As a Veterinarian, I am very concerned about the bird flu news all over the world. On Dec 20, 2005, Elias A. Zerhouni, Director of National Institutes of Health of the United States, said that China government is totally open and transparency in the bird flu prevention and cure and epidemic situation reports. He also said China and the United States had cooperated in the virus inspection and capability of diagnose last month, meanwhile, trained the staffs. Dr. Zerhouni was satisfied with China labs, considered that many labs had the capability to research bird flu.

Qin Gang, the spokesman of the Ministry of Foreign Affairs of the People's Republic of China, declared that China government, EU and the World Bank will hold the International Poultry/ Human Flu Control Raising Funds Meeting from Jan 17 to Jan 18, 2006. Li Zhao Xing, the Minister has sent out the invitation to relative Countries and International Organizations.

I recommend that the FSIS of USDA approve China export poultry meat to USA, and establish the open, sufficient, transparent communication channel with China.
