World Agricultural Production

China Wheat Production Higher than Expected in 2007/08

China's 2007/08 wheat production is estimated at 105.0 million tons, up 1.0 million from last year's revised output of 104.0 million. The total includes an estimated 99.0 million tons of winter wheat and 6.0 million tons of spring wheat. Total area is estimated at 23.1 million hectares, down 0.1 million from last year's revised area. The estimated yield of 4.55 tons per hectares is up 1.6 percent from last year's record yield.

Winter wheat accounts for approximately 94 percent of total China wheat production and 93 percent of total area. Area

reportedly decreased in Shandong, Hebei, and Yunnan due to dry weather at planting, but area increased in central China in response to favorable prices and government support for grain production. The winter wheat crop was harvested from mid-May through the end of June. Timely rainfall in May, successful drought-mitigation efforts, and excellent harvest weather boosted yields in many areas, particularly Anhui, Hubei, Jiangsu, and Hebei. Spring wheat is reportedly unchanged from last year, as higher planted area in Heilongjiang offset lower area in other provinces. The weather was very dry in spring wheat areas of Northeast China during June, but increased rainfall in July has raised moisture levels and improved yield prospects. (For more information, contact Paulette Sandene at 202-690-0133.)

Higher China Corn Area and Yield Forecast for 2007/08

China corn production for 2007/08 is estimated at a record 148.0 million tons, up 2.0 million from last month and 3.0 million from last year's revised crop of 145.0 million. Area is estimated at a record 27.8 million hectares, up 0.8 million from last year. The estimated yield of 5.32 tons per hectare is down slightly from last year's record yield. According to preliminary government estimates, corn area increased significantly in 2007/08 in response to rising prices, strong demand for feed and biofuels, higher profits compared to soybeans, and government financial support for grain farmers. In the Northeast (Liaoning, Jilin, and Heilongjiang), planted area was estimated at 8.1 million hectares, up 647,000 from last year. The area planted to high-yielding hybrid varieties continues to increase.

Soil moisture and temperatures were mostly favorable for spring corn planting, which occurred in March and April. Rainfall has been adequate in most of southern China this summer, but drought in May and June stressed vegetative spring corn in parts of the Northeast and North China Plain. Growing conditions have improved following widespread rain in July. The summer corn crop was planted on the North China Plain in June following the winter wheat harvest. Dry weather aided fieldwork, and abundant rainfall in July has benefited emergence and early development. Recent extremely heavy rainfall in the lower Yangtze/Huai River basins caused local flooding and water logging. More rain is forecast, and local officials are taking flood-prevention measures. *(For more information, contact Paulette Sandene at 202-690-0133.)*

China Cotton Production is Revised Upward

The USDA has revised estimated China cotton production for 2004/05 through 2007/08. Estimated production has been increased by 1.0 million bales for 2004/05, to 30.0 million; by 1.3 million bales for 2005/06, to 27.5 million; by 1.6 million bales for 2006/07, to 32.5 million; and by 1.5 million bales for 2007/08, to 32.5 million. The government of China's National Statistics Bureau (NBS) has been the source of USDA's China cotton production estimates for many years. This month's USDA estimates for China deviate from the practice of following NBS data. For 2005/06 and 2006/07, the increases are based on reports from sources in China's industry and government that production in the Xinjiang Autonomous Region was higher than the official government estimates provided by the NBS. The USDA has made a comparable adjustment for 2004/05. The production increases in all years are attributed to higher planted area in Xinjiang. *(For more information, contact Paulette Sandene at 202-690-0133.)*

Australia Wheat and Barley: Production Forecast to Rebound from Last Year

Increases in both estimated area and yield should enable 2007/08 Australia wheat and barley production to rebound from last year's low level. Wheat production is forecast at 23.0 million tons, up 0.9 million or 4 percent from last month, and up 13.1 million or 132% from last year. Area is forecast at 13.0 million hectares, or 1.7 million above last year, and yield at 1.77 tons per hectare –double last year's level. Barley production is forecast at 9.0 million tons, up 0.7 million or 8 percent from last month, and up 5.2 million or 137% from last year. Area is forecast at 4.5 million hectares, up 0.5 million or 13 percent above last year. Yield is forecast at 2.0 tons per hectare against 1.05 tons per hectare last year.

The 2006 winter and summer drought severely impacted pasture growth, which, combined with high feed grain prices throughout the country, led farmers to sell off large numbers of cattle and sheep. This season's area increase is a culmination of three factors: improved rainfall, strong economic incentive for growers to recoup losses incurred during the 2006 drought, and the conversion of last season's pasture to field crops. The sowing of both wheat and barley occurred from April through June, slightly later than usual, and the late sowing likely resulted in some area shifting away from wheat to barley this season. Unfavorably dry conditions in May were followed by June rainfall in most areas, but concerns about subsoil moisture persist. Although the rainfall in June and early July will support crop establishment, drought conditions last season resulted in exceptionally low subsoil moisture reserves. Additional rainfall is necessary to ensure average yields. *(For more information, contact Jim Crutchfield at 202-690-0135.)*

Ukraine: Further Drop in Yield Prospects for Wheat and Barley

Excessive dryness in Ukraine's main grain production region has reduced estimated wheat and barley output. Cumulative precipitation from October through May was the lowest in over ten years in some of the country's key wheat territories, and the dryness was accompanied by excessive heat during May. June rainfall arrived too late to benefit crops in southern Ukraine. Ukraine wheat production for 2007/08 is estimated at 13.0 million tons, down 1.0 million from both last month and last year, and yield is estimated at 2.17 tons per hectare (t/ha) against last year's near-average 2.55 t/ha. Winter wheat accounts for approximately 95 percent of total wheat production in Ukraine. Barley production is estimated at 7.5 million tons, down 1.5 million from last month and 3.9 million from last year. Spring barley typically comprises about 90 percent of total barley output. Harvest-progress reports have confirmed forecasts of low wheat yields in south-central Ukraine, where the harvest campaign began in late June. As of July 5, with harvest complete on nearly 30 percent of the sown area, yield stood at 1.9 t/ha against 2.7 t/ha on the same date last year, although yields are improving as the harvest campaign advances. Typically, in a drought year, the worst fields are the first to be harvested, which tends to suppress initial reported yields. Yields are also likely to improve as harvest activity moves beyond southern Ukraine. *(For more information, contact Mark Lindeman at 202-690-0143.)*

This report uses information from the Foreign Agricultural Service's (FAS) global network of agricultural attachés and counselors, official statistics of foreign governments and other foreign source materials, and the analysis of economic data and satellite imagery. Estimates of foreign area, yield, and production are from the International Production Assessment Branch, FAS, and are reviewed by USDA's Inter-Agency Commodity Estimates Committee. Estimates of U.S. area, yield, and production are from USDA's National Agricultural Statistics Service. Numbers within the report may not add to totals because of rounding. This report reflects official USDA estimates released in the World Agricultural Supply and Demand Estimates (WASDE-443), July 12, 2007.

Printed copies are available from the National Technical Information Service. Download an order form at http://www.ntis.gov/products/specialty/usda/fas_a-g.asp, or call NTIS at 1-800-363-2068.

The FAS International Production Assessment Branch prepared this report. The next issue of World Agricultural Production will be released after 9:30 a.m. Eastern Time, August 10, 2007.

World and Selected Countries and Regions

7/12/2007 8:49:10 AM

TABLE 18

The table below presents a 26-year record of the differences between the July projection and the final estimate. Using world wheat production as an example, changes between the July projection and the final estimate have averaged 13.7 million tons (2.5 percent) and ranged from -34.6 to 23.7 million tons. The July projection has been below the final 15 times and above the final 11 times.

RELIABILITY OF PRODUCTION PROJECTIONS

COMMODITY AND REGION	PROJECTION AND FINAL ESTIMATES, 1981/82 - 2005/06 1/					
	Difference		Lowest	Highest	Below	Above

OATS	10.6	26	-39	144	4	21

1/ The final estimate for 1981/82-2004/05 is defined as the first December estimate following the marketing year.

2/ May not total 25 if projection was the same as the final.

3/ Includes corn, sorghum, barley, oats, rye, millet, and mixed grain.
