Mission 6: NAL enhances global cooperation through international exchange of information and the provision of services and technical assistance

NAL continued work with an array of international partners to advance use of information technology in the service of agricultural research and development.

For example, NAL and the U.S. Department of State collaborated in 2001 to provide ARIEL (a document transmission system that delivers over the Internet using both the FTP and MIME standards) workstations and training, plus AGRICOLA access in Russia for the All-Russian Institute for Animal Health, the State Research Center of Virology and Biotechnology, the All-Russian Institute of Phytopathology, and the State Research Center for Applied Microbiology. NAL continues to provide briefings and demonstrations for interns and visitors from other countries and many international organizations.

NAL and the Agricultural Research Service's Mycotoxin Research Unit jointly funded a 1998-1999 review of recent wheat-head scab research in China. The review surveyed U.S. wheat breeders and researchers to identify what they wanted to know about recent Chinese research initiatives and resistant wheat varieties. U.S. researchers of Chinese ancestry were sent to China to find the answers to those questions. The literature and program reviews were summarized in English and made available over the Internet. The resulting study, "Recent Advances in Wheat Head Scab Research in China," was published on the NAL website (http://www.nal.usda.gov/pgdic/WHS/about.html) in 2000. As a result of reading the report, one scientist went to China to collect specific resistant germplasm.

NAL trained information specialists from other countries in management and delivery of agricultural information. From 2000 through 2002, NAL trained five information professionals from the Agricultural Research Council of South Africa who received Cochran Fellowship Program (CFP) support administered by USDA's Foreign Agricultural Service. The U.S. Congress provides CFP funding for training senior and midlevel specialists or agriculturalists from middle-income countries, emerging markets, and emerging democracies.

In May 2000, NAL hosted the 32nd annual meeting of the Council on Botanical and Horticultural Libraries, allowing information specialists from Canada and Europe to have a look at NAL's electronic systems and resources. In May 2001, NAL hosted a reception during a conference on "Food Safety Through Dynamic Leadership," which drew participants from public and private institutions in North, Central, and South America. NAL staff gave a well-received presentation at the 2002 conference of the International Association of Technological University Libraries.

NAL and other AgNIC institutions welcomed Agricultural Information and Documentation System for America (SIDALC) and its participating Latin American and Caribbean partners as an AgNIC member in 2000. SIDALC is a joint effort among agricultural information providers in the Americas and the Caribbean and is coordinated by the Inter-American Institute for Cooperation in Agriculture (IICA). In 2001, NAL agreed to bring up a website that mirrors the SIDALC website.

^{*} Statistics are October 1 through September 30 each year.

^{**} The decline in mediated reference transactions from 2001 to 2002 is due largely to the application (in 2002) of a different means of counting these transactions.

^{***} In 2001 and 2002, NAL began to measure hits not previously reported.
