

I

(572)

To Department of Agriculture

When my son ^{RECEIVED} ^{FSLB BOOKLET ROOM} ^{04 APR 15 PM 12:23} letter from the
U.S.D.A that he ^{should} take no down cattle

I have slaughter many hundreds off them
in my life time and nobody ever got sick

When I started in 1939 every small ^{town} had
two or three meat market there were
no slaughter room ever think was ~~don~~ done
~~was~~ outside it took two pail off water to
was a beef all beef in small town was
home butchered butcher one day and eat the
next.

I have no collage degree but lot off
experiences when it come to meat raising beef
and pork chicken I can tell good meat from
bad and we have many people working
for the U.S.D.A that dont the region I
say that because I have many question
and never got answer.

I work with the small farmer all my life
I know what they have to put up with
because I am one off them also the U.S.D.A
have put many farmer out off farming

Lets take a look what Washington is doing
for the small process plant trying to close
them up but lets look ~~how~~ had bad
meat its the big plants

II

You people in Washington better wake up at the rate you going this country will have no food if you think cap. farming and large farmer will produce enough you are badly mistaken be ~~to~~ because if you get ~~the~~ disease in herd it will wipe it out

Let take a look what the USDA has done for meat department they sure don't help to produce good food everything has to have drugs in it

They let farmer grow corn and beans that other country don't want so we feed to U.S.A. people isn't that great

I have raised beef cattle for sixty years I sold most of the beef to people that come pick out these animal they want to process I have many people that don't want to eat packer meat ~~with~~ with all the drugs they are feed

I raise them without drugs all my life and I have no problem it may take little longer but I have good meat

There isn't much food raised with out some drugs in it we are poison are ground with all kind of spray it the USDA ~~lets~~ doesn't do nothing about it

III

here we have one cow come to USA and
look what it caused and look what
it done to the small process plant

The problem we have too many people
working for the U.S.D.A that dont know what
is going on I dont care how many year
off collage degree you have it experine and
live with it and come sense

I wont be able to change all are problem
no way I havent much time left for I am
going be 80yr old but when I look at
my great great ~~child~~ children not my tears drop
what ~~for~~ they facem

I ~~no~~ it was my what off time writing
you but at at least I lower my blood
pressure ~~top~~ Hoping to hear from you
