

CRITERIA

Due to the number of participants that attended the Boston meeting, the participants elected to discuss the Criteria in one group rather than breaking into small groups.

Missing Criteria

- *Prevention*: Participants stressed the importance of prevention and said it should be a criterion.
- *Holistic Approach to Health*: Participants suggested that CDC take a more holistic approach to health.

General Comments

- *Health Disparities*: Participants felt that health disparities should be a priority.
- *Involve Community*: Some participants mentioned that CDC needs to move away from a medical model to allow more involvement at the community level.
- *Not for Healthy World*: In considering the Healthy World Objectives, participants felt that the criteria do not apply as well as they do for the other goal areas.
- *Metropolitan Area*: Participants recognized that Boston is a metropolitan area and said that input should also come from other areas with fewer resources.
