US Department of the Interior National Park Service National Center for Preservation Technology and Training Publication No. 1997-25

# NCPTT Internet Communication Survey Report

Office of Community Preservation School of Architecture Louisiana State University December 5, 1997

Funding for this report was provided by the National Park Service's National Center for Preservation Technology and Training. NCPTT promotes and enhances the preservation of prehistoric and historic resources in the United States for present and future generations through the advancement and dissemination of preservation technology and training.

#### INTERNET COMMUNICATION SURVEY REPORT

This survey was administered by the LSU Office of Community Preservation through the sponsorship of the National Center for Preservation Technology and Training. Its purpose was to collect data about the use of Internet-based technologies for communication among preservation professionals. The objective of this project was to help the National Center for Preservation Technology and Training plan and develop training courses, workshops, and services that will advance the use of electronic communication technologies for historic preservation.

The survey was designed to solicit responses from preservation professionals about how Internet-based communication is affecting conservation activities. Divided into six parts, the survey contained twenty-five questions. Although the authors of the survey realize that there are many other innovative applications of computer-based technologies for historic preservation, it was decided that this initial survey should address only Internet access and usage. However, there was a "Comments" section at the end of the survey that specifically requested input about other computer-based applications for historic preservation.

#### Distribution

The survey was available in numerous ways. It could be filled out and submitted online at <a href="http://shpo.survey.lsu.edu">http://shpo.survey.lsu.edu</a>. A Microsoft Word or ASCII file of the survey could be downloaded from the WWW site, requested by e-mail, or a hardcopy could be received via the NCPTT faxback. In addition, the survey was sent by U.S. Mail to all State Historic Preservation Offices. The survey was also promoted at the Association for Preservation Technology International (APTI) 1997 General Assembly in Chicago, in APTI Communique and in APT Bulletin. Links to the online survey were available at the NCPTT web site and the Louisiana Heritage Network web site.

#### **Technical Problems**

Although there were some technical problems with the survey at the outset, most of these were quickly solved. We received a small number (less than 10) of e-mail messages from people who were not able to submit the survey online. Most often they had not responded to all of the questions on the survey. This problem occurred because the questionnaire required a response to all the questions except those ones related to the "User Profile" field. It was solved by designating the "optional" fields for data entry. In addition, we received e-mail indicating that a few people were unable to find the site. This resulted from the web server being down, or the wrong URL (web address) being used. We sent surveys via e-mail to the individuals having this problem, along with the correct URL for the site.

#### Results

The results discussed reflect all surveys received by OCP through September 30, 1997. We received a total of 100 surveys from 28 different states and one U.S. territory. The survey data summarized here is included at the end of this report.

#### **User Profile**

- 29% were affiliated with State Historic Preservation Offices representing 18 different states, and one territory
- 15% were affiliated with federal preservation and came from 11 different states.
- 11% were affiliated with nonprofit preservation organizations and came from 9 different states
- 45% were affiliated with private sector preservation organizations, were preservation professionals, or belonged to the "other" category and came from 7 states

#### **Internet Access**

- 99% have access to the Internet
- 70% have individual Internet accounts at work
- 90% have access to e-mail, 81% have access at work
- 87% have access to Web browser
- 59% have access to FTP
- 54% have access to Gopher

#### World Wide Web Use

- 62% access WWW daily
- 28% access WWW twice a day
- 50% find useful information very often
- 38% find useful information often

#### **Printer Access**

- 99% have access to a printer
- 58% deem printer availability very important
- 31% deem printer availability somewhat important

#### **Comments**

Respondents provided input on how they are using the Internet for communication and research and also introduced a wide range of computer-based applications for historic preservation. Beyond electronic communications, the single issue of greatest significance in the comments was training and applications for geographic information systems (GIS) and visual simulation. Representative comments included:

- "Need more preservation WWW sites!"
- "Many thanks for your interest in furthering this miraculous opportunity."
- "The Internet has become a vital source or research, unfortunately web sites are often short on content."

- "Please continue to offer on-line access to [Preservation] Briefs, NPS Bulletins and other publications."
- "Research and interaction with fellow professions is not an option, it is a requirement."
- "Our work with local preservation commissions would be far easier if the majority of them had Internet access."
- "Very interested in application of GIS for use in developing interpretive displays pertaining to historic sites and landscapes."
- "E-mail is more direct and efficient than faxing or telephoning."
- "HP professionals need to make better use of the Internet to communicate current information from states to local governments."
- "The [Internet] allows us to learn about preservation issues, ask questions of professionals, etc. Great educational tool."
- "We plan to do much of our interaction with public using this medium in the future."
- "More workshop/training opportunities needed."
- "I NEED HELP designing a web site for our statewide nonprofit."

### **Summary**

From the responses, it is clear that the majority of respondents considers the Internet and e-mail vital resources for historic preservation professionals. These technologies are used for:

- gathering and disseminating preservation information
- networking for preservation advocacy
- research for restoration/rehabilitation products, materials and techniques
- keeping up with preservation news and fellow preservationists

The survey results suggest that there are a number of well-equipped computer users within the preservation community. The majority of respondents have access to both the Internet and email and use one or the other daily. They are eager to learn more about computer-based applications for historic preservation. Many expressed the need for greater content in web sites and opportunities for training on the Internet.

#### Recommendations

Based on the survey results, we believe that NCPTT can increase the effectiveness of its mission by pursuing two objectives.

#### 1. Work to increase computer awareness

As a national clearinghouse for preservation information and center for preservation training, the NCPTT must continue its efforts to increase computer literacy among preservationists. The Center can enhance these efforts by increasing support for research and development of preservation applications for emerging computer-based technologies for information management and dissemination. The NCPTT web site is an excellent (and appropriate) venue for promoting computer literacy and advancing computer-based research. The first step is to

increase awareness of computer applications for historic preservation and enhance the utility of the NCPTT web site. The following recommendations should be considered.

- Promote NCPTT web site in conventional media such as magazines, journals, and direct mailings.
- Develop web pages for each NCPTT sponsored research project and training initiative.
- Promote Internet research and web-based projects that mine the data-rich NPS resource base.
- Support web-based projects that facilitate public access and use of existing research generated reference materials.
- Replace existing Gopher text documents with interactive hypertext documents.
- Capitalize on the multimedia capabilities of the WWW, incorporating graphics, text, audio, and video where appropriate.
- Include a calendar of preservation events such as conferences, seminars, and demonstrations.
- Include a list of historic preservation, architecture, and archaeology educational programs.
- List preservation employment and training opportunities (This step alone will ensure greater visitation to the NCPTT site).
- Under "How to contact NCPTT," provide active e-mail links to NCPTT staff.

#### 2. Develop distance learning programs

We believe that distance learning for heritage education represents a significant opportunity for the NCPTT. The development of distance learning modules (based on Internet technologies) will expand the educational and training reach of the Center. Beyond preservationists, the NCPTT could reach constituencies not currently being exposed to heritage education. This would increase opportunities for new partnerships, and promote a greater preservation voice in community planning, project design, and resource management decisions. In addition, it would facilitate transfer of preservation techniques and technologies from disciplines traditionally outside of the preservation field.

Modern, distance learning strategies increasingly rely on computer-based instruction through the Internet. Any office or home with a personal computer and an Internet connection becomes a classroom. Students are able to access the information they need when it is convenient for them. Such "learner centered instruction" provides students with the education content and flexibility they require.

Seminars, classes, discussion groups and other education offerings can now be presented "on demand" and fit more conveniently into the schedules of participants (both instructors and students). They can be tailored to fit personal interests and be presented at various levels of expertise. Thus, successful distance learning modules are by design very personal, interactive, and stimulating.

Computer-based distance learning can be very economical for the NCPTT and target audiences. Traditionally, the NCPTT sponsors a number of training sessions across the United States each year. Unfortunately, no matter where they are held or when they are scheduled, many potential attendees are unable to participate because of travel costs or scheduling conflicts. Such considerations can conspire to result in low numbers of course registrants.

By contrast, distance learning is not constrained by geography or time. Instead of traveling to the location where a training course is being offered, distance learners worldwide are able to conveniently log on to personal computers at their workplace or home. In addition to providing scheduling flexibility, travel and lodging costs for students are eliminated in Internet-based learning strategies.

The hardware that NCPTT utilizes presently to construct web pages is more than adequate to begin producing information modules for distance learning using existing instructional materials. The distance learning model requires only a small team of skilled researchers to assemble and manage information modules. At the same time, experts from across the nation and a wide variety of fields can contribute to the development of modules. Once a module is developed, modification and updating is relatively easy to accomplish.

Information can be presented in formats useful to individuals ranging from elementary school children to preservation professionals. As suggested by the survey results and respondents' comments, training and educational information modules could be developed to service a variety of needs including:

- Basic preservation awareness
- Preservation planning
- Technical training courses for GIS and computer visualization
- Section 106 review and compliance
- Disaster preparedness and recovery
- Heritage tourism strategies
- Web design and publishing for heritage education
- Grantsmanship (Proposal Development)

#### Conclusion

The NCPTT Internet Survey indicates a need to increase and promote computer awareness in the preservation community. This need can be serviced in part by enhancing the NCPTT web site. In addition, the development of a distance learning program offers obvious opportunities for NCPTT to fulfill its goal of advancing preservation training and education. The techniques and technologies involved in the recommendations contained in this report are suitable for all the fields served by the NCPTT (historic architecture, archeology, historic landscapes, materials conservation, and historical documentation and interpretation). They provide cost-effective alternatives to traditional methods of information management and dissemination, and offer increased opportunities for technology transfer and training. These Internet-based strategies should be developed and applied by NCPTT, and shared with all preservation practitioners to further the Center's mission.
