decline for 1986, following the enactment of the Tax Reform Act of 1986 (TRA '86). TRA '86 reduced the allowable depreciation deduction by lengthening the cost recovery periods and changing the

depreciation methods for property placed in service after July 31, 1986. The depreciation deduction dropped 2.4 percent for 1986 and continued to decline through 1992. Beginning with 1993, however, the trend reversed and depreciation increased through 1994. The depreciation deduction represented 4.2 percent of total business deductions for 1994. Depreciation deductions as a percentage of total business deductions remained below the 1985 (pre-TRA '86) level of 5.7 percent.

With the implementation of the Schedule C-EZ for Tax Year 1992, certain smaller businesses could elect not to itemize depreciation and other business deductions. The Schedule C-EZ, *Net Profit From Business* (a simplified version of the Schedule C) and the Schedule C, *Profit or Loss From Business*, are the sources of the sole proprietorship statistics. Taxpayers could use the Schedule C-EZ if they had gross receipts of \$25,000 or less; business expenses of \$2,000 or less; used the cash accounting method; had no inventories; did not report a net loss from the business; owned only one business as a sole proprietor; had no employees; did not take a deduction for home business expenses; and had no prior year disallowed "passive activity losses" from the business [7]. Because taxpayers using the Schedule C-EZ did not itemize business deductions, the detailed deductions in Table 2 are slightly understated and will not add to the totals.

The numbers and percentages of nonfarm sole proprietorship returns filed on Schedule C-EZ are shown by

# Sole Proprietorship Returns, 1994

n.a. = Not available

<sup>1</sup> Includes returns with Schedule C-EZ attached. Because only a total is reported for business deductions on Schedule C-EZ, the totals shown in the statistics exceed the sum of the detailed deductions; the detailed deductions are, therefore, slightly understated.

<sup>2</sup> Total business deductions are calculated before subtraction of nonallowable "passive" activity losses and any "passive loss" carryover from the prior years. However, these losses (after subtraction) and any carryover are reflected in net income or deficit. Therefore, total business receipts minus total business deductions may not always equal net income or deficit.

<sup>3</sup> Included in "Other business deductions."

industrial division in Figure I. Of the almost 2.0 million Schedule C-EZ returns filed for 1994, about 1.2 million, or 63.3 percent, were filed by taxpayers in the service industries. Business receipts from Schedule C-EZ filers totaled \$6.6 billion, or 0.8 percent of total business receipts. The \$0.9 billion in business deductions reported on Schedule C-EZ returns represented only 0.1 percent of total business deductions for all industries for 1994. In fact, despite accounting for the vast majority of Schedule C-EZ filers among the industrial divisions, sole proprietorships in the services division reported only 0.3 percent of their business deductions on Schedule C-EZ returns.

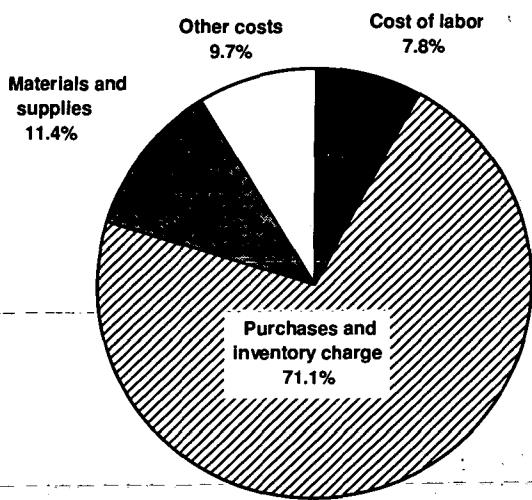

## Profits and Losses

All principal industrial divisions showed an increase in sole proprietorship profits for 1994. Total profits grew 6.6 percent from 1993, increasing from \$156.5 billion to \$166.8 billion (Figure B) [8]. While both total receipts and deductions increased, a higher annual growth of receipts (a 4.4 percent increase in receipts compared to the 3.8 percent growth in deductions) yielded this increase in total profits. Using constant dollars, 1994 receipts rose 2.0 percent and deductions grew 1.5 percent, yielding a 4.2 percent increase in profits. This increase in profits reversed the 1.0 percent fall for 1993.

## Sole Proprietorship Returns, 1994

**Figure F**

### Nonfarm Sole Proprietorship Costs of Sales and Operations, Tax Year 1994

With the exception of the services division, the annual increase in profits was generated by greater percentage increases in business receipts relative to deductions. Sole proprietorships in the transportation and public utilities division reported a 12.5 percent increase in receipts and, with an 11.4 percent increase in deductions, produced the largest percentage increase in 1994 profits, 19.6 percent (Figure B). The wholesale and retail trade division displayed an increase in profits of 12.2 percent, while sole proprietorships in the construction division reported a 12.1 percent increase. Profits for the finance, insurance, and real estate division grew 5.8 percent.

The services division and its component groups, medical services and consulting and management services, saw increases in profits of 3.6, 3.3, and 9.7 percent, respectively. However, in contrast to other divisions showing growth in profits, these sole proprietorships demonstrated growth in business deductions that surpassed that of receipts. The increases in profits despite greater growth in deductions relative to receipts may be explained by an examination of business deductions as a percentage of receipts (Figure J). Business deductions, as a percentage of receipts for all nonfarm sole proprietorships, were 78.9 percent for 1994. By comparison, the services division, medical services, and consulting and management services displayed relatively low percentage of deductions to receipts (64.8, 53.6, and 49.0 percent, respectively). As a consequence of this comparatively

low ratio, profits increased despite the larger growth in deductions.

TRA'86 may have influenced 1994 sole proprietorship profits through its placement of restrictions on "passive losses." Beginning in 1987, these restrictions were an effort to curb investment in "tax shelters" [7]. These restrictions, however, have had a limited effect on overall sole proprietorship profits, amounting to only \$109.7 million for 1994.

In constant dollars, positive net income increased 3.7 percent from 1993, while net losses grew only 0.2 percent (Figure H). The annual increase in net income contrasts with the 0.6 percent decline of 1993. Further, it was the second strongest increase since 1988, before the economy began its decline toward the recession of 1991. Among the principal industrial divisions, sole proprietorships in the transportation and public utilities division and in the construction division reported the largest (current dollar) annual increases, 16.9 and 11.1 percent, respectively (Figure K). Services, accounting for more than half of total positive net income for sole proprietorships, showed growth of 4.0 percent from 1993. However, growth in net income for services was moderately offset by a 9.9 percent growth in net loss. The \$7.6 billion net loss for the services division accounted for 36.3 percent of the total net loss for 1994 sole proprietorships. Net loss for medical services, the largest industrial group in the services division, increased 31.3 percent from 1993. Similarly, the largest industrial group in the construction division, special trade contractors, displayed a 14.1 percent increase in net losses.

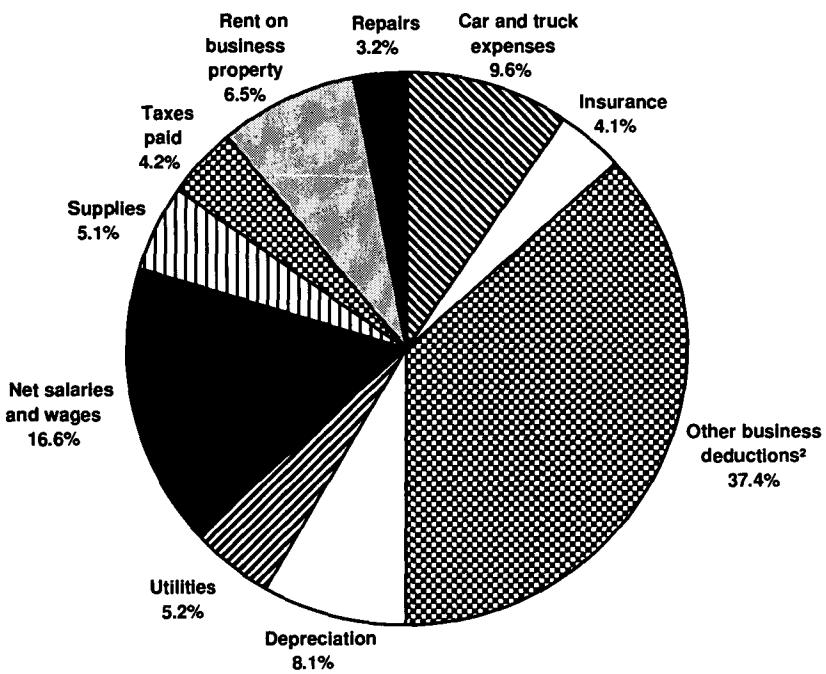

### Industry Trends

Services was the largest sole proprietorship division in terms of total business receipts, with 34.4 percent of the total for 1994 (Figure B). Receipts for this division, at \$271.7 billion, grew 4.4 percent from the \$260.3 billion for 1993. Total deductions for the services division increased 4.8 percent to \$176.0 billion. Service division profits increased 3.6 percent, up from the 0.8 percent decline of 1993 (Figure D). This annual increase brought profits to \$95.7 billion, accounting for 57.4 percent of total sole proprietorship profits (down from the 59.0 percent share of total profits for 1993). Medical and health services reported increases in both receipts and deductions. The net effect of these changes was a 3.3 percent growth in profits to \$34.0 billion, representing 35.5 percent of total services division profits. Accounting for 21.6 percent of services' profits, the business and personal services group grew at a rate of 6.2 percent (in contrast to a 7.6 percent decline of 1993) to \$20.7 billion (Figure D). Consulting and management services' profits grew 9.7 percent, generated by increases in receipts and deductions of 11.1 and 13.7

## Sole Proprietorship Returns, 1994

**Figure G**

### Nonfarm Sole Proprietorship Total Business Expenses, Tax Year 1994<sup>1</sup>

<sup>1</sup>Total business expenses equals all business expenses minus cost of sales and operations. For 1994, this amount was \$322.8 billion.

<sup>2</sup>Other business deductions include: commissions, office expenses, advertising expenses, travel meals entertainment, bad debts, depletion, employee benefits, interest, legal and professional services, pension and profit-sharing, and home office deductions. "Other business deductions" also includes all Schedule C-EZ deductions.

<sup>1</sup> Less than 0.05 percent.

NOTE: Detail may not add to totals because of rounding.

percent, respectively. In contrast, however, sole proprietorships in the legal services group reported a 2.5 percent decline in receipts. The decline in receipts, coupled with a 0.8 percent increase in deductions, produced a 6.2 percent drop in profits.

Wholesale and retail trade was the second-largest sole proprietorship division, with 31.4 percent of total receipts. For this division, the growth of receipts surpassed deductions to yield a 12.2 percent increase in profits, up from the 6.5 percent increase for 1993 (Figure D). While receipts for the wholesale trade group fell 0.5 percent, deductions fell 1.8 percent, resulting in an 8.0 percent increase in profits. This reversed a 7.4 percent decline for 1993. Retail trade receipts grew 1.7 percent and deductions grew 1.1 percent, resulting in a 14.3 percent increase in profits. Within the retail group, a 21.0 percent increase in profits for eating and drinking places contrasted with a 15.4 percent drop in profits reported for food stores.

The third largest industrial division was construction, with receipts totaling \$115.9 billion. This amount represented 14.7 percent of sole proprietorship receipts and was a 7.9 percent increase from 1993. Similarly, deductions increased by 7.0 percent. Profits grew 12.1 percent to \$20.4 billion, an improved annual increase compared to the 7.7 percent growth of the prior year. Special trade contractors, with 80.4 percent of construction profits, showed increases of 14.5 percent for receipts and 15.5 percent for profits.

The fourth largest division was finance, insurance, and real estate, which represented 6.8 percent of 1994 sole proprietorship receipts. The 2.5 percent increase in receipts, combined with a 0.9 percent increase in deductions, yielded a growth in profits of 5.8 percent to \$20.0 billion. This growth was smaller than the 10.5 percent

increase of the prior year. Finance, insurance, and real estate was the only principal industrial division to show a growth in profits that did not exceed its 1993 growth. Declines for finance, in receipts, deductions, and profits (5.9 percent), were offset by increases in profits for both insurance and real estate (8.9 and 5.4 percent, respectively).

#### Summary

For 1994, nonfarm sole proprietorship receipts and deductions grew faster relative to their 1993 growth. Despite the largest percentage increase in business deductions since 1988, the growth in business receipts surpassed that of deductions, yielding a 6.6 percent increase in total profits. In constant dollars, profits increased 4.2 percent, reversing the 1.0 percent drop for 1993. The increase in 1994 profits was the second largest annual increase (in constant dollars) since 1988. With the exception of finance, real estate, and insurance, all of the principal industrial divisions saw an improved growth in profits that exceeded the rates of increase for 1993. The transportation and public utilities, wholesale and retail trade, and construction divisions produced the largest percentage increases in current dollar profits, with increases of 19.6, 12.2, and 12.1 percent, respectively. Services accounted for 57.4 percent of total sole proprietorship profits. While the services division was responsible for a smaller share of total sole proprietorship profits than for 1993, the 3.6 percent increase in profits contrasts with the 0.8 percent decrease of 1993. With the continued impact of the Omnibus Budget Reconciliation Act of 1993 (OBRA '93) on expensing of capital expenditures, total 1994 depreciation deductions increased 4.8 percent. Further provisions in OBRA '93 generated a 30.5 percent decline in deductible meals and entertainment.

<sup>1</sup> Includes returns with Schedule C-EZ attached. Because only a total is reported for business deductions on Schedule C-EZ, the totals shown in the statistics exceed the sum of the detailed deductions; the detailed deductions are, therefore, slightly understated.

<sup>2</sup> Total business deductions are calculated before subtraction of nonallowable "passive" activity losses and any "passive loss" carryover from the prior years. However, these losses (after subtraction) and any carryover are reflected in net income or deficit. Therefore, total business receipts minus total business deductions may not always equal net income or deficit.

\* Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to totals because of rounding.

### Data Sources and Limitations

The 1994 sole proprietorship estimates are based on a stratified probability sample of unadjusted individual

income tax returns, Forms 1040 and 1040PC, processed by the Internal Revenue Service during 1995. Returns in the

NOTE: Detail may not add to totals because of rounding.

sample were stratified based on: (a) the presence or absence of Schedule C, *Profit or Loss From Business (Sole Proprietorship)* or Schedule C-EZ, *Net Profit From Business* and Schedule F, *Farm Income and Expenses*; (b) the larger of positive income or negative income (i.e., "adjusted gross income" before statutory adjustments); and (c) tax year. The returns were selected at rates that ranged from 0.02 percent to 100 percent. The 1994 nonfarm sole proprietorship data are based on a sample of 37,462 returns and a population of 16,160,509 returns [9]. The corresponding sample and population for the 1993 data were 35,808 and 15,854,389 returns, respectively.

Since the data presented in this article are estimates based on a sample of returns filed, they are subject to sampling error. To properly use the statistical data provided, the magnitude of the potential sampling error must be known; coefficients of variation (CV's) are used to measure that magnitude. In the absence of sampling error measures for 1994, similar measures for selected amounts for 1993 may be used as approximations; these measures are published in the Fall 1995 *Statistics of Income Bulletin*. The reliability of estimates based on samples, and the use of coefficients of variation for evaluating the precision of estimates based on samples, are discussed in the appendix to this issue of the *Bulletin*.

### Notes and References

[1] For 1994, the 16,153,871 nonfarm sole proprietorship

returns accounted for 18,108,775 nonfarm businesses (Figure A). Actually, there may have been more businesses than those counted; processing for tax administration purposes allows only three businesses (reported on separate Schedules C) per return, and combines any remaining businesses on one (or more) of the three Schedules C. *Statistics of Income—1981, Sole Proprietorship Returns* contains a more detailed explanation of the relationship between proprietors and proprietorships.

For purposes of the statistics, if a proprietor owned more than one business, the statistics for each business were combined with those of the proprietor's dominant business and included in the industrial group for that business activity. When this occurred, the sum of net incomes (for businesses reporting a positive net income) reduced by the sum of net deficits (for businesses reporting a deficit) yielded the profits for a specific industrial group.

The *Standard Industrial Classification Manual, 1987*, issued by the U.S. Office of Management and Budget, was used to classify data by industry. These classifications were applied on a "per business" (rather than on a "per establishment") basis for *Statistics of Income* by combining various industry groups, although businesses were further combined as described above. While the wording of the industry titles used for the sole proprie-

## Sole Proprietorship Returns, 1994

etorship statistics diverge somewhat from those appearing in the *Standard Industrial Classification Manual*, the definitions are consistent.

- [2] Statistics for "business receipts, total" in Table 2 represent the total receipts of the business, mainly gross receipts from sales and operations. Business receipts also include miscellaneous business receipts, such as incidental sales of scrap, shown separately in the statistics as "other business income." However, business receipts exclude incidental investment income received through the business. Examples of such incidental investment income are interest, dividends, income or loss from rents or royalties, and capital or ordinary gain or loss from the sale of investment and business property. Sole proprietors report incidental investment income, in combination with nonbusiness-related investment income, as part of their total income on their individual income tax returns.

- [3] Based on the overall implicit price deflator for gross domestic product (GDP). The deflator is obtained by dividing GDP in current dollars by real (i.e., inflation adjusted for base year 1992) GDP and multiplying by 100. Its values are very similar to those of BEA's chain-type price index for GDP, in which annual adjustments are obtained by averaging estimates of aggregate price changes using detailed output weights for both the current and the preceding year. See U.S. Department of Commerce, Bureau of Economic Analysis, *Survey of Current Business*, January-February, 1996. Indices used for Figures C and H were:

<u>Year</u>	<u>Indices</u>	<u>Year</u>	<u>Indices</u>
1982	70.1	1989	89.7
1983	73.1	1990	93.6
1984	75.9	1991	97.3
1985	78.4	1992	100.0
1986	80.6	1993	102.6
1987	83.1	1994	105.0
1988	86.1		

- [4] Sole proprietors report personal, i.e., nonbusiness, income and expense items apart from business income or loss, which are reported on the attached Schedules C, *Profit or Loss From Business* (or, to a lesser extent, on Schedule C-EZ, *Net Profit From Business*). Salaries paid to owners qualify as personal income, not as a business expense, and are therefore part of the owner's taxable income. Similarly, sole proprietors deduct charitable contributions made through the business as personal expenses on Schedule A,

*Itemized Deductions.* However, the owner of a sole proprietorship may choose to deduct any foreign taxes paid as a business expense, unless the owner elects to claim these taxes as a credit against U.S. income tax.

- [5] Business deductions include the home office business deduction. After 1990, home office expenses were calculated separately on Form 8829, *Expenses for Business Use of Your Home*, and the deductible portion brought forward to the Schedule C. In some cases, these expenses were limited. Prior to 1990, these expenses were not limited and were included with other expenses, such as depreciation deduction, utilities, and "other" expenses on the Schedule C.
- [6] The cost of certain tangible property placed in service after 1992 (as described in section 179 of the Internal Revenue Code) may be treated as a current expense rather than a capital expenditure subject to depreciation deductions. For 1993, the maximum deduction amount was increased from \$10,000 to \$17,500. The total amount of this deduction claimed for 1994 for all individual taxpayers (including sole proprietorships) was \$15.9 billion, an annual increase of 17.8 percent, down from the 32.4 percent increase for 1993.
- [7] Losses generated by any "flow-through" business activity (i.e., such as partnerships or S Corporations for which profits and certain other amounts are passed through to the owners for taxation), in which the taxpayer did not "materially participate" (i.e., was not involved regularly and substantially in the operations of the activity) qualified as passive activity losses. The Tax Reform Act of 1986 (TRA '86) gradually eliminated the use of passive losses as a means to offset nonpassive income, such as salaries and wages. TRA '86 provided for a 5-year phase-in of the limitations on passive losses for investments made prior to 1987; since Tax Year 1991, the restrictions applied to all passive losses. However, exceptions up to \$25,000 were made for certain rental real estate losses. Under prior law, passive losses were fully deductible.
- [8] Net income minus deficit (loss) before Federal income tax, yields profits. Proprietors compute their tax on total "taxable income," which includes their business profits, plus any other income.
- [9] The small difference between the number of returns in the population and the total number of returns in Tables 1 and 2 is mainly due to the processing of amended and tentative returns, data from which are not reflected in these statistics.

\* Estimate should be used with caution because of the small number of sample returns on which it is based.

\*\* Data not shown to avoid disclosure of specific sole proprietorship information. However, the data are included in the appropriate totals.

<sup>1</sup> Excludes amounts reported on Schedule C-EZ filed by certain small businesses not required to itemize their business deductions. Therefore, totals shown may be slightly understated.

<sup>2</sup> Interest paid is the sum of mortgage interest and other interest on business indebtedness (see Table 2).

<sup>3</sup> Payroll is the sum of net salaries and wages plus the cost of labor reported as part of cost of sales and operations (see Table 2).

NOTE: Detail may not add to totals because of rounding.

# Sole Proprietorship Returns, 1994

**Table 2.--Nonfarm Sole Proprietorships: Income Statements, by Selected Industrial Groups**

\* Estimate should be used with caution because of the small number of sample returns on which it is based.

<sup>1</sup> Includes returns with Schedule C-EZ attached. Schedule C-EZ was filed for certain small businesses, i.e., those with net income and with receipts of \$25,000 or less and business deductions of \$2,000 or less, with no inventories or employees, and with no deduction for a home office business and no allowable "passive" activity losses. Because only a total is reported for business deductions on Schedule C-EZ, the totals shown in the statistics exceed the sum of the detailed deductions; the detailed deductions are, therefore, slightly understated.

<sup>2</sup> Total business deductions are calculated before subtraction of nonallowable "passive" activity losses and any "passive loss" carryover from the prior years. However, these losses (after subtraction) and any carryover are reflected in net income or deficit. Therefore, total business receipts minus total business deductions may not always equal net income or deficit.

<sup>3</sup> Less than \$500.

<sup>4</sup> Includes operative builders.

NOTE: Detail may not add to totals because of rounding.

# Partnership Returns, 1994

by Timothy D. Wheeler

**P**artnership returns for 1994 continued the trend of large percentage increases in net income (less deficit) first seen for 1991. Net income (less deficit) increased by almost 25 percent to \$82.2 billion (Figure A). This increase occurred in all industrial divisions except agriculture, forestry, and fishing, and mining. Within the finance, insurance, and real estate industrial division, operators and lessors of buildings reported positive net income (less deficit) for the first time since 1967. Although the net income (less deficit) was a positive \$2.6 billion, rental real estate income (less deficit) reported by this industry -- the main source of income and loss for the industry -- was still a \$1.4 billion deficit. This, however, was a considerable improvement over the \$6.1 billion deficit this industry reported for 1993, and an even more significant improvement over the \$36.6 billion deficit reported for 1987, the largest loss ever shown by this industry. For 1994 the number of partnerships increased by 2 percent to 1,493,963. This was the first increase in the number of partnerships since 1988. The number of partners decreased by 4 percent to 14,989,505. This was the fifth consecutive year that the number of partners declined (Figures B and C) [1].

## Partnership Activity in 1994

Partnership net income (less deficit) increased in almost every industrial division (Table 6). Only agriculture, forestry, and fishing and mining showed decreases. Fifty-seven percent of the entire increase in net income (less deficit) for all partnerships was reported by the finance, insurance, and real estate industrial division. Net income (less deficit) for this industrial division increased from \$15.3 billion for 1993 to \$24.1 billion for 1994. This was only the second year in which a gain was reported by this division since 1979. The first was reported for 1993. Within this division, the largest increase was reported by operators and lessors of buildings whose net income (less deficit) rose to a \$2.6 billion gain for 1994 from a \$2.4 billion loss for 1993. This was the first gain reported for this industrial group since 1967. The second largest increase within this division was reported by holding and investment companies. For this group net income (less deficit) rose from \$14.9 billion for 1993 to \$17.5 billion for 1994. Other industrial divisions which showed large increases were manufacturing and services, for which net income (less deficit) rose by \$2.6 billion and \$2.4 billion, respectively (Figure D and Table 6).

Timothy D. Wheeler is a statistician in the Corporation Special Projects Section. This article was prepared under the direction of Alan Zempel, Chief.

Figure A

### Partnership Gain or Loss by Type of Partnership and Profit Status, Tax Years 1985-1994

1994.....	82.2	91.2	29.0	56.0	38.1	3.7	1.7

<sup>1</sup> The term Limited Liability Company is discussed in the Explanation of Selected Terms section.

Note: Detail may not add to totals because of rounding.

Partnership statistics for 1994 show the continuing domination of the finance, insurance, and real estate and the services industrial divisions (Figure D). The finance, insurance, and real estate division accounted for 54.2 percent of all partnerships, 43.3 percent of the net income and 60.0 percent of the deficit. While only 17.5 percent of all partnerships were in the services division, these partnerships reported 30.5 percent of the net income and 14.2 percent of the deficit for all partnerships. Together these two industrial divisions accounted for almost three-quarters of both net income and deficit for all partnerships. For 1994 the net income (less deficit) for services increased \$2.4 billion to \$36.3 billion. Eighty-four percent of the total net income (less deficit) for this industrial division was attributable to partnerships in the following industries: legal services (\$18.7 billion); medical and health services (\$7.4 billion); and accounting, auditing, and bookkeeping services (\$4.3 billion). The net income (less deficit) for these industries increased slightly for 1994 -- further indicating improvement in the economy. For 1993 this amount declined for these three industries.

Figure A shows, for 1994, that the \$15.5 billion increase for net income (less deficit) for all partnerships was caused by an increase in the gain for both general and limited partnerships coupled with a decline in losses for these two groups. Limited partnerships showed a gain for the second consecutive year as net income (less deficit) rose to \$17.9 billion from the \$10.4 billion reported for 1993. However, limited partnerships in the real estate industry continued to show losses for 1994, although the losses declined from \$11.1 billion for 1993 to \$6.9 billion for 1994 (Figure E). This decline was driven by limited partnerships in the operators and lessors of buildings industry. These partnerships reported a decline in net deficit from \$8.9 billion for 1993 to \$6.1 billion for 1994.

1993.....	15,627	2,665	1,680	6,521	4,676	51	33
1994.....	14,990	2,657	1,737	5,885	4,398	241	72

<sup>1</sup> The term Limited Liability Company is discussed in the Explanation of Selected Terms section.  
Note: Detail may not add to totals because of rounding.

For 1994 the number of limited liability companies increased 176 percent to 47,816 (Figure E). More than two-thirds of these companies were classified in the finance, insurance, and real estate and services industrial groups. The net income (less deficit) associated with all limited liability companies increased from \$0.3 billion for 1993 to \$2.1 billion for 1994. Eighty percent of this increase was concentrated in the finance, insurance, and real estate and services industry groups. Limited liability companies are discussed further in the Explanation of Selected Terms section.

### Real Estate Operators and Lessors of Buildings

Although the real estate operators and lessors of buildings

industry has historically reported large deficits, for 1994 this industry was the largest contributor to the rise in net income (less deficit) for all partnerships, accounting for \$5.0 billion of the overall \$15.5 billion increase. In addition, this industry showed a profit for the first time since 1967, as net income (less deficit) rose to a \$2.6 billion gain for 1994 from a \$2.4 billion loss for 1993 (Figure D and Table 6).

The 540,374 real estate operators and lessors of buildings reported total assets of \$740.9 billion -- 32 percent of the total reported for all partnerships -- an increase from the \$715.7 billion reported by this industry for 1993. Overall, this industry accounted for 36 percent of all partnerships and 40 percent of all partners (Table 1).

### Rental Real Estate Income (Less Loss)

Table 4 presents data from Form 8825, *Rental Real Estate Income and Expenses of a Partnership or an S Corporation*. The net rental real estate loss reported by all partnerships declined from \$8.4 billion for 1993 to \$2.5 billion for 1994 (Figure F). This \$5.9 billion decline in losses accounted for over one-third of the \$15.5 billion increase in profits for all partnerships. Eighty percent of the decline in rental real estate loss was attributable to partnerships in the real estate operator and lessors of buildings industry whose losses declined from \$6.1 billion for 1993 to \$1.4 billion for 1994. Net rental income for all partnerships increased from \$25.0 billion for 1993 to \$28.1 billion for 1994. Net rental loss dropped from \$33.4 billion for 1993 to \$30.6 billion for 1994. This increase in net rental income (less loss) was mostly caused by a \$5.0 billion increase in gross rental income, from \$158.5 billion for 1993 to \$163.5 billion for 1994. Operators and lessors of buildings accounted for most of this increase. Total rental real estate expenses for all partnerships remained virtually unchanged from 1993.

### Total Receipts and Total Assets

Total receipts increased \$109.5 billion to \$844.4 billion, 27 percent more than the \$86.2 billion increase reported for 1993, which is consistent with an improving economy. (See the Explanation of Selected Terms section for the definition of total receipts.) Eighty-seven percent (\$95.2 billion) of this rise for 1994 was due to an increase in "business receipts," i.e., gross receipts from sales and operations.

Over fifty percent of the \$844.4 billion in total receipts reported for 1994 for all partnerships was concentrated in the finance, insurance, and real estate and services industrial divisions (Figures G and H). Services, which historically had been the largest contributor to total receipts, was surpassed in 1994 by the finance, insurance, and real estate

Medical and health services.....	7,130,071	7,383,805	3.56	35,336,057	37,180,595	5.22	19,076,142	20,266,997	6.24
Accounting auditing and bookkeeping services.....	4,090,742	4,348,553	6.30	17,379,226	18,246,620	4.99	4,689,455	4,218,861	-10.04
Nature of business not allocable.....	28,483	-18,258	-164.10	269,739	121,821	-54.84	31,254	116,888	273.99

division as total receipts for this group rose 16 percent from \$196.5 billion for 1993 to \$228.3 billion for 1994, while total receipts for services rose only 7 percent to \$215.2 billion for 1994 from \$201.0 billion for 1993. Eighty-six percent of this increase in total receipts for finance, insurance, and real estate was contributed by security brokers and dealers, other holding and investment companies, and commodity contract brokers and dealers.

Table 3 presents balance sheet data by industrial group and by profit status for the 66 percent of partnerships which filed balance sheets with their returns. For 1994, approximately 40 percent of all partnerships -- generally partnerships with total assets of less than \$600,000 and total receipts of less than \$250,000 -- were not required to file balance sheets. Seventy-six percent of the total assets for all partnerships was concentrated in the finance, insurance, and real estate industrial division (Figure G). For 1994 total assets grew 8 percent, down from the 11 percent increase reported for 1993. For 1994 total assets increased by \$176.9 billion to \$2,295.2 billion. "Other investments" accounted for \$69.9 billion of this increase in total assets. Partners' capital accounts contributed \$134.6 billion of the increase in total liabilities and capital. As in the prior year, two-thirds of the increase in total assets was concentrated within holding and investment companies and security and commodity brokers.

### Distributions to Partners

Partnerships are not taxed; instead, their income, credits, and deductions flow through to the partners who are liable for any tax. Partners may be individuals, corporations, other partnerships, tax-exempt organizations, nominees, or other legal entities. Table 5 presents data on the distributions (or allocations) of partnership income (or losses) to limited and general partners by industrial division. These data were obtained from Schedule K, *Partners' Shares of Income, Credits, Deductions, etc.*, of the partnership return. This schedule reports the partners' shares of each component of the partnership's distributive income, deductions, and tax credits, as totals and by type of partner.

For 1994, the total income (less loss) available for distribution--without regard to separately allocable deductions--increased by \$14.7 billion over 1993, from \$141.9 billion to \$156.6. This was a substantially slower growth than the \$50.3 billion increase reported for the period 1992 to 1993. For 1994, all industrial divisions showed increases in the income available for distribution except agriculture, forestry, and fishing and mining. The largest increases were reported by transportation and public utilities, \$4.5 billion; services, \$4.2 billion; and finance, insurance, and real estate, \$3.9 billion. Overall deductions increased \$3.8 billion to \$29.7 billion. The difference

<sup>1</sup> Includes "Nature of business not allocable," which is not shown separately.

between the income (less loss) and deductions resulted in \$126.9 billion available for distribution or allocation to partners. This was a \$10.9 billion increase over the \$116.0 billion available for 1993. Of the \$126.9 billion available for distribution or allocation for 1994, \$120.9 billion was identified by type of partner. The difference was due to partnerships that failed to report allocations or distributions by type of partner.

Individuals who were general partners were the principal category of income recipients for all industrial divisions except mining, manufacturing, and transportation and public utilities. Corporate general partners received the largest distribution of income or loss for these divisions. Individual general partners in the services division continued to dominate the statistics, showing 25.6 percent (\$31.0 billion) of all reported allocations. However, distributions

Real estate.....	-7,811,551	-2,378,800	5,432,751	69.55
Operators and lessors of buildings.....	-6,145,685	-1,446,474	4,699,211	76.50
All other industries.....	532,808	772,917	240,109	45.06

to this group increased by only 3 percent for 1994, rising from \$30.1 billion for 1993.

Distributions to partners in real estate partnerships were positive for the second year in a row, increasing from a \$17.1 billion gain for 1993 to \$23.2 billion gain for 1994. This increase was led by a \$2.4 billion increase in allocations to individual general partners. Distributions to individual limited partners in real estate, a group which has historically received net losses, continued to be positive for the second year, although gain declined from \$5.4 billion for 1993 to \$4.9 billion for 1994. In addition, distributions for corporate general partners in real estate, another group which has historically received net losses, became positive for 1994, rising from a \$0.2 billion loss for 1993 to a \$0.4 billion gain for 1994. However, distributions to corporate limited partners in real estate continued to be negative.

### Summary

Partnership net income (less deficit) increased 23 percent (\$15.5 billion), continuing the recent trend of increasing profits and reflecting improvement in the economy. Partnerships classified as operators and lessors of buildings, and holding and other investment companies accounted for almost half of this increase. Operators and lessors of buildings, the largest contributor to this increase, reported their first gain since 1967. This group had historically reported large deficits. Although limited partnerships showed a gain for the second consecutive year, limited partnerships in real estate continued to show a deficit. Total receipts for all partnerships increased 15 percent to \$844.4 billion. Although partnerships in the services industrial division have historically accounted for the largest share of total receipts, for 1994 partnerships from the finance, insurance, and real estate industrial division became the leader, reporting \$228.3 billion versus \$215.2 billion for services. Activity by individual general partners

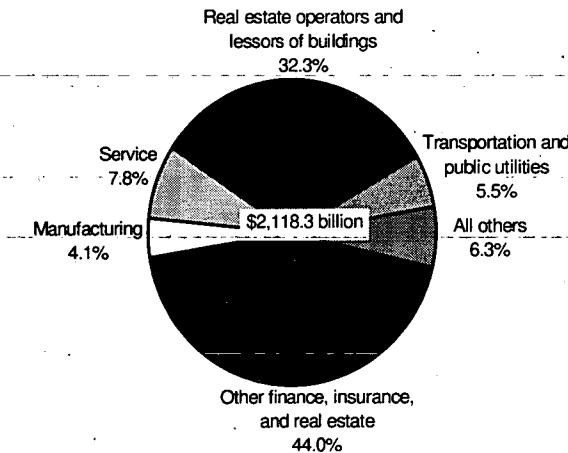

in the services division continued to dominate the statistics for partnership income (less loss) available for distribution to partners, accounting for \$31.0 billion of the \$120.9 billion reported by all partnerships.

### Sample Selection

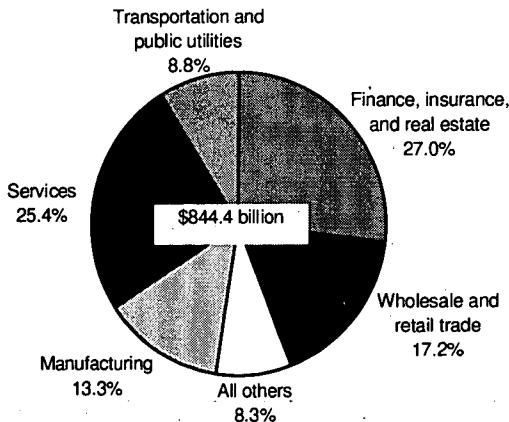

Tax Year 1994 statistics are estimates based on a stratified probability sample of almost 31,000 returns selected from a population of approximately 1.5 million partnerships. Tax Year 1994 covers returns processed by the Internal Revenue Service during Calendar Year 1995. All partnerships engaged in business in, or having income from sources within, the United States were required to file a

Form 1065, U.S. Partnership Return of Income, to report income or loss, deductions, tax credits and other tax-related items generated by the partnership. The statistics are only for active partnerships, which are defined as those that reported any items of income or deduction derived from a trade or business, or from rental or portfolio income.

The population was stratified into classes based on size of total assets, receipts, net income (or deficit), and indus-

try. Returns were selected from these classes at various probabilities ranging from 0.18 percent to 100 percent, and were weighted to represent the total population. Approximately 3 percent of the returns selected for the sample were not included in the tabulations because they represented inactive partnerships or multiple returns with identical accounting periods filed by the same partnership.

Because the data presented in this article are based on a sample of returns, they are subject to sampling error. To

## Partnership Returns, 1994

properly use the data, the magnitude of the potential sampling error needs to be known. Coefficients of variation (CV's), the ratio of an estimate's standard error to the estimate, are used to measure this magnitude. Figure I presents the coefficients of variation for certain money amounts, for selected industrial groups. The smaller the coefficient of variation, the more reliable the estimate is judged to be [2].

**Figure I**

### Explanation of Selected Terms

**Assets and Liabilities.**-- Balance sheet information was required to be provided, in general, only if the partnership had total receipts of \$250,000 or more and total assets of \$600,000 or more. No attempt was made to estimate the assets and liabilities of partnerships which did not provide this information. Although efforts were made to overcome

the effects of nonuniform reporting, especially by firms that used balance sheets of their own design instead of that provided on the return form, certain anomalies were accepted; for example, when a negative amount was reported for an asset or liability account.

**Limited Liability Companies.**-- Limited liability companies (LLCs) were required to file Form 1065, *U.S. Partnership Return of Income*, and were identified by a question on Schedule B, *Other Information*. These companies were first identified on the 1993 Form 1065. There were 47,816 such companies in the 1994 population, a dramatic increase over the 17,335 shown for 1993. With about ten states and the District of Columbia enacting LLC legislation in 1994 (including New York and California), only three states lacked LLC laws by the end of 1994: Hawaii, Massachusetts and Vermont [3]. LLCs were hybrid business entities that combined the corporate characteristics of limited liability for all owners (members) with the pass-through tax treatment of a partnership. LLCs offered more organizational flexibility than do S Corporations. For example, unlike S Corporations, LLCs could issue more than one class of stock, were not limited in the number of owners, and could have corporate or foreign members. Also, unlike partners in limited partnerships, all members of LLCs benefited from limited liability protection, even if they actively participated in the management of the business.

**Partners.**-- Partners can be individuals, corporations, other partnerships, or any other legal entity. Partners are classified as either general or limited. General partners are those who assume liability for the partnership's debts and losses. Limited partners are those whose liability in the partnership does not exceed their investment. By definition, a partnership must have at least two partners, at least one of which must be a general partner. A general partnership is composed entirely of general partners. A limited partnership has at least one general partner and one or more limited partners.

**Partnerships.**-- A partnership is the relationship between two or more entities or persons which join to carry on a trade or business, with each partner contributing money, property, labor, or skill and each expecting to share in the profits and losses. Every partnership that engages in a trade or business or has income from sources in the United States must file an annual information return, Form 1065, *U.S. Partnership Return of Income*, with the Internal Revenue Service, showing the partnership's taxable income or loss for the year. A partnership must file this return even if its principal place of business is outside the United States or if all its members are nonresident aliens.

## Partnership Returns, 1994

*Partnership net income (less deficit).*-- Through Tax Year 1986 partnership net income (less deficit) represents "ordinary income" (loss). Beginning with Tax Year 1987, because of tax law changes and tax form revisions, a similar net income (less deficit) figure has been computed for Statistics of Income as the sum of: ordinary income or loss from trade or business; portfolio income distributed directly to partners (excluding net short-term and long-term capital gains and losses, and prior to 1994, other portfolio income was also excluded); net income or loss from rental real estate activities; and net income or loss from other rental activities. The sum of these components is a comprehensive measure of overall partnership profits or losses which enables comparisons to be made with amounts of net income (less deficit) reported for years prior to 1987. The profit status of partnerships is determined as the sum of the gains or losses from the four activities listed above. Partnerships with a breakeven between gains and losses are included with loss partnerships.

*Receipts.*-- Total receipts, for this article, is defined as the positive income (negative amounts or losses are not included) received by partnerships for the specific items listed below. Total receipts of partnerships consisted of: gross receipts or sales less returns and allowances (i.e., "business receipts" in the statistics); ordinary income from other partnerships and fiduciaries; farm net profit; net ordinary gain from sales of business property; other income from a trade or business; net income from rental real estate activities; net income from other rental activities; portfolio interest income; portfolio dividend income; portfolio royalty income; net short-term capital gain; net long-term capital gain; other portfolio income; net gain from sales or exchanges of property used in a trade or business (Internal Revenue Code section 1231); and other income distributed to partners. Therefore, total receipts differs from the total receipts presented in Table 11 in the *Selected Historical and Other Data* section of this issue of the SOI Bulletin in that certain income and deduction

items distributed or allocated directly to partners (such as net short-term and long-term capital gains, net gain under Internal Revenue Code section 1231, other portfolio income, and other income) are excluded in the latter.

<sup>1</sup> Total net income is the sum of net income from trade or business, portfolio income distributed directly to partners (not including net short-term capital gain and long-term capital gain), net income (less deficit) from rental real estate, and net income (less deficit) from other rental activity.

NOTE: Detail may not add to totals because of rounding.

## Partnership Returns, 1994

**Table 2--Partnerships With Net Income: Total Assets, Trade or Business Income and Deductions, Portfolio Income, Rental Income, and Total Net Income, by Industrial Groups**

[All figures are estimates based on samples--money amounts are in thousands of dollars]

<sup>1</sup> The difference between "number of partnerships" and "number of partnerships reporting balance sheet data" is because of partnerships exempt from filing balance sheets. Since these partnerships are generally small--total assets less than \$600,000 and total receipts less than \$250,000--balance sheet data for partnerships are slightly understated.

NOTE: Detail may not add to totals because of rounding.

<sup>1</sup> Net income (less deficit) is the sum of net income from trade or business, portfolio income distributed directly to partners (not including net short-term capital gain and net long-term capital gain), net income (less deficit) from rental real estate, and net income (less deficit) from other rental activity.

NOTE: Detail may not add to totals because of rounding.

# Foreign-Controlled Domestic Corporations, 1993

by James R. Hobbs

For 1993, the 54,001 domestic corporations each "controlled" by a foreign "person" generated \$1.3 trillion of total receipts and reported total assets amounting to \$2.1 trillion. (The term "person" includes an individual, partnership, corporation, estate, trust, or other entity. See the Explanation of Selected Terms section of this article for a discussion on foreign persons.) These corporations, 1.4 percent of the U.S. total, accounted for 10.2 percent of the receipts and 9.6 percent of the assets reported on U.S. corporation income tax returns [1]. They also represented 6.4 percent of the taxable income and 6.8 percent of the total income tax after credits reported by all corporations.

The net income (less deficit) reported by foreign-controlled domestic corporations (FCDC's) for tax purposes under the Internal Revenue Code was \$11.2 billion for 1993. This increase over the 1992 amount of \$5.7 billion of net profits reflects the overall corporate performance [2]. The net income (less deficit) reported on all corporation income tax returns increased from \$402.0 billion for 1992 to \$498.2 billion for 1993.

Of all the FCDC's, 22,007 reported positive net income for 1993, totaling \$35.9 billion, a 12.1 percent increase over the \$32.0 billion of net income for 1992. The profitable companies for 1993 also reported \$28.0 billion of taxable income after statutory special deductions (i.e., "income subject to tax" shown in the statistics), 16.0 percent higher than their taxable income for 1992. The tax liability (i.e., "total income tax after credits") of FCDC's was \$8.2 billion, 15.0 percent greater than that for 1992.

For 1993, the 2,401 "large" companies (i.e., those with at least \$250 million of assets and/or with at least \$50 million of receipts) accounted for most of the key financial items of all FCDC's: 91.0 percent of total assets, 90.0 percent of total receipts, 86.4 percent of taxable income, and 85.6 percent of total income tax after credits. After an overview of all FCDC's, this article will focus on the large foreign-controlled domestic companies and compare them on an industry basis to large domestic corporations that were not controlled by foreign persons.

## Direct Foreign Investment in the United States

Direct foreign investment in the United States can take several forms, including corporations, partnerships, and even joint ventures. Under these forms of direct invest-

**FCDC's accounted for 10.2 percent of the receipts and 6.4 percent of the taxable income reported on all 1993 U.S. corporation income tax returns.**

ment, the foreign investor has sufficient equity in the enterprise to control and participate in managing its operations [3]. In regard to corporations, a foreign investor can either gain control of an existing U.S. company, create a new company incorporated in the United States, or operate in the United States through a branch of a foreign corporation.

There are several factors involved in the decision of a foreign investor to operate in the United States through either a domestic or foreign corporation [4]. This article focuses on domestic corporations that are controlled by a foreign person. Control is generally defined as ownership by any foreign person (or entity), directly or indirectly, of 50 percent or more of a U.S. corporation's voting stock at the end of the tax year. (This is discussed in greater depth in the Data Sources and Limitations section. Also, a description of foreign persons and an explanation of the rules of attribution are given in the Explanation of Selected Terms section.) There will be a separate tabulation in *Statistics of Income—1993, Corporation Income Tax Returns* (currently planned for publication in the Fall of 1996), covering branch operations of foreign corporations with income "effectively connected" with a U.S. trade or business [5].

This article includes two basic tables that show balance sheet, income statement, and tax items, as well as various ratios. Table 1 includes information for all FCDC's by selected industrial groupings and selected countries. Country information is based on the location of the owner's country of residence, incorporation, organization, creation, or administration. Table 2 presents information on "large" FCDC's by both selected industrial groupings and selected countries. For comparison purposes, this table also contains data for large domestic corporations that were not controlled by foreign persons. Because FCDC's could not file Forms 1120S, *U.S. Income Tax Return for an S Corporation*, and Forms 1120F, *U.S. Income Tax Return of a Foreign Corporation*, these forms were excluded from the data for domestically-controlled corporations shown in Table 2.

## Foreign-Controlled Domestic Corporations Growth of Corporations

Direct foreign investment in the United States through foreign-controlled domestic corporations grew steadily and substantially during the 1985-1993 period [6]. Total receipts of FCDC's grew from \$513.8 billion for 1985 to \$1,250.2 billion for 1993, a 143.3 percent increase using current dollars. In comparison, total receipts reported on all U.S. corporation income tax returns grew from \$8.4 trillion for 1985 to \$12.3 trillion for 1993, a 46.4 percent increase [7]. As a result of the rapid growth rate of

James R. Hobbs is a management official with the Special Studies and Publications Branch.

## Foreign-Controlled Domestic Corporations, 1993

FCDC's, their share of the receipts reported on all corporate returns increased from 6.1 percent for 1985 to 10.2 percent for 1993.

The growth of FCDC's can also be measured from the early 1970's, when a question concerning foreign ownership of companies was first placed on Form 1120, *U.S. Corporation Income Tax Return*. For 1971, these companies reported \$39.2 billion of total receipts, just 2.1 percent of the \$1.9 trillion reported for all corporations. By 1993, this percentage had grown substantially.

The growth of FCDC's can be viewed more specifically on an industrial basis. The four most significant industrial sectors for FCDC's have been wholesale trade; manufacturing; finance, insurance, and real estate; and services. Using total receipts as the measure, the growth during the 1985-1993 period of FCDC's as a percentage of all corporations for these four sectors has been: for wholesale trade, 16.2 percent to 23.3 percent; for manufacturing, 7.2 percent to 13.0 percent; for finance, insurance, and real estate, 3.5 percent to 6.9 percent; and for services, 2.4 percent to 6.5 percent. FCDC's in all four groups made significant increases over this period.

There were an estimated 54,001 returns of foreign-controlled domestic corporations for 1993, an increase over the 49,943 returns for 1992. (FCDC's, like most other corporations, could file consolidated returns for affiliated groups of domestic corporations. To the extent that they did, the data included in this article actually represent more companies than the stated number of returns.) Returns of FCDC's comprised a rather constant percentage of all U.S. corporation income tax returns, between 1.1 and 1.4 percent for each year between 1985 and 1993. This is in contrast to the rising percentage of receipts over this period.

### Industry Characteristics

For 1993, foreign-controlled domestic corporations were involved in every type of industrial activity, but, based on number of returns, 83 percent were concentrated in four industrial groupings: (1) finance, insurance, and real estate (16,967 returns); (2) wholesale trade (13,961 returns); (3) services (7,619 returns); and (4) manufacturing (6,289 returns). (In general, data are presented only for broad industrial classifications; they do not focus on more specific industrial subgroups underlying these broad classifications. The Data Sources and Limitations section discusses how returns are classified by industry.)

While the services industrial division comprised a substantial number of the total returns filed by FCDC's, these companies tend to have small amounts of receipts and assets when compared to companies in the other three groupings. For this reason, most of the remaining discus-

sion on industry characteristics will focus on companies classified in finance, insurance, and real estate; wholesale trade; and manufacturing.

Based on assets, two industrial sectors dominated the total for FCDC's for 1993. Finance, insurance, and real estate and manufacturing accounted for \$1.0 trillion and \$0.6 trillion of total assets, respectively, or 76.1 percent of the \$2.1 trillion of assets for all FCDC's. These two sectors made up a similar portion of the total assets reported on returns of other corporations. In this respect, FCDC's closely-mirrored other corporations.

Alternatively, on the basis of total receipts, manufacturing and wholesale trade continued to be the two primary industrial categories for FCDC's for 1993. Manufacturers reported \$0.5 trillion of receipts, while wholesalers reported \$0.4 trillion. These two groups accounted for 73.1 percent of the \$1.3 trillion of total receipts for all FCDC's.

This percentage was substantially higher than the comparable one for other corporations that filed U.S. corporation income tax returns.

Companies classified in different industries often have different financial characteristics. For instance, the comparative levels of total assets and total receipts of companies primarily engaged in wholesale trade activities and those primarily engaged in finance, insurance, and real estate activities differ significantly. FCDC wholesalers produced large amounts of receipts with relatively small amounts of assets (as of the end of their accounting periods), resulting in \$1.80 of receipts for each dollar of assets for 1993. Companies classified in finance, insurance, and real estate reported large amounts of assets, but relatively small amounts of receipts. These FCDC's produced only \$.13 of receipts for each dollar of assets. Other corporations in these two industrial categories had similar characteristics.

Even though foreign-controlled domestic corporations accounted for just one-tenth of the \$12.3 trillion of total receipts reported by all corporations filing U.S. income tax returns for 1993, these companies played disproportionately larger roles in certain industrial groups. For instance, FCDC's produced very substantial parts of the total receipts reported for mining (30.5 percent) and wholesale trade (23.3 percent). FCDC's also accounted for 13.0 percent of the receipts reported by all manufacturing companies. Conversely, FCDC involvement in the agriculture, forestry, and fishing; construction; transportation and public utilities; retail trade; services; and finance, insurance, and real estate industrial divisions was relatively low.

## Foreign-Controlled Domestic Corporations, 1993

for 1993, accounting for only 1.6, 2.1, 2.5, 3.4, 6.5, and 6.9 percent, respectively, of the receipts for all companies classified in these categories.

While FCDC's accounted for 30.5 percent of the receipts for all mining companies for 1993, they are not a major focus of this article. In comparison to the four industrial groupings shown in Table 1, mining accounted for only 1.6 percent of the total FCDC returns for 1993, 2.8 percent of the total FCDC assets, and 2.7 percent of the total FCDC receipts.

Statistics classified by industry do have certain limitations, which are discussed more thoroughly in the Data Sources and Limitations section, below. However, a brief point should be mentioned here. FCDC's accounted for 23.3 percent of the receipts of all companies classified as wholesalers. This percentage may be subject to certain limitations. For example, certain U.S. companies (not foreign controlled) and their subsidiaries may have been involved in both the manufacturing and wholesaling of products and reported tax information for these activities on a single (consolidated) income tax return, which was classified under manufacturing, rather than trade. Conversely, many domestic companies controlled by foreign corporations acted as wholesalers in the United States for products manufactured overseas by their parent, or other related, companies. These domestic companies would have been classified in the wholesale trade industrial grouping.

### Country Characteristics

Domestic corporations are controlled by "persons" throughout the world. However, for 1993, owners from 10 countries controlled 62 percent of the 54,001 domestic corporations classified as 50-percent-or-more controlled by a foreign person (see Table 1). (The countries represent the geographic location of the direct foreign owner's place of residence in the case of individuals, and place of incorporation, organization, creation, or administration in the case of other persons. Because holding companies located in a country different from that of the ultimate owner may directly own the stock of U.S. affiliates, the country reported on the tax return may not necessarily reflect the country of the ultimate owner. No data on the extent of this potential limitation are available.) The 33,330 corporations controlled by persons from these 10 countries accounted for 85 percent or more of the most significant financial items (such as, total assets, total receipts, total taxable income, and total income tax after credits) for all FCDC's.

Domestic corporations controlled by Japanese persons had assets of \$559 billion and total receipts of \$352 billion for 1993, amounts easily larger than those for any

other country. These assets and receipts represented about 27 and 28 percent of the respective totals for all FCDC's. (Companies controlled by Japanese persons also accounted for the largest amount of assets and receipts for each of the years of the 1985-1992 period.) Finance, insurance, and real estate companies accounted for \$318 billion, 57 percent, of the Japanese-controlled assets. Nearly \$237 billion, 67 percent, of the Japanese receipts were produced by wholesale trade companies.

**Domestic corporations controlled by Japanese persons represented 28 percent of the total receipts for all FCDC's.**

Although Japanese-controlled domestic corporations accounted for the largest part of the assets and receipts reported by all FCDC's, they did not file the largest number of returns, and they did not report the highest amounts of taxable income and total income tax after credits for 1993. Canadian-controlled domestic corporations filed the most returns, 10,135; Japanese-controlled domestic corporations were second with 7,355, and United Kingdom-controlled domestic corporations were third with 4,058. The U.K.-controlled companies reported the largest amounts of taxable income and total income taxes after credits (\$6.2 billion and \$2.0 billion, respectively), with Japanese-controlled companies second (\$4.2 billion and \$1.5 billion), and Netherlands-controlled companies third (\$3.8 billion and \$1.2 billion).

Domestic corporations controlled by persons in the United Kingdom accounted for the second largest amount (\$185 billion) of receipts for 1993, as well as the second largest for the 1985-1992 period as a whole. These receipts represented 15 percent of the 1993 receipts for all FCDC's. Most of the U.K. receipts, totaling \$96 billion, were produced by manufacturers.

For 1993, Japanese-controlled domestic corporations reported an overall net deficit of \$1.0 billion, while U.K.-controlled companies reported (positive) net income totaling \$5.1 billion. There are many factors that may have caused this large difference in "profits." Although these causal factors are beyond the scope of this article, it is noteworthy to look at the reported profits and losses on a country/industry basis. In the manufacturing industrial division, there were very large differences between the two countries. Japanese-controlled corporations reported a net deficit of \$0.1 billion on \$67.7 billion of receipts, while U.K.-controlled companies reported net income of \$3.5 billion on \$96.2 billion of receipts. There was also a substantial difference between the two countries in the finance, insurance, and real estate industrial division. Japanese-controlled corporations reported a net deficit of \$1.2 billion on \$22.3 billion of receipts, while U.K.-controlled companies reported net income of \$1.8 billion on

## Foreign-Controlled Domestic Corporations, 1993

\$27.2 billion of receipts. For the wholesale trade area, both Japanese- and U.K.-controlled companies reported \$0.5 billion of net profits, but on very different levels of receipts (\$236.9 billion for Japan and \$32.5 billion for the United Kingdom). Japanese- and U.K.-controlled companies classified in the services industrial sector had approximately the same amounts of receipts and profits.

Approximately 41 percent of all FCDC's had positive amounts of net income for 1993, and 30 percent reported U.S. income tax liabilities (i.e., total income tax after credits). The percentages of FCDC's that had net income and/or U.S. income tax liabilities varied considerably among countries, as well as between different industrial groups. Of the 10 countries shown in Table 1, Sweden had the lowest percentages of both companies with net income (16 percent) and with U.S. income tax liabilities (13 percent), while Germany had the highest percentages (56 and 51, respectively).

### **Receipts, Deductions, and Profits**

A domestic corporation, whether controlled by a foreign person or not, could have business activities in foreign countries as well as in the United States. The estimates shown in this article include business activities in the United States as well as certain foreign activities as reported on tax returns of domestic corporations. Whether from domestic or foreign sources, income includes receipts from sales and operations, as well as investment income. Income is reported in different manners for foreign branches and foreign subsidiaries of domestic corporations. "Total receipts" shown in this article include the receipts of foreign branch operations of U.S. companies. Also included in these receipts are dividends remitted to U.S. corporations from their foreign subsidiaries. However, for the statistics, two items of constructive taxable income from related foreign corporations (i.e., includable income from Controlled Foreign Corporations and foreign dividend "gross-up") are not included in "total receipts." (These two items are, however, reflected in the data for "net income (less deficit) [8]." See the Explanation of Selected Terms section.)

The receipts and deductions shown in this article for foreign-controlled domestic corporations do not include any amounts generated by their foreign parent companies. However, FCDC's could have had business transactions with their parent companies (and other related foreign persons), and FCDC receipts and deductions stemming from these transactions are included in the statistics [9].

Approximately 91 percent of the \$1.3 trillion of total receipts reported by domestic corporations controlled by a foreign person consisted of "business receipts" (i.e., receipts from sales and operations). These same compa-

nies reported \$1.2 trillion of total deductions for 1993. Cost of sales and operations was 66 percent of the total.

It is noteworthy to look at the "gross profit" of FCDC's. Gross profit is defined here as the difference between business receipts and cost of sales and operations. The manufacturing and wholesale trade industrial groupings accounted for most of the reported amounts of business receipts and cost of sales and operations. Manufacturers had substantially higher gross profits than did wholesalers. As shown in column 28 of Table 1, for every dollar of business receipts, manufacturers reported \$.69 of cost of sales and operations. By comparison, wholesalers reported \$.86 of cost of sales and operations for each dollar of business receipts.

Total receipts less total deductions for FCDC's amounted to a positive \$10.2 billion for 1993. This is somewhat different from the \$11.2 billion of net income (less deficit) reported by these companies. Total receipts less total deductions includes all of the income "actually" (as opposed to "constructively") received by corporations and reported on tax returns. Unlike net income (less deficit), total receipts less total deductions includes non-taxable interest on State and local Government obligations and excludes the two items of constructive taxable income from related foreign corporations described herein. For 1993, FCDC's received \$0.6 billion of tax-exempt interest on State and local Government obligations and \$1.6 billion of constructive taxable income.

The previous paragraph discussed the difference, for statistical purposes, between total receipts less total deductions and net income (less deficit). It is also important to make a distinction between (positive) net income and taxable income (i.e., "Income subject to tax" shown in the statistics). Because certain statutory special deductions, including the "net operating loss" deduction, were available to most companies in computing their taxable income, the statistics for net income are generally larger than the amounts shown for taxable income.

Net income (less deficit) for foreign-controlled domestic corporations was a positive \$11.2 billion for 1993, up from the \$5.7 billion for 1992. Net income (less deficit) reported on all corporation income tax returns also increased between 1992 and 1993, from \$402.0 billion to \$498.2 billion.

The overall increase in net income (less deficit) for 1993 resulted from the performance of three of the four principal industrial groups of FCDC's. Companies whose principal business activity was in manufacturing reported

**Net income (less deficit) for FCDC's increased from \$5.7 billion to \$11.2 billion for 1993, reflecting the overall corporate performance for that year.**

## Foreign-Controlled Domestic Corporations, 1993

\$8.4 billion of positive net income (less deficit) for 1993, a significant rise from the \$5.1 billion of income reported for 1992. The finance, insurance, and real estate group also reported an increase in net income (\$2.8 billion) for 1993, as compared to \$0.4 billion for the previous year. The services sector assisted in the overall increase by reducing their net loss from \$1.8 billion for 1992 to \$0.7 billion for 1993. However, the performance of the wholesalers in regard to their reported amounts of net income (less deficit) remained static, at \$0.5 billion in net profits for both years.

The \$11.2 billion of net income (less deficit) was the result of 22,007 corporations reporting \$35.9 billion of (positive) profits and 31,994 companies reporting \$24.7 billion of deficits [10]. Thus, about 4 out of every 10 (40.8 percent) domestic corporations with foreign owners reported a (positive) profit for 1993. By comparison, 54.1 percent of all corporations filing U.S. income tax returns for the same year reported a profit. The percentage of FCDC's reporting a profit for 1993 was within the range of percentages for the 1985-1992 period as a whole, which varied between 38.7 percent and 43.3 percent.

The percentage of companies reporting (positive) profits varied among different industrial groups. About half of the FCDC's classified in manufacturing (50.1 percent) and in wholesale trade (47.6 percent) reported profits for 1993. However, only about one-third (34.1 percent) of the companies classified in finance, insurance, and real estate reported profits. Real estate companies primarily accounted for this low percentage, with only 4,038 of the 12,749 returns classified in this industry reporting profits (31.7 percent).

About six out of every 10 FCDC's reported a deficit for 1993. Collectively, these companies had \$24.7 billion in deficits, a small decrease from the \$26.4 billion of deficits reported for 1992. Deficits could be carried back or forward to other tax years, under prescribed rules, to reduce the taxable income of those years (see "net operating loss deduction" in the Explanation of Selected Terms section). When a company "carried back" a deficit to a previous tax year, it could file either Form 1120X, *Amended U.S. Corporation Income Tax Return*, or Form 1139, *Corporation Application for Tentative Refund*. These forms are not included in the statistics for foreign-controlled domestic corporations. However, net operating losses carried forward to Tax Year 1993 from years prior to that time are included in the statistics as part of the computation of income subject to tax (discussed below).

### Taxes

For 1993, foreign-controlled domestic corporations reported \$28.0 billion of "income subject to tax" (or

taxable income, i.e., the base on which tax was computed, for purposes of the statistics), resulting in nearly \$9.7 billion of "regular" tax. The \$10.4 billion of total income tax before credits reported by FCDC's consisted of the regular tax plus the alternative minimum tax, the environmental tax, the Personal Holding Company tax, the tax from the recapture of low-income housing credits, and the tax from the recapture of investment credits. The alternative minimum tax was \$0.7 billion for 1993. The remaining taxes comprised a very small amount of the total.

The difference between the \$35.9 billion of positive profits (or net income) and \$28.0 billion of income subject to tax was the result of statutory special deductions. These deductions were allowed for most corporations in computing their taxable income and included the deduction for "net operating losses" (NOL's) from other years. For 1993, the net operating loss deduction was \$7.0 billion and accounted for over 85 percent of the total statutory special deductions. (See the Explanation of Selected Terms section for a discussion of the net operating loss deduction.) FCDC's reduced their 1993 net income by 19.5 percent using NOL's carried over from prior years. NOL's carried back to 1993 from Tax Year 1994 and beyond are not included in the statistics shown in this article.

Tax credits totaling \$2.2 billion reduced the U.S. tax liability of foreign-controlled domestic corporations to \$8.2 billion for 1993. The largest credits claimed were \$1.5 billion of foreign tax credits and \$0.2 billion each of general business credits, prior-year minimum tax credits, and U.S. possessions tax credits. Other credits included the orphan drug research credit and the nonconventional source fuel credit. The \$8.2 billion of total U.S. income tax after credits represents the tax liability as originally reported by taxpayers. However, it does not include any changes made by taxpayers through amended returns or by the Internal Revenue Service as a result of examination or enforcement activities.

### "Large" Foreign-Controlled Domestic Corporations

"Large" companies accounted for the majority of the key financial items of all FCDC's. For purposes of this article, large companies were those with at least \$250 million of total assets and/or \$50 million of business receipts. (Within the finance, insurance, and real estate industrial group, total receipts were used in place of business receipts for selecting the large companies. Total receipts includes both business receipts (i.e., gross receipts from sales and operations) plus investment income.) Both size of assets and size of receipts were used to select these large companies in order to obtain maximum coverage of four primary industrial sectors: manufacturing; wholesale

## Foreign-Controlled Domestic Corporations, 1993

trade; finance, insurance, and real estate; and services. As previously discussed, certain industries have different characteristics from other industries. For instance, companies classified in the wholesale trade industrial sector generally report large amounts of receipts as compared to their end-of-year assets. By comparison, corporations classified in the finance, insurance, and real estate industrial sector generally report large amounts of assets as compared to their receipts. If only assets or receipts were used to select the large companies, then one of these industrial sectors would have greater coverage in comparison to the other sector. Table 2 shows data for the large FCDC's by selected industrial sectors. This table also contains data for large domestic corporations that were not foreign owned (i.e., that were owned by domestic persons, or in which ownership by each separate foreign person was less than 50 percent).

For 1993, large companies reported 91.0 percent of the total assets, 90.0 percent of the total receipts, 86.4 percent of the taxable income, and 85.6 percent of the total income tax after credits, of all the FCDC's. While accounting for most of these key financial items, these 2,401 companies comprised just 4.4 percent of the number of income tax returns filed by FCDC's.

Table 2 shows that there were 12,910 large domestic corporations that did not have controlling foreign owners for 1993. These companies accounted for even less of the number of income tax returns filed by domestic corporations without foreign owners (excluding Forms 1120S and 1120F), only 0.6 percent. However, like the FCDC's, the large companies comprised the majority of the key financial items of this group of returns: 87.7 percent of total assets, 75.3 percent of total receipts, 86.1 percent of taxable income, and 85.7 percent of total income tax after credits.

Large FCDC's generally report greater profits than do the smaller companies. For 1993, large FCDC's reported a combined positive amount of \$15.1 billion of net income (less deficit) while the smaller companies reported a combined loss of \$3.9 billion. Later in this article, the profitability of the large FCDC's will be compared to that of large domestically-controlled corporations.

### Industry Characteristics

The industrial concentration of the large companies was somewhat different for the domestic corporations that were foreign controlled and those that were not. For 1993, 34.2 percent of the large domestic companies without foreign owners were classified in the finance, insurance, and real estate industrial sector. For the large FCDC's, this sector accounted for only 16.3 percent of the companies. Conversely, large FCDC's were more commonly classified in

the manufacturing (38.1 percent versus 24.9 percent) and wholesale trade (26.9 percent versus 11.7 percent) sectors as compared to the large domestic companies that were not foreign controlled.

Table 2 shows selected items and percentages for large domestic corporations, both foreign- and domestically-controlled. In comparing the percentages, or ratios, between the two groups of returns, this article will focus on each of the four industrial groupings shown in the table, rather than the data for all industries. By doing so, the effect of different financial characteristics in different industries (previously discussed) will be minimized.

In each of the four industrial groupings shown in Table 2, the percentage of returns reporting amounts of positive net income were substantially less for the FCDC's than for the domestically-controlled large companies. (See column 24 of the table.) The largest difference was in the finance, insurance, and real estate sector, with 85.7 percent of the domestically-controlled companies reporting profits, while only 62.4 percent of the FCDC's did so. The smallest difference was for wholesalers, 82.4 percent versus 71.8 percent.

Within each industrial grouping in Table 2, there are seven countries shown for the FCDC's. The country information is based on the location of the owner's country of residence, incorporation, organization, creation, or administration, as reported on the U.S. income tax returns of the foreign-controlled domestic corporations. (See the Data Sources and Limitations section of this article for a brief discussion of the possible limitations of the data classified on a country basis.) The seven countries were selected for the table based on the largest aggregated amounts of total receipts at the all-industries level. Within a given industrial grouping, domestic corporations controlled by owners in different foreign countries had very different percentages of profitable companies for 1993. For example, while 66.0 percent of large manufacturing FCDC's reported profits, this ranged from a high of 81.1 percent for Switzerland to a low of 56.1 percent for Japan.

Another key ratio is net income (less deficit) as a percentage of total receipts (column 30 of Table 2). Once again, for each of the four industrial sectors shown in this table, domestically-controlled companies reported significantly-higher percentages than did their foreign-controlled counterparts. The differences were: (1) for finance, insurance, and real estate, 11.1 percent for domestically-controlled companies as compared to 3.6 percent for FCDC's; (2) for manufacturing, 5.5 percent versus 1.9 percent; (3) for services, 4.6 percent versus 0.7 percent; and (4) for wholesale trade, 1.9 percent versus 0.2 percent. The range of values for this ratio was large among the different countries. For instance, while all large FCDC's

## Foreign-Controlled Domestic Corporations, 1993

classified in the finance, insurance, and real estate industrial sector reported 3.6 percent of their receipts as net positive profits, this ratio ranged from a high of 6.9 percent for the United Kingdom to a low of -0.6 percent for Japan.

While the differences in the ratios between domestically-controlled large companies and their foreign-controlled counterparts for taxable income as a percentage of total receipts were also substantial, these differences were generally somewhat smaller than the differences discussed above for net income (less deficit) as a percentage of total receipts. However, in the finance, insurance, and real estate sector, the differences narrowed substantially. The difference in net income (less deficit) as a percentage of total receipts for this sector was 11.1 percent for domestically-controlled companies as compared to 3.6 percent for FCDC's. In calculating the taxable income as a percentage of the total receipts reported by these companies (Figure A), the difference had narrowed to 6.7 percent for domestically-controlled companies versus 4.9 percent for FCDC's. This "narrowing" effect reflects to some extent the relatively large amount of statutory special deductions claimed by domestically-controlled large companies classified in the finance, insurance, and real estate sector.

Table 2 also includes the ratio of total income tax after credits to total receipts (column 37). The total income tax after credits reported by both domestically-controlled companies (\$95 billion) and by FCDC's (\$7 billion) represents the tax liability of these companies as originally reported on their U.S. income tax returns. However, it does not take into account either of the following changes: (1) amended returns filed by the corporations, or (2) adjustments made by the Internal Revenue Service as a result of examination or enforcement activities. Among other reasons, corporations could file amended returns to use carryback provisions for net operating losses and unused foreign tax and general business credits.

In using the ratio of total income tax after credits to total receipts, it should also be noted that a small portion of total income tax after credits (for example, the recapture tax on investment credit) does not relate to the current-year total receipts reported by corporations. However, this is not considered to be a major limitation in using the ratio because the regular tax and the alternative minimum tax represented well over 99 percent of the total income tax for both domestically-controlled companies and for FCDC's.

In each of the four industrial sectors shown in Table 2, the ratio of total income tax after credits to total receipts was higher for domestically-controlled corporations than it was for FCDC's. The finance, insurance, and real estate sector had the highest ratios for both domestically-con-

**The ratio of total income tax after credits to total receipts was higher in each of the four primary industrial sectors for "large" domestically-controlled corporations than it was for "large" FCDC's.**

trolled corporations (2.1 percent) and for FCDC's (1.6 percent). While these ratios appear to be more similar than the ratios previously discussed, the large domestically-controlled corporations classified in this

sector reported about 26 percent more taxes after credits than did the FCDC's when based on the same level of receipts. The differences were significantly greater in this ratio between large domestically-controlled corporations and for large FCDC's in the other three industrial sectors. The differences were: (1) for services, 1.4 percent as compared to 0.4 percent; (2) for manufacturing, 1.2 percent versus 0.7 percent; and (3) for wholesale trade, 0.6 percent versus 0.3 percent. Thus, for services, as an example, large domestically-controlled corporations reported 226 percent more taxes after credits than did the large FCDC's when based on the same level of receipts.

The differences in financial characteristics of different industries once again becomes evident when reviewing the ratios shown in Table 2. For instance, when the ratio of net income (less deficit) to total receipts (column 30) is used, the finance, insurance, and real estate sector has a substantially higher ratio (3.6 percent for large FCDC's) than does the wholesale trade sector (0.2 percent). However, when total assets is used as the denominator in place of total receipts (column 28), the difference is much less significant (large FCDC's in finance, insurance, and real estate have a 0.5 percentage and those in wholesale trade have a 0.4 percentage). Because the breakdown of industrial activities is not the same for large FCDC's as it is for domestically-controlled companies, this again illustrates the importance of comparing domestically-controlled companies to FCDC's on an industrial basis.

### Summary

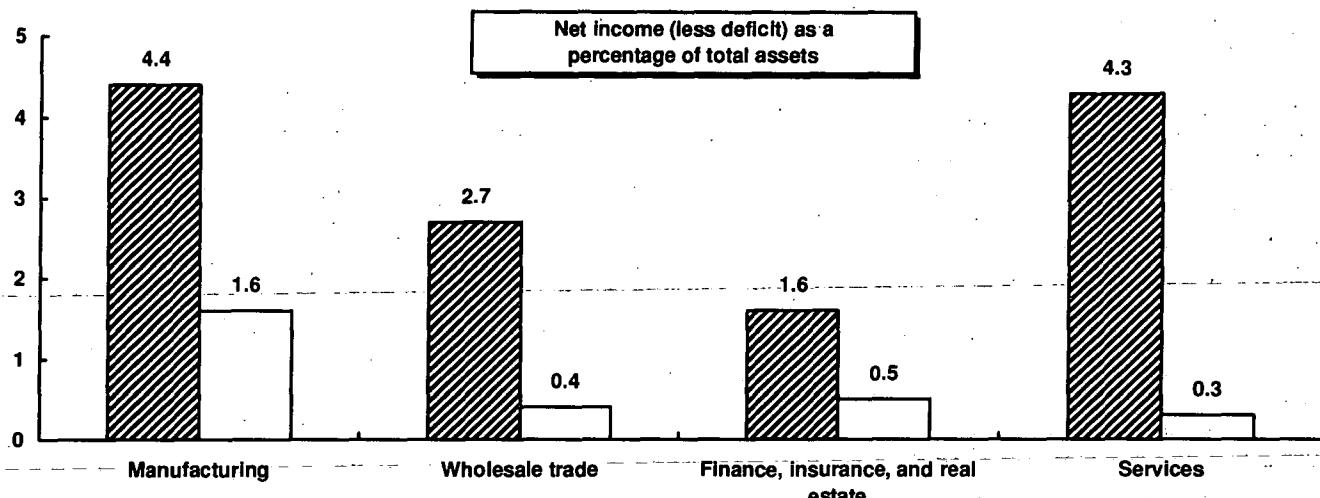

Direct foreign investment in the United States through FCDC's continued to grow for 1993. While total assets reported on all U.S. corporation income tax returns increased by 9.1 percent over the previous year, assets of domestic corporations controlled by foreign persons increased by 11.4 percent [11]. As a result, the percentage of total corporate assets accounted for by FCDC's increased to 9.6 percent. In addition, the share of total corporate receipts accounted for by FCDC's increased to 10.2 percent. Between 1992 and 1993, receipts reported by all corporations increased by 4.5 percent, while the receipts of FCDC's increased at a faster pace, by 5.5 percent.

## Foreign-Controlled Domestic Corporations, 1993

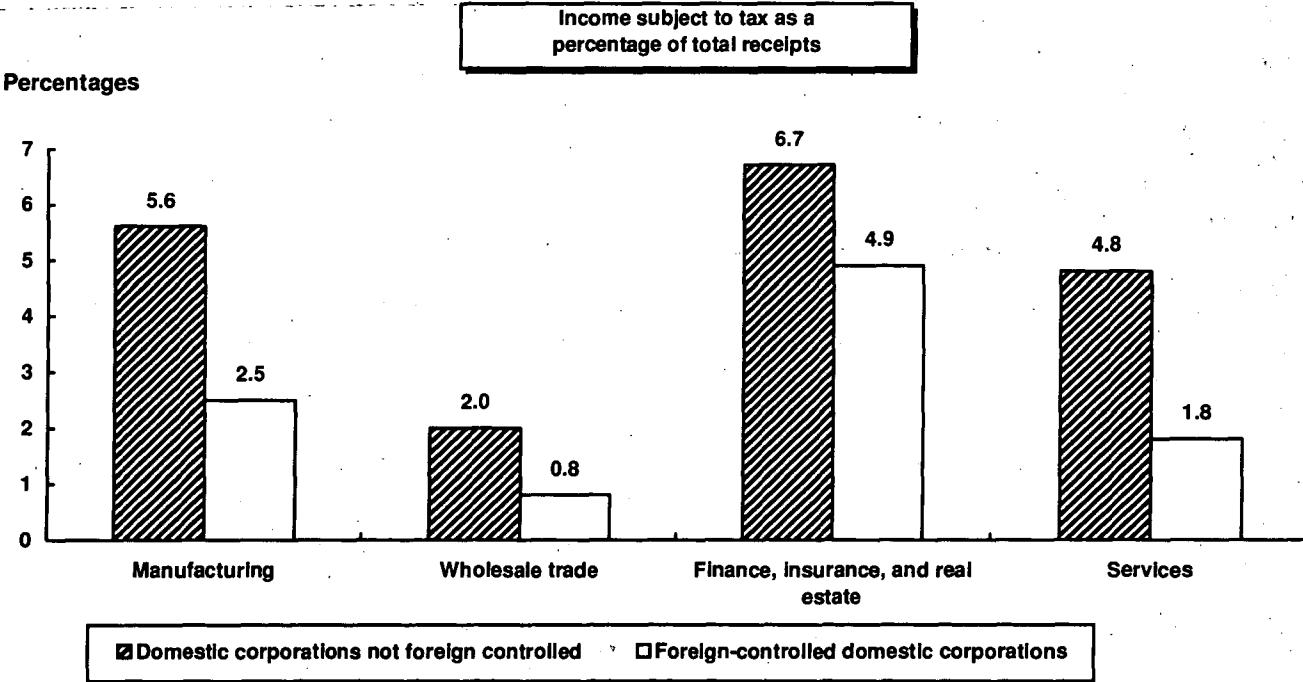

**Figure A**

### Comparative Percentages for "Large" Corporations, 1993

#### Percentages

#### Percentages

NOTES: "Large" corporations are those with total assets of \$250,000,000 or more, and/or with business receipts of \$50,000,000 or more (total receipts were used in lieu of business receipts for the finance, insurance, and real estate group). Data from corporations that filed Forms 1120S and 1120F are excluded from this figure.

## Foreign-Controlled Domestic Corporations, 1993

Two industrial groupings (manufacturing and wholesale trade) generated nearly three-fourths of the total receipts of all FCDC's. From a country perspective, domestic corporations controlled by persons in Japan had total receipts of \$352 billion, 28.1 percent of the FCDC total. In addition, the United Kingdom, the Netherlands, and Germany accounted for 14.8, 12.3, and 10.1 percents, respectively, of the total.

The collective net income (less deficit) reported by foreign-controlled domestic corporations increased to \$11.2 billion, as compared to \$5.7 billion for 1992. This reflects both an increase in (positive) net income (from \$32.0 billion to \$35.9 billion) and a decrease in deficits (from \$26.4 to \$24.7 billion). Total income tax after credits moved in the same direction as net income, increasing from \$7.1 billion for 1992 to \$8.2 billion for 1993.

Of the 54,001 foreign-controlled domestic corporations, 2,401 "large" companies accounted for 85 percent or more of the total amounts of key financial items (e.g., total assets, total receipts, taxable income, and total income tax after credits). In comparing these large companies to large domestically-controlled companies on an industry basis, in most cases the ratios related to profitability and taxable income (e.g., net income (less deficit) as a percentage of total assets, and income subject to tax as a percentage of total receipts) were substantially smaller for the FCDC's.

### Explanation of Selected Terms

The following are brief explanations of some of the terms used in this article. For more extensive definitions, see *Statistics of Income—1993, Corporation Income Tax Returns*.

**Alternative Minimum Tax.**—This tax was designed to ensure that a taxpayer with substantial economic income would not avoid significant tax liability through a legitimate use of exclusions, deductions, and credits. It is included in the statistics shown for both total income tax before (and after) credits.

**Attribution Rules.**—In regard to domestic corporations that are 50 percent or more owned by one foreign "person," these rules provide that an individual shall be considered as owning the stock of a corporation if it is owned, directly or indirectly, by or for his or her family. The family of an individual includes his or her spouse, brothers and sisters, ancestors, and lineal descendants. For more information on these rules, see section 267(c) of the Internal Revenue Code. However, if a corporation is owned by two or more unrelated persons, neither of which owned 50 percent or more of the corporation, then that corporation was excluded from the FCDC statistics even though, together, these persons may have met the 50-percent-or-more ownership criterion.

**Business Receipts.**—These receipts were, in general, the gross operating receipts of the corporation reduced by the cost of returned goods and allowances. Some corporations reported sales and excise taxes as part of their gross receipts from sales (and deducted these taxes as part of "cost of sales and operations" or as "taxes paid"); others reported their receipts after adjustment for these taxes. Business receipts include rents reported as the principal business income by real estate operators and certain manufacturing, public utility, trade, and service corporations. In the finance, insurance, and real estate industries, business receipts include such banking items as fees, commissions, trust department earnings, and service charges. Interest, the principal operating income of banking and savings institutions, was excluded from business receipts, but included in the statistics for "interest received." Also in the finance, insurance, and real estate industries, premium income of most insurance companies was included in business receipts.

**Cost of Sales and Operations.**—This item generally consisted of the direct costs incurred by corporations in producing goods or providing services. Included were costs of materials used in manufacturing; costs of goods purchased for resale; direct labor; and certain overhead expenses, such as rent, utilities, supplies, maintenance, and repairs. For statistical processing purposes, however, certain items (such as advertising, amortization, bad debts, compensation of officers, depletion, depreciation, interest paid, sales and excise taxes, and contributions to charitable organizations, employee benefit programs, and pension plans) reported by taxpayers in cost of sales and operations schedules were transferred to their respective and separate deduction categories.

**Foreign Person.**—A foreign person (or entity) is defined as a person other than a U.S. person. A U.S. person includes: (1) a citizen or resident of the United States, (2) a domestic partnership, (3) a domestic corporation, and (4) any estate or trust (other than a foreign estate or trust). Section 7701 of the Internal Revenue Code further defines the term, U.S. person.

**Income Subject to Tax.**—For most corporations, income subject to tax was defined by Internal Revenue Code section 63 and consisted of net income minus certain statutory special deductions. This item is often referred to as "taxable income" in this article. There were special provisions in the Code for determining the taxable income of life insurance companies, regulated investment companies, and real estate investment trusts. On Form 1120, this item was reported on page 1, line 30.

**Net Income (or Deficit).**—This is the difference between taxable receipts and the ordinary and necessary business deductions allowed by the Internal Revenue Code. In this

## Foreign-Controlled Domestic Corporations, 1993

article, it is also referred to as "profits." It reflects not only actual receipts, but "constructive" receipts as well (i.e., certain income from Controlled Foreign Corporations and from the foreign taxes deemed paid on foreign dividends received). Tax-exempt interest on State and local Government obligations is excluded from this item, but it is included in "total receipts." Because certain statutory special deductions, including the net operating loss deduction, were allowed most corporations in computing their "taxable income" (or "income subject to tax"), the statistics for net income are generally larger than the amounts shown for (U.S.) "income subject to tax" (i.e., the base on which the regular income tax was computed). See also the discussion of the "net operating loss deduction." On Form 1120, this item was reported on page 1, line 28.

*Net Operating Loss Deduction (NOLD).*—A statutory "net operating loss" (NOL) for a given tax year could be carried back, in general, 3 years to reduce the taxable income of those years, and any amount of the NOL not offset against income during that time could be carried forward and offset against income for a period not exceeding 15 years. The amount of the deduction included in the statistics, however, consists only of losses from prior years carried forward and actually used to reduce taxable income for the current (1993) tax year. Losses incurred after the 1993 Tax Year and carried back to that year at a later date could not be reported on the tax returns used for this article. Net operating losses on which the 1993 deduction was based include: (1) the excess of ordinary and necessary business expenses over income for previous loss years, and (2) statutory special deductions claimed for a loss year for dividends received and for dividends paid on certain preferred stock of public utilities (or any excess of such deductions over net income).

*Net Worth.*—This item represented the stockholders' equity in the corporation, i.e., total assets less the claims of creditors. It is the net result of capital stock, plus paid-in or capital surplus, plus appropriated retained earnings, plus unappropriated retained earnings, less the cost of treasury stock. Treasury stock is common or preferred stock originally issued by the corporation which has been reacquired and was held at the end of the accounting period by the issuing corporation.

*Number of Returns.*—The data contained in this article include the number of returns filed for Tax Year 1993. For expeditious reasons, the number of returns is sometimes referred to in this article as the number of corporations. However, the actual number of corporations may be larger than the number of returns because most domestic corporations could elect to file consolidated income tax returns. These returns were filed by common parent corporations and contained combined financial data of two

or more affiliated domestic corporations meeting certain stock ownership requirements. Each consolidated return was treated for statistical purposes as a single unit. The number of returns shown in this article represents returns of "active" corporations, i.e., those which reported any income or deduction items. While any corporation in existence during any portion of the taxable year was required to file an income tax return (even though it may have been inactive, not having any income or deductions), the great majority of returns filed with IRS were for active corporations.

*Statutory Special Deductions.*—This item was the sum of: (1) deductions for net operating losses of prior years, (2) inter-corporate dividends received deductions, (3) deductions for dividends paid on certain preferred stock of public utilities, (4) deductions for dividends paid for regulated investment companies and real estate investment trusts, and (5) Internal Revenue Code section 857(b)(2)(E) deductions reported by real estate investment trusts. Since these deductions were allowed by law, in addition to ordinary and necessary business deductions, they are shown in the statistics as deductions from net income. In general, net income less statutory special deductions equals income subject to tax.

*Total Assets.*—This item represented those assets reported in the end-of-year balance sheets of the corporations' books of account. Total assets were net amounts after reduction by accumulated depreciation, accumulated amortization, accumulated depletion, and the reserve for bad debts.

*Total Income Tax After Credits.*—For 1993, total income tax was primarily comprised of the regular tax imposed on corporate income subject to tax (93.1 percent of the total tax) and the alternative minimum tax (6.5 percent). Some taxes included in total income tax were not imposed directly on a corporation's income subject to tax, such as the recapture tax on investment credits. Thus, a small number of corporations without net income and regular tax reported such taxes on their income tax returns. These taxes were included in the statistics for total income tax. For 1993, the credits used to reduce total income tax primarily included the foreign tax credit (68.5 percent of the total credits), the prior-year minimum tax credit (10.6 percent), the general business credit (9.3 percent), and the U.S. possessions tax credit (9.2 percent). The statistics shown for this item may differ somewhat from the actual income tax collections and the final income tax liability of corporations for Tax Year 1993. Adjustments could be made to income tax returns after they were filed, which could affect the final tax liability. Such adjustments are not reflected in the statistics. Adjustments could result from tax examination activities by IRS, or the use of

# Foreign-Controlled Domestic Corporations, 1993

carryback provisions for net operating losses and unused foreign tax and general business credits by taxpayers. This item is computed within the Statistics of Income corporate program [12].

**Total Receipts.**—This item includes all of the income actually (as opposed to constructively) received by a corporation and reported on an income tax return. It includes gross taxable receipts, before the deduction of cost of sales and operations and other ordinary and necessary business expenses. It also includes tax-exempt interest received from State and local Government obligations. A domestic corporation (i.e., one incorporated in the United States), whether controlled by a foreign person or not, could have business activities in a foreign country as well as in the United States. Thus, total receipts may include those from foreign branch operations of the U.S. company. Also, the total receipts of a domestic corporation conducting business abroad through foreign subsidiaries may include dividends remitted from those subsidiaries. This term, however, excludes certain taxable income from related foreign corporations that is only constructively received by the domestic corporation. This item is computed within the Statistics of Income corporate program [12].

**Total Receipts Less Total Deductions.**—This item differed from "net income (less deficit)" for statistical purposes in that it included nontaxable interest received on State and local Government obligations, and excluded constructive taxable income from related foreign corporations. This item is computed within the Statistics of Income corporate program [12].

## Data Sources and Limitations

### Sample

The statistics for domestic corporations controlled by a foreign person are based on samples of corporation income tax returns filed primarily on Form 1120 (*U.S. Corporation Income Tax Return*). In addition, the 1993 statistics include data from the small numbers of other corporation income tax returns filed on Forms 1120L (*U.S. Life Insurance Company Income Tax Return*), 1120-RIC (*U.S. Income Tax Return for Regulated Investment Companies*), 1120-REIT (*U.S. Income Tax Return for Real Estate Investment Trusts*), and 1120PC (*U.S. Property and Casualty Insurance Company Income Tax Return*).

Form 1120 sampled returns were stratified based on the size of total assets and the size of "proceeds" (which was used as a measure of income and was the larger of the absolute value of net income or deficit or the absolute value of "cash flow," i.e., net income plus depreciation and depletion). Forms 1120L, 1120-RIC, 1120-REIT, and 1120PC

were sampled based solely on the size of total assets.

For 1993, the achieved sampling rates for Forms 1120 alone (the overwhelming majority of the returns used for the sample) ranged from less than 1 percent to 100 percent. In general, Form 1120 returns with assets of \$50 million or more, or with "proceeds" of \$10 million or more, were selected for the study at the 100-percent rate. For additional information on the sampling rates, see *Statistics of Income—1993, Corporation Income Tax Returns*.

Because the data presented are estimates based on samples, they are subject to sampling error. To properly use these data, the magnitude of the sampling error should be known. Coefficients of variation (CV's) are used to measure that magnitude. For a general discussion of CV's, see the appendix to this publication. For a more detailed discussion of the CV's applicable to the corporation statistics, see *Statistics of Income—1993, Corporation Income Tax Returns*.

### Nonsampling Limitations

Most of the data in this article relate to Tax Year 1993, which covers returns with accounting periods that ended in a 12-month span beginning in July 1993 and ending in June 1994. (The sampling frame for the 1993 statistics consisted of tax returns which posted to the IRS Business Master File between July 1993 and June 1995.) As a result of the 12-month span for ending accounting periods, the statistics shown in this article include income received or expenses incurred during a 23-month span. For Tax Year 1993, that span was from August 1992 through June 1994. Nevertheless, most of the income and expenses are, in fact, associated with Calendar Year 1993.

Returns were selected for this study based on taxpayers' responses to two questions that appeared on the various types of Form 1120. The first question asked whether any "foreign person" owned, directly or indirectly, 25 percent or more of the filing corporation's voting stock at any time during the tax year. If this question was answered "yes," then a second question asked for the percentage owned [13]. If the first question was answered "yes," and the second question was answered with a percentage between 50 and 100, then the return was included in the FCDC statistics [14, 15]. Taxpayers sometimes incorrectly answered these questions, or did not answer them at all. However, prior to tabulation, corporations with large amounts of assets and with changes in foreign ownership status between 1992 and 1993 were researched and verified. These large corporations have a dominating effect on the estimates for balance sheet, income statement, and tax items.

Each return used for the statistics had an industry code reported or assigned during statistical processing. This

# Foreign-Controlled Domestic Corporations, 1993

code was used as a classifier of the returns. The industry code represented the principal business activity (i.e., the activity which accounted for the largest portion of total receipts) of the corporation filing the return. However, a given return may have been for a company engaged in several business activities or may have been a consolidated return filed for an affiliated group of corporations that conducted different business activities. To the extent that some consolidated (and non-consolidated) corporations were engaged in many types of business activities, the data in this article are not entirely related to the industrial activity under which they are shown.

There is an additional limitation related to data presented by industrial classification. Companies that sell similar products may not be classified in the same industry. For instance, those FCDC's that were primarily U.S. distributors of products made in foreign countries by their parent or other related companies, were classified as wholesalers. However, other domestic corporations that were also distributors and that were included in consolidated returns covering the manufacture and distribution of similar products may have been classified as manufacturers.

Each return used for the statistics also had a foreign country code assigned during statistical processing which identified the owner's country. For individuals, it was the owner's country-of-residence. For all others, it was the country in which the foreign entity was incorporated, organized, created, or administered. The code was also used as a classifier of the returns. To the extent that a holding company or other affiliated entity was part of a chain between a U.S. subsidiary company and the ultimate parent, the data may not be entirely related to the foreign country under which they are shown.

## Notes and References

- [1] Internal Revenue Service, *Statistics of Income Bulletin*, Publication 1136, Spring 1996, Volume 15, Number 4, pp. 170-171.
- [2] For 1992 data covering FCDC's, see Hobbs, James R., "Foreign-Controlled Domestic Corporations, 1992," Internal Revenue Service, *Statistics of Income Bulletin*, Publication 1136, Fall 1995, Volume 15, Number 2, pp. 124-139.
- [3] Direct investment is different from portfolio investment in that the latter exerts no control over the management of the enterprise, except to the extent, for example, of rights to vote periodically in stockholder meetings of corporations. The portfolio investor has a minimal interest in a company, and is primarily seeking dividend payments, an increase in the value of the shares of stock, or both.

- [4] Sections 7701(a)(4) and (5) of the Internal Revenue Code define a domestic corporation as one created or organized in the United States or under the laws of the United States or any State. A foreign corporation is "one which is not domestic."
- [5] Internal Revenue Service, *Statistics of Income—1993, Corporation Income Tax Returns*, Publication 16.
- [6] For additional information on direct foreign investment in the United States, see Bureau of Economic Analysis (BEA), *United States Department of Commerce News*, "Foreign Investors' Spending to Acquire or Establish U.S. Businesses Continued to Increase in 1995," BEA 96-21, July 9, 1996. This news release presents data for 1989 to 1995 from surveys covering existing U.S. business enterprises in which foreign investors acquired, either directly or through their U.S. affiliates, at least a 10-percent ownership interest, as well as new U.S. business enterprises established by foreign investors or their U.S. affiliates. The data are for newly-acquired or established U.S. business enterprises with total assets greater than \$1 million or ownership of 200 acres or more of U.S. land.
- [7] Beginning with Tax Year 1988, returns of Foreign Sales Corporations and Interest-Charge Domestic International Sales Corporations were not included in the totals for all U.S. corporation income tax returns. Previously, they were. Because these returns accounted for such a small portion of the total for most financial items, this change is not considered to be significant in terms of year-to-year comparisons.
- [8] In general, the computation of net income (less deficit) can be shown as follows:

Total Receipts  
(Includes Business Receipts)  
*Less:* Total Deductions  
(Includes Cost of Sales and Operations)  
*Equals:* Total Receipts Less Total Deductions  
*Plus:* Constructive Taxable Income from  
Related Foreign Corporations  
*Less:* Tax-exempt Interest on State and Local  
Government Obligations  
*Equals:* Net Income (Less Deficit)
- [9] For detailed information on transactions between FCDC's and their related foreign persons, see the data release entitled "Transactions Between Large Foreign-Owned Domestic Corporations and Related Foreign Persons, 1991," Internal Revenue Service,

## Foreign-Controlled Domestic Corporations, 1993

*Statistics of Income Bulletin*, Publication 1136, Summer 1995, Volume 15, Number 1, pp. 88-98. While the above-mentioned data release provides more complete information on transactions between FCDC's and their related foreign persons, the reader may want to review columns 5 and 6 of Table 1 of this article for data on loans to and from the stockholders of FCDC's. At the end of their 1993 accounting periods, FCDC's had \$55.1 billion of outstanding loans from their stockholders, while making \$18.3 billion of loans to their stockholders. The principal stockholders of FCDC's are foreign "persons," usually foreign corporations.

- [10] The 31,994 companies reporting a deficit may include a small number of "break-even" companies, i.e., those whose receipts and deductions were equal.
- [11] The 11.4 percent increase between 1992 and 1993 in the assets of domestic corporations controlled by foreign persons, as well as the 9.1 percent increase for all corporations, may overstate the actual "growth in investment." Assets are generally reported at book value on tax returns (i.e., at the value at the time of acquisition). The book value of newly-acquired assets is generally greater than the book value of similar assets they replaced. Therefore, new corporations may tend to have a greater percentage of new assets with greater book values. To the extent that new corporations comprised a different portion of FCDC's than they did for other companies, the comparability of 11.4 percent to 9.1 percent (above) may be limited.
- [12] See Internal Revenue Service, *Statistics of Income*—

1993, *Corporation Income Tax Returns, Documentation Guide*, Document 6930, December 1995, for the computation of these items.

- [13] On Form 1120, Page 3, Schedule K, the actual questions were: "(10) Did one foreign person at any time during the tax year own, directly or indirectly, at least 25% of: (a) the total voting power of all classes of stock of the corporation entitled to vote, or (b) the total value of all classes of stock of the corporation?" and "(10a) If 'Yes,' enter percentage owned." There was an additional question used for the country distribution of these statistics, which was "(10b) If 'Yes,' enter owner's country."
- [14] Returns for this study may exclude certain domestic companies that are effectively controlled by foreign persons, such as public companies in which "control" may be exercised with as little as 10 to 20 percent of the stock holdings.
- [15] Statistics of Income also compiles statistics for the domestic corporations with 25 to 49 percent foreign owners. If a company was classified as an FCDC, based on 50-percent-or-more foreign stock ownership, then it was not included in the 25-to-49 percent foreign ownership category, even if it had an unrelated foreign owner with 25 to 49 percent stock ownership. For 1993, there were only 4,329 returns which indicated a level of foreign ownership between 25 and 49 percent. These companies reported \$213.3 billion of assets, \$72.8 billion of receipts, \$2.1 billion of taxable income, and \$0.6 billion of total income tax after credits. All of these amounts were small in comparison to data for the FCDC's.

N/A: Not available. Also, those amounts of "interest received" shown in column 10 exclude interest received on State and local Government obligations.

"DB": Divided by.

\* Estimate should be used with caution because of the small number of sample returns on which it is based.

<sup>1</sup> Includes industrial groups and countries not specifically listed.

<sup>2</sup> Includes countries not specifically listed.

<sup>3</sup> Less than \$500,000.

NOTE: This table presents separate data for the 10 largest countries, based on total receipts (column 8) for 1993, at the all-industries level.

\*\* Not shown to avoid disclosure of information about specific corporations. However, the data are included in the appropriate totals.

"DB": Divided by.

<sup>1</sup> Includes industrial groups not specifically listed.

<sup>2</sup> Includes countries not specifically listed.

<sup>3</sup> Less than \$500,000.

NOTES: This table presents separate data for the 7 largest countries, based on total receipts (column 6) for 1993, at the all-industries level. "Large" corporations are those with total assets of \$250,000,000 or more, and/or with business receipts of \$50,000,000 or more (total receipts were used in lieu of business receipts for the finance, insurance, and real estate group). Data from corporations that filed Forms 1120S and 1120F are excluded from this table.

# Transactions Between Large Foreign-Owned Domestic Corporations and Related Foreign Persons, 1992

by Daniel S. Holik and Sarah E. Nutter

Statistics of Income studies of large "foreign-owned" domestic corporations, conducted annually beginning with Tax Year 1988, reflect the substantial and increasing interest in direct foreign investment in the United States [1]. For Tax Year 1992, large "foreign-owned" domestic corporations reported amounts received of \$63.1 billion and payments of \$139.2 billion in transactions with 6,708 related foreign persons. These 366 large domestic corporations (with total receipts of \$500 million or more) also reported outstanding balances at the end of the accounting periods of \$67.9 billion in loans received from, and \$19.2 billion in loans granted to, the same related foreign persons (Table 1).

## Amounts Received from, and Payments to, Related Foreign Persons

Sales and purchases of stock in trade accounted for the majority of the total amounts received from, and payments to, the 6,708 related foreign persons. Large foreign-owned domestic corporations sold \$49.0 billion and purchased \$120.8 billion of stock in trade during 1992, nearly 78 percent and 87 percent of the total amounts received and the total amounts paid, respectively. Although foreign-owned domestic manufacturers reported transactions with the largest number (4,445) of related foreign persons, foreign-owned domestic wholesalers and retailers reported the largest dollar volume of transactions (Table 1). Transactions reported by foreign-owned domestic wholesalers and retailers accounted for more than half of the total amounts received (\$35.4 billion) and the total amounts paid (\$82.5 billion).

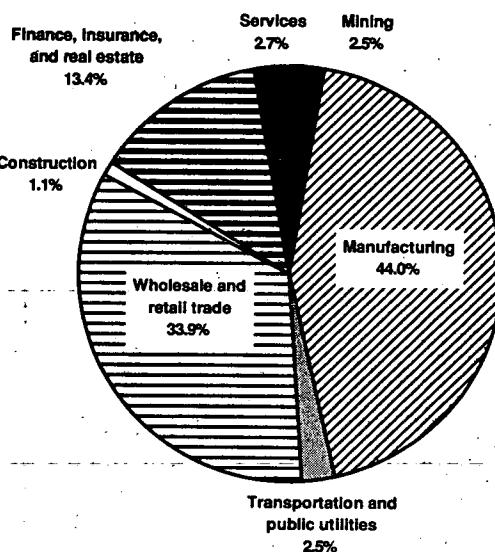

## Major Industrial Divisions of Foreign-Owned Corporations

The dominance of manufacturers, and wholesalers and retailers in the statistics presented can be shown in another way—almost 80 percent of the 366 large foreign-owned domestic corporations were classified in the manufacturing and wholesale and retail trade industrial divisions (Figure A). Corporations in the finance, insurance, and real estate division accounted for an additional 13 percent of the returns classified. The remaining returns were almost equally divided between services, mining, transportation and public utilities, and construction.

This article was written by Daniel S. Holik and Sarah E. Nutter, economists with the Special Studies and Publications Branch, Returns Analysis Section, under the direction of Chris Carson, Chief.

Figure A

## Foreign-Owned Domestic Corporations by Industrial Division, Tax Year 1992

NOTE: Detail may not add to total because of rounding.

## Country of Residence of Related Foreign Persons

Over 50 percent of the related foreign persons were "residents" (see Explanation of Selected Terms) of one of the following eight countries: Australia, Canada, France, Germany, the Netherlands, Japan, the United Kingdom, and Switzerland. Transactions with related foreign persons in these eight countries of residence accounted for 77 percent of the total amounts received and 80 percent of the total amounts paid (Table 2). Transactions with related persons from Japan, the largest source of amounts received and amounts paid, accounted for \$22.8 billion (36 percent) and \$64.8 billion (47 percent) of the totals, respectively. Nearly all of both the amounts received and the amounts paid connected with Japanese related persons were sales and purchases of stock in trade, primarily to or from foreign-owned domestic wholesalers and retailers. These wholesalers and retailers reported sales and purchases of stock in trade with Japanese related persons of \$19.2 billion and \$55.1 billion, respectively (Table 3).

Stock-in-trade transactions generally dominated the amounts received and the amounts paid reported in connection with related foreign persons in other top countries of residence (besides Japan), as well. Foreign-owned domestic wholesalers and retailers reported the majority of the stock-in-trade transactions with United Kingdom

# Transactions Between Large Foreign-Owned Domestic Corporations and Related Foreign Persons, 1992

related persons: 74 percent of the total sales (\$7.6 billion) and 50 percent of the total purchases (\$12.1 billion) of stock in trade, respectively. In transactions with Canadian related persons, foreign-owned domestic manufacturers accounted for 62 percent of the \$3.6 billion in sales and 65 percent of the \$7.2 billion in purchases of stock in trade. Sales and purchases of stock-in-trade transactions also comprised the largest dollar volumes of transactions for related parties "residing" in France, Germany, and Switzerland.

Nearly all of the reported insurance transactions were between foreign-owned domestic insurance companies and Canadian related persons. These foreign-owned domestic insurance companies reported Canadian related-party transactions amounting to \$2.7 billion out of the \$2.8 billion total received for insurance premiums and \$2.5 billion out of the \$2.9 billion total paid for such premiums.

## Amounts Borrowed and Loaned from Related Foreign Persons

Overall, based on year-end balances, foreign-owned domestic corporations borrowed \$67.9 billion, almost four times the amount they loaned (\$19.2 billion) to related foreign persons during 1992. Interest income received and the interest paid expense reflect these borrowing differences; interest paid to related foreign persons of \$5.4 billion exceeded the \$1.1 billion of interest received by far. By the end of 1992, the total amount of loans outstanding from related foreign persons decreased by nearly 8 percent from a beginning balance of \$73.5 billion, while amounts loaned to related foreign persons increased by 17 percent from a beginning balance of \$16.4 billion. Transactions with related foreign persons whose residence was in the United Kingdom comprised the largest single portion of the loan transactions, accounting for \$26.4 billion (39 percent) of the loans received and \$10.2 billion (53 percent) of the loans granted. Approximately three-fifths of these loan transactions with related foreign persons in the United Kingdom were reported by foreign-owned domestic manufacturers. Transactions with related foreign persons whose residence was in the Netherlands comprised the second largest portion of the loan transactions, accounting for \$13.0 billion (19 percent) of the loans received and \$4.6 billion (24 percent) of the loans granted.

## A Comparison of Tax Years 1991 and 1992 Statistics

Figure B presents selected items from the foreign-owned domestic corporations data for Tax Years 1991 and 1992 [2]. While the number of large foreign-owned corpora-

tions reporting transactions with related foreign persons increased by 6 percent from 1991 to 1992, the number of related foreign persons reported increased by 16 percent. Interest received and interest paid amounts declined from Tax Year 1991 to 1992, reflecting a general decline in interest rates. Caveats to these year-to-year comparisons of the data are necessary. First, patterns of transactions between a foreign-owned domestic corporation and related persons may or may not be repeated on a year-to-year basis. Second, a two-year comparison of these data may not show changes that could be evident if a longer time series were available. Additional information about the year-to-year comparability of the data is presented below under Data Sources and Limitations.

## Legislative History

Even before the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA), U.S. parent corporations were required to report transactions with and between their foreign affiliates [3]. However, no similar reporting requirements

Figure B

# Transactions Between Large Foreign-Owned Domestic Corporations and Related Foreign Persons, 1992

existed for transactions between domestic subsidiaries (i.e., incorporated in the United States) of foreign corporations or foreign corporations (i.e., incorporated abroad) engaged in a U.S. trade or business and their related foreign affiliates. Concerned that these related-party transactions could be manipulated to avoid U.S. taxation, Congress added new reporting requirements as part of TEFRA to provide the Internal Revenue Service with more information about the nature and amount of these transactions. Under Internal Revenue Code section 6038A, domestic corporations that are 25-percent or more owned by a foreign person and foreign corporations engaged in a U.S. trade or business must report transactions with related foreign persons. The transactions are reported on Form 5472, *Information Return of a 25 Percent Foreign-Owned U.S. Corporation or a Foreign Corporation Engaged in a U.S. Trade or Business*. Form 5472 was required to be filed with corporation income tax returns for tax years beginning after December 31, 1983.

The Omnibus Budget Reconciliation Acts (OBRA) of 1989, 1990, and 1993 modified section 6038A penalties and other filing and reporting requirements. In general, these modifications to section 6038A were motivated by continuing concerns that foreign-owned domestic corporations could still manipulate transactions so as to avoid U. S. taxation.

## Data Sources and Limitations

The foreign-owned domestic corporation statistics, collected annually starting with 1988, include data from Forms 5472 for all U.S. corporations with total receipts of \$500 million or more that were (a) owned (25-percent or more) by a foreign person and reported transactions with related foreign persons and (b) were included in the Statistics of Income sample of U.S. corporation income tax returns with accounting periods ending July 1992 through June 1993 [4]. In addition, the Form 5472 study sample is longitudinal—once a corporation is selected for inclusion, the corporation's income tax return is included in all future Form 5472 studies, regardless of the size of its total receipts [5]. (It should be noted that the 366 large foreign-owned corporations included in the study sample for 1992 may include certain returns not included in 1991, due in part to the \$500 million dollar total receipts threshold for sampling, and may not include all of the 344 corporations sampled for 1991, since certain 1992 returns were unavailable for statistical processing).

The corporation Statistics of Income sample included approximately 81,000 income tax returns chosen from the 3.9 million returns filed for Tax Year 1992. These returns were selected after administrative processing was

complete, but before any audit examinations [6]. Corporations with total receipts of \$500 million or more were included among the returns selected at the 100-percent rate for the sample. Only domestic corporations are included in the statistics; foreign corporations engaged in a U.S. trade or business (filing Form 1120F) were not included, even though they may have filed Forms 5472 for transactions with related foreign persons [7].

The statistics in this article augment the data for some of the companies included in the Statistics of Income data for domestic corporations "owned" by foreign persons [8]. For 1992, the 366 large foreign-owned domestic corporations filing Forms 5472 accounted for less than 1 percent of the returns, but approximately 67 percent of the \$2.0 trillion in total assets, and approximately 66 percent of the \$1.2 trillion in total receipts reported by all domestic corporations that were 25-percent-or-more owned by foreign persons (Figure C).

Total assets and total receipts of the large foreign-owned domestic corporations filing Forms 5472 account for approximately 7 percent of the assets and 8 percent of the total receipts reported by all other domestic corporations [9]. "Income subject to U.S. tax" and total U.S. income tax after credits account for approximately 4 percent of the income and tax reported by all other domestic corporations.

## Explanation of Selected Terms

*Amounts Borrowed and Loaned.*—Because the beginning and ending balances reflect only the amounts outstanding

# Transactions Between Large Foreign-Owned Domestic Corporations and Related Foreign Persons, 1992

at the beginning and end of the year, respectively, these amounts may not equal the actual amounts borrowed and loaned during Tax Year 1992.

*Country of Residence of Related Person.*—The income tax regulations related to Code section 6038A require that “each country in which each 25-percent shareholder files an income tax return as a resident under the tax laws of that country” be reported on Form 5472 for each related foreign person (Regulation section 1.6038A-2). The statistics in Table 2 are based on this reported residence of the related foreign person and, within this meaning, the related foreign person is a “resident” of a particular foreign country.

*Foreign-Owned Domestic Corporation.*—For purposes of these statistics, a domestic corporation was considered foreign-owned if at least 25 percent of the total voting power of all classes of stock entitled to vote, or 25 percent of the total value of all classes of stock of the corporation, was owned, directly or indirectly, at any time during the tax year, by a single foreign shareholder (usually a foreign parent corporation). This is in contrast to the other Statistics of Income data on foreign-controlled domestic corporations which are based on 50-percent or more ownership by a foreign person [10].

*Foreign Person.*—The term “foreign person” generally includes: (1) any partnership, association, company, or corporation that was not created or organized under the laws of the United States or the laws of any State; (2) any individual who is not a citizen or resident of the United States; (3) any individual who is a citizen of a U.S. possession, but is not otherwise a U.S. citizen or resident; and (4) any foreign trust, estate, or government. For the most part, the foreign persons referred to in the statistics are corporations. See also “related person,” below.

*Number of Foreign Persons.*—The data shown in the tables generally represent the number of Forms 5472 appended to the 366 income tax returns filed by corporations with total receipts of \$500 million or more that were owned 25-percent or more by a foreign person. Domestic member corporations of an affiliated group that filed a consolidated income tax return could also join in filing a consolidated Form 5472 for transactions with a given foreign related person. However, some affiliated domestic corporations that could have filed consolidated Forms 5472, filed separate forms instead. When these forms were identified during statistical processing, the information on them was combined, and the result treated as a single Form 5472 for consistency. To this extent, the “number of persons” understates the actual number of Forms 5472 attached to the 366 income tax returns included in the statistics.

*OPEC Countries.*—Summary statistics are provided (Table 2) for the following Asian countries that were members of the Organization of Petroleum Exporting Countries (OPEC) for 1992: Iran, Iraq, Kuwait, Qatar, Saudi Arabia, and the United Arab Emirates. Data for non-Asian OPEC members are not shown by country.

*Related Person.*—Persons related to the domestic corporation that filed a Form 5472 include the 25-percent-or-more foreign shareholder, any person that was related to the reporting corporation or the 25-percent-or-more shareholder (as described in Internal Revenue Code sections 267(b) or 707(b)(1)), or any other person that was related to the reporting corporation within the meaning of Internal Revenue Code section 482 (covering allocation of income and deductions among taxpayers) and the associated income tax regulations. See also “number of foreign persons,” above.

*Total Receipts.*—Total receipts is the total “positive” income of the domestic corporation as reported on its U.S. corporation income tax return. It was derived from the tax return as follows: included items (1) gross taxable receipts (before deduction of cost of sales and operations, and ordinary and necessary business expenses) and (2) tax-exempt interest received from state and local government obligations. Excluded items were: (1) other nontaxable income recognized by the corporation and (2) certain taxable income from related-foreign corporations only constructively received. Long-term capital gains were excluded for Regulated Investment Companies.

## Notes and References

- [1] A “domestic” corporation is incorporated in the United States, while a “foreign” corporation is incorporated abroad. For purposes of the 1992 study, “large” corporations had total receipts of \$500 million or more. Additional information about terms (such as “related persons”) used in this section is provided in the Explanation of Selected Terms section at the end of this article.
- [2] The Statistics of Income studies of foreign-owned corporations for Tax Years 1988 through 1990 included data from Forms 5472 for all foreign-owned U.S. corporations with total receipts of \$1 billion or more, while the Tax Year 1991 and 1992 studies included data for all foreign-owned U.S. corporations with total receipts of \$500 million or more. Consequently, direct comparisons of the data for these periods are not appropriate.

## Transactions Between Large Foreign-Owned Domestic Corporations and Related Foreign Persons, 1992

1994, Volume 14, Number 1 and Green, Kathryn A., "Controlled Foreign Corporations, 1992" *Statistics of Income Bulletin*, Winter 1995-1996, Volume 15, Number 3.

- [4] Additional information about SOI Form 5472 studies for Tax Years 1988 through 1991 may be found in the following *Statistics of Income Bulletin* issues: Tax Year 1988, Summer 1992 (Volume 12, Number 1); Tax Year 1989, Spring 1993 (Volume 12, Number 4); Tax Year 1990, Summer 1994 (Volume 14, Number 1); and Tax Year 1991, Summer 1995 (Volume 15, Number 1).
- [5] The use of total receipts as a criterion for inclusion of U.S. corporation income tax returns in the Form 5472 studies may lead to a possible "bias". This "bias" may occur because classification of returns by criteria other than total receipts, such as total assets, could lead to selection of a somewhat different set of large corporations. For example, corporation returns classified in the finance, insurance, and real estate industrial division may not have had large amounts of total receipts, but may have had large amounts of total assets, when compared to corporation returns classified in the wholesale and retail trade industrial division.
- [6] For more information on the sample of corporation

income tax returns for 1992, see *Statistics of Income—1992, Corporation Income Tax Returns*.

- [7] Foreign corporations engaged in a U.S. trade or business file Form 1120F. For Tax Year 1992, 33 Form 1120F returns with \$500 million or more of total receipts and having 671 Forms 5472 qualified for inclusion in the SOI Form 5472 study. However, data from these returns were not included in the statistics presented. Data reported by a few foreign life insurance companies filed on Form 1120L were included in the statistics, to facilitate statistical processing.
- [8] The statistics on domestic corporations controlled by foreign persons for 1992 are reported in Hobbs, James R., "Foreign-Controlled Domestic Corporations, 1992," *Statistics of Income Bulletin*, Fall 1995, Volume 15, Number 2. Statistics on domestic corporations controlled by foreign persons for 1993 are reported in this issue of the *Statistics of Income Bulletin*. See Hobbs, James R., "Foreign-Controlled Domestic Corporations, 1993."
- [9] The statistics on all U.S. corporations are reported in *Statistics of Income—1992, Corporation Income Tax Returns*.

# Federal Excise Taxes, Fiscal Years 1994 and 1995

## Data Release

With this issue, the *SOI Bulletin* initiates a regular program of publishing excise tax data. Data are presented here for Fiscal Years 1994 and 1995, by quarter and for each year as a whole. The data are reported separately for taxes collected by the Internal Revenue Service (IRS) and those jointly collected by the Customs Service and the Bureau of Alcohol, Tobacco and Firearms (BATF). In addition, data for the fourth quarter of Fiscal Year 1993 are presented for taxes collected by the IRS in order, as explained below, to provide a transition between prior reporting practices and this new series.

### The Aggregate Data

Summary data for all excise taxes are presented in Figure A for Fiscal Year 1994 and Figure B for Fiscal Year 1995. Total excise tax collections are recorded in the *Monthly Treasury Statement*. These data reflect cash payments made as taxpayers make deposits or submit payments with excise tax returns. Because of the manner in which deposits based on estimated liabilities are made, excise tax collections cannot, in general, be ascribed to particular excise taxes (e.g., gasoline, distilled spirits, and others). Amounts for specific excise taxes can only be derived from processing the returns upon which taxpayer liabilities for specific taxes are reported. The IRS reports the collections it receives on an annual basis in its *Data Book* and in an internal document on a monthly basis. The totals shown for the Customs-BATF collections are calculated as a residual.

Taxpayers who regularly file excise tax returns are able to claim excise tax refunds as a credit against their excise tax liabilities on the excise tax return. An example would be a taxpayer claiming a refund for exporting a taxed commodity. Excise tax collections as recorded in the *Monthly Treasury Statement* are net of such refunds and credits because they diminish payments received as deposits or made in connection with filing excise tax returns. Others may claim refunds of certain excise taxes because they use a taxed commodity for an exempt purpose, such as gasoline used on farms or alcohol used for a non-beverage purpose, but have no reason to file excise tax returns. By filing the appropriate form they can secure refunds directly. Some refunds are claimed as credits against income tax liabilities. The aggregate of such refunds and credits, that is, those not claimed on excise tax

returns, is reported in the *Monthly Treasury Statement*; the distribution of these refunds between IRS and Customs-BATF taxes is taken from an internal Treasury Department report.

Excise tax collections net of excise tax refunds and credits are referred to as excise tax receipts both in the *Monthly Treasury Statement* and in the *Budget of the United States* [1]. Excise tax receipts grew from \$48.1 billion in Fiscal Year 1993 to \$55.2 billion in Fiscal Year 1994, in large part as a result of increased taxes on gasoline and diesel fuel imposed effective October 1, 1993, by the Omnibus Budget Reconciliation Act of 1993. Excise tax receipts totaled \$57.5 billion in Fiscal Year 1995.

### Excise Taxes Collected by IRS

The aggregate data reported in Tables 1 and 2 for all excise tax collections received by the IRS are payments made during the indicated quarter of the fiscal year, either through the semi-monthly deposits required to be made by most taxpayers with significant excise tax liabilities or as payments attached to tax returns. With one exception, the detailed information for each particular excise tax collected by the IRS is the amount of *excise tax liability* "certified" by the IRS's Revenue Accounting Branch in the Submission Processing Division [2]. The certification is made with respect to quarterly excise tax returns processed at IRS service centers during the calendar quarter following the quarter indicated in Tables 1 and 2. In general, excise tax returns processed in one quarter are for liabilities that arose in the previous quarter.

In the certification process, after the returns are processed, certain adjustments are made for returns that may have been filed late or are missing and for data editing to correct what appear to be obvious errors on taxpayer returns. In addition, some certified amounts are rounded-off [3]. Adjustments made during the certification process for a particular quarter are reversed in the following quarter to avoid any double counting as late and missing returns are processed and corrections posted to the IRS Business Master File. Certified amounts are net of excise tax refunds and credits claimed on excise tax returns, e.g., for the export of a product upon which an excise tax was previously imposed.

The data editing undertaken to produce certified amounts occasionally results in negative amounts being reported for a particular tax. This can occur if a prior misclassification is corrected in the editing process, or if taxpayers report negative amounts as they use a current quarter's return to claim refunds or correct mistakes made in a prior quarter [4].

Certified liability amounts are used to adjust transfers from the Treasury's General Fund, into which all excise

This data release was written by Bruce F. Davie, a financial economist with the Office of Tax Analysis, Department of the Treasury. Significant contributions were made by Joan Cannon, Revenue Accounting Branch, Submission Processing Division, Internal Revenue Service, and Fred Rossler, Bureau of Alcohol, Tobacco and Firearms, Department of the Treasury.

## Aggregate Excise Tax Data for Fiscal Year 1994

[Money amounts are in millions of dollars]

Item	Total Fiscal Year 1994	Amounts for quarter ending--			
		December 1993	March 1994	June 1994	September 1994
(1)	(2)	(3)	(4)	(5)	
<b>Total excise tax collections.....</b>	<b>56,783</b>	<b>13,432</b>	<b>12,941</b>	<b>14,581</b>	<b>15,829</b>
Internal Revenue Service.....	43,005	9,907	9,932	10,629	12,536
Customs Service and Bureau of Alcohol, Tobacco and Firearms.....	13,778	3,525	3,009	3,952	3,293
<b>Excise tax refunds, total.....</b>	<b>1,559</b>	<b>332</b>	<b>396</b>	<b>322</b>	<b>509</b>
Internal Revenue Service.....	1,311	273	338	258	441
Customs Service and Bureau of Alcohol, Tobacco and Firearms.....	248	59	58	64	68
<b>Net excise tax receipts, total.....</b>	<b>55,225</b>	<b>13,101</b>	<b>12,544</b>	<b>13,899</b>	<b>15,681</b>
Internal Revenue Service.....	41,694	9,634	9,594	10,371	12,095
Customs Service and Bureau of Alcohol, Tobacco and Firearms.....	13,530	3,466	2,951	3,888	3,225

tax payments are initially deposited, to the various trust funds and other accounts into which some excise taxes are required to be transferred. The trust funds and accounts related to specific excise taxes are indicated in the last column of Tables 1 and 2. Amounts are transferred on a current basis from the General Fund into the trust funds and other accounts based upon estimated excise tax receipts and subsequently adjusted for certified liabilities. Additionally, transfers between trust funds and other accounts and the General Fund are made to reflect excise tax refunds and credits and, in some cases, transfers between trust funds [5]. Thus, the data with respect to individual excise taxes reported in these tables do not generally match trust fund receipts reported for comparable time periods.

Because the detailed quarterly data for individual excise taxes presented in these tables are certified *liability amounts*, they do not logically sum to the aggregate data for excise taxes collected. The table entry "collections less reported amounts" is a balancing item representing the difference between excise tax collections for the quarter and the sum of all excise tax certifications based on returns processed in the following quarter.

In prior years the IRS published detailed data each quarter regarding the excise taxes it collects. The last of these provided quarterly data for Fiscal Year 1993 [6]. These news releases followed the practice of balancing collections for a particular quarter against certified liabilities based on returns processed in that same quarter. Thus the detailed information shown in that last release was for

**Figure B**

## Aggregate Excise Tax Data for Fiscal Year 1995

[Money amounts are in millions of dollars]

Item	Total Fiscal Year 1995	Amounts for quarter ending--			
		December 1994	March 1995	June 1995	September 1995

# Federal Excise Taxes, Fiscal Years 1994 and 1995

returns processed in the quarter that ended on September 30, 1993. This new data series being published in the *Bulletin* matches detailed data ("certifications") for a particular "processing quarter" with collections in the prior "liability quarter." Thus the detailed information for the first quarter of Fiscal Year 1994 shown in Table 1 is based on returns processed in the quarter ended March 31, 1994. To avoid "losing" the detailed data based on returns processed in the quarter ended December 31, 1993, those data are provided in Table 1 and reconciled to collections for that same quarter.

## **Excise Taxes Collected by the Customs Service and the Bureau of Alcohol, Tobacco and Firearms**

Excise taxes on alcoholic beverages and tobacco products are collected by both Customs, on imports, and BATF, on domestic production. Taxes on firearms and certain occupational taxes are collected only by BATF. The second part of Tables 1 and 2 reconciles collections data with respect to these taxes with detailed data regarding individual taxes. As with the taxes collected by the IRS, collections data for these taxes cannot be related to specific taxes because of the requirement for most taxpayers to make deposits without indicating the specific taxes to which the deposits apply.

BATF publishes a *Statistical Release* entitled "Alcohol, Tobacco and Firearms Tax Collections" each quarter showing tax amounts for distilled spirits, wine, beer, and tobacco products separately for imports and domestic production. In addition, aggregate data are provided for taxes on firearms and the occupational taxes (e.g., the \$250 annual tax on retailers of alcoholic beverages) collected by BATF. Only the data for imports are actual collections data. The other data are based on returns filed with respect to liabilities arising in the particular quarters referenced in the *Statistical Release*, and are often revised by minor amounts as late returns are processed or other adjustments made. These data are used in Tables 1 and 2 along with product-specific liability data for domestic tobacco and firearms taxes from an internal BATF report. These detailed data do not sum to the total shown for domestic tobacco taxes or firearms taxes because of timing differences between the two measures of quarterly liabilities, given that some returns for a quarter are processed late or are amended. "Collections less reported amounts" is a balancing item reconciling the differences between

Customs and BATF collections data included in the *Monthly Treasury Statement* of excise tax collections and the total amount reported in BATF's *Statistical Release*.

Most of the alcohol, tobacco and firearms taxes remain as General Fund receipts. Some firearms taxes are transferred to the Wildlife Restoration Account and certain taxes on imported rum are transferred to the treasuries of Puerto Rico and the Virgin Islands.

In Table 20 of the historical section of the Winter 1996-1997 *Bulletin*, quarterly excise tax data will begin to be presented for FY 1996. This ongoing report will include information regarding excise tax rates.

## **Notes and References**

- [1] Each year the *Budget* documents contain a table entitled "Receipts by Source" that repeats the *Monthly Treasury Statement*'s total for excise tax receipts in a column of "actuals" for the year that is two years prior to the fiscal year to which the *Budget* pertains. See *Analytical Perspectives, Budget of the United States Government, Fiscal Year 1997*, p. 51.
- [2] The one exception is the annual use tax on heavy highway vehicles, which is paid using a separate return and the amounts collected are reported for the quarter during which actual payments are made. To adjust the timing of the reported amounts the amount for the last quarter of Fiscal Year 1993 is repeated in Table 1 for the first quarter of Fiscal Year 1994.
- [3] This is the reason why some of the amounts in thousands of dollars in Tables 1 and 2 end with two zeroes. These amounts were rounded to the next hundred thousand dollars.
- [4] Negative amounts can appear for repealed excise taxes, particularly, as was the case with the luxury taxes, when a retroactive repeal allows taxpayers to claim refunds. The refund process can be stretched over several quarters or, in the case of the windfall profits tax on domestic crude oil, several years.
- [5] For additional information about excise taxes see Davie, Bruce F., "Excise Taxes, Fiscal Year 1992," *Statistics of Income Bulletin*, Volume 13, Number 2, Fall 1993, pp. 36-52.

<sup>1</sup> Abbreviations used to designate the following trust funds or accounts related to specific excise taxes:

AA	Airport and Airway Trust Fund	LUST	Leaking Underground Storage Tank Trust Fund
AR	Aquatic Resources Trust Fund	MT	Mass Transit Account in the Highway Trust Fund
BLD	Black Lung Disability Trust Fund	OSL	Oil Spill Liability Compensation Trust Fund
GF	General Fund	PR	Puerto Rico
H	Highway Account in the Highway Trust Fund	VIC	Vaccine Injury Compensation Trust Fund
HSS	Hazardous Substance Superfund	VI	Virgin Islands
IW	Inland Waterways Trust Fund	WR	Wildlife Restoration Account

<sup>2</sup> Amounts based on returns processed during the subsequent quarter, except for tax on use of heavy highway vehicles which is based on actual collections during the period indicated.

<sup>3</sup> Floor stocks taxes are generally imposed when excise tax rates are increased or new taxes enacted. These taxes are enacted in revenue statutes rather than as amendments to the Internal Revenue Code. The amounts shown are not included in the amounts for the taxable products with which the floor stocks taxes are associated.

<sup>4</sup> Amounts are aggregates for two or more specific taxes for which amounts have been combined or are not separately available.

<sup>5</sup> This tax is in addition to the regular tax on gasoline. An amount is transferred from the Highway Trust Fund to the Airport and Airway Trust Fund equal to the regular tax on gasoline used in noncommercial aviation.

<sup>6</sup> This balancing item reconciles collections for a calendar quarter with reported liabilities based upon returns processed during the subsequent quarter.

<sup>7</sup> Data are not shown because the matching of collections in one quarter with tax liabilities recorded in the subsequent quarter, initiated with the 1994 data presented in this table, only applies to taxes reported by the Internal Revenue Service.

<sup>8</sup> Based on liabilities reported on returns except that data for taxes on imported products are actual collections.

<sup>9</sup> This balancing item reconciles collections for a calendar quarter with liabilities based upon returns processed during subsequent quarters.

NOTE: See text for a discussion of data concepts and sources and for an explanation of negative amounts. Detailed amount may not add to totals because of rounding and for other reasons, as explained in the text.

Collections less reported amounts <sup>5</sup> .....	—	1,637,521	-5,433	-82,689	123,258	1,602,385		—	

<sup>1</sup> Abbreviations used to designate the following trust funds or accounts related to specific excise taxes:

AA Airport and Airway Trust Fund	LUST Leaking Underground Storage Tank Trust Fund
AR Aquatic Resources Trust Fund	MT Mass Transit Account in the Highway Trust Fund
BLD Black Lung Disability Trust Fund	OSL Oil Spill Liability Compensation Trust Fund
GF General Fund	PR Puerto Rico
H Highway Account in the Highway Trust Fund	VIC Vaccine Injury Compensation Trust Fund
HSS Hazardous Substance Superfund	VI Virgin Islands
IW Inland Waterways Trust Fund	WR Wildlife Restoration Account

<sup>2</sup> Amounts based on returns processed during the subsequent quarter, except for tax on use of heavy highway vehicles which is based on actual collections during the period indicated.

<sup>3</sup> Floor stocks taxes are generally imposed when excise tax rates are increased or new taxes enacted. These taxes are enacted in revenue statutes rather than as amendments to the Internal Revenue Code. The amounts shown are not included in the amounts for the taxable products with which the floor stocks taxes are associated.

<sup>4</sup> Amounts are aggregates for two or more specific taxes for which amounts have been combined or are not separately available.

<sup>5</sup> This tax is in addition to the regular tax on gasoline. An amount is transferred from the Highway Trust Fund to the Airport and Airway Trust Fund equal to the regular tax on gasoline used in noncommercial aviation.

<sup>6</sup> This balancing item reconciles collections for a calendar quarter with reported liabilities based upon returns processed during the subsequent quarter.

<sup>7</sup> Based on liabilities reported on returns, except that data for taxes on imported products are actual collections.

<sup>8</sup> This balancing item reconciles collections for a calendar quarter with liabilities based upon returns processed during subsequent quarters.

NOTE: See text for a discussion of data concepts and sources and for an explanation of negative amounts. Detailed amount may not add to totals because of rounding and for other reasons, as explained in the text.

## Notes to Selected Historical and Other Data Tables

### General notations and statement

N/A - Not applicable.

n.a. - Not available.

p - Preliminary.

r - Revised.

\* - Estimate should be used with caution because of the small number of sample returns on which it is based. See "Appendix—SOI Sampling Methodology and Data Limitations."

\*\* - Not shown to avoid disclosure of information about specific taxpayers. However, the data are included in the appropriate totals.

Detail may not add to totals because of rounding.

### Table 1

[1] Forms 1040, 1040A, and 1040EZ include "standard" electronically-filed (ELF) returns starting with 1985, and returns filed electronically by telephone ("Telefile") starting with 1991. For 1992 and 1993, data for these forms also include computer-generated "paper" returns (Form 1040PC) that were reclassified as Form 1040, 1040A, or 1040EZ returns for Statistics of Income, depending on the filing characteristics of each return. The total number of ELF and Form 1040PC returns are also presented, as information items, starting with 1990 and for 1992 and 1993, respectively. However, starting with 1994, Form 1040PC returns were not reclassified for Statistics of Income. Therefore, starting with 1994, data for Forms 1040, 1040A, and 1040EZ are not comparable with the previous years.

[2] Less deficit. Starting with 1987, data are not comparable with earlier years because of major changes in the law, many of which are referred to in other footnotes.

[3] Not included in AGI.

[4] Starting with 1987, represents total dividends; previously, represented total dividends after statutory exclusion.

[5] Starting with 1987, losses are after "passive loss" limitation.

[6] Starting with 1987, represents total capital gains; previously, represented total capital gains after statutory exclusion. For other changes affecting

capital gains, see *Statistics of Income—Individual Income Tax Returns*, various years.

[7] Before 1980 and starting again after 1987, excludes Individual Retirement Arrangement (IRA) distributions; for intervening years, pensions and IRA distributions in AGI were reported together on the tax return. Effective during 1986, the more liberal of the two methods of computing the nontaxable portion of pensions and annuities (representing taxpayer contributions to certain pension plans) was repealed.

[8] Starting with 1987, represents total unemployment compensation; previously, all or part was excludable under certain conditions.

[9] Starting with 1994, up to 85 percent of social security benefits were taxable; previously, the maximum percentage was 50.

[10] Excludes sole proprietorship (including farm) rental income or loss. Starting with 1987, rental losses are before "passive loss" limitation and, therefore, exceed the amount included in AGI.

[11] Excludes certain royalties included in computations of capital gain or loss and of ordinary gain or loss, sales of noncapital assets.

[12] Prior to 1981, amounts for net income are actually for net income (less loss). Net income and loss were not separately tabulated. Also, for these years, the number of returns shown with net income was rounded to millions during processing; the more exact number was not tabulated.

[13] See footnote 5.

[14] See footnote 12.

[15] See footnote 5.

[16] Includes adjustments not shown separately in this table. Starting with 1987, excludes certain business-related expenses, deduction for two-earner married couples, and certain alimony payments, but includes self-employed health insurance deduction; see also footnotes 17 and 18. Also, for 1987-1993, excludes employee moving expenses (see footnote 22).

Starting with 1990, adjustments include deduction for one-half of self-employment (social security) tax. For changes in adjustments for earlier years, see *Statistics of Income—Individual Income Tax Returns*.

[17] Deductible Individual Retirement Arrangement

## Notes to Selected Historical and Other Data Tables

- (IRA) contributions, reflected in adjustment statistics starting with 1980, were limited starting with 1987.
- [18] Deduction expired during 1992 and 1994, but was later reinstated retroactively for each of these years. Data for 1992 and 1994 are, therefore, understated because they exclude amounts subsequently claimed on amended returns.
- [19] Includes exemptions for blindness repealed effective 1987. Deduction for exemptions was limited for higher-income taxpayers starting with 1991. Exemption amounts were indexed for inflation starting with 1985 and were limited for certain high-income taxpayers starting with 1987.
- [20] In general, represents the sum of standard and itemized deductions. For 1980 and 1985 data, includes total itemized deductions before subtraction of "zero bracket amount," plus, for non-itemized deduction returns, the zero bracket amount and, for 1985 data only, charitable contributions deduction. Starting with 1987, includes revised itemized deductions (see also footnotes 22-24), "basic" standard deduction and "additional" standard deductions for age 65 or over or for blindness (for changes in the standard deduction and its relation to the zero bracket amount, see *Statistics of Income—Individual Income Tax Returns*, for appropriate years). Starting with 1991, total itemized deductions are after statutory limitation (see footnote 22).
- [21] For 1980 and 1985 data, represents "zero bracket amount" used on returns of non-itemizers; see also footnote 26. Zero bracket amount for 1985 and standard deduction, starting with 1986, were indexed for inflation.
- [22] Includes itemized deductions not shown separately in this table, including revised deductions, starting with 1987, for "miscellaneous expenses" after limitation and for employee moving expenses; see also footnotes 23 and 24. For the most part, moving expenses are excluded after 1993 (see also footnote 15). In general, total itemized deductions were limited for certain high-income taxpayers starting with 1991. For changes in deductions for earlier years, see *Statistics of Income—Individual Income Tax Returns*.
- [23] Deductible medical and dental expenses were limited, starting with 1987, based on a revised percentage of AGI. For changes in the deduction for
- 1987 and earlier years, see *Statistics of Income—Individual Income Tax Returns*.
- [24] Starting with 1987, State sales taxes were no longer deductible.
- [25] Starting with 1987, deductions for "personal" interest and mortgage real estate loan interest were limited and, starting with 1991, personal interest was no longer deductible.
- [26] For 1980 and 1985 data, taxable income *includes* the "zero bracket amount," repealed effective 1987 and partially replaced by standard deductions which were *subtracted* in computing taxable income. A standard deduction was similarly used prior to 1980. For the percentages of AGI used for the standard deduction and the limitation on the deduction, see *Statistics of Income—Individual Income Tax Returns*.
- [27] Different tax rate structures applied to Tax Years 1970, 1971-1978, 1979-1981, 1982-1986, 1987, 1988-1990, 1991-1992, and 1993-1994. Indexing of tax rate boundaries for inflation was introduced starting with 1985. The preferential maximum tax rate on net long-term capital gains under "alternative tax" was revised over the years. Alternative tax was abolished effective 1987, but a maximum capital gains tax rate less than the maximum regular tax rate continued to apply under certain conditions starting with 1991. For additional information on changes affecting tax computations, see *Statistics of Income—Individual Income Tax Returns*.
- [28] Includes that portion of the earned income credit used to offset income tax before credits; see also footnotes 33 and 34. Earned income credit is shown below in Table 1.
- [29] Includes credits not shown separately in this table, such as the political contributions credit (repealed effective 1987), earned income credit (see below in Table 1; see also footnote 33), and low-income housing credit (introduced effective 1987); see also footnote 30. For changes in credits allowed for earlier years, see *Statistics of Income—Individual Income Tax Returns*.
- [30] Investment credit was included in the more-inclusive general business tax credit starting with 1984. With exceptions, investment credit was repealed effective 1986.
- [31] Includes income tax after credits and additional tax

## Notes to Selected Historical and Other Data Tables

for tax preferences, i.e., "minimum tax" or "alternative minimum tax" (see footnote 32).	year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.
[32] The add-on "minimum tax" on "tax preferences" (chief among which were net long-term capital gains) was introduced starting with 1970. (This tax was formerly described in Statistics of Income as the "additional tax for tax preferences.") The minimum tax computation, using a base related to taxable income, was revised and the tax rate increased effective 1976. The number of preferences subject to tax was revised effective 1976 and 1981. Starting with 1979, two major preferences formerly subject to minimum tax (including net long-term capital gains) were subjected, instead, to the new "alternative minimum tax," which required taxpayers to pay the larger of the regular income tax or the AMT. Computation of AMT was revised effective 1980 (to allow tax to be reduced by certain credits) and, again, effective 1981 (to modify the graduated tax rate structure). Minimum tax was abolished effective 1983 and many of the tax preferences subject to this tax were subjected, instead, to a revised AMT. AMT was increased starting with 1983 by introduction of a single, higher tax rate which replaced two, lower graduated rates. The single rate was increased effective 1987 and 1991; two, higher graduated rates were introduced effective 1993.	[1] In addition to low-income taxpayers, this size class (and others) includes taxpayers with "tax preferences," not reflected in adjusted gross income or taxable income, which are subject to the "alternative minimum tax" (included in "total income tax"), defined in footnote 32, Table 1.
[33] Earned income credit, allowed certain low-income recipients, was liberalized starting with 1985, 1987, 1991, and 1994. In Table 1, the amounts used "to offset income tax before credits" and "to offset other taxes" (that are income-related) is reflected in the statistics for "total tax credits"; "excess earned income credit (refundable)" is reflected in the statistics for "overpayments."	[2] AGI minus "total deductions, personal exemptions"
[34] Includes refunds and credits to the following year's estimated tax and refundable portion of earned income credit. Reflects overpayments of income tax, tax recapture of certain prior-year tax credits, tax applicable to Individual Retirement Arrangements (IRA's), self-employment (social security) tax, social security tax on certain tip income, and certain other income-related taxes (for the taxes applicable to the years shown, see <i>Statistics of Income—Individual Income Tax Returns</i> ).	will not equal "taxable income" because the total of deductions and exemptions could exceed AGI and therefore includes amounts that could not be used in computing taxable income.
[35] Reflects taxes mentioned in footnote 34.	[3] Tax includes income tax after credits and the alternative minimum tax (see footnote 1).
SOURCE: <i>Statistics of Income—Individual Income Tax Returns</i> , appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-	[4] Not computed.

**Table 2** - Not presented.

**Table 3**

- [1] In addition to low-income taxpayers, this size class (and others) includes taxpayers with "tax preferences," not reflected in adjusted gross income or taxable income, which are subject to the "alternative minimum tax" (included in "total income tax"), defined in footnote 32, Table 1.
- [2] AGI minus "total deductions, personal exemptions" will not equal "taxable income" because the total of deductions and exemptions could exceed AGI and therefore includes amounts that could not be used in computing taxable income.
- [3] Tax includes income tax after credits and the alternative minimum tax (see footnote 1).
- [4] Not computed.

SOURCE: *Statistics of Income—Individual Income Tax Returns*, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

**Table 4**

- [1] Represents "income" from owner-occupied nonfarm housing (less actual rental income and subsidies); proprietors' income; services to individuals furnished without payment by financial intermediaries (except life insurance carriers and private non-insured pension plans); employment-related food to employees, including that related to military and domestic service; standard military clothing issued to military personnel; and employees' lodging. Excludes employer-paid health and life insurance premiums.
- [2] Represents imputed interest received by persons from life insurance carriers and private non-insured pension plans.
- [3] Starting with 1990, the procedure for estimating the difference between NIPA and IRS treatment of depreciation was revised. Therefore, the data for years before 1990 are not comparable to data for later years.

## Notes to Selected Historical and Other Data Tables

- [4] Represents income of low-income individuals not required to file individual income tax returns, unreported income, and statistical errors or omissions and effects of errors in data for adjusted gross income or personal income.

SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis, *The National Income and Product Accounts of the United States, Volume 1, 1929-58*, 1993, and revised *Volume 2, 1959-92* (in preparation); for years after 1992, *Survey of Current Business*, various issues. Statistics of Income data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

### Tables 5 and 6

- [1] See Table 4 for the differences between personal income and adjusted gross income.
- [2] Beginning with 1987, data are not comparable with earlier years because of major changes in the definition of adjusted gross income.

SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis, *The National Income and Product Accounts of the United States, 1929-58, Volume 1*, 1993, and revised *Volume 2, 1959-92* (in preparation); for years after 1992, *Survey of Current Business*, various issues. Statistics of Income data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

### Table 7

- [1] Returns with standard deduction, starting with 1955, include a small number with no adjusted gross income and no deductions. (For 1977-1986, standard deduction is the "zero bracket amount," which was also reported on a small number of returns included in the 1987-1988 statistics; see footnote 2.) For 1944-1954, returns with no adjusted gross income are included in the number of returns with itemized deductions.
- [2] Amount of standard deduction for 1944-1957 was estimated by Joseph A. Pechman, The Brookings Institution, on the basis of the distribution of the number of returns by income class and marital status in *Statistics of Income—Individual Income Tax*

*Returns*, and, starting with 1958, was obtained directly from Statistics of Income tabulations for these years. Represents "zero bracket amount" for 1977-1986. Starting with 1987, represents the sum of "basic" and "additional" standard deductions (for age 65 or over and for blindness); also includes zero bracket amount reported on the small number of prior-year returns filed in 1988-1989 that were included in the 1987-1988 statistics.

- [3] For 1977-1986, total itemized deductions are before subtraction of the "zero bracket amount." Starting with 1991, total itemized deductions are after statutory limitation (see footnote 22, Table 1).
- [4] Sum of standard and itemized deductions, plus charitable deduction reported on standard deduction returns for Tax Years 1982-1986. For 1987-1988, total deductions also include "zero bracket amount" reported on a small number of returns (see footnote 2). Includes total deductions that could not be used because they exceeded AGI.
- [5] See footnote 2, Tables 5 and 6.

SOURCE: Except as indicated in footnote 1, *Statistics of Income—Individual Income Tax Returns*, and unpublished tables, appropriate years. Data are subject to sampling error. Tax law and form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

### Table 8

- [1] See Table 4 for the differences between personal income and adjusted gross income.
- [2] Excludes the "zero bracket amount" for 1977-1986. Because of major changes in law, taxable income starting with 1955 and 1987 is not comparable with earlier years. See also footnote 26, Table 1.
- [3] For the definition of total income tax, see footnote 31, Table 1.

SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis, *The National Income and Product Accounts of the United States, Volume 1, 1929-58*, 1993, and revised *Volume 2, 1959-9* (in preparation); for years after 1992, *Survey of Current Business*, various issues; and *Statistics of Income—Individual Income Tax Returns*, appropriate years. Statistics of Income data are subject to sampling error; tax law and tax form changes affect the

## Notes to Selected Historical and Other Data Tables

year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

### Table 9

- [1] Starting with 1975, includes refundable portion of the earned income credit.

SOURCE: *Statistics of Income—Individual Income Tax Returns*, and unpublished tables, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

### Table 10

- [1] For 1980, represents number of businesses (up to a maximum of three per return). For other years, represents the number of returns, even if there were more than one business per return.

[2] Total deductions include amounts not shown separately in this table, as well as amounts not reported separately on Schedule C-EZ (short form) used by certain of the smaller businesses starting with 1992. Most deductions for which statistics are shown are slightly understated to the extent that only total deductions had to be reported on Schedule C-EZ. After 1986, total deductions exclude disallowed "passive losses"; but net income (less deficit), net income, and deficit reflect these losses. In addition, net income (less deficit), net income, and deficit are after adjustment for the passive loss carryover from prior years. Therefore, business receipts minus total deductions do not equal net income (less deficit).

SOURCE: *Statistics of Income—Sole Proprietorship Returns*, appropriate years, and *Statistics of Income Bulletin*, Summer issues (for most years). Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

### Table 11

- [1] Includes assets and liabilities not shown separately. Totals are somewhat understated because not all partnership returns included a complete balance sheet. In addition, after 1990 certain small partnerships were not required to file balance sheets.

[2] Short-term debt is the abbreviated title for mortgages, notes, and bonds payable in less than 1 year.

[3] Long-term debt is the abbreviated title for mortgages, notes, and bonds payable in 1 year or more.

[4] "Total receipts" and "total deductions" include amounts not shown separately. Prior to 1981, "total receipts" included gross income from farming, rents, and royalties. Expenses related to this income were included under "total deductions." Starting with 1981, only the *net* incomes or deficits from farming, rents, and royalties were tabulated; the positive amounts were included under "total receipts" and the negative amounts under "total deductions." The related expenses were not tabulated. Because of a redesign of the partnership return, starting with 1987, total receipts was computed for the statistics as the sum of "total income from a trade or business," and the following income distributed directly to partners: "ordinary" gain from sales of property other than "capital assets;" "ordinary" income from estates, trusts, and other partnerships; "portfolio income," comprising interest, dividends, royalties, and other (excluding net capital gains), and rental real estate income (positive amounts only); income from other rental activities (positive amounts only). Most, but not all, of these types of income were included in receipts data for 1986 and earlier years.

Total deductions was computed as the sum of "cost of sales and operations," "total deductions from a trade or business," and the following, which were allocated directly to partners: "ordinary" loss from sales of property other than "capital assets"; "ordinary" loss from estates, trusts, and other partnerships; rental real estate losses; other rental losses; and "portfolio losses" (excluding net capital losses). Portfolio income and loss from sales of "capital assets" was intentionally omitted from receipts and deductions to improve comparability with earlier years.

[5] In finance, insurance, and real estate prior to 1981, only gross rentals reported as investment income were treated as business receipts, but only if they were the principal operating income.

[6] Taxable interest only. For the 1985 statistics, also includes certain dividends reported in combination with taxable interest.

[7] After 1980, represents the more complete amounts

## Notes to Selected Historical and Other Data Tables

reported in depreciation computation schedules, rather than the amounts reported as the depreciation deduction (augmented by depreciation identified for the statistics in cost of sales and operations schedules).

SOURCE: *Statistics of Income—Partnership Returns*, appropriate years, and *Statistics of Income Bulletin*, Summer or Fall issues (for most years). Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific *Statistics of Income* reports for a description of sampling error and of the changes mentioned above.

### Table 12

- [1] Size classes are based on "business receipts," i.e., gross amounts from sales and operations, for industries except those in finance, insurance, and real estate. For the latter industries, "total receipts," which is the sum of business receipts and investment income, was used. For partnerships, comparability of data by size of receipts is affected by revisions to the definition of receipts; see also footnotes 4 and 5, Table 11. To help minimize the break in comparability caused by the change in statistical treatment of partnership farm and rental income, an effort was made for 1981-1987 only, to include rental (though not farm) gross income in the receipts used for the size distribution in Table 12. Starting with 1988 though, only partnership net rentals are reflected in the size distribution.
- [2] Includes returns with no business receipts.
- [3] Includes corporations and partnerships with zero assets and liabilities. In addition, for partnerships, includes partnerships without balance sheet information (see also footnote 1, Table 11).
- [4] See footnote 1, Table 10.

SOURCE: *Statistics of Income—Corporation Income Tax Returns*; *Statistics of Income—Partnership Returns*, *Sole Proprietorship Returns*, and *Business Income Tax Returns*, depending on the year; and *Statistics of Income Bulletin*, Summer or Fall issues (for most years). Tax law and tax form changes affect the year-to-year comparability of the data. See the appropriate *Statistics of Income* reports for a description of sampling error and of the changes mentioned above.

### Table 13

- [1] Starting with 1985, "number of returns" excludes

taxable cooperatives; starting with 1987, Real Estate Mortgage Investment Conduits (REMIC's); and starting with 1988, Foreign Sales Corporations (FSC's) and Interest-Charge Domestic International Sales Corporations (IC-DISC's); see also footnotes 5 and 6, below. Because of the omission of these returns, totals for all income and financial items shown in the statistics (except those not applicable to IC-DISC's and FSC's, such as "income subject to tax," "income tax," and tax credits) are slightly understated. (There were 980 IC-DISC returns for 1991; see "Interest-Charge Domestic International Sales Corporations, 1991," *Statistics of Income Bulletin*, Summer 1995, Volume 15, Number 1.) A change in the definition of S Corporation net income starting with 1987 means that totals for receipts and deductions are slightly understated to the extent that they were not directly related to the "trade or business income" reported by these companies. Comparability of data for returns with net income is also affected by this same change, as well as by a change in the definition of regulated investment company net income for certain years; for additional information about these changes in the definition of net income, see footnote 16.

- [2] Consolidated returns were filed on an elective basis for groups of affiliated corporations (with exceptions), in general, if 80 percent or more of the stock of the affiliates was owned within the group and a common parent corporation owned at least 80 percent of the stock of at least one of the affiliates.
- [3] Included in "number of returns, total" and "number with net income."
- [4] In general, certain small, closely-held corporations that elected to be taxed at the shareholder level, with no more than 35 shareholders (25 for 1982; 15 for 1979-1981; 10 or 15 for 1977-1978, depending on conditions contained in the law; and 10 for earlier years).
- [5] Domestic International Sales Corporations (DISC's) were designed to promote U.S. exports. They were taxed through parent corporations, but only when profits were distributed or deemed distributed to them. This system of tax deferral was generally replaced after 1984 with a new system of Foreign Sales Corporations (FSC's); see footnote 6. Tax benefits of DISC's remaining after 1984 were limited and an interest charge for tax-deferred amounts was imposed on the parent shareholders, whose DISC

## Notes to Selected Historical and Other Data Tables

subsidiaries were unable to meet the FSC requirements and that elected to continue as IC-DISC's.

- [ 6] Foreign Sales Corporations (FSC's) generally replaced DISC's as a means of promoting U.S. exports (see footnote 5). Under the FSC provisions, a portion of these subsidiaries' "foreign trade income" was exempt from U.S. income tax.
- [ 7] Starting with 1985, inventories includes amounts reported by real estate subdividers and developers previously included in "other investments."
- [ 8] For 1980 and 1985 data, tax-exempt securities, representing investments in State and local Government obligations, were reported with investments in U.S. Government obligations as a combined total on the tax return. After 1988, tax-exempt securities were again reported separately on the tax return, but were redefined to include, not only investments in State and local Government obligations, but also stock in investment companies that distributed dividends during the current year representing tax-exempt interest on such obligations.
- [ 9] After 1990, accounts payable of banking and savings and loan institutions includes deposits and withdrawable shares previously reported in "other current liabilities."
- [10] In general, after 1982, Statistics of Income data for receipts, deductions, and net income (or deficit) of S Corporations are limited to those attributable to a trade or business. Therefore, most investment income or loss, such as from taxable interest, dividends, rents, royalties, and gain (loss) from sales of investment property; the deductions related to this income; as well as deductions for charitable contributions, intangible drilling and development costs, oil and gas depletion, foreign taxes paid, and the limited expensing of the cost of depreciable assets (Code section 179), are not reflected in net income (because they were allocated directly to shareholders, instead). See also footnote 11.

After 1991, "cost of sales and operations" exclude amounts previously estimated for the statistics from other information reported (often in "other deductions") on the tax returns of corporations reporting "business receipts," without a corresponding cost of sales and operations. Most of these corporations were classified either in transportation and public utilities or in services.

[11] After 1986, "business receipts" includes the full amount reported by stock and commodity brokers and exchanges, and by real estate subdividers, developers and operative builders, even when they bought and sold securities, commodities and real estate on their own account. Previously, such transactions were treated as "net gain (loss), non-capital assets."

[12] See footnote 10.

[13] Starting with the 1985 statistics, includes any dividends reported in combination with interest on Form 1120-S by S Corporations, i.e., certain corporations that elect to be taxed through shareholders (see footnote 4). Based on prior years when Form 1120-S required each to be reported separately, nearly all of the combined amount represents interest.

[14] For the 1985 statistics, "other deductions" includes depletion and employer contributions to pension, profit-sharing, stock bonus, and annuity plans, and to employee benefit programs, reported on the Form 1120-A short form. After 1987, identifiable amounts reported on Form 1120-A for any of these items are included in the statistics for the appropriate deduction. For the 1985 statistics, "other deductions" include depletion and employer contributions to pension, profit-sharing, stock bonus, and annuity plans, reported on the Form 1120-A short form. After 1987, identifiable amounts reported on Form 1120-A for any of these items are included in the statistics for the appropriate deduction. Starting with 1992, "other deductions" include certain amounts previously treated as part of the cost of sales and operations for Statistics of Income. See also footnote 10.

[15] In general, "total receipts less total deductions" includes nontaxable interest on State and local Government obligations, but excludes income from related foreign corporations only "constructively" received. As such, "total receipts less total deductions" represents all income, taxable and nontaxable, "actually" received by the corporation, as reported on the corporation income tax return, and excludes all income only "constructively" received. In contrast, "net income (less deficit)" represents all taxable income, actually or constructively received. Therefore, in the statistics, "total receipts less total deductions" minus "nontaxable interest on State and local Government obligations" and "constructive taxable income"

## Notes to Selected Historical and Other Data Tables

from related foreign corporations" equals "net income (less deficit)." For the exception, due to regulated investment companies, see footnote 16.

- [16] "Net income (less deficit)," "net income," and "deficit" shown for 1991-1993 exclude: (a) net long-term capital gain reduced by net short-term capital loss reported by regulated investment companies (see also footnote 15), and (b) amounts other than "from a trade or business" reported by S Corporations (see also footnote 4). For comparisons with earlier years, these amounts should therefore be added back in. Regulated investment company net long-term capital gain reduced by net short-term capital loss excluded from the statistics for net income (less deficit) were: for 1990, \$7.5 billion; for 1991, \$12.8 billion; for 1992, \$20.9 billion; and, for 1993, \$33.3 billion. S Corporation net income (less deficit) excluded from the statistics for 1992 and 1993 was estimated at \$12.1 billion for each year. Data with which to estimate the S Corporation net income (less deficit) excluded from the statistics for 1988-1991 were not tabulated. (For additional information about S Corporation net income, see *Statistics of Income Bulletin*, "S Corporations, 1992," Spring 1995, Volume 14, Number 4, and "S Corporation Returns, 1993," Spring 1996, Volume 15, Number 4.)

- [17] For most years, "income subject to tax" (the corporate tax base) exceeds "net income (less deficit)" in the statistics, chiefly because of the deficits reported on returns without net income. Moreover, it is the sum of the several tax bases applicable over time to different classes of corporations, not all of which were directly related to net income. Income subject to tax thus includes the "taxable income" base used by most companies (and defined for the statistics as net income minus certain statutory special non-business deductions, such as for intercorporate dividends received and "net operating losses"): prior to 1988, a variation of this base in combination with net long-term capital gains in certain situations where the lower capital gains tax applied; and the special tax bases applicable to S Corporations (otherwise taxed through their shareholders), insurance businesses, and certain investment companies. Profits of Domestic International Sales Corporations or Interest-Charge Domestic International Sales Corporations (depending on the year) were tax-deferred until distributed, actually or constructively, to parent businesses, and those of S

Corporations were mostly taxed through their individual shareholders. Therefore, the net income of all these corporations is excluded from income subject to tax for years for which data for these companies are included in the statistics (see also footnote 1).

- [18] For 1980, includes tax from recapture of Work Incentive Program (WIN) credit; starting with 1985, Personal Holding Company tax; after 1987, tax on "branch profits" of foreign corporations with U.S. operations; and, after 1988, certain lesser taxes, including special taxes applicable to real estate investment trusts and foreign corporations with U.S.-source income.
- [19] Different tax rate structures applied for Tax Years 1979-1981, 1982, 1983-1986, 1987-1992, and 1993. In general, starting with tax years beginning in 1987, "alternative tax" was repealed. This tax included a maximum rate on net long-term capital gains that produced a tax that was less than that produced by the regular tax rates.
- [20] Effective during 1987, the "alternative minimum tax" replaced the "minimum tax" (formerly referred to in the statistics as the "additional tax for tax preferences"). The tax computation was modified effective with Tax Years 1983, 1984, and 1990. The alternative minimum tax rate exceeded that applicable under the former minimum tax.
- [21] Starting with the 1985 statistics, general business credit includes alcohol fuel, investment, jobs and employee stock ownership plan (ESOP) credits which were reported separately for previous years. Also included are the research credit (starting 1986), the low-income housing credit (starting 1987), and the credit for contributions to certain community development corporations (starting 1993). With exceptions, investment credit was repealed effective 1986; employee stock ownership plan contributions credit was repealed effective 1987. For changes in definitions of component credits, see *Statistics of Income—Corporation Income Tax Returns*, for the years concerned.

SOURCE: *Statistics of Income—Corporation Income Tax Returns*, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the appropriate Statistics of Income reports for a description of sampling error and of the changes mentioned above.

## Notes to Selected Historical and Other Data Tables

### Table 14

- [1] See footnote 1, Table 13.
- [2] See footnotes 10 and 16, Table 13.
- [3] See footnote 11, Table 13.
- [4] See footnote 13, Table 13.
- [5] See footnotes 18 and 19, Table 13.
- [6] In addition to regular (and alternative) tax, for years prior to 1988, includes certain other taxes either shown in Table 13 or specified in footnote 18, Table 13. See *Statistics of Income—Corporation Income Tax Returns*, for the years concerned for more detailed explanations.

SOURCE: *Statistics of Income—Corporation Income Tax Returns*, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the appropriate *Statistics of Income* reports for a description of sampling error and of the changes mentioned above.

### Table 15

- [1] Profits shown are without inventory valuation and capital-consumption adjustments.
- [2] "Net income (less deficit)" and "income subject to tax" exclude taxable cooperatives starting with 1980, and Real Estate Mortgage Investment Conduits starting with 1987. Net income (less deficit) starting with 1985 excludes Foreign Sales Corporations (FSC's) and Interest-Charge Domestic International Sales Corporations (IC-DISC's); see also Table 13, footnote 1. For changes in the definition of regulated investment company and S Corporation net income, see Table 13, footnote 16.
- [3] For the definition of "income subject to tax," see footnote 17, Table 13. See also footnote 2, above.

SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis, *The National Income and Product Accounts of the United States, Volume 1, 1929-58*, 1993, and revised *Volume 2, 1959-92* (in preparation); for years after 1992, *Survey of Current Business*, various issues; and *Statistics of Income—Corporation Income Tax Returns*, appropriate years. Statistics of Income data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data. See the specific *Statistics of Income* reports for a description of sampling error and of the changes mentioned above.

### Table 16

- [1] Total adult deaths represent those of individuals age 20 and over, plus deaths for which age was unavailable.
- [2] Prior to 1982, number of "taxable estate tax returns" by year of death is only approximate because, while the majority of returns filed in a given calendar year represent estates of decedents who died in the immediately preceding year, many represent estates of decedents who died in earlier years. Therefore, the number of taxable returns shown for 1976 decedents is actually the number of taxable returns filed in 1977, regardless of year of death. Starting with 1982, statistics by year of death are more accurate because they are based on the year of death reported on return filings over a period of successive years.

Year-to-year comparability is affected by changes in the gross estate filing threshold which is based on date of death: 1934 (\$50,000); 1935 (\$50,000 changing to \$40,000); 1942 (\$40,000 changing to \$60,000); 1943 (\$60,000); 1977 (\$120,000); 1978 (\$134,000); 1979 (\$147,000); 1980 (\$161,000); 1981 (\$175,000); 1982 (\$225,000); 1983 (\$275,000); 1984 (\$325,000); 1985 (\$400,000); 1986 (\$500,000); and 1987 (\$600,000).

SOURCE: For years after 1953, *Statistics of Income—Estate Tax Returns; Estate and Gift Tax Returns; Fiduciary, Estate and Gift Tax Returns*; and unpublished tabulations, depending on the year. For years prior to 1954, *Statistics of Income—Part 1*. Adult deaths are from the National Center for Health Statistics, Public Health Service, U.S. Department of Health and Human Services, *Vital Statistics of the United States*, unpublished tables.

### Tables 17 and 18

- [1] Collections include that portion designated for the Presidential election campaign fund by taxpayers on their income tax returns. Also included is the income tax collected from estates and trusts. Income tax from estates and trusts collected in 1995, was \$5.3 billion; in 1994, was \$6.2 billion; in 1993 was \$6.0 billion; in 1992, \$6.1 billion; in 1991, \$4.8 billion; in 1990, \$5.9 billion; in 1989, \$6.0 billion; in 1988, \$6.5 billion; and, in 1987, \$8.4 billion. Presidential election campaign designations amounted \$68.5 million in 1995; to \$69.7 million in 1994; \$27.7 million in 1993; \$29.6 million in 1992, \$32.3 million in 1991; \$32.5 million in 1990; \$32.3

## Notes to Selected Historical and Other Data Tables

million *in* 1989; \$33.2 million *in* 1988; and \$33.2 million *in* 1987.

Refunds include the refundable portion of the earned income credit; see footnote 4, Table 2. Individual income tax refunds are net of offsets under laws which require IRS to act as collecting agent for delinquent payments owed various U.S. Government agencies under specific programs; see Table 19.

- [2] Includes various taxes applicable to tax-exempt organizations, including the tax on "unrelated business income." Total taxes collected from tax-exempt organizations were \$294.3 million *in* 1995, \$372.4 million *in* 1994, \$173.6 million *in* 1993, \$181.6 million *in* 1992, \$155.6 million *in* 1991, \$127.9 million *in* 1990, \$115.6 million *in* 1989, \$137.5 million *in* 1988, and \$119.9 million *in* 1987.
- [3] Excise taxes are imposed on selected products, services and activities, such as on alcohol and tobacco products and on gasoline. Statistics shown in Table 17 have been revised, starting with Fiscal Year 1988, to include alcohol and tobacco taxes, collection of which was transferred from the Internal Revenue Service to the Bureau of Alcohol, Tobacco, and Firearms, starting with that year. Collections and refunds of manufacturers tax on recreational products include taxes on firearms, responsibility for which was transferred from the Internal Revenue Service to the Bureau of Alcohol, Tobacco, and Firearms starting January 1991. Collections exclude taxes on cargoes, paid to the U.S. Customs Service; however, refunds include these taxes.
- [4] Employment taxes include payroll taxes levied on salaries and wages, such as social security, railroad retirement, and unemployment taxes; plus the self-employment (social security) tax imposed on "self-employment income."

NOTES: Refunds in Table 18 are associated with the taxes (including alcohol, tobacco, and firearms taxes) as described in footnotes 1-4, Table 17. Collections (or refunds) are those made during time periods indicated, regardless of the year or other period during which the tax liability was incurred (or to which the refund applied).

Collections represent the gross amounts before refunds and include amounts paid with the tax return; prior to filing the return (as applicable, income tax withheld by employers and estimated tax payments); and subsequent to filing the return (chiefly the result of initial return processing or of examination and enforcement activities).

Collections also include interest and penalties.

Refunds result chiefly from tax overpayments determined at time of filing a return. Also included are amounts subsequently determined as due the taxpayer as a result of an amended return or a claim for refund (including those produced by "net operating loss" and other carryback adjustments from future taxable years); or as a result of initial return processing or of IRS examination and other activities.

All refund data include interest paid by IRS (*in* 1995, \$2.6 billion, *in* 1994, \$3.1 billion, *in* 1993, \$2.1 billion; *in* 1992, \$3.2 billion; *in* 1991, \$2.8 billion; *in* 1990, \$2.4 billion; *in* 1989, \$0.5 billion; *in* 1988, \$0.4 billion; and, *in* 1987, \$0.4 billion).

For Fiscal Years 1988-1993, additional detail on manufacturers excise taxes, retail and special fuel taxes, and other taxes was available in the fourth quarter *Internal Revenue Report of Excise Taxes*; previously this information was published in the *Internal Revenue Service Annual Report*. For more recent years, see "Federal Excise Taxes, Fiscal Years 1994-1995," in this issue of the *Bulletin*. For more information about alcohol and tobacco taxes, see the Statistical Release, *Alcohol and Tobacco Tax Collections*, Bureau of Alcohol, Tobacco, and Firearms, U.S. Department of the Treasury.

SOURCE: U.S. Department of the Treasury, Internal Revenue Service, Assistant Commissioner (Taxpayer Services), Customer Service Branch.

### Table 19

- [1] Represents repayments to specific Federal agencies for debts, such as student loans, mortgage and loan foreclosures, dishonored checks, and overpayments of benefits. There was no refund offset program prior to Fiscal Year 1982.
- [2] After 1990, number of offsets includes adjustments for injured spouse claims filed with the original return.
- [3] Net amount collected after injured spouse claims and after processing of reversal claims; excludes fees charged by the Internal Revenue Service and Financial Management Service, U.S. Department of the Treasury.
- [4] Also includes repayments to the Public Health Service (starting with 1987) and to the Social Security Administration (for 1992 through 1994). Data for the Social Security Administration (SSA) are included under "All other" programs or agen-

## Notes to Selected Historical and Other Data Tables

cies starting with 1995, when SSA became an independent Federal agency, no longer affiliated with the Department of Health and Human Services. Therefore, data for the Department of Health and Human Services and "All other" programs or agencies are not comparable with previous years, starting with 1995.

- [5] Represents repayments to State treasuries for funds disbursed to families receiving State assistance.
- [6] Represents repayments to State treasuries for distribution to custodial parents.

SOURCE: U.S. Department of the Treasury, Internal Revenue Service, *Annual Report, Commissioner and Chief Counsel*, for Fiscal Years 1982 and 1983; for all other years, Assistant Commissioner (Taxpayer Services), Customer Service Branch.

**Table 20** - Not presented.

**Table 21**

- [1] Form 1040 is the long form, and Form 1040A, one of the two short forms. Prior to 1994, Form 1040EZ, the other short form, was for single taxpayers with no dependents; starting with 1994, certain married taxpayers with no dependents could also file on this form. Schedule C is for reporting non-farm sole proprietorship business income and deductions, and Schedule F is for reporting farm sole proprietorship income and expenses. The reported figures for total Forms 1040, 1040A, 1040EZ, and 1040PC, as well as totals for business and nonbusiness Form 1040 returns with Schedules C or F attached, all include "paper" returns plus "standard" electronically-filed (ELF) returns (usually filed by tax preparers) starting with 1986. Starting with 1992, these totals also include returns filed by telephone ("TeleFile"). Form 1040PC represents "paper" Form 1040, 1040A, or 1040EZ returns filed by taxpayers (or tax preparers) using an IRS-approved computer software-generated format, rather than a specific tax form. Calendar Year 1992 is the first for which this "form" applied. The last category under individual income includes Form 1040C (departing alien) in years before 1992; 1040NR (nonresident alien); 1040PR (self-employment tax, Puerto Rico); and 1040SS (self-employment tax, U.S. Virgin Islands, Guam, and American Samoa); but excludes Form 1040X (amended return).
- [2] Form 1120 is the basic corporation income tax

return; Form 1120A is the short form; and Form 1120S is for S Corporations (certain small companies electing to be taxed through their shareholders, no more than 35 shareholders starting with 1983, and no more than 10, for earlier years). "Other" includes Forms 1120F (most foreign companies with U.S. income); 1120L (life insurance companies) starting in 1992 (included in the statistics for Form 1120 in the earlier years); 1120.POL (certain political associations); 1120H (homeowners associations); 1120-FSC (Foreign Sales Corporations or FSC's) starting in 1986; starting in 1988, 1120-REIT for real estate investment trusts, 1120-RIC for regulated investment companies (both of which formerly filed on Form 1120), and 1120-PC for property and casualty insurance companies (which formerly filed on Form 1120 or 1120M, described below). "Other" also includes Form 1120 DF (for designated funds) starting in 1988; and for years before 1988, Form 1120M, now discontinued, for mutual non-life insurance companies which now file on Form 1120 or Form 1120-PC (and are included in the statistics for Form 1120 in the earlier years). "Other" excludes Forms 1120-DISC for Domestic International Sales Corporations or DISC's, discontinued after 1985 and mostly replaced by FSC's (see above); 1120 IC-DISC for Interest-Charge Domestic International Sales Corporations, which replaced certain DISC's after 1985; and 1120X, amended returns.

- [3] Form 1041 is the regular income tax return filed for estates and trusts. For 1988-1990, includes Form 1041S (short form). For 1970, includes Form 1041A (trust accumulation of charitable trust) information return.
- [4] Form 706 is the regular estate tax return; Form 706NA is for U.S. estates of nonresident aliens; Forms 706 GS(D) and 706 GS(T) are for estate tax returns for which the generation-skipping transfer tax applies.
- [5] Form 990 is for tax-exempt organizations, except private foundations (Form 990-PF). Form 990EZ is the short form. Form 990-T is the income tax return filed for businesses conducted by tax-exempt organizations. Form 990-C is for farmers' cooperatives. Form 4720 is for computing the special excise taxes applicable to certain private foundations and Form 5227 is for split-interest trusts treated as private foundations.

## Notes to Selected Historical and Other Data Tables

Revenue Service, Research Division, Projections and Forecasting Group.

### Table 22

- [1] Number of returns with a paid signature is based on different sources, depending on the year. Data for 1993 are based on the Statistics of Income sample. Data for 1989-1992 are from the Individual Master File of all individual income taxpayers, with the following exceptions: the number of returns with itemized deductions; and, starting with 1990, the number of returns filed electronically. These latter numbers were estimated from the Statistics of Income—Taxpayer Usage Study (TPUS) samples of returns filed during the first 4 months of the filing year, and, for 1992, from the full Statistics of Income sample of returns received throughout the entire filing year.
- [2] Data on electronically-filed returns are included in the counts of Form 1040 returns shown above in Table 22, for all years. For Tax Years 1990 and 1991, data are based on the TPUS samples (see footnote 1) of returns filed, extended to cover the first 8 months of the filing years. No adjustment was made for the returns filed after the first 8 months on the assumption that few were likely to

have been filed electronically during these months. Starting with Tax Year 1992, data are based on the full Statistics of Income samples of returns filed throughout the entire filing year.

- [3] Data on IRS taxpayer assistance programs are actually for the fiscal year. In general, assistance rendered in a given fiscal year may be associated with returns due on April 15th of that fiscal year and is, therefore, for the tax year ending with the previous December. As a result, data in Table 22 on taxpayer assistance, shown as for Tax Year 1994, for example, are actually for Fiscal Year 1995.

NOTE: Data on IRS assistance represent taxpayers contacts, unless otherwise indicated. Some taxpayers are contacted more than once. The number of taxpayers assisted (in contrast to the number of taxpayers contacted) is not known.

SOURCE: Data on paid preparers were obtained from Statistics of Income; and from the Corporate Systems Division, Individual Systems Branch. Data on IRS assistance were obtained from the *Internal Revenue Service Annual Reports* for Fiscal Years 1990 through 1992; and *Internal Revenue Service Data Book*, for 1993/1994 and 1995.

# SOI Sampling Methodology and Data Limitations

## Appendix

This appendix discusses typical sampling procedures used in most Statistics of Income (SOI) programs. Aspects covered briefly include sampling criteria, selection techniques, methods of estimation, and sampling variability. Some of the nonsampling error limitations of the data are also described, as well as the tabular conventions employed.

Additional information on sample design and data limitations for specific SOI studies can be found in the separate SOI reports (see the References at the end of this appendix). More technical information is available, upon request, by writing to the Director, Statistics of Income Division CP:R:S, Internal Revenue Service, P.O. Box 2608, Washington, DC 20013-2608.

### Sample Criteria and Selection of Returns

Statistics compiled for the SOI studies are generally based on stratified probability samples of income tax returns or other forms filed with the Internal Revenue Service (IRS). The statistics do not reflect any changes made by the taxpayer through an amended return or by the IRS as a result of an audit. As returns are filed and processed for tax purposes, they are assigned to sampling classes (strata) based on criteria such as: industry, presence or absence of a tax form or schedule, accounting period, State from which filed, and various income factors or other measures of economic size (total assets, for example, is used for the corporation and partnership statistics). The samples are selected from each stratum over the appropriate filing periods. Thus, sample selection can continue for a given study for several calendar years — 3 for corporations because of the prevalence of fiscal (non-calendar) year reporting. Because sampling must take place before the population size is known precisely, the rates of sample selection within each stratum are fixed. This means, in practice, that both the population and the sample size can differ from that planned. However, these factors do not compromise the validity of the estimates.

The probability of a return being designated depends on its sample class or stratum and may range from a fraction of 1 percent to 100 percent. Considerations in determining the selection probability for each stratum include the number of returns in the stratum, the diversity of returns in

the stratum and interest in the stratum as a separate subject of study. All this is subject to constraints based on the estimated cost or the target size of the total sample for the program.

For most SOI studies, returns are designated by computer from the IRS Master Files based on the taxpayer identification number (TIN), which is either the social security number (SSN) or the employer identification number (EIN). A fixed and essentially random number is associated with each possible TIN. If that random number falls into a range of numbers specified for a return's sample stratum, then it is selected and processed for the study. Otherwise, it is counted (for estimation purposes), but not selected. In some cases, the TIN is used directly by matching specified digits of it against a predetermined list for the sample stratum. A match is required for designation.

Under either method of selection, the TIN's designated from one year's sample are for the most part selected for the next year's, so that a very high proportion of the returns selected in the current sample are from taxpayers whose previous years' returns were included in earlier samples. This longitudinal character of the sample design improves the estimates of change from one year to the next.

### Method of Estimation

As noted above, the probability with which a return is selected for inclusion in a sample depends on the sampling rate prescribed for the stratum in which it is classified. Weights are, in general, computed by dividing the count of returns filed for a given stratum by the count of sample returns for that same stratum. "Weights" are used to adjust for the various sampling rates used — the lower the rate, the larger the weight. For some studies, it is possible to improve the estimates by subdividing the original sampling classes into "post-strata," based on additional criteria or refinements of those used in the original stratification. Weights are then computed for these post-strata using additional population counts. The data on each return in a stratum are multiplied by that weight. To produce the tabulated estimates, these weighted data are summed to produce the published statistical totals.

Sample returns are designated by computer from the IRS Master Files based on the taxpayer identification number.

Information for this appendix was compiled by Bettye Jamerson, Special Studies and Publications Branch, under the direction of Beth Kilss, Chief, Publications Section. Major contributions were made by Paul McMahon, Statistical Computing Branch.

## SOI Sampling Methodology and Data Limitations

### **Sampling Variability**

The particular sample used in a study is only one of a large number of possible random samples that could have been selected using the same sample design. Estimates

**In transcribing and tabulating data from tax returns, checks are imposed to improve the quality of the statistics.**

derived from the different samples usually vary. The standard error of the estimate is a measure of the variation among the estimates from all possible samples and is used to measure the precision with which an estimate from a particular sample approximates the average result of the pos-

sible samples. The sample estimate and an estimate of its standard error permit the construction of interval estimates with prescribed confidence that this interval includes the actual population value.

In SOI reports the standard error is not directly presented. Instead, the ratio of the standard error to the estimate itself is presented in percentage form. This ratio is called the coefficient of variation (CV). The user of SOI data may multiply an estimate by its coefficient of variation to recreate the standard error and to construct confidence intervals.

For example, if a sample estimate of 150,000 returns is known to have a coefficient of variation of 2 percent, then the following arithmetic procedure would be followed to construct a 68 percent confidence interval estimate:

$$\begin{aligned} & 150,000 \text{ (sample estimate)} \\ & \times 0.02 \text{ (coefficient of variation)} \\ & = 3,000 \text{ (standard error of estimate)} \end{aligned}$$

then:

$$\begin{aligned} & 150,000 \text{ (sample estimate)} \\ & + or - 3,000 \text{ (standard error)} \\ & = \{147,000, 153,000\} \text{ (68 percent confidence interval).} \end{aligned}$$

Based on these data, the interval estimate is from 147 to 153 thousand returns. This means that the average estimate of the number of returns lies within an interval computed in this way. Such an estimate would be correct for approximately two-thirds of all possible samples similarly selected. To obtain this interval estimate with 95 percent confidence, the standard error should be multiplied by 2 before adding to and subtracting from the sample estimate. (In this particular case, the resulting interval would be from 144 to 156 thousand returns.)

Further details concerning sample design, sample selection, estimation method, and sampling variability for a particular SOI study may be obtained on request by writing the Director, Statistics of Income Division, at the address given above.

### **Nonsampling Error Controls and Limitations**

Although the previous discussion focuses on sampling methods and the limitations of the data caused by sampling error, there are other sources of error that may be significant in evaluating the usefulness of SOI data. These include taxpayer reporting errors, processing errors, and effects of an early cut-off of sampling. More extensive information on nonsampling error is presented in SOI reports, when appropriate.

In transcribing and tabulating the information from the returns or forms selected for the sample, checks are imposed to improve the quality of the resultant estimates. Tax return data may be disaggregated or recombined during statistical "editing" in order both to improve data consistency from return to return and to achieve definitions of the data items that are more in keeping with the needs of major users. In some cases not all of the data are available from the tax return as originally filed. Sometimes the missing data can be obtained through field follow-up. More often, though, they are obtained through imputation methods. As examples, other information in the return or in accompanying schedules may be sufficient to enable an estimate to be made; prior-year data for the same taxpayer may be used for the same purpose; or data from another return for the same year that has similar characteristics may be substituted. Research to improve methods of imputing data that are missing from returns continues to be an ongoing process [1].

Quality of the basic data abstracted from the returns is subjected to a number of quality control steps including 100-percent key verification. The data are then subjected to many tests based on the structure of the tax law and the improbability of various data combinations. Records failing these tests are then subjected to further review and any necessary corrections are made. In addition, the Statistics of Income Division in the National Office conducts an independent reprocessing of a small subsample of statistically-processed returns as a further check [2].

Finally, before publication, all statistics are reviewed

# SOI Sampling Methodology and Data Limitations

for accuracy and reasonableness in light of provisions of the tax laws, taxpayer reporting variations, as well as limitations, economic conditions, comparability with other statistical series, and statistical techniques used in data processing and estimating.

## Tabular Conventions

Estimates of frequencies and money amounts that are considered unreliable due to the small sample size on which they are based are noted in SOI tables. The presence of the indicator means that the sampling rate is less than 100 percent of the population and that there are fewer than 10 sample observations available for estimation purposes.

A dash in place of a frequency or amount indicates that no sample return had that characteristic. In addition, a dash in place of a coefficient of variation for which there is an estimate indicates that all returns contributing to the estimate were selected at the 100-percent rate.

Whenever a weighted frequency in a data cell is less than 3, the estimate is either combined with other cells or deleted in order to avoid disclosure of information about individual taxpayers or businesses. These combinations and deletions are indicated in the tables.

## Notes

- [1] See, for example, Hinkins, Susan M., "Matrix Sampling and the Effects of Using Hot Deck Imputation," in *1984 Proceedings of the American Statistical Association, Section on Survey Research Methods*. Other research efforts are included in *Statistical Uses of Administrative Records: Recent Research and*

*Present Prospects*, Volume 1, Internal Revenue Service, March 1984.

- [2] Quality control activities for all SOI studies are published from time to time in a series of separate reports. These reports provide detailed information relating to quality in all phases of SOI processing.

# SOI Projects and Contacts

General Statistical Information: (202) 874-0410 Fax: (202) 874-0964

Project	Primary Analysts	Frequency and Program Content
<b>Americans Living Abroad:</b> 1996 Program	Jeff Curry	This periodic study is conducted every 4 years (every 5 years, after 1991). It covers foreign income and taxes paid, and foreign tax credit shown on individual income tax returns. Data are by size of adjusted gross income and country.
<b>Corporation Foreign Tax Credit:</b> 1993 Program 1994 Program 1995 Program	Bill States Robin Robison Maggie Lewis	This annual study provides data on foreign income and taxes paid and foreign tax credit reported on corporation income tax returns. Data are classified by industry and country.
<b>Corporation Income Tax Returns:</b> 1993 Program 1994 Program 1995 Program	Ellen Legel Glenn Hentz Paula Miller Nina Shumofsky Patty Treubert John McGrath	Basic data are produced annually and cover complete income statement, balance sheet, tax, and tax credits, and detail from supporting schedules. Data are classified chiefly by industry group or asset size.
<b>Environmental Excise Taxes (Superfund) Study:</b> 1995 Program 1996 Program	Sara Boroshok	The Superfund Amendments and Reauthorization Act of 1986 (SARA) replaced the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA), authorizing the collection of environmental taxes, a type of excise tax. This study, published annually, is the only source of data that provides detailed tabulations by type of chemical.
<b>Estate Tax Returns:</b> 1992-1994 Program 1995-1997 Program	Barry Johnson Martha Eller	This annual study includes information on gross estate and its composition, deductions, and tax; and information on the age, sex, and marital status of the decedents. Basic estate tax return data by year in which returns are filed are produced every year. Also included are data on nonresident aliens who had more than \$60,000 of assets in the United States. Other statistics are available on a year-of-death basis (approximately every 3 years). The most recent study is based on decedents who died in 1992 with returns filed in 1992-94.
<b>Exempt Organizations Business Income Tax Returns:</b> 1993 Program 1994 Program	Peggy Riley	This annual study includes tabulations of "unrelated business" income and deductions for organizations classified as tax-exempt under the Internal Revenue Code.
<b>Foreign Controlled Corporations:</b> 1993 Program 1994 Program	Dan Holik Michael Seiders	This study includes data on transactions between U.S. corporations and their foreign owners. Data are classified by country and industry. This study will be done biennially after 1994.

## SOI Projects and Contacts

**General Statistical Information: (202) 874-0410 Fax: (202) 874-0964**

<b>Project</b>	<b>Primary Analysts</b>	<b>Frequency and Program Content</b>
<b>Foreign Corporations:</b> 1993 Program 1994 Program 1995 Program	Maggie Lewis Kathryn Green Randy Miller	This annual study (as of 1992) provides data on activities of foreign corporations that are controlled by U.S. corporations. Data are classified by industry and country.
<b>Foreign Recipients of U.S. Income:</b> 1994 Program	Denise Freites	This annual study provides data by country on income paid to nonresident aliens and the amount of tax withheld for the U.S. Government.
<b>Foreign Sales Corporations (FSC):</b> 1992 Program 1996 Program	Dan Holik	These corporations replaced the Domestic International Sales Corporation, or DISC, as of 1985. Balance sheet, income statement, and export-related data are tabulated annually through 1987, and then on a 4-year cycle after 1992.
<b>Foreign Trusts:</b> 1994 Program	Robin Robison	This periodic study, conducted every 4 years, provides data on foreign trusts that have U. S. persons as grantors, transferors, or beneficiaries. Data include country where trust was created, value of transfer to the trust, and the year the trust was created.
<b>Individual Income Tax Return Public Use File</b>	Mario Fernandez	Microdata magnetic tape files, produced annually, contain detailed information obtained from the individual statistics program, with identifiable taxpayer information omitted to make the file available for public dissemination, on a reimbursable basis. (In addition to microdata files, specific tabulations from them are produced, also on a reimbursable basis.)
<b>Individual Income Tax Returns:</b> 1993 Program 1994 Program 1995 Program	Michael Strudler Marty Shiley	Basic data are produced annually and cover income, deductions, tax, and credits reported on individual income tax returns and associated schedules, chiefly by size of adjusted gross income.
<b>Interest-Charge Domestic International Sales Corporations (IC-DISC):</b> 1991 Program 1996 Program	Dan Holik	These corporations replaced the Domestic International Sales Corporation, or DISC, as of 1985. Balance sheet, income statement, and export-related data are tabulated annually through 1987; thereafter, on a 4-year cycle.

## SOI Projects and Contacts

**General Statistical Information: (202) 874-0410 Fax: (202) 874-0964**

<b>Project</b>	<b>Primary Analysts</b>	<b>Frequency and Program Content</b>
<b>International Boycott Participation:</b> 1994 Program 1995 Program	Denise Freites	This study provides data on business operations of U.S. persons in boycotting countries, as well as the requests and agreements to participate in, or cooperate with, international boycotts not sanctioned by the U.S. Government.
<b>Migration Flow and County Income Data</b>	Emily Gross	Migration flow data (based on year-to-year changes in individual income tax return addresses) and county or State income data are available annually on a reimbursable basis. The most recent data are for 1993-94.
<b>Nonprofit Charitable and Other Organizations:</b> 1993 Program 1994 Program	Cecelia Hilgert	This annual study includes balance sheet and income statement data for organizations classified as tax-exempt under subsections 501(c)(3)-(9) of the Internal Revenue Code.
<b>Occupation Studies</b>	Terry Nuriddin	This periodic study, based on availability of outside funding, is designed to classify individual income tax returns by occupation and to develop a dictionary of occupation titles that can be used to enhance the economic data of many other individual income tax return studies.
<b>Partnership Returns of Income</b>	Tim Wheeler	Basic data, produced annually, cover income statement, balance sheet, and details from supporting schedules. Data are classified chiefly by industry group.
<b>Partnership Withholding Study:</b> 1994 Program	Chris Carson	This annual study includes data on U.S. partnership payments to foreign partners. Data are classified by country and recipient type.
<b>Personal Wealth Study:</b> 1992 Program	Barry Johnson Martha Eller	This periodic study provides estimates of personal wealth of top wealthholders that are generated from estate tax return data using the "estate multiplier" technique, in conjunction with both filing-year and year-of-death estate data bases. The most recent data (1992) are based on returns filed from 1992 to 1994.
<b>Private Foundations:</b> 1993 Program 1994 Program	Paul Arnsberger	This annual study includes balance sheet and income statement data for private foundations and charitable trusts filing a Form 990-PF. For the 1994 program only, the study was based on the entire population of Form 990-PF returns.

## SOI Projects and Contacts

**General Statistical Information: (202) 874-0410 Fax: (202) 874-0964**

<b>Project</b>	<b>Primary Analysts</b>	<b>Frequency and Program Content</b>
<b>S Corporations</b>	Amy Gill Susan Wittman	Annual study data are collected for the income statement, balance sheet, and from supporting schedules. Data are classified by industry group or by asset size.
<b>Sales of Capital Assets:</b> 1985 Program 1985-1995 Panel Study	Barbara Livingston Janette Wilson Laura Prizzi	This periodic study provides detailed data on the sales of capital assets reported on Schedule D of the individual income tax return, sales of residences, and personal or depreciable business property.  A panel study provides the same data on capital asset transactions for a subsample of the returns in the Sales of Capital Assets basic study, over a period of years.
<b>Sales of U.S. Real Property Interests by Foreign Persons:</b> 1995 Program	Chris Carson	This annual study will provide data on transfers of U.S. real property interests, when these interests are acquired from foreign persons. Data include the amount realized on transfers, U.S. tax withheld, and the country of foreign persons.
<b>Sole Proprietorships:</b> 1993 Program 1994 Program 1995 Program	Michael Strudler	Basic data, produced annually, cover business receipts, deductions and net income reported on Schedule C (for nonfarm proprietors), by industry group. Similar data from Schedule F (for farmers) are available on an occasional basis.
<b>State Data:</b> 1985 Program 1988 Program	Mario Fernandez	Special tabulations of selected individual income, deduction, and tax data by State are produced on a reimbursable basis. (The data file for 1988 is the most recent.)
<b>Statistical Subscription Services:</b> Corporation Source Book	Sandy Byberg	Annual data by more detailed industry groups than are used for the regular corporation statistics are produced by asset size.
<b>Tax-exempt Bond Issues:</b> 1992-1994 Program	Marvin Schwartz	This annual study provides information on private activity and governmental bond issues by type of property financed, size of face amount, and State.
<b>Taxpayer Usage Study:</b> 1995 Program	Mike Weber	Basic data, produced annually, provide weekly frequencies of specific line entries made by taxpayers, the use of various return schedules and associated forms, and general characteristics of the individual taxpayer population for returns received during the primary filing season (January through April).
<b>U.S. Possessions Corporations:</b> 1993 Program 1995 Program	Randy Miller	This periodic study, planned for every 2 years, provides data on income statements, balance sheets, tax, and "possessions tax credit" for "qualifying" U. S. possessions corporations. (Most of these corporations are located in Puerto Rico.)

## Compendiums

### Studies of Tax-Exempt Organizations, 1974-1987

Publication 1416 – Price \$26.00

This publication presents 22 articles from Statistics of Income studies on tax-exempt organizations. The articles emphasize important issues within the nonprofit sector, and also include several other articles previously unpublished in the *SOI Bulletin*, as well as papers published in proceedings of the American Statistical Association and the Independent Sector Research Forum. Topics featured are:

- nonprofit charitable organizations (primarily charitable, educational, and health organizations);
- private foundations and charitable trusts; and
- unrelated business income of exempt organizations.

### Studies of Tax-Exempt Organizations, 1986-1992

Publication 1416 – Price \$26.00

This is the second volume in a series of Statistics of Income (SOI) publications on tax-exempt, nonprofit organizations. The volume includes data covering 1986-1992 and contains 12 previously-published articles from SOI studies, including articles from the *SOI Bulletin*, as well as papers prepared for the *Journal of Nonprofit Management and Leadership*, *Trusts and Estates*, the Independent Sector Research Forum, the National Research Council's Committee on National Statistics, and the American Statistical Association.

### Studies of International Income and Taxes, 1984-1988

Publication 1267 – Price \$26.00

This report presents information from 13 Statistics of Income studies in the international area (many of them previously published in the *SOI Bulletin*), including:

- foreign activity of U.S. corporations;
- activity of foreign corporations in the United States;
- foreign controlled U.S. corporations;
- statistics related to individuals, trusts, and estates; and
- data presented by geographical area or industrial activity, as well as other classifiers.

### Compendium of Federal Estate Tax and Personal Wealth Studies

Publication 1773 – \$26.00

Part I of this report focuses on data from estate tax returns, describing decedents, their beneficiaries, and the composition of their estates. It contains a methodological discussion of the strategy used in weighting the sample data for the estate studies and also statistics on selected components of decedents' estates, 1916-1990. Information on charitable giving is also included.

Part II presents a series of articles describing the estate-multiplier technique and its applications for personal wealth estimates, estimates of personal wealth for selected years, 1962-1989, as well as a discussion of the relationship among realized income, wealth, and well-being.

# Publications & Tapes

## Reimbursable Services

### Corporation Source Book, 1993

*(Publication 1053 — Price \$175)*

This 511-page document presents detailed income statement, balance sheet, tax, and selected other items, by major and minor industrial groups and size of total assets, for all returns and separately for returns with net income. The report, which underlies the *Statistics of Income-Corporation Income Tax Returns* publication, is part of an annual series and can be purchased in its entirety or by page. (The Source Book is also available on 35mm microfilm for \$175. Issues prior to 1982 are for sale at \$150 per year.) A magnetic tape or diskette containing the tabular statistics for 1993 can be purchased for \$1,500.

### Public-Use Magnetic Tape Microdata Files

*(Price depends on the request.)*

This includes individual income tax returns for 1979-1992. A limited number of files for 1989 are also available on CD-ROM. (Individual income tax returns for 1966-1978 are available for sale by writing to the Center for Electronic Records (NNX) of the National Archives and Records Administration, Washington, DC 20408.) Files containing more limited data for each State are also available for 1985 and 1988. All of these files have been edited to protect the confidentiality of individual taxpayers. Files for private foundations for 1982-1983 and 1985-1991 and nonprofit charitable organizations for 1982-1983 and 1985-1990 are also available from Statistics of Income. The individual, private foundation, and charitable organization files are the only microdata files that can be released to the public.

### Migration Data

*(Price depends on the request.)*

Compilations are available showing migration patterns, from where to where, by State and county, based on year-to-year changes in the individual income tax return address. Data are also available for selected time periods (according to the years in which the returns were filed) between 1978 and 1994 and include counts of the number of returns and the number of personal exemptions (which can be used to approximate population). Tabulations are available as hard copy for all years, on magnetic tape for all years except 1983, and diskette starting with 1989.

(Compilations showing State-to-State migration flows only are also accessible through the SOI electronic bulletin board starting with 1988; see next page.)

### County Income Data

*(Price depends on the request.)*

Tables present adjusted gross income by source and number of personal exemptions (which can be used to approximate population) reported on individual income tax returns for Income Years 1982 and 1984 through 1993. Data are available as hard copy or on magnetic tape for each year, or on diskette starting with 1988. (County income data starting with 1990 are available on the SOI electronic bulletin board; see next page.)

### ZIP Code Area Data

*(Price depends on the request.)*

Recent statistics are available for Income Year 1991 only, either on computer tape or diskette, showing the number of individual income tax returns, the number of personal exemptions (which can be used to approximate population), adjusted gross income, and income tax, by 5-digit ZIP Code.

### Other Unpublished Tabulations

*(Price depends on the request.)*

Unpublished tabulations are also available, including detailed tables underlying those published in the *SOI Bulletin*. Special tabulations may also be produced, depending on the availability of resources.

### Other Publications

The following Statistics of Income publications are available from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC, by calling (202) 512-1800. The reports may also be obtained by using the order form following this section or write:

Superintendent of Documents  
P. O. Box 371954  
Pittsburgh, PA 15250-7954.

If you determine from the Government Printing Office that any of the next three items is out-of-print, please telephone the Statistical Information Services Office on (202) 874-0410, for assistance.

## Publications & Tapes

### **Statistics of Income (SOI) Bulletin**

*Quarterly, Publication 1136, Stock No. 748-005-00000-5  
Subscription price, \$30.00; Single copy price, \$15.00*

This series provides the earliest published financial statistics from individual and corporation income tax returns. The *Bulletin* also includes annual data on nonfarm sole proprietorships and on partnerships, as well as from periodic or special studies of particular interest to tax analysts and administrators and to economists. Historical tables include data from SOI, as well as on tax collections and refunds by type of tax.

### **Statistics of Income - 1993, Corporation Income Tax Returns**

*Publication 16, Stock No. 048-004-02369-5  
Price \$19.00*

This report presents data on corporation income tax returns with accounting periods that ended July 1992 through June 1993, that are more comprehensive than those published earlier in the *SOI Bulletin*.

Presents information on: Data are classified by:  

- receipts;
- deductions;
- net income;
- taxable income;
- income tax;
- tax credits;
- assets; and
- liabilities.

- industry;
- accounting period;
- size of total assets; and
- size of business receipts.

### **Statistics of Income - 1993, Individual Income Tax Returns**

*Publication 1304, Stock No. 048-004-02339-3  
Price \$14.00*

This report presents more comprehensive and complete data on individual income tax returns for 1993 than those published earlier in the *SOI Bulletin*.

Presents information on: Data are presented by:  

- sources of income;
- exemptions;
- itemized deductions; and
- tax computations.

- size of adjusted gross income; and
- marital status.

The following Statistics of Income publication is available from the Statistics of Income Division by writing to the Director at the address shown at the beginning of this section.

### **Turning Administrative Systems Into Information Systems - 1995**

*Publication 1299 - Free of Charge*

This report is the fourth edition of the IRS' methodology reports series, which documents technological and methodological changes in Statistics of Income programs and other related statistical uses of administrative records.

Previous volumes in the series were called *Statistics of Income and Related Administrative Record Research*.

This year's compilation has been divided into five major sections, each focusing on a somewhat different area of research:

- description of SOI's migration data;
- sample designs and redesigns;
- weighting and estimation research;
- analytical approaches to quality improvement;
- and
- record linkage applications for health care policy.

### **SOI Electronic Bulletin Board**

Since June 1992, over 1,150 files have been added to the SOI electronic bulletin board system (BBS) and are available for access. They include data from recent *SOI Bulletin* publications for returns covering individuals, corporations, partnerships, sole proprietorships and estates. The BBS also contains files on personal wealth and international topics, such as foreign tax credits and Controlled Foreign Corporations, as well as tax collections and refunds from the IRS administrative system.

**Electronic Bulletin Board Numbers:**  
(202) 874-9574 (Analog - Most Users)

Systems Administrator: Jim Willis (202) 874-0277  
Systems Coordinator: Jim Hobbs (202) 874-0268.

# *Announcing Latest IRS Report of Corporation Income Tax Statistics*

*Statistics of Income — 1993, Corporation Income Tax Returns*, Publication 16, is an annual report which provides aggregate corporate statistics on the following:

- receipts
- deductions
- net income
- taxable income
- tax credits
- income tax
- assets, and
- liabilities.

These items are formatted in tables and categorized by industry, size of total assets, size of business receipts, size of income tax after credits, by accounting period ended, and by other selected variables. The data are based on a stratified random sample of approximately 87,500 unaudited returns in the Forms 1120 series, selected from nearly 4 million active corporate returns filed for the 1993 Income Year — defined to include accounting periods which ended between July 1993 and June 1994. They provide unique information on corporation income and taxes for economic research and analysis.

The 230-page report is available for sale (\$19) through the Government Printing Office — Publication 16, stock number 048-004-02369-5. If this (or any other) SOI report is out of print, contact SOI's Statistical Information Services Office — at (202) 874-0410 — for assistance.

# Census Catalog and Guide: 1996

The U.S. Census Bureau announces its 315-page One-Stop Guide to all kinds of statistics!

It provides the detail you'll need to choose the right products. And it covers everything from the Census Bureau, mid-1993 through 1995 — plus tells how to get free monthly updates!

## Want More?

You'll find thousands of phone numbers and addresses for easy access to information and assistance. Why pass up help—State or local, public or private?

Also, the catalog guides you to online data, CD-ROM's, printed reports, floppy disks, and computer tape from:

- 1992 Economic Census
- Current Surveys of Population and Housing

Plus all our other topics too—

- Agriculture
- Business
- Communications
- Construction
- Finance
- Foreign Trade
- Geography
- Governments
- Insurance
- International
- Manufacturing
- Mineral Industries
- Real Estate
- Transportation
- Utilities
