Hyogo Framework for Action 2005 - 2015

Building the Resilience of Nations and Communities to Disaster: An Introduction to the Hyogo Framework for Action

Every year, more than 200 million people are affected by droughts, floods, cyclones, earthquakes, wildlandfires, and other hazards. Increased population densities, environmental degradation, and global warming adding to poverty make the impacts of natural hazards worse.

The past few years have reminded us that natural hazards can affect anyone, anywhere. From the Indian Ocean tsunami to the South Asia earthquake, from the devastation caused by hurricanes and cyclones in the United States, the Caribbean and the Pacific, to heavy flooding across Europe and Asia, hundreds of thousands of people have lost their lives, and millions their livelihoods, to disasters caused by natural hazards.

While many know the human misery and crippling economic losses resulting from disasters, what few realize is that this devastation can be prevented through disaster risk reduction initiatives.

Governments around the world have committed to take action to

2005 has been a year of disasters. The loss of life and livelihoods could have been greatly reduced. "If we had good early warning systems, fewer people would have died in the Indian Ocean tsunami. If we had earthquake safe schools, hospitals, and housing in Northern Pakistan, tens of thousands would not have lost their lives. If we had better levees in New Orleans, those who lived in the lower lying parts of the city would not have had to see their lives devastated."

TRANSFERRING RISK THROUGH MICRO-INSURANCE,
MICRO-CREDIT AND LIVELIHOOD RELIEF

Best Practice Case Studies

Poor communities in India are often left without the resources and capacity to recover their economic and infrastructure losses when a disaster strikes. Risk transfer programmes are tools used by the humanitarian sector to reduce the vulnerability of the poor against disasters and to accelerate long-term sustainable recovery. The All India Disaster Mitigation Institute (AIDMI) examines three risk transfer schemes micro-insurance, micro-credit, and AIDMI's Livelihood Relief Fund to assess how these programmes can build a community's capacity to recover from and mitigate disaster. These programmes can be used by disaster mitigation practitioners to incorporate lesson learned and to promote risk transfer initiatives at the grassroots level.
