f You Have Diabetes, AFIUshot Could Save YOURLife. If You Have

Prevention Is Control.

Dear Diabetes Patient:

For people with diabetes, influenza ("the flu") can mean more than aches and pains. It can mean a longer illness, hospitalization, even death. In fact, people with diabetes are almost 3 times more likely to die with complications of flu and pneumonia.

Call your doctor today to ask about getting a flu shot and vaccine for pneumococcal disease, the cause of the most common form of pneumonia. For most people one dose of pneumococcal vaccine provides lasting protection. You need a flu shot each year just before flu season.

With diabetes, prevention is control.
