Diesel Inspection of Underground Coal Mine Equipment — Wagner Model LST-5S Scoop

MSHA - 2001 (1 CD and 50-page booklet)

This computer CD contains visuals and discussion to assist students in the understanding and application of equipment safety requirements for the Wagner Model LST-5S Scoop. The program focuses on inspection of the machine for diesel permissibility compliance. It is primarily designed for trainers, maintenance personnel, and industry safety inspectors, and may also be beneficial for others who work in an underground coal mine where this type of equipment is used. The presentation may take from one to four hours depending on classroom discussion and inclusion of regulatory and other reference materials. The same presentation is available on MSHA's home page (www.msha.gov); however, the CD includes additional formats for those who wish to present the material full-screen with a computer projection system, without being connected to the internet, and/or wish to tailor the material to their operations. A color booklet is also available containing the same material in an easy-to-read format.

To order, please complete the form below. You may do so "on-screen," print the form, then mail or fax it to us. Make certain to provide all the information requested in the form.
