By Barry W. Johnson*

There were an estimated 45,800 U.S. citizens who died in 1986 with gross estates above \$500,000. These decedents made up almost 2.2 percent of the total U.S. decedent population for 1986 and had a combined total gross estate of over \$66 billion [1]. Their executors claimed over \$30 billion in allowable deductions. Just under half of these returns (or 22,000) were taxable, reporting a tax liability that totalled almost \$6.3 billion (see Figure A).

1986 Decedents: Number of Returns by Sex and Tax Status

Number of Returns (Thousands)

BACKGROUND

The Internal Revenue Service's Statistics of Income Division (SOI) samples estate tax returns in order to evaluate the effects of tax policies and to provide annual estimates of the financial characteristics of estate tax filers. Currently, an estate tax return can be filed up to 9 months after a decedent's death; a six month extension is available beyond that. Thus, returns for a particular year of death may be filed over a period of several years. This means that the sample must span several years if estimates of a specific year of death are desired.

Year of death estimates are desirable for several reasons. Because of filing extensions and other delays, returns filed in any given year can represent decedents who died in many different years. This means that the estate tax return data for a filing year can reflect different economic and tax law conditions. By concentrating on a single year of death, these limitations can be overcome, making it possible to study the data in the context of a single time period.

This article presents data from returns filed in 1986-1988, focusing on 1986 as the year of death. Data for each of these filing years are also presented to facilitate comparisons with past SOI data, which presumed that filing year data were, in general, for decedents who had died the previous year. The main objective of the analysis, however, is to present an accurate portrayal of the estates of decedents who died in a specific year, 1986, regardless of when returns for their estates were filed [2].

History of the Estate Tax

The modern estate tax has been in effect since 1916. Estate and inheritance taxes, however, had been instituted periodically before this, usually to raise revenue during wartime. The estate tax is a tax on the transfer of assets from the decedent rather than on the value of assets inherited by a decedent's beneficiaries. The purpose of the tax is to raise revenue and to redistribute wealth in order to prevent the concentration of wealth [3]. While rates and filing requirements have varied since its inception, there

^{*}Foreign Special Projects Section. Prepared under the direction of Michael Alexander, with assistance from Marvin Schwartz, Elizabeth Nelson, and Louise Woodburn.

have been relatively few changes in the structure of the estate tax. Some modifications to the law have included a deduction for bequests to the surviving spouse and allowing for alternate valuation of assets should their value decrease shortly after death [4].

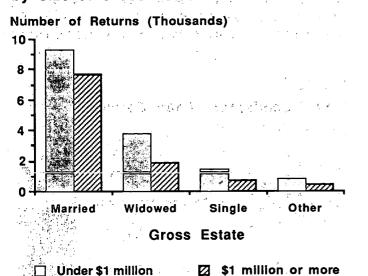

The most recent changes to the tax rates and filing requirement were due to the Economic Recovery Tax Act of 1981. This Act provided for increasing the filing requirement from \$175,000 in 1981 to \$600,000 by 1987. The top tax rate was to be lowered from 70 percent to 50 percent by 1985. Subsequent tax law changes have sustained a maximum rate of 55 percent until 1993. (For a more detailed summary of estate tax law changes, see Appendix I.)

1986 DECEDENTS

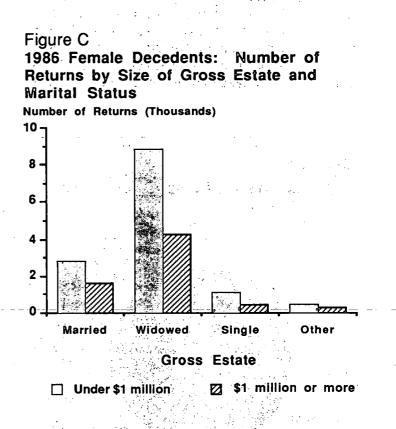

Males accounted for about 57 percent of the estate tax returns filed for 1986 decedents. The majority of these men were married, nearly half of whom had gross estates of \$1 million or more (see Figure B). In fact, the average size of a married male decedent's gross estate was \$1,715,216. Only 36 percent of returns filed for all male decedents showed any estate tax; as a group, they accounted for about 45 percent of the total tax reported.

Figure B

1986 Male Decedents: Number of Returns by Size of Gross Estate and Marital Status

The majority of female decedents, on the other hand, were widowed (see Figure C). Although as a group women made up only 43 percent of the total 1986 estate tax population, 64 percent of their returns were taxable. Women accounted for almost 55 percent of the total estate tax reported, although their estates accounted for only 38 percent of the aggregate gross estate for 1986.

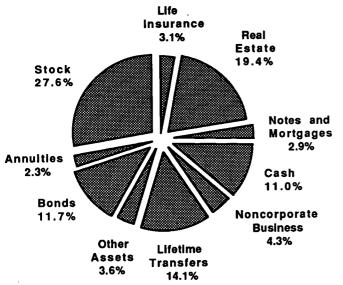

It is not surprising that the majority of female decedents were widowed, given that women in general have longer life expectancies than their male counterparts. The majority of married decedents leave the bulk of their estates to their spouses, thereby deferring some or all of the estate taxes until the death of the surviving spouses. Therefore, it is understandable that widowed female decedents would bear a larger share of the tax burden. It is interesting, however, that the average size of their estates was \$1,265,472, considerably lower than that of married male decedents. In fact, only about a third of widowed women had gross estates of \$1 million or more, again, far fewer than married men. It is not likely that these differences can be attributed entirely to consumption of the estate due to normal living expenses. This suggests (1) that many married men leave substantial bequests to survivors other than their spouse, and (2) that widowed women may be inclined to pass on property through gifts during their lifetime, rather than waiting until their deaths.

Assets

Overall, corporate stock, including the value of stock in closely held corporations, made up the largest portion of the total gross estate of 1986 decedents, almost 28 percent (see Figure D). Real estate was the second largest asset type, accounting for about 19 percent of gross estate. Lifetime transfers (for a definition, see Appendix II), bonds, and cash, in that order, accounted for substantial portions of the remaining gross estate for 1986 decedents.

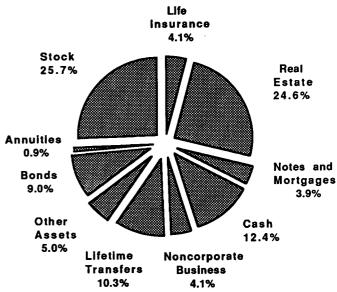

Figure D 1986 Decedents: Composition of Total Gross Estate

A comparison of 1986 decedent data with data for 1982 decedents shows that the value of corporate stock, as a percentage of gross estate, has been almost constant (see Figure E) [5]. The value of real estate, however, decreased significantly between these two years. The decline in real estate for 1986 seems to have been offset by an increase in bond holding, specifically in tax-free municipal bonds, and in annuities, which include individual retirement arrangements (IRA's), Keogh self-employed retirement plans, and other tax deferred retirement instruments. Taxable transfers of property during the decedent's life also increased significantly. It is also interesting to note that the principal asset type for decedents with less than \$1 million in gross estate, in both years, was real estate, not stock.

Figure E

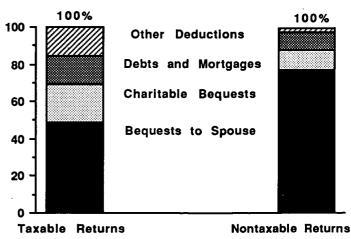

1982 Decedents: Composition of Total Gross Estate

Deductions

The largest single deduction for 1986 decedents was for bequests to the surviving spouse. Under the current law, the executors of an estate for a decedent dying after 1981 can take an unlimited deduction from total gross estate for assets left to the surviving spouse. This deduction accounted for about 78 percent of the total allowable deductions for estates with no tax liability, and for almost 50 percent of the deductions for taxable estates (see Figure F). Bequests to charities were the second most significant

deduction, accounting for 10 percent of allowable deductions for nontaxable returns and 20 percent for taxable. Estates with no tax liability gave more (as a percentage of their gross estates) to charities (7.5 percent) than did taxable estates (5.2 percent). Overall, decedents with larger gross estates, regardless of their tax status, tended to give a larger percentage of their assets to charities.

Alternate Valuation

調 ポワ あしょうさいやくさく

Sauge States in the

Estate tax law allows for the valuation of assets at their value up to six months after the date of death if there is a decline in the value of some assets immediately following the decedent's death. (For a definition, see Appendix II.) Figure G shows data for all returns filed between 1986 and 1988, which include decedents who died in several different years. For 1986 decedents, 2,441 estates, or 5.4 percent, chose to use alternate valuation. The result was a decrease in the estate tax after credits from \$912 million to \$838 million, a savings of about 8 percent [6].

. • • • •

Because this analysis is limited to only those returns filed between 1986 and 1988, these data represent only a portion of those dying in 1987. However, even this advanced look at 1987 decedents shows that a much greater number of these estates (about 16 percent of those returns filed) elected alternate valuation. The use of alternate valuation for these decedent's returns caused reductions in their aggregate gross estate and estate tax after credits which were considerably higher than the corresponding reductions in the other years. This is almost certainly attributable to the dramatic decline in stock values which occurred in October of that year.

· · · ;;

FILING YEAR DATA

Although data by year of death are clearly superior for many applications, data by filing year are not without merit. One of the chief benefits of filing year data is that they are available relatively quickly, unlike year of death data, which must be gathered over a period of several years. Availability of data on a timely basis is particularly important for tax administration and for analyzing the effects of changes in tax policies. Given that about two-thirds of the returns filed in a particular year are for decedents who died in the previous year, filing year data can be easily adapted for this type of analysis.

In 1988, almost 41,000 estate tax returns were filed; their combined total gross estate was about \$69 billion. This was nearly 27 percent more than the number of filers and combined gross estate reported in 1986 (see Figure H).

Converting all figures to 1986 dollars to adjust for the effects of inflation shows a true increase over this period of 16 percent in both the number of filers and size of gross estate [7]. Total deductions increased by about 15 percent. Estate tax before credits was over \$13 million in 1988, almost 18 percent higher than 1986. However, for the same period, estate taxes after credits fell nearly 6 percent. The drop in tax liability may be due, in part, to an increase in the unified credit during this period from \$121,800 for those dying in 1985 (filed mainly in 1986), to 192,800 for those dying after 1986 (see Appendix I).

SUMMARY

.

While the number of U.S. decedents with gross estates above \$600,000 (the filing requirement after

1986) increased over the period 1986-1988, along with the size of their aggregate total gross estate, the estate tax actually declined in real terms. For 1986 decedents, males, most of whom were married at the time of death, outweighed females both in terms of the number of filers and overall size of gross estate. Female decedents, however, most of whom were widowed, accounted for a larger share of the tax. Real estate was the most significant asset for decedents with less than \$1 million in total gross estate, but corporate stock supplanted it for wealthier decedents. The bequest to the surviving spouse was the largest deduction and was used by many executors to defer much or all of the tax owed on an estate until the death of the other married partner.

DATA SOURCES AND LIMITATIONS

The data presented in this article are estimates based on samples of returns filed in 1986, 1987, and 1988. These samples were limited to returns filed for decedents dying after 1981 with total gross estates of at least \$500,000. The sample for the 1986 filing year included 4,575 returns out of a total population of 42,172. In 1987, the year most returns for 1986 decedents were filed, 11,257 returns were sampled out of a total of 45,119. There were 5,437 returns out of 43,683 sampled during the 1988 filing year. The combined 1986-1988 sample contained 13,694 returns filed for 1986 decedents.

Sample Design

Estate tax returns were statistically sampled while the returns were being processed for administrative purposes, but before any audit examination. Thus, returns were selected on a flow basis using a stratified random probability sampling method, whereby the sample rates were preset based on the desired sample size and an estimate of the population. Current plans for estate tax statistics are based on recurring cycles of 3 or 4 years, focusing on years of death ending in 2, 6, and 9 every decade (1982, 1986, 1989, ...), so that returns filed in consecutive years are combined to produce statistics for those specific years of death.

This structure accommodates the filing requirements which allow an estate to file an estate tax return up to 9 months after the decedent's death, although an additional 6 month extension is often attainable. Thus, the return for a decedent who died in December 1986 might not be timely filed until March 1988. The sample focuses on year of death rather than filing year to parallel the effective dates of tax law changes. Estate tax data based on year of death can also be more accurately used as the basis for computing wealth estimates of the living population by using the Estate Multiplier Technique [8]. Data gathered during the 1986-1988 filing years focus on 1986 decedents. Additionally, they can be used to estimate the financial characteristics of those filing in each of these three years.

Stratification Variables

Estate tax return data are collected using a stratified sample, the basic nature of which has not changed since it was first implemented in 1982. The design has three stratification variables: year of death, age at death and total gross estate. For the 1986-1988 filing years, the year of death variable is separated into 2 categories: 1986 year of death and non-1986 year of death. Age was broken down into four categories: under 40, 40 under 50, 50 under 65, and 65 and older (including age unknown). Total gross estate was limited to three categories: \$500,000 under \$1 million, \$1 million under \$5 million, and \$5 million or more. The non-1986 portion of the sample included only those decedents dying after 1981 with total gross estates of \$500,000 or more. Sampling rates ranged from 7 to 100 percent [9].

1986 Decedent Population Estimates

An examination of year of death by filing year for returns filed from 1982 through 1988 revealed that almost 99 percent of all returns for decedents dying in a given year are filed by the end of the second calendar year following the year of death. Further, the decedent's age at death and the length of time between the decedent's date of death and the filing of an estate tax return are related. It was therefore possible to adjust the sample weights of the 1986 decedents within age group to account for returns not filed within a 3 year period and, thus, unavailable for this sample.

Limitations

Because the data in this article are estimates based on samples, they are subject to sampling as well as nonsampling error. In order to use the statistical data properly, the magnitude of the potential sampling error should be considered. Estimates of the coefficients of variation (CV's) for frequency estimates can be obtained by writing the author at the following address:

APPENDIX I

TAX LAW CHANGES, 1981-1987

The data reported in this article have been influenced by three major pieces of tax legislation: the Economic Recovery Tax Act of 1981, the Tax Reform Act of 1986, and the Revenue Act of 1987.

Economic Recovery Tax Act of 1981

Changes in estate tax law as a result of the Economic Recovery Tax Act of 1981 applied to decedents who died after December 31, 1981. The major tax law change resulting from this Act was a gradual increase in the unified credit (see Appendix II), from \$47,000 in 1981 to \$192,800 by 1987. This had the effect of gradually increasing the filing requirement from \$175,000 to \$600,000. Figure I gives the filing requirements and associated unified credits for each of the years of death included in the 1986-1988 SOI sample.

This Act also abolished limits on the allowable

Figure I.—Unified Credit and Filing Requirements, by Year of Death

| Year of death | Unified credit | Filing requirement | | |
|---------------------|----------------|--------------------|--|--|
| 1982 | \$ 62,800 | \$225,000 | | |
| 1983 | 79,300 | 275.000 | | |
| 1984 | 96,300 | 325,000 | | |
| 1985 | 121.800 | 400,000 | | |
| 1986 | 155.800 | 500,000 | | |
| 1987 and thereafter | 192,800 | . 600,000 | | |

deduction for assets bequeathed to the surviving spouse, such that, all assets could be transferred to the spouse tax free. Additionally, the maximum estate tax rate was reduced from 70 percent on net (taxable) estate in excess of \$5 million in 1981, to 50 percent on net (taxable) estate in excess of \$2.5 million by 1985 [10]. The Tax Reform Act of 1984 delayed this reduction 3 years, keeping the highest rate at 55 percent on net (taxable) estate in excess of \$3 million, until 1987.

Tax Reform Act of 1986

The Tax Reform Act of 1986, first applicable to decedents dying in 1987, resulted in modifications to the tax treatment of "generation skipping trusts" (GST). These are trusts which provide for the splitting of benefits between two or more generations that are younger than the generation of the persons establishing the trusts, i.e., the "grantors." The changes simplified the tax rates and increased the amount a grantor can transfer into a GST tax free, known as the "specific exemption," from \$250,000 to \$1,000,000. Three specific "taxable events" were also defined: the distribution of property (income or corpus) from the trust to a beneficiary, a termination or expiration of a beneficiary's interest in a trust (usually due to death), or a direct skip or outright transfer of property to a person at least two generations younger than the grantor.

A third outcome of the 1986 Act was the establishment of the employee stock ownership plan (ESOP) deduction. It provided for a tax deduction equal to 50 percent of the proceeds resulting from the sale (by the estate) of employer securities back to the ESOP or to an eligible worker-owned cooperative (EWOC) [11].

Revenue Act of 1987

The Revenue Act of 1987 applied to decedent's dying after 1987. This Act delayed the reduction of the top estate tax rate from 55 percent to 50 percent until after 1992. It also phased out the graduated rates and unified credit for taxable estates larger than

\$10,000,000. This was achieved by adding 5 percent of any amount of taxable estate in excess of \$10,000,000 but not over \$21,040,000 to the estate tax before credits. At the \$21,040,000 level, the effects of the graduated rates and the unified credit are completely recaptured such that the entire estate is taxed at the maximum rate of 55 percent. (The additional tax was limited to taxable estates in excess of \$10,000,000 but not over \$18,340,000 for decedents dying after 1992 due to the lowering of the maximum estate tax rate to 50 percent by 1993.)

"Estate freeze" legislation was a third area affected by the Revenue Act of 1987. These "freezes" occur when an older family member transfers a disproportionately large share of the potential future appreciation in a family business (usually in the form of common stock) to a younger family member, but retains a disproportionately large share of the income or rights. This "freezes" the value of the company includable in the older family member's estate at its value on the date of the transfer. The 1987 legislation provided for including the full date-ofdeath value of any property transferred after December 17, 1987, in the older decedent's gross estate when this occurred.

Finally, the use of the ESOP deduction was more carefully defined and its use somewhat restricted in many cases. The deduction was limited to 50 percent of the taxable estate, with overall reduction of the estate tax due to this deduction limited to \$750,000 [12].

APPENDIX II

DEFINITIONS

Brief definitions of some of the terms used in the tables are provided below:

Adjusted Taxable Estate.--Adjusted taxable estate was equal to the sum of total taxable estate and adjusted taxable gifts.

Adjusted Taxable Gifts.--Certain gifts made during the life of an individual who died before 1982 were automatically included in the gross estate. However, for the estate of an individual who died after this, these gifts were not generally included in the gross estate. In these estates, the gifts were included in the amount of the adjusted taxable gifts and combined with adjusted taxable estate for the purposes of determining the "estate tax before credits." Alternate Value of Gross Estate.--All property included in the gross estate could be valued at one of two points in time. While the value of the gross estate at the date of death determined whether an estate tax return had to be filed, the executor of the estate had the option of valuing the estate as of the date of death or 6 months thereafter. (Any property sold, exchanged or otherwise disposed of within 6 months was valued as of the date of the disposition.)

Annuities.--These were investments for which a person receives a fixed income for a set period of time and include assets related to pensions or retirement such as equity in a Keogh self-employed retirement plan or in individual retirement arrangements (IRA's).

Bequests to Surviving Spouse.--This was equal to the value of property interest passing from the decedent to the surviving spouse and was taken as a deduction from the "total gross estate."

Date-of-Death Value of Gross Estate.--The amount of property in this category was the fair-market value of all the assets at the time of death of the decedent. Although this value was used as a criterion for filing an estate tax return, it was not the only measure that could be used in valuing property for estate tax purposes. See also "alternate value of gross estate."

Estate Tax After Credits.--This was the tax liability of the estate remaining after subtraction of credits for State death taxes, foreign death taxes, and Federal gift taxes previously paid. In addition, a "unified credit," graduated according to the year of death and a "credit" for gift taxes paid on post-1976 gifts, is allowed. See also "unified credit."

Estate Tax Before Credits.--This was the tax obtained by applying the graduated estate tax rates to the adjusted taxable estate reduced by the amount of Federal gift taxes previously paid.

Federal Gift Taxes Previously Paid.--Credit was allowed against the estate tax for the Federal gift tax paid on a gift made by a decedent before 1977. No credit, apart from the unified credit, was allowed for any gift tax paid on gifts made after 1976.

Lifetime Transfers.--Included were two categories of gifts that, by law, had to be reported in total gross estate: gifts taking effect at death, and gifts of property in which the decedent retained some rights during his or her lifetime. *Net Worth.--*Net worth was equal to the total gross estate less debts and mortgages.

*Nontaxable Returns:--*Nontaxable returns were those with no estate tax after credits.

Other Tax Credits.--The sum of all tax credits (other than the unified credit) taken as a deduction against the estate tax before credits. Those include credits for State death taxes, foreign death taxes, Federal gift taxes and taxes on prior transfers.

Tax on Prior Transfers. --A tax credit was allowed for Federal estate tax paid on property received by the decedent or the estate from a transferor who died within 10 years before, or 2 years after, the decedent. The credit was intended to lessen the burden of double taxation between successive estates whose owners had died within a short period of time. Depending on the time that elapsed between the deaths, a credit is allowed for all or part of the Federal estate tax paid by the transferor's estate with respect to the transfer.

Taxable Estate.--Taxable estate is the base to which the graduated Federal estate tax rates are applied in computing the estate tax before credits. Taxable estate is equal to the value of the "total gross estate" less deductions for the following: funeral and administrative expenses; casualty and theft losses; debts, mortgages, losses and other claims against the estate, including pledges to charitable organizations; bequests to the surviving spouse; and the ESOP deduction (included in the statistics for "other expenses and losses").

Taxable Returns.--Taxable returns were those with an amount of estate tax after credits.

Total Gross Estate.--An estate tax return was required in the case of every decedent whose gross estate exceeded the legal filing requirement in effect for the year of death. For estate tax purposes, the gross estate included all property or interest in property before reduction by debts (except policy loans against insurance) and mortgages, or by administrative expenses. Included in the gross estate were such items as real estate, tangible and intangible personal property, certain lifetime gifts made by the decedent, property in which the decedent had a general power of appointment, the decedent's interest in annuities receivable by the surviving beneficiary, the decedent's share in community property, life insurance proceeds (even though payable to beneficiaries other than the estate), dower or courtesy of the surviving spouse (inherited property), and, with certain exceptions, joint estates with right of survivorship and tenancies by the entirety.

Unified Credit.--The unified credit, so called because it is used for both estate and gift tax purposes, is applied as a dollar for dollar reduction of the estate tax. (The unified credit represents the amount of tax on that part of gross estate which is below the filing requirement.) The credit must be used to offset gift taxes on lifetime transfers made after 1976. However, to the extent it is so used, the amount of credit available at death is reduced.

¹ The types of property shown in columns 3 through 26 exclude lifetime transfers shown in columns 27 and 28.

Estimate should be used with caution because of the small number of sample estate returns on which it is based.
 NOTE: Detail may not add to totals because of rounding.

¹ The types of property shown in columns 3 through 26 exclude lifetime transfers shown in columns 27 and 28.
 ² Estimates should be used with caution because of small number of sample estate tax returns on which it is based.
 ³ Data combined to avoid disclosure of specific estate tax returns.
 NOTE: Detail may not add to totals because of rounding.

Table 2.—Estate Tax Returns Filed for 1986 Decedents: Gross Estate by Type of Property, Deductions, Taxable Estate, Estate Tax, and Tax Credits, by Size of Gross Estate
