Subject: Comments on Draft Guidelines

You guys have got to be kidding! Surely the persons who are recommending that the elderly's lives are NOT worth as much as young people, must not have any elderly relatives.

These same elderly are the people who are the most affected by pollution.

Not only is such a decision unfair, it is surely not based on any scientific evidence.

Please rethink you policy of valuing elderly at 60% of younger people when evaluating environmental regulations.

A concerned citizen -- Louis Paley
