
Keep Foot-and-Mouth Disease OUT of America

Immediately report any signs of a vesicular condition to your local, State, or Federal animal health official or veterinarian.

Signs include excessive salivation, lameness, weight loss, drop in milk production, and blisters around the mouth and feet.

Early detection is vital to containing and preventing the spread of FMD to protect the Nation's livestock.

For more information on FMD, call 1-800-601-9327.
