

# ***U.S. Space-Based PNT International Cooperation***

---

SPACE-BASED POSITIONING  
NAVIGATION & TIMING  
NATIONAL ADVISORY BOARD

***March 27, 2008***

***David A. Turner, Deputy Director***

*Office of Space and Advanced Technology  
Bureau of Oceans, Environment and Science  
U.S. Department of State*

# *2004 U.S. Space-Based PNT Policy*

## *(Excerpts focused on International Relations)*

### *Goals:*

- U.S. space-based PNT systems and services remain essential components of internationally accepted PNT services
- Promote U.S. technological leadership in applications involving space-based PNT services

### *To achieve this, the United States Government shall:*

- Encourage foreign development of PNT services/systems based on GPS
  - Seek to ensure foreign space-based PNT systems are **interoperable** with civil GPS and augmentations
  - At a minimum, ensure **compatibility**

### *The Secretary of State shall:*

- Promote the use of civil aspects of GPS and its augmentation services and standards with foreign governments and other international organizations
- Lead negotiations with foreign governments and international organizations regarding civil PNT matters
  - And, as appropriate in coordination with the SECDEF, military PNT matters

# *Planned GNSS*

- Global Constellations
  - **GPS (24+)**
  - GLONASS (24)
  - Galileo (27)
  - Compass (35)
- Regional Constellations
  - QZSS (3)
  - IRNSS (7)
- Satellite-Based Augmentations
  - WAAS (3)
  - MSAS (2)
  - EGNOS (3)
  - GAGAN (3)
  - SDCM (2?)

# *U.S. Objectives in Working with Other GNSS Service Providers*

- Ensure **compatibility** – ability of U.S. and non-U.S. space based PNT services to be used separately or together without interfering with each individual service or signal
  - Radio frequency compatibility
  - Spectral separation between M code and other signals
- Achieve **interoperability** – ability of civil U.S. and non-U.S. space-based PNT services to be used together to provide the user better capabilities than would be achieved by relying solely on one service or signal
  - Primary focus on the common L1C and L5 signals

***Pursue through Bi-lateral and Multi-lateral Cooperation***

# *The Goal of RNSS Civil Interoperability*

- Ideal interoperability allows navigation with one signal each from four different systems with no additional receiver cost or complexity

*Interoperable = Better Together than Separate*

## *U.S. - Europe Cooperation*

- US-EU agreement signed in 2004 provides solid foundation for cooperation
- Action is now divided among four working groups set up by the agreement:
  - Technical, trade, and security issues working groups have met
- Improved new civil signal (MBOC) adopted in July 2007

June 26, 2004, press conference at U.S.-EU Summit in Ireland (U.S. Sec. of State Colin Powell, Irish Foreign Minister Brian Cowen, EU Vice-President Loyola De Palacio)

# ***U.S. - Russian Federation Cooperation***

- **U.S.- Russia Joint Statement issued in December 2004**
- **Several very productive technical working group meetings have been held:**
  - **Russia WG-1 chair proposed adopting two new civil CDMA signals at L1, L5 to be interoperable with GPS**
  - **Still under discussion within the Russian Government**
- **Negotiations for a U.S.-Russia Agreement on satellite navigation cooperation have been underway since late 2005**

# *U.S. - Japan Cooperation*

- Japan's status as a world leader in GPS applications and user equipment makes it an important partner
- Regular policy consultations and technical meetings on GPS cooperation have been held since 1996 and led to the 1998 Clinton-Obuchi Joint Statement
- Both countries have benefited from the close relationship:
  - QZSS is designed to be compatible and interoperable with GPS
  - U.S. working with Japan to set up QZSS monitoring stations in Hawaii and Guam

# *U.S. - India Cooperation*

- **Policy and technical consultations on GPS cooperation underway since 2005**
  - One aim is to ensure interoperability between GPS augmentation system WAAS and India's planned GAGAN augmentation system based on GPS
  - Another important topic is ionospheric distortion and solutions
- **U.S.-India Joint Statement on GNSS Cooperation issued in February 2007 in Washington**
  - Bi-lateral meeting held in Bangalore in September 2007
  - Technical Meeting focused on GPS-IRNSS compatibility and interoperability held in January 2008

# ***U.S. - Australia Cooperation***

- Long history of GPS cooperation between U.S. and Australia
- U.S.-Australia Joint Delegation Statement on Cooperation in the Civil Use of GPS signed April 19, 2007
  - Cooperation expands upon existing efforts to ensure interoperability between GPS and Australia's Ground-based Regional Augmentation System (GRAS) and Ground Based Augmentation System (GBAS)
- U.S. Coast Guard NAVCEN posts a daily Position Dilution of Precision (PDOP) report in response to Australia's concerns over planned GPS outages

# ***International Committee on Global Navigation Satellite Systems (ICG)***

- Emerged from 3rd UN Conference on the Exploration and Peaceful Uses of Outer Space July 1999
  - Promote the use of GNSS and its integration into infrastructures, particularly in developing countries
  - Encourage compatibility and interoperability among global and regional systems
- Members include:
  - GNSS providers (U.S., EU, Russia, China, India, Japan)
  - Other Member States of the United Nations
  - International organizations/associations

## *2<sup>nd</sup> International Committee on Global Navigation Satellite Systems (ICG)*

- ICG-2 held in September in Bangalore, India
- Established **Providers Forum** to address common issues
- Began implementation of the ICG Work Plan within established working groups:
  - A. Interoperability and compatibility
  - B. Enhancement of performance of GNSS services
  - C. Information dissemination, education, outreach & coordination
  - D. Interaction with monitoring & reference station network organizations
- U.S. will host the 3rd ICG in December 2008

# *ICG Providers Forum*

- Six space segment providers listed previously are members
- Purpose:
  - Focused discussions on **compatibility and interoperability**, encouraging development of complimentary systems
  - Exchange of detailed information on systems and service provision plans
  - Exchange views on ICG work plan and activities
- Consensus reached at the first meeting on general definitions for compatibility and interoperability
  - Including spectral separation between each system's authorized service signals and other systems' signals

<http://www.unoosa.org/oosa/en/SAP/gnss/icg.html>

# *Summary*

- As new space-based GNSS are emerging globally, interoperability is the key to “success for all”
- U.S. is actively engaged in bi-lateral and multi-lateral cooperation on space-based navigation issues
- International cooperation in the context of National Space-Based PNT Policy principles is a top priority for the U.S. Government
