Comment of docket 05-024N We fell that HACCP costs us a small plant 75.00 dollars a day to run our HACCP program. This is not cost effective program. The problem is that big government dose not understand how small and very small plants run. Our business is our life, so by nature we don't want to make inferior product or we will be out of business we are very hands on people. Intern the cost of running HACCP is just a BURDEN.
