

Scientific Name: *Juncus hallii* Engelm.

Bibliographic Reference: Engelm., 1866. Trans. Acad. Sci. St. Louis 2: 446.

Common Name: Hall's rush

Family (Common Name): Juncaceae (Rush Family)

Synonyms: None

Idaho Native Plant Society Category: State Review

Natural Heritage Program Rank: S2

Distribution: Bonneville, Clearwater, Fremont, Lemhi and Owyhee counties, Idaho; sw Montana, to Colorado and ne Utah.

Habitat: Dry, wet, boggy meadows, margins of ponds and lakes, and along streams, 1500-1900 m elevation.

Phenology: June through August.

Look-alikes: Similar to *J. parryi* but Hall's rush differs in having a retuse capsule, acute tepals 4-5 (5.5) mm long vs 5-7 mm long and smaller seeds (1 mm long vs 2 mm). The seed appendage at each end is fi the body length vs equalling or a little longer in Parry's rush.
