Dwayne E. Russell

Dear Sirs;

I am 61 years old. I have **great respect** for the responsibilities those in Government office carry. **Thank** you.

Perhaps you could help me with this concern.

I have researched, and used foods, herbs, and supplements for 50 years to enhance health. Millions of intelligent people in this land have done the same, for their **personal benefit**, the **benefit of their employers**, and the **benefit of their country. They are healthy citizens not imposing a burden on the Health Care system.** Why would a government consider taking away the availability of these proven, time tested foods, herbs, and supplements?

At a time when computer enhanced research capabilities daily and weekly discover new revelations as to **why** foods, herbs, and supplements improve health, and cure disease, a politically powerful movement wants to curtail their availability to the health conscious consumer??????? WHY?

Can you help me out on this question?

Thank you for giving consideration to my question.

Sincerely,

Dwayne E. Russell
