To: Risk Based Inspection

I am very interested in this inspection system. What is this going to do to our jobs, will anyone lose their jobs? Also I think that risk based inspection is the way to go because it is the next step from HACCP. What kind of enforcement will take place with RBIS? Is it similar to HACCP? Are there going to be changes to the regulations? Also are we going to be involved in risk assessment or risk management or is that for another team?

Thanks.
