

# International Compilation of Human Research Protections

## 2009 Edition

Compiled By:  
Office for Human Research Protections  
U.S. Department of Health and Human Services

### PURPOSE

This Compilation lists the approximately 1,100 laws, regulations, and guidelines that govern human subjects research in 92 countries, as well as standards from a number of international and regional organizations. This Compilation was developed for IRBs/Ethics Committees, researchers, sponsors, and others who are involved in international research. Its purpose is to help these groups familiarize themselves with the laws, regulations, and guidelines where the research will be conducted, to assure those standards are followed appropriately.

The 2009 Edition includes numerous additions and updates to the 2008 Edition, and features the laws, regulations, and/or guidelines for 7 new countries: Burma (also known as Myanmar), Egypt, the Gambia, San Marino, South Korea, the Sudan, and Vietnam.

### ORGANIZATION

The Table of Contents is found on page 3. Under each country, the rows categorize the standards as:

1. General, i.e., applicable to most or all types of human subjects research
2. Drugs
3. Privacy/Data Protection (Note: Further information can be found at the website of Privacy Laws and Business: <http://www.privacylaws.com/>)
4. Human Biological Materials
5. Genetic (Note: Further information can be found in the HumGen International database at <http://www.humgen.umontreal.ca/int/>)
6. Embryos, Stem Cells, and Cloning

These six categories often overlap, so it may be necessary to review all standards to obtain a full understanding of the country's requirements.

The information is then organized into four columns:

1. Key Organizations – include those groups that issue regulations or guidelines, or serve in a national oversight role for human subjects research
2. Legislation – includes statutes, statutory instruments, legislative decrees, and constitutional provisions, if any, that relate to human subject protections.
3. Regulations – refer to instruments that are created and issued under the name of governmental administrative bodies.
4. Guidelines – refer to non-binding instruments.

The year of the document's initial approval or most recent modification is indicated in parenthesis (when that information is available), unless the date is part of the document's actual title. For example, Law 46/2006 indicates the law was enacted in 2006. Note that the English translation of a non-English document may not be an official translation.

## **HOW TO ACCESS A DESIRED DOCUMENT**

Documents can be accessed in one of five ways:

1. Link to the listed web address (URL), when provided.
2. Perform a web search on the document title.
3. Go to the website of the agency listed in the Key Organizations column and look for the sub-page labeled "guidance," "regulations," or similar terms.
4. Go to the website of the corresponding agency and e-mail a request for the document.
5. Request the local research ethics committee to provide the document.

In most cases the documents are available in English. Sometimes the English translation is a non-official version. When the link is to a non-English language website or document, the language is indicated in parenthesis, e.g., (Spanish).

## **TOPICS NOT COVERED**

In order to focus its scope, the Compilation does not include:

1. Laws, regulations, or guidelines specific to clinical bioethics, medical devices, adverse event reporting, insurance requirements, product liability, clinical trial inspection procedures, human tissue engineering, intellectual property, or informed consent in clinical practice.
2. Enabling legislation, i.e., laws that authorize an agency to promulgate human subjects regulations, but do not direct the content of those regulations.
3. Ethics codes of academic, medical, or other professional organizations.
4. Working papers, drafts, commentaries, or discussion papers.

### *Updates and Broken Links*

Updates and broken links should be reported to the attention of Edward E. Bartlett, PhD, Office for Human Research Protections, International Activities Program, at: [edward.bartlett@hhs.gov](mailto:edward.bartlett@hhs.gov) .

### *Disclaimer*

**Although this Compilation contains information of a legal nature, it has been developed for informational purposes only and does not constitute legal advice or opinions as to the current operative laws, regulations, or guidelines of any jurisdiction. In addition, because new standards are issued on a continuing basis, this Compilation is not an exhaustive source of all current applicable laws, regulations, and guidelines relating to human subject protections. While reasonable efforts have been made to assure the accuracy and completeness of the information provided, researchers and other individuals should check with local authorities and/or research ethics committees before starting research activities.**
