EXECUTIVE SUMMARY

The Food Stamp Program (FSP) provides millions of Americans with the means to purchase food for a nutritious diet. The FSP is the largest of the 15 domestic food and nutrition assistance programs administered by the U.S. Department of Agriculture's Food and Nutrition Service (FNS). This report presents the characteristics of food stamp households nationwide in fiscal year 2001 (October 2000 to September 2001). This information on household characteristics comes from FSP household data collected by FNS for quality control purposes.

FSP Participation and Costs

In an average month in fiscal year 2001, the FSP provided benefits to approximately 17.3 million people living in 7.5 million households across the United States¹. The total cost of the program over fiscal year 2001 was \$17.8 billion, \$15.5 billion of which were for food stamp benefits. The average monthly food stamp benefit in fiscal year 2001 was \$163 per household. Compared with fiscal year 2000, the number of FSP participants increased by 1 percent and FSP benefit costs increased by 5 percent.

Characteristics of Food Stamp Households and Participants

In fiscal year 2001, slightly over half of all food stamp participants were children, 39 percent were nonelderly adults, and 10 percent were elderly people. About 67 percent of the children were school age, and 70 percent of adult participants were women.

Approximately 89 percent of food stamp households lived in poverty, as measured by the fiscal year 2001 federal poverty guidelines issued by the Department of Health and Human Services (see Appendix C). Food stamp benefits were concentrated among poorer households—34 percent of all food stamp households had a gross income less than or equal to half of the poverty guideline, and these households received 55 percent of all benefits. If the value of food stamps is included as income, 7 percent of all food stamp households moved above the poverty guideline as a result of receiving food stamps, and 15 percent moved from below to above half of the poverty guideline.

Of all food stamp households, 88 percent contained either a child or an elderly or disabled person, and these households received 91 percent of all benefits. Households with children received a relatively large average monthly food stamp benefit (\$242), reflecting their larger household size. The average household with children had 3.4 people compared with an average

¹ The figure of 17.32 million people is based on FNS administrative records. The participant count of 17.30 cited later in this report and in other figures provided throughout the report are estimates from the Food Stamp Program Quality Control (FSPQC) sample. For an explanation of the difference in the counts see Appendix D.

of 2.3 people for all households. Most of the food stamp households with children were single-adult households. Less than half of these single-adult households with children received support from Temporary Assistance to Needy Families (TANF). About 43 percent of all food stamp households with children had earned income; 39 percent of single-adult households with children and 63 percent of married—couple households with children had earnings. Ten percent of all households with children had both TANF and earned income.

Households with an elderly member received a relatively small average monthly food stamp benefit (\$58), reflecting their relatively small average size (1.3). Eighty percent of food stamp households with an elderly member consisted of an elderly person living alone. These individuals received an average monthly benefit of \$45 compared with an average monthly benefit of \$111 for households with elderly people not living alone and \$190 for households without any elderly.

CHAPTER 1: INTRODUCTION

The Food Stamp Program (FSP) is a central component of America's nutrition assistance safety net. The stated purpose of the FSP is "to permit low-income households to obtain a more nutritious diet by increasing their purchasing power" (The Food Stamp Act of 1977, as amended, P.L. 95-113). The FSP is the largest of the domestic food and nutrition assistance programs administered by the U.S. Department of Agriculture's Food and Nutrition Service (FNS). According to FNS administrative records, during fiscal year 2001, the FSP served approximately 17.3 million people in an average month at a total cost of \$17.8 billion, \$15.5 billion of which were for food stamp benefits.¹

The FSP is the only low-income assistance program available nationwide to essentially all financially needy households because it imposes relatively few nonfinancial categorical criteria.² The FSP provides benefits electronically or through coupons. These benefits can be redeemed for food in approximately 155,000 authorized stores across the nation.

Federal, state, and local governments share the costs and administration of the FSP. Congress authorizes the program and appropriates necessary funds. The Department of Agriculture establishes program regulations under the Food Stamp Act of 1977, as amended. FNS administers the FSP nationally, while state and local welfare agencies operate the program locally. The federal government fully funds the benefits of the FSP. Administrative costs are shared by the cooperating agencies, with FNS usually paying 50 percent of the costs.

Since food stamps are available to most people who meet the income and resource standards set by Congress, the FSP serves a broad spectrum of the needy population. Using FSP household data collected periodically for quality control review, FNS sponsors several analyses to enhance its understanding of the people served by the FSP. The agency also produces a series of reports to document these analyses (see Appendix G for a list of titles). This report presents a picture of households and individuals participating in the FSP in fiscal year 2001.

Chapter 2 provides an overview of the FSP, including the regulations used to determine eligibility and benefits, and the factors that affect program participation and costs, such as trends

¹ The total cost of the FSP in fiscal year 2001 also included \$2.3 billion in other costs, including the federal share of state administrative costs and employment and training programs, printing and processing, anti-fraud funding, and program evaluation.

² The FSP eligibility requirements include nonfinancial categorical criteria for certain groups. Specifically, many able-bodied, childless adults and legal permanent resident aliens were ineligible for food stamps in fiscal year 2001. The Farm Security and Rural Investment Act of 2002 (P.L. 107-171), known as the Farm Bill and signed into law on May 13, 2002, restores eligibility to disabled legal immigrants who entered the United States after August 22, 1996 (effective October 1, 2002); all legal immigrants who have been legally residing in the United States for 5 years (effective April 1, 2003); and to all legal immigrant children, regardless of date of entry to the United States (effective October 1, 2003). These provisions take place after the period of this report, and will be discussed in more detail in the fiscal year 2002 report.

in the national economy. Chapter 3 describes the characteristics of individuals and households participating in the FSP in fiscal year 2001. The appendices include detailed tabulations of household and participant characteristics for the nation and by state, and a brief description of the sample design and the sampling error associated with the estimates presented in the report.

CHAPTER 2: AN OVERVIEW OF THE FOOD STAMP PROGRAM

The characteristics of food stamp households and the level of FSP participation change over time in response to legislative changes to the FSP as well as economic and demographic trends. This chapter explains FSP eligibility requirements, application procedures, benefit computation, and food stamp issuance. The chapter concludes with a summary of program participation and costs, including a discussion of how these costs are related to the economy in fiscal year 2001.

PROGRAM ELIGIBILITY REQUIREMENTS

The Food Stamp Act of 1977, as amended, establishes uniform national eligibility standards for the FSP and defines the basic FSP unit as the "household." The eligibility criteria include gross and net income limits, an asset limit, and various nonfinancial criteria. There are exceptions to these criteria for certain high-cost areas, such as Alaska and Hawaii, and for certain individuals such as elderly people (age 60 and over) and people with disabilities.

The Household

Under FSP rules, a household is defined as individuals who live in a residential unit and purchase and prepare food together. The income and assets of each household member are aggregated to determine eligibility and benefits. Individuals who live together in a residential unit but do not purchase and prepare food together can apply as separate household units and their income and assets are considered separately in eligibility and benefit determinations. People who are elderly and disabled and cannot prepare and purchase food because of a substantial disability may apply as a separate household as long as the gross monthly income of the remainder of their residential unit is less than 165 percent of the U.S. Department of Health and Human Services poverty guidelines.¹

Income Eligibility Standards

Monthly income is the most important determinant of household eligibility. The majority of households that apply for food stamps must meet two income eligibility standards: a gross income standard and a net income standard.

¹ Federal poverty guidelines for many assistance programs are established annually by the Secretary of the U.S. Department of Health and Human Services. The FSP used 2000 poverty guidelines (published in the February 15, 2000 *Federal Register*) for all fiscal year 2001 income eligibility tests. These guidelines were developed on the basis of the 1999 Census poverty thresholds inflated to 2000 using the CPI–U. This means that the income eligibility tests applied to food stamp households in fiscal year 2001 are based on 1999 poverty measures inflated to 2000. See Appendix C for a listing of the fiscal year 2001 FSP poverty guidelines.

As defined in the Food Stamp Act of 1977, as amended, gross income includes most cash income (with the exception of specific types of income such as loans) and excludes most noncash income, or in-kind benefits. To be eligible for the FSP, a household without an elderly or disabled member must have a monthly gross income that is at or below 130 percent of the poverty guideline (\$1,847 for a family of four in the contiguous United States in fiscal year 2001). Households with elderly or disabled members are not subject to the gross income standard. Net income is determined by subtracting deductions permitted under the FSP from monthly gross income. The FSP deducts the following from a household's gross monthly income to arrive at the net monthly income:²

- Standard Deduction. All households automatically receive a standard deduction, equal to \$134 in the contiguous United States in fiscal year 2001. The standard deduction for outlying states and territories varies to reflect price differences between these areas and the contiguous United States (Appendix C).
- *Earned Income Deduction*. Households with earnings receive a deduction equal to 20 percent of the combined earnings of household members.
- *Dependent-Care Deduction*. Households with dependents receive a deduction for expenses involved in caring for children and other dependents while other household members work, seek employment, or go to school. The maximum dependent-care deduction in fiscal year 2001 was \$200 per month per dependent under age 2 and \$175 per month per dependent age 2 or older (Appendix C).
- Medical Deduction. A medical deduction is available only to households that contain
 elderly or disabled members. These households can deduct combined out-of-pocket
 medical costs exceeding \$35 that are incurred on behalf of elderly or disabled
 members of the household. Medical expenses reimbursed by insurance or
 government programs are not deductible.
- *Child Support Payment Deduction*. Households can deduct legally obligated child support payments made to or for a nonhousehold member.
- Excess Shelter Expense Deduction. A household is entitled to a deduction equal to shelter costs (such as rent, mortgage payments, utility bills, property taxes, and insurance) that exceed 50 percent of its countable income after all other potential deductions are subtracted from gross income. The limit on the excess shelter expense deduction for households without elderly or disabled members was \$300 in the contiguous United States at the beginning of fiscal year 2001, then increased to \$340 on March 1, 2001 (although states varied in when they implemented the change). This amount is indexed to inflation increases in subsequent years. Households that

² There is a distinction between a household's deduction entitlement and the amount actually used to compute food stamp benefits. The entitlement is the deduction that a household receives if the total of allowable deductions is less than the household's gross income. Because net income cannot be less than zero, households with total deductions greater than their gross income can only claim a portion of their deduction entitlement.

contain elderly or disabled members are entitled to subtract the full value of shelter costs that exceed 50 percent of their adjusted income. The limit on the excess shelter expense deduction for outlying states and territories varies to reflect price differences between these areas and the contiguous United States (Appendix C).

To be eligible for the FSP, a household must have a net monthly income at or below 100 percent of the poverty guideline (\$1,421 for a family of four in the contiguous United States in fiscal year 2001). The gross and net income eligibility standards vary by household size, as well as for residents of Alaska and Hawaii (see Appendix C). A household is exempt from these income tests (as well as the asset test described below) if all of its members receive General Assistance, Supplemental Security Income (SSI), or cash or in-kind Temporary Assistance to Needy Families (TANF) benefits.³

Assets

The second most important determinant of FSP eligibility is a household's assets. Households are permitted up to \$2,000 in countable assets, or \$3,000 in countable assets if at least one member is age 60 or older.⁴ Countable assets include cash, assets that can easily be converted into cash (such as money in checking or savings accounts, savings certificates, stocks or bonds, or lump-sum payments), and some nonliquid resources such as certain vehicles. However, certain types of property such as family homes, tools of a trade, or business property used to earn income are not counted.

Throughout 2001, many vehicles were not counted as assets for the purpose of determining eligibility; these included vehicles used as a home, to produce income, to transport fuel and water, or to transport disabled people. For some other vehicles, the first \$4,650 of the vehicle's Fair Market Value (FMV) is excluded and any excess value is applied to the asset limit. For yet other vehicles, the greater of excess FMV over \$4,650 or all equity (the FMV less any loan balance) is applied to the asset limit.

The vehicle asset rules changed significantly in 2001. For information on the new rules, see the section "Program Changes Since the Previous Fiscal Year" on page 8.

Nonfinancial Eligibility Standards

The FSP has some nonfinancial eligibility standards, such as restrictions on the participation of students, strikers, and people who are institutionalized. In addition, the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 (PRWORA) made most legal permanent

³ Benefits for these categorically eligible households are determined according to the same rules used for other eligible households.

⁴ The 2002 Farm Bill increases the asset limit to \$3000 for households with disabled members as well, but this takes effect after the period covered in this report.

resident aliens (LPRs) ineligible for benefits and imposed work registration requirements and time limits on able-bodied adults living in households without children.

LPRs with 40 quarters of work in the United States were exempted from the alien restrictions on FSP participation. Veterans and LPRs who were serving in the U.S. Armed Forces were also exempted along with their spouses and minor children. In addition, LPRs who were accorded refugee, asylee or deportee status were exempted from the restrictions for five years after they entered the country. Effective November 1, 1998, the Agricultural Research, Extension and Education Reform Act of 1998 (AREERA) restored eligibility to LPRs who were in the United States when PRWORA was enacted and were over 65 on August 22, 1996, or are currently under age 18 or disabled. The Act also extended the eligibility period for refugees, asylees, and deportees from five to seven years.

Certain other aliens, such as Hmong or Highland Laotians, American Indians born in Canada, and battered spouses and children, were eligible, as well. Additionally, LPRs who became naturalized U.S. citizens were eligible.⁵

Able-bodied adults living in households without children can receive benefits only if they work or participate in work-related activities. With certain exceptions, those who do not meet these work requirements are restricted to 3 months of food stamp benefits in any 36-month period. Participants age 18 to 49 are subject to this time limit unless they meet one of the following conditions:

- People who are disabled
- People who are mentally or physically unfit for employment
- Women who are pregnant
- People needed in the home to care for an ill or incapacitated person
- Relatives or other caretakers of dependent children
- Students meeting FSP eligibility requirements
- People who work at least 20 hours per week
- People who receive unemployment compensation
- People complying with work requirements under another program
- People participating in a drug or alcohol rehabilitation program
- People participating in a work experience program

APPLICATION PROCEDURES

To apply for food stamps, individuals are required to appear in person at their local food stamp office. However, elderly and disabled people, and people who have transportation problems can be interviewed by telephone or at their home. All states must allow individuals to apply for food stamps when they apply for TANF or SSI benefits.

⁵ The 2002 Farm Bill restores benefits to many legal immigrants, but this legislation takes effect after the period covered by this report.

The Food Stamp Act of 1977, as amended, requires that local offices process applications for food stamps within 30 days after they are received. However, applications from households with extremely low income or resources can be processed more quickly through the expedited food stamp eligibility verification procedures, allowing people to receive food stamp benefits within seven days after they apply. Those eligible for expedited service include (1) migrant or seasonal farm workers with assets equal to or less than \$100, and (2) households with gross income equal to or less than \$150 and assets equal to or less than \$100.

FSP participants are required to appear in person at their local food stamp offices periodically for recertification. The certification period varies according to the likelihood of a change in a food stamp household's financial circumstances. In fiscal year 2001, food stamp households were certified for food stamps for an average of almost 10 months.

BENEFIT COMPUTATION

After a household is certified for food stamps, its monthly food stamp benefit is computed on the basis of its net monthly income, the benefit reduction rate, and the maximum food stamp benefit for its household size and location. The maximum benefit to which a household is entitled is based on the June cost of the Thrifty Food Plan (TFP) for a family of four, adjusted for household size and geographic areas outside the contiguous United States. The cost of the TFP is based on an economical and nutritious diet, adjusted for household size and composition. Maximum benefits are revised annually to reflect changes in the cost of the foods in the TFP. As specified in the Food Stamp Act of 1977, as amended, the maximum benefit was 100 percent of the TFP through 1988, 100.65 percent in 1989, 102.05 percent in 1990, 103 percent from 1991 through 1996, and 100 percent of the TFP beginning in 1997.⁶ In fiscal year 2001 the maximum monthly benefit for a family of four in the contiguous United States was \$434 (Appendix C).

The benefit reduction rate is the rate at which benefits are reduced for every additional dollar of net income. The benefit reduction rate is 30 percent, reflecting the assumption that a household will spend 30 percent of its net income on food and that the FSP will provide the difference between that amount and the maximum benefit. Thus, benefits are reduced by 30 cents for every additional dollar of net income.

A household's monthly food stamp benefit is computed by subtracting 30 percent of its net income from the maximum benefit. If a household has zero net income, it receives the maximum food stamp benefit. All eligible one- and two-person households are guaranteed a minimum benefit of at least \$10 per month (except during the initial month of participation). For new participants, benefits are prorated for the first month.

⁶ In 1993, the Act was amended to require that 1993 maximum benefit amounts in the contiguous United States remain constant at 1992 values despite a drop in the value of the TFP in June 1992. In 1995, legislation was adopted to freeze maximum benefit amounts for Alaska at their 1994 levels.

FOOD STAMP ISSUANCE

State and local food stamp offices issue food stamp benefits in five main ways:

- On-Line Electronic Benefit Transfer (EBT). Participant receives a "debit" card, similar to a bank card, which is used to purchase food at authorized retail stores. The household's monthly benefit is electronically transferred to an account created specifically for FSP benefits. When a purchase is made, the amount of the purchase is debited from the account.
- *Off-Line Electronic Benefit Transfer*. Two states (Ohio and Wyoming) issue "smart cards." Unlike on-line electronic benefit transfer cards, these cards contain food stamp benefit information in a chip on the card.
- *ATP Card*. An authorization-to-participate identification card is mailed to the participant each month; the participant then exchanges the card for food stamp coupons at an authorized issuance office.
- *Mail.* State and local offices mail the food stamp coupons directly to the participant.
- *Manually*. The participant goes directly to the food stamp office for coupons.

By the end of fiscal year (FY) 2001, EBT projects operated statewide in 40 states and in parts of three others. More than four-fifths of all food stamp benefits were issued through EBT.

PROGRAM CHANGES SINCE THE PREVIOUS FISCAL YEAR

There were two substantive changes to program regulations in FY 2001: new vehicle rules were implemented, and the shelter deduction cap was raised.⁷

New regulations implemented in January 2001 excluded from the asset test any vehicle with equity below \$1,500, and exempted from the equity test one vehicle per adult in every household as well as any vehicles used by a teenager to drive to work or school. If there are no qualifying adults or teenagers in the household, one vehicle is still exempted from the equity test. For vehicles exempt from the equity test but not excluded entirely from the asset test, any fair market value exceeding \$4,650 is counted toward the asset limit. For any remaining vehicles, the higher of either any fair market value in excess of \$4,650 or any equity is counted.

In addition, the FY 2001 Agricultural Appropriations Act (enacted in September 2000 but not effective until July 1, 2001) allowed states to use TANF vehicle rules in place of food stamp

⁷ The 2002 Farm Bill made numerous changes to the FSP, including restoring benefits to many legal immigrants. However, these changes took effect after the period covered in this report.

⁸ The equity test counts all equity–fair market value minus remaining liens–of the vehicle.

rules if the TANF rules were more generous. Further, a broader interpretation of categorical eligibility rules was announced in July 1999 and implemented on November 21, 2000. This new interpretation requires states to confer categorical eligibility on families receiving or certified as eligible to receive benefits or services that are at least 50 percent funded by TANF or Maintenance of Effort (MOE) funds. (States have the option of conferring categorical eligibility on families receiving or certified to receive benefits or services that are less than 50 percent funded by TANF/MOE. They may also confer categorical eligibility on households where one member receives the benefit or service, but the state determines that the whole household benefits.) Categorically eligible households are exempt from the asset test and the net income test. They are subject to a 200 percent of poverty gross income test.

All of these changes were designed to make it easier for low-income workers to keep a vehicle and still receive food stamps. 9,10

The FY 2001 Agricultural Appropriations Act increased the maximum allowable shelter deduction on March 1, 2001. States were directed to apply the higher shelter deduction when certifying or recertifying households on or after March 1.

FSP PARTICIPATION AND COSTS

After declining slowly from 1983 through 1989, FSP participation grew substantially during the early 1990s. As illustrated in Figure 2.1, FSP participation increased by 37 percent from fiscal year 1990 through fiscal year 1994. Since peaking at 28.0 million people in March 1994, the number of FSP participants declined steadily through 2000 but began to rise again in 2001. There were 17.0 million participants at the beginning of fiscal year 2001, rising to 17.9 million by the end of the fiscal year.

The decline in FSP participation from 1994 to 2000 was caused by several factors. Part of the decline is associated with the improved economy in the second half of the 1990's. Major economic indicators generally showed improvement from 1994 to 1998 (Table 2.1). However, participation fell more sharply than expected during this period of sustained economic growth. Recent research suggests that about a third of the total decline in FSP participation occurred because rising income and assets lifted people above the program's eligibility limits. Another eight percent of the decline reflects welfare reform's restrictions on the eligibility of non–citizens and limits on the time during which childless able–bodied unemployed adults can receive

⁹ Vehicles used as a home, to produce income, to transport fuel or water, or to transport disabled people are still exempt from the asset test.

¹⁰ Prior to fiscal year 2001, vehicles not used as a home, to produce income, to transport fuel or water, or to transport disabled people were counted in the following way: for the first vehicle and any additional vehicles used to commute to work or qualifying job training programs, any fair market value exceeding \$4,650 was counted toward the asset limit; for all other vehicles, the higher of either any fair market value in excess of \$4,650 or any equity (fair market value minus remaining liens) was counted.

benefits. The remainder of the decline—just over half—occurred because fewer eligible people participated in the program. 11

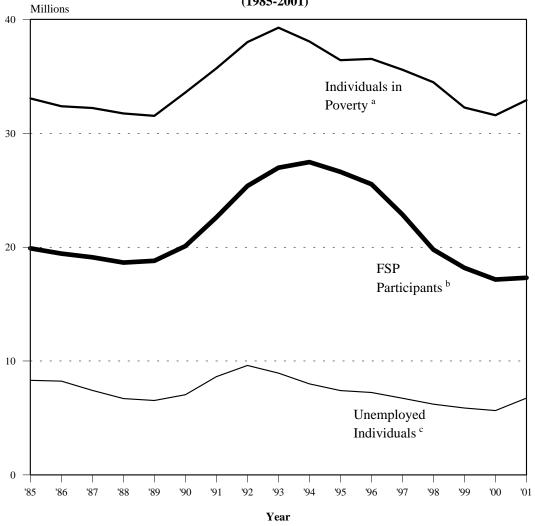

The increase in FSP participation from fiscal year 2000 to fiscal year 2001 occurred during a period when unemployment increased from 4 percent to 5 percent and the poverty rate increased from 11 percent to 12 percent.

Total FSP costs increased from \$17.1 billion in fiscal year 2000 to \$17.8 billion in fiscal year 2001, in part because of the increase in the FSP caseload.

CHAPTER 3: CHARACTERISTICS OF FOOD STAMP HOUSEHOLDS AND PARTICIPANTS

The FSP serves the nutritional needs of a broad spectrum of low-income Americans. In an average month in fiscal year 2001, the FSP provided benefits to 17.3 million people living in 7.5 million households. Almost all food stamp households lived in poverty (according to the federal poverty guidelines for program eligibility in fiscal year 2001). The vast majority of food stamp households contained either a child (under age 18), an elderly person (over age 59), or a disabled person. The average food stamp household received an average monthly food stamp benefit of \$163, had an average gross monthly income of \$624, had an average net monthly income of \$354, and was entitled to an average total deduction of \$310 per month (Tables 3.4 and 3.6). The average household size was 2.3 people. Compared with fiscal year 2000, the number of FSP participants increased by 1 percent and FSP benefit costs increased by 4 percent. This chapter discusses the composition and economic status of food stamp households, the characteristics of food stamp participants, and the changes in the characteristics of food stamp households from fiscal year 2000 through fiscal year 2001.

THE POVERTY STATUS OF FOOD STAMP HOUSEHOLDS⁴

The FSP provides benefits to households in need. In fiscal year 2001, the gross monthly income of 89 percent of food stamp households was less than or equal to 100 percent of the federal poverty guideline (Table 3.1).⁵ The gross monthly income of 55 percent of all food stamp households was less than or equal to 75 percent of the poverty guideline, and the income of one-third of all food stamp households was less than or equal to 50 percent of the guideline.

¹ The information in this chapter and the estimates in Appendices A and B are based on a sample of 47,009 households that participated in the FSP in fiscal year 2001. The sample was drawn from food stamp households in the 50 states, the District of Columbia, Guam, and the Virgin Islands. Households in Puerto Rico and the Northern Mariana Islands were not included in the sample because Puerto Rico has its own Nutritional Assistance Program, which replaced the FSP there in July 1982, and the Northern Mariana Islands participate in another block grant program instead of the FSP.

² The estimate of 17.30 million participants differs slightly from the number of food stamp participants according to FNS administrative records (17.32 million people) because the sample estimate is weighted by households rather than by individuals (see Appendix D).

³ This estimate reflects the entire deduction to which households are entitled. Because households cannot deduct more than their gross income, this figure is greater than the average deduction actually received by households.

⁴ For more information on the economic status of food stamp households, see Appendix Tables A-3 through A-8.

⁵ See Appendix Table C-1 for the poverty guidelines.

Table 3.1-- Distribution of Households and Their Benefits by Income as a Percentage of Poverty Guideline, Fiscal Year 2001

Gross Income as a	Percentage of:	
Percentage of Poverty Guideline ^a	All Households	All Benefits
Total	100.0	100.0
25% or less	18.1	28.4
26 - 50%	16.0	26.7
51 - 75%	20.4	23.8
76 - 100%	34.1	17.0
101 - 130%	10.1	3.9
131% or more	1.3	0.2

 $^{^{\}rm a}$ Defined as the fiscal year 2001 poverty guidelines published by the Department of Health and Human Services (see Appendix D).

The FSP effectively targets benefits to the neediest households; poorer households receive larger food stamp benefits than do households with more income. The 34 percent of all food stamp households that had a gross monthly income less than or equal to 50 percent of the poverty guideline in fiscal year 2001 received 55 percent of all benefits. In contrast, the 11 percent of households with a gross monthly income over the poverty guideline received only 4 percent of all benefits (Table 3.1).

The impact of food stamps on a household's purchasing power is estimated by adding the dollar value of the food stamps to household income and examining the distribution of households by poverty status. As shown in Table 3.2, the combination of cash and food stamps yields a significantly different distribution of food stamp households by poverty status. Specifically, when food stamps are included in gross income, the resulting increase in income of food stamp households was enough to move 7 percent of them above the poverty guideline. Food stamp benefits had an even greater impact on the poorest food stamp households, moving 15 percent of them above 50 percent of the poverty guideline.

HOUSEHOLDS WITH SPECIAL NEEDS⁷

The FSP effectively serves many households that contain people with special needs—children, elderly, and disabled people. In fiscal year 2001, 88 percent of all food stamp households contained a child, an elderly person, or a disabled person. These households received 91 percent of all food stamp benefits (Table A-14).

Households with Children

In fiscal year 2001, the FSP served approximately 4.0 million households with children each month, representing more than half (54 percent) of all households (Table 3.3). These households constituted 85 percent of all food stamp households with earnings. Ten percent of all households with children received a combination of TANF and earnings (Table A-6). Compared with other food stamp households, those that contained children received a relatively high average food stamp benefit of \$242 per month (Table 3.4). This relatively high benefit primarily reflects the fact that the average household size among food stamp households with children (3.4 people) was larger than the average household size among all food stamp households (2.3 people).

Children who received food stamps in fiscal year 2001 tended to live in households that were headed by a single adult, usually a female. Sixty-seven percent of all food stamp households with children were headed by a single adult, representing 36 percent of all food stamp households (Table 3.3).

⁶ This comparison assumes that program participants value their food stamp benefits at face value.

⁷ See Appendix Tables A-3, A-6, A-11, A-12, A-14, A-15, A-17, A-18, A-19, and A-23 for more details concerning these households.

^a The sum of individual categories does not match the table total because a household can have more than one of the characteristics.

b Household composition categories are based on characteristics of participating individuals only, and do not factor in characteristics of nonparticipants who may live in the same household with the participants. For example, single-adult households have exactly one participating adult and at least one participating child, but may have one or more nonparticipating adult or an adult participating in a separate case not included in the FSPQC sample.

^c Households not containing children, elderly persons, or disabled persons.

No sample households are found in this category.

Table 3.4-- Average Values of Selected Characteristics by Household Composition, Fiscal Year 2001

	Average Values

Single-Person Household	170	50	118	1.0		
Multi-Person Household	443	195	196	2.1		

^a Household composition categories are based on characteristics of participating individuals only, and do not factor in characteristics of nonparticipants who may live in the same household with the participants. For example, single-adult households have exactly one participating adult and at least one participating child, but may have one or more nonparticipating adult or an adult participating in a separate case not included in the FSPQC sample.

^b Households not containing children, elderly persons, or disabled persons.

Forty-four percent of these single-adult food stamp households received TANF, 39 percent had earnings, and 16 percent received SSI. Eight percent of food stamp households contained married couples and children, representing 14 percent of all food stamp households with children. Of all married-couple households with children, 63 percent had earned income and 24 percent received TANF (Table 3.3).

The characteristics of married-couple households with children varied considerably from those of single-adult households with children. The average monthly food stamp benefit for single-adult households was lower than that of married-couple households (\$239 versus \$284) due to the smaller size of single-adult households (Table 3.4). The per capita benefit was higher for people in single-adult households than for people in married-couple households (\$75 versus \$62) in part because single-adult households were poorer. Single-adult households with children had a substantially lower gross monthly income (\$671 versus \$1,074).

Among all households with children, 14 percent received child support, and 7 percent had no income (Table A-6).

Households with Elderly People

In fiscal year 2001, the FSP served an average of 1.5 million households containing elderly people (age 60 or older) each month, representing 20 percent of all households (Table 3.3). These households received an average food stamp benefit of \$58 per month and had an average household size of 1.3 people (Table 3.4).

Elderly people who received food stamps tended to live alone and thus received relatively small food stamp benefits. In fiscal year 2001, 80 percent of all food stamp households with elderly members were single-person households (Table 3.3). These households received an average food stamp benefit of \$45 per month compared with \$111 in benefits for households with elderly people not living alone and \$190 for households without elderly members (Tables 3.4 and A-2). The average size of households containing elderly people not living alone was 2.4 people.

A majority of food stamp households that contained elderly people received SSI or Social Security income. In fiscal year 2001, 61 percent of all food stamp households with elderly members received SSI and 69 percent received Social Security (Table 3.3). Thirty-five percent of households with elderly members received both SSI and Social Security income (Table A-6). Food stamp households with elderly members represented 39 percent of all food stamp households with SSI and 55 percent of food stamp households with Social Security income.

Households with Disabled People

In fiscal year 2001, the FSP served an average of 2.1 million households containing disabled people (Table 3.3).⁸ Households that contain disabled people represented 28 percent of all food stamp households and received an average monthly food stamp benefit of \$101 (Table 3.4).

⁸ In this report, disabled children are defined as individuals under age 18 who are receiving SSI. Disabled adults are defined as individuals age 62 to 64 who receive SSI or age 18 to 61 who receive SSI, Social Security, veterans' benefits, or other government benefits as a result of a

About 58 percent of food stamp households that contained disabled people were single-person households (Table 3.3). Households containing a disabled person living alone received a lower average monthly food stamp benefit than did households containing disabled people not living alone (\$48 compared with \$173) (Table 3.4). Once again, the difference in benefits between the two groups reflects differences in average household size. Disabled people who did not live alone lived in households with an average of 3.3 individuals. Over 80 percent of households containing disabled people received SSI and 42 percent received Social Security income.

Other Households Served by the FSP

The FSP serves needy households other than those that contain children, elderly people, or disabled people. In fiscal year 2001, 12 percent of all food stamp households consisted solely of one or more nonelderly, nondisabled adults (Table 3.3). These households tended to be singleperson households (92 percent) and represented the majority (55 percent) of households that received General Assistance. However, three-fourths (74 percent) of these households did not receive General Assistance. Five percent had zero gross income (Table A-16). Households consisting solely of one or more nonelderly, nondisabled adults received an average food stamp benefit of \$124 per month (Table 3.4).

Single-Person Households

Of all food stamp households in fiscal year 2001, 43 percent were individuals who lived alone. These households received an average monthly food stamp benefit of \$68. Most of these individuals (62 percent) were female, and 38 percent were elderly. Compared with all food stamp households, a relatively small proportion of food stamp participants living alone had earned income (9 percent), and a relatively high proportion had zero gross income (13 percent) (Tables A-4, A-5, A-17, A-19, and A-24). By comparison, 23 percent of all multiple person households had earned income, and 4 percent had zero gross income (Tables A-4 and A-19).

CHARACTERISTICS OF FSP PARTICIPANTS

The FSP serves a broad spectrum of individuals. In fiscal year 2001, 51 percent of FSP participants were children (younger than 18 years old), and they received 53 percent of pro-rated FSP benefits (Table 3.5). Two-thirds of the children served by the FSP were school age (age 5 to 17). Thirty-nine percent of participants were nonelderly adults (age 18 to 59), and 10 percent were elderly adults.

Seventy percent of nonelderly adults and 72 percent of elderly adults were female (Table A-23). Thirteen percent of FSP participants were disabled.⁹

(continued)

disability. Because individuals over age 64 can receive Social Security or SSI without being disabled (age 61 for Social Security), disability status of adults over age 64 cannot be identified accurately in the FSPQC sample.

⁹ For more information on FSP participants, see Appendix Tables A-23 and A-24.

^a Percent of all participants.

 $^{^{\}rm b}$ Pro-rated benefits equal the benefits paid to households multiplied by the ratio of participants with selected characteristic to total household size.

^c Noncitizens may be inside or outside the food stamp unit.

^d The FSPQC reports these individuals to be nonelderly, nondisabled childless adults (sometimes referred to as ABAWDs). Many of them are subject to work registration, unless they live in a waiver area or receive a state exemption. (Whereas past reports in this series have used a simulated definition to identify these individuals, this report uses the FSPQC variable ABWDSTi to identify them.)

Six percent of participants were citizen children living with noncitizens. Four percent of participants were noncitizens–3 percent were legal permanent resident aliens and another 1 percent were refugees. ¹⁰

With the exception of certain groups of individuals, such as caretakers of small children and people working at least 30 hours per week, able-bodied nonelderly adult food stamp participants are required to register for work and accept suitable employment as a condition for receiving food stamps. Like participants in the FSP, participants in other assistance programs often are required to register for work. In fiscal year 2001, 14 percent of all food stamp household heads were registered for work under the FSP or another assistance program (Table A-25). Most food stamp household heads (78 percent) were exempt from work registration requirements. Twenty-nine percent of household heads were exempt due to physical or mental disability, 17 percent were exempt because they were caretakers of a child under age 6 or an incapacitated adult, and 9 percent were exempt because they were already employed full-time.

CHANGES IN THE ECONOMIC CONDITIONS OF FOOD STAMP HOUSEHOLDS

The overall economic conditions of the average food stamp household worsened slightly from fiscal year 2000 to fiscal year 2001. While average gross income decreased in real dollars from \$620 in fiscal year 2000 to \$607 in fiscal year 2001, the average total deduction to which households are entitled increased by 1 percent in real dollars, resulting in a 3 percent decrease in real dollars in average net income (Table 3.6). The percentage of households with zero net income increased from 20 percent in fiscal year 2000 to 22 percent in fiscal year 2001. The percentage of households with earnings remained fairly constant at 27 percent. The percentage of households receiving TANF dropped from 26 percent to 23 percent even as the percentage of all FSP households with children stayed constant at 54 percent (Tables A-1 and A-26).

In real dollars, the average food stamp benefit remained at the fiscal year 2000 level of \$158. Although the real average net income decreased, the maximum benefit also decreased in real dollars, offsetting the increase in the average benefit.

¹⁰ The 2002 Farm Bill made numerous changes to the FSP, including restoring benefits to many legal immigrants. However, these changes took effect after the period covered in this report.

Reports in this series prior to summer 1989 included as work registrants only people required to register for work under the FSP; the summer 1989 through fiscal year 1997 reports include as work registrants food stamp participants registered for work under the FSP or for the Job Opportunities and Basic Skills (JOBS) program. Beginning with the fiscal year 1998 report, work registrants include those registered for work under the FSP or any other assistance program. For more information on the work registration status and other characteristics of food stamp participants and household heads, see Appendix Tables A-21 and A-25.

Table 3.6 Nominal and Real Values of Selected Characteristics, Fiscal Year 2000 and Fiscal Year 2001

		Nominal Values		Real V	alues
Selected Characteristics	Fiscal Year 2000	Fiscal Year 2001	Percentage Change	Fiscal Year 2001 (in 2000 dollars)	Percentage Change
Average Gross Income ^a Per Household Per Person	\$620 331	\$624 335	+0.6 +1.2	\$607 326	-2.1 -1.5
Average Net Income ^a Per Household Per Person	355 178	353 179	-0.6 +0.6	343 174	-3.4 -2.3
Average Total Deduction ^a	298	311	+4.4	302	+1.3
Average Household Benefit ^b	158	163	+3.2	158	0.0
Maximum Coupon Benefit for a Family of Four in the Continental U.S. ^b	426	434	+1.9	420	-1.4
Consumer Price Index All Items Food at Home	172.2 167.9	177.1 173.4	+2.8 +3.3		

^a Real values are in constant fiscal year 2000 dollars. Fiscal year 2001 values were deflated by the change in the CPI-U for all items between fiscal year 2000 and fiscal year 2001 (2.8 percent).

Source of CPI-U average values: U.S. Department of Labor, Bureau of Labor Statistics.

Source of nominal values: Fiscal Year 2000 and Fiscal Year 2001 Food Stamp Program Quality Control samples.

^b Real values are in constant fiscal year 2000 dollars. Fiscal year 2001 values were deflated by the change in the CPI-U for food at home between fiscal year 2000 and fiscal year 2001 (3.3 percent).

DEFINITIONS

Alien. Participant who is a non-citizen, including legal permanent resident aliens, immigrants accorded permanent resident status, refugees, individuals granted political asylum, aliens granted a stay of deportation, aliens residing in the United States under color of law, nonimmigrants admitted for a specified period, Mexican citizens with a "border" card, and undocumented aliens. See also Legal Immigrants, Other Alien, Legal Permanent Resident Alien.

Children. Individuals under age 18.

Child Support Payment Deduction. Deduction for households with legally obligated child support payments made to or for a non-household member. See also *Deductions*.

Countable Resources. Cash on hand and assets that can be converted easily to cash, such as money in checking or savings accounts, savings certificates, stocks or bonds, and lump sum payments. They also include some nonliquid assets, although the family home, certain family vehicles, and business tools or property are not counted. See also *Resource Limit*.

Deductions. Allowable deductions from a household's gross monthly income to arrive at FSP net monthly income. The deductions shown in the tables are those to which households were entitled. Some of the deductions may not have been used, however, before a household reached zero net income status. Therefore, total deductions do not equal the difference between gross and net income amounts. See also *Total Deduction, Standard Deduction, Earned Income Deduction, Dependent-Care Deduction, Excess Shelter Deduction, Medical Deduction and Child Support Payment Deduction.*

Dependent-Care Deduction. Deduction received by food stamp households for expenses involved in caring for dependents while other members work, seek employment, or go to school. In fiscal year 2001 the deduction was subject to a maximum of \$200 per month for each dependent under age 2 and \$175 per month for each dependent age 2 or more. See also *Deductions*.

Disabled Individuals. Disabled individuals are defined as individuals under age 65 who receive SSI and individuals age 18 to 61 who receive Social Security, veterans benefits, or other government benefits as a result of disability. Because identifiers such as Social Security and SSI receipt are not valid indicators of disability for individuals over age 64 (Social Security is not

a valid indicator for individuals over age 61), disability status of adults over age 64 cannot be identified accurately in the FSPQC sample.

Earned Income Deduction. Deduction received by households with earnings, equal to 20 percent of the combined earnings of household members. See also *Deductions*.

Earned Income. Includes wages, salaries, and self-employment income.

Elderly. Adults age 60 or older.

Electronic Benefit Transfer. Means of benefit delivery via electronic "debit" card, similar to a bank card, which is used to purchase food at authorized retail stores.

Employed Full Time. Employed at least 30 hours per week or receiving weekly earnings equal to or greater than the federal minimum wage multiplied by 30 hours. This estimate is based on an employment status variable.

Employed Part Time. Employed less than 30 hours per week.

Employment and Training (E&T). Refers to employment and training services received under FSP E&T programs. Services provided include work experience, educational programs, and job search training.

Entrant Households. Includes households newly certified during fiscal year 2001.

Excess Shelter Deduction. Deduction received by households with shelter costs, equal to those shelter costs that exceed 50 percent of the household's countable income after all other potential deductions are subtracted from gross income. There is a limit on the shelter deduction for households that do not contain elderly or disabled members. See Appendix C. See also *Deductions*.

Exempt from Work Registration. See *Work Registration*.

Expedited Service Households. Households which initially received expedited service for the

certification period in effect during fiscal year 2001.

Gross Income. Total monthly income of household in dollars, before applying deductions.

Gross Income Limit. Food stamp program monthly gross income eligibility standards, determined by household size; equal to 130 percent of the poverty guidelines. See Appendix C.

Household. Individuals who live in a residential unit and purchase and prepare food together.

Households With Preschool-Age Children. Households with at least one member under age 5

Households With Elderly. Households with at least one member age 60 or older.

Households With Elderly or Disabled. Households in which at least one member is age 60 or over or at least one member is under age 65 and receives SSI, or at least one member is age 18 to 61 and receives Social Security, veterans' benefits, or other government benefits as a result of disability.

Households With School-Age Children. Households with at least one member age 5 to 17.

Households With Disabled. Households with at least one member who is under age 65 and receives SSI or at least one member who is age 18 to 61 and receives Social Security, veterans' benefits, or other government benefits as a result of disability.

Households With Children. Households with at least one member age 17 or less.

Initial Certification Households. Includes both households certified for the first time within the current certification period and previously certified households that have not received benefits for at least 30 days.

Legal Immigrants. All immigrants legally residing in the United States, including all legal permanent resident aliens, refugees, asylees, and

deportees. See also Other Aliens, Legal Permanent Resident Aliens, and Refugees.

Legal Permanent Resident Alien. An immigrant lawfully admitted for permanent resident status. See also *Legal Immigrants*, *Other Alien, Refugee*.

Married-Couple Household. Household with two or more individuals age 18 or older and at least one spouse.

Maximum Benefit. Based on 100 percent of the cost of the Thrifty Food Plan in the preceding June for a reference family of four, rounded to the lowest dollar increment. Maximum benefit varies from the Continental U.S. in Alaska, Hawaii, Guam and the Virgin Islands. See Appendix C.

Medical Deduction. Deduction available to households that contain elderly or disabled members, equal to all medical expenses incurred by the elderly or disabled person that exceed \$35. See page 4. See also *Deductions*.

Minimum Benefit. \$10 for one- or two-person households.

Multiple-Adult Household. Household with two or more individuals age 18 or older.

Net Income. Total monthly income of household in dollars, after applying deductions.

Net Income Limit. FSP monthly net income eligibility standard, determined by household size. See Appendix C.

Nonelderly Adults. Adults age 18 to 59.

Not Employed. Not working and not looking for work, and therefore not part of the labor force.

Other Alien. A nonimmigrant admitted for a specified period, a Mexican citizen with a "border" card, an undocumented alien, or an alien permanently residing in the United States under color of law. See also *Legal Immigrants*, *Legal Permanent Resident Alien*, *Refugee*.

Personal Responsibility and Work Opportunity Reconciliation Act of 1996 (PRWORA). This act disqualified many legal permanent resident aliens and able-bodied adults from the Food Stamp Program. In addition, the legislation changed cash welfare from an entitlement to temporary assistance designed to move parents to work. Since many cash welfare recipients also participate in the FSP, changes to the cash welfare program significantly affect FSP participants.

Poverty Guideline. The poverty guidelines used in fiscal year 2001 were issued by the Department of Health and Human Services and published in the 2000 *Federal Register*. Dividing these guidelines by 12 yields the monthly net income limits for the FSP. The Bureau of the Census establishes other poverty thresholds which are used primarily for statistical purposes. See Appendix C.

Preschool-Age Children. Children less than 5 years old.

Refugee. An alien accorded refugee status, an alien granted political asylum, or an alien granted a stay of deportation. See also *Legal Immigrants*, *Legal Permanent Resident Alien*, *Other Alien*.

Resource Limit. For most households the resource limit was \$2,000 in fiscal year 2001. Households with at least one member age 60 or older were allowed up to \$3,000 of resources. See also *Countable Resources*.

Rural. A household is considered to be located in a rural area if the county in which its local food stamp agency is located is not in a Metropolitan Statistical Area as defined by the Census Bureau.

School-Age Children. Children ages 5 to 17.

Shelter Deduction. See *Excess Shelter Deduction.*

Single-Adult with Children Household. Food stamp household with exactly one person age 18 or older and at least one person under age 18.

Standard Deduction. Deduction received by all households which varies by area to reflect price differences among areas. See Appendix C. See also *Deductions*.

Student. Participant age 18 or older enrolled at least half time in a recognized school, training program, or institution of higher education.

Thrifty Food Plan (TFP). Market basket of goods based on an economical and nutritious diet, adjusted for household size and composition. Used to determine maximum food stamp benefit amounts.

Total Deduction. Includes earned income, child support payment, dependent-care, excess shelter, medical, and standard deductions to which the FSP household is entitled. In some cases this exceeds the amount deducted from gross income because net income cannot be less than zero. See also *Deductions*.

Unearned Income. Includes **Temporary** Assistance to Needv Families. General Assistance. Supplemental Security Income. Security, Unemployment Social Income. Veterans' Benefits, Workers' Compensation, Government Benefits. Household Other Contributions, Household Deemed Income, Educational Loans, Child Support Enforcement Payments, and other unearned income.

Unemployed. Not working but looking for work, and therefore part of the labor force.

Urban. A household is considered to be located in an urban area if the county in which its local food stamp agency is located is in a Metropolitan Statistical Area as defined by the Census Bureau.

Work Registration. Many able-bodied food stamp household heads are required to register for work with their welfare office or state unemployment agency and must agree to accept any suitable job that is offered to them. Individuals who are exempt from FSP work registration rules include the following:

 All individuals under age 16 or over age 60, and some individuals age 16 and 17

- Individuals responsible for the care of a dependent child under age 6 or the care of an incapacitated person
- Individuals who are physically or mentally unfit for work
- Individuals complying with work requirements of other assistance programs
- Students enrolled at least half time in a school, training program, or institution of higher education
- Regular participants in a drug addiction or alcoholic treatment program
- Individuals working 30 hours a week or earning more than an amount equal to 30 hours times the minimum wage.

Workfare. A program in which food stamp participants perform work in a public service capacity in exchange for the food stamp benefits to which their household is entitled. The positions are in public or private not-for-profit organizations only. The hours of participation are limited to the number of hours needed to pay off the household's monthly benefit allotment at the higher of the applicable federal or state minimum wage.

^a The FSPQC reports these individuals to be nonelderly (age 18-49), nondisabled childless adults (sometimes referred to as ABAWDs). Many of them are subject to work registration, unless they live in a waiver area or receive a state exemption. (Whereas past reports in this series have used a simulated definition to identify these individuals, this report uses the FSPQC variable ABWDSTi to identify them.)

Multi-Person Household	72	1.0	153	0.9	14,016	1.2	

^a Household composition categories are based on characteristics of participating individuals only, and do not factor in characteristics of nonparticipants who may live in the same household with the participants. For example, single-adult households have exactly one participating adult and at least one participating child, but may have one or more nonparticipating adult or an adult participating in a separate case not included in the FSPQC sample.

 $^{^{\}rm b}$ The sum of individual categories does not match the table total because a household can have more than one of the characteristics in the table.

^c Households not containing children, elderly persons, or disabled persons.

^a Percent of all participants.

^b Pro-rated benefits equal the benefits paid to households multiplied by the ratio of participants with selected characteristic to total household size.

^c Noncitizens may be inside or outside the food stamp unit.

^d The FSPQC reports these individuals to be nonelderly (age 18-49), nondisabled childless adults (sometimes referred to as ABAWDs). Many of them are subject to work registration, unless they live in a waiver area or receive a state exemption. (Whereas past reports in this series have used a simulated definition to identify these individuals, this report uses the FSPQC variable ABWDSTi to identify them.)

^a Fiscal year analysis files were not developed for the years prior to 1989.

^b Beginning in 1995, disabled households are defined as households with at least one member under age 65 who received SSI, or at least one member age 18 to 61 who received Social Security, veterans benefits, or other government benefits as a result of a disability. For years prior to 1995, disabled households are defined as households with SSI but no members over age 59. The substantial increase in the percentage of households with a disabled member between 1994 and 1995 is due in part to the change in the definition of disabled households. Using the previous definition, 13.3 percent of households included a disabled person in fiscal year 1995.

^a The FSPQC reports these individuals to be nonelderly (age 18-49), nondisabled childless adults (sometimes referred to as ABAWDs). Many of them are subject to work registration, unless they live in a waiver area or receive a state exemption. (Whereas past reports in this series have used a simulated definition to identify these individuals, this report uses the FSPQC variable ABWDSTi to identify them.)

^b Due to rounding, the sum of individual categories may not match the table total.

^a This category includes participants whose citizenship status is unknown or missing; therefore, the total may not equal the sum of the other columns.

^b Because of an administrative change in how citizenship data were collected in the FSPQC, individuals in citizenship subcategories (such as permanent resident aliens and refugees) cannot be identified reliably at the state level. State citizenship tables in this report contain information only for citizens and noncitizens and therefore are not directly comparable with tables in *Characteristics of Food Stamp Households* reports prior to the Fiscal Year 1999 edition.

5	2,162	2,703	2,487
6	2,476	3,097	2,849
7	2,790	3,490	3,210
8	3,104	3,883	3,572
Each Additional Member	+315	+394	+362

^aThe fiscal year 2001 FSP gross income limits are based on the 2000 poverty guidelines issued by the Department of Health and Human Services (HHS) and published in the February 2000 Federal Register. (See Table C-1.) FNS derived the fiscal year 2001 gross income limits by multiplying the 2000 poverty guidelines by 130 percent, dividing the results by 12 and then rounding up to the nearest dollar. The 2000 poverty guidelines were developed on the basis of the 1999 Census poverty thresholds, so the gross income limits applied to food stamp households in fiscal year 2001 are based on 1999 poverty measures.

Table C-3. FSP Maximum Allowable Net Monthly Income Eligibility Standards in Fiscal Year 2001

Household Size	Continental United States, Guam, and the Virgin Islands	Alaska	Hawaii
			_
1	\$696	\$870	\$800
2	938	1,172	1,078
3	1,180	1,475	1,356
4	1,421	1,777	1,635
5	1,663	2,080	1,913
6	1,905	2,382	2,191
7	2,146	2,685	2,470
8	2,388	2,987	2,748
Each Additional Member	+242	+303	+279

^aThe fiscal year 2001 FSP net income limits are based on the 2000 poverty guidelines issued by the Department of Health and Human Services (HHS) and published in the February 2000 Federal Register. (See Table C-1.) FNS derived the fiscal year 2001 net income limits by dividing the 2000 poverty guidelines by 12 and rounding up to the nearest dollar. The 2000 poverty guidelines were developed on the basis of the 1999 Census poverty thresholds, so the net income limits applied to food stamp households in fiscal year 2001 are based on 1999 poverty measures.

Table C-4. Value of Standard, Maximum Dependent-Care, and Excess Shelter Expense Deductions in the Continental United States and Outlying Areas in Fiscal Year 2001

Area	Standard ^a	Maximum Dependent-Care ^{b,c}	Excess Shelter ^d
Continental United States	\$134	\$200/\$175	\$300/\$340
Alaska	229	200/175	521/543
Hawaii	189	200/175	429/458
Guam	269	200/175	364/399
Virgin Islands	118	200/175	221/268

^aPrior to fiscal year 1997, the standard deduction was adjusted each October to reflect changes in the CPI-U for nonfood items. Since fiscal year 1997, the standard deduction has been frozen at fiscal year 1996 levels.

^bThe household limit on the dependent-care deduction is equal to the maximum dependent-care deduction multiplied by the number of dependents in the household.

^cThe higher dependent-care deduction pertains to dependents under age 2; the lower deduction is for dependents age 2 or more.

^dThe shelter cap increased at the beginning of fiscal year 2001 and again on March 1, 2001, although states varied in when they implemented the second change.

Table C-5. Value of Maximum Food Stamp Benefit in the Continental United States and Outlying Areas in Fiscal Year 2001^b

Household Size	Continental U.S.	Alaska Urban	Alaska Rural I	Alaska Rural II	Hawaii	Guam	Virgin Islands
1	\$130	\$160	\$204	\$249	\$199	\$192	\$167
2	238	294	375	456	366	352	307
3	341	421	537	654	524	504	439
4	434	535	682	830	665	640	558
5	515	635	810	986	790	760	663
6	618	762	972	1,183	948	912	796
7	683	842	1,074	1,308	1,048	1,008	879
8	781	963	1,228	1,495	1,198	1,152	1,005
Each Additional Member	+98	+120	+154	+187	+150	+144	+126

^a The maximum benefit values are effective from October 1, 2000 to September 30, 2001 and are based on 100 percent of the cost of the Thrifty Food Plan in the preceding June for a reference family of four, rounded to the lowest dollar increment.

^b Due to the unusual nature of Alaskan terrain and climate, areas outside major urban centers are less accessible to food distributors. Therefore the value of the maximum benefit is adjusted to account for differences in the estimated cost of the Thrifty Food Plan in various regions. All regions of the state are classified as Rural I, Rural II, or Urban for this purpose.

PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDEL) COPYING

APPENDIX D SOURCE AND RELIABILITY OF ESTIMATES

PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPY	YING

THE SAMPLE

The estimates in this report are derived from a sample of households selected for review as part of the Food Stamp Program Quality Control System (FSPQC), an ongoing review of food stamp household circumstances. The FSPQC is designed to determine (1) if households are eligible to participate or are receiving the correct benefit amount and (2) if household participation is correctly denied or terminated. The FSPQC is based on a national probability sample of approximately 47,000 participating food stamp households, and on a somewhat smaller number of denials and terminations. The national sample of participating households collected in the FSPQC is stratified by the 50 states, the District of Columbia, Guam, and the Virgin Islands. Annual required state samples range from a minimum of 300 to 2,400 reviews, depending on the size of the state's caseload. State agencies select an independent sample each month that is generally proportionate to the size of the monthly participating caseload.

The estimates presented in Appendices A and B of this report are derived from the fiscal year 2001 FSPQC sample of participating food stamp households. The fiscal year 2001 data is made up of monthly samples from October 2000 through September 2001.

Target Universe

The target universe of this study included all participating households (active cases) subject to quality control review in the 50 states, the District of Columbia, Guam, and the Virgin Islands.¹

While almost all participating food stamp households are included in the target universe, certain types of households not amenable to review are not included. Specifically, the universe includes all households receiving food stamps during the review period except those in which the participants (1) died or moved outside the state; (2) received benefits through a disaster certification authorized by FNS; (3) were under investigation for FSP fraud (including those with pending fraud hearings) and/or were appealing a notice of adverse action; or (4) received restored benefits in accordance with the state manual, but were otherwise ineligible. The sampling unit within the universe each month is the active food stamp household as specified in FNS regulations.

Weighting

The estimates for fiscal year 2001 in this report are based on a sample of 47,009 valid observations. The sample records have been weighted, based on the number of households participating in the food stamp program in each month in fiscal year 2001 as reported to FNS.²

¹ Participating households in Guam and the Virgin Islands have been included in the target universe since fiscal year 1993. Prior to that year the universe excluded households in those areas.

² Case record sample weights of states that had disproportionately stratified quality control sample designs were adjusted to reflect the stratification.

Thus, when the sample is weighted, it contains the total number of households that actually participated in the FSP over any given time period. A separate person-level weight was not created, however. Therefore, although the number of households in the weighted sample is equal to the number of households found in program operations data provided by FNS, the number of participants in the weighted sample is not exactly equal to the number in program data.

Comparison to Participation Data

The following table compares the quality control sample-based estimates to aggregate program participation data for fiscal year 2001.

	Fiscal Year 2001		
Average Monthly Value	Program Data	FSPQC Sample	
Number of households	7,450,303	7,450,303	
Number of participants	17,315,190	17,297,000	
Value of benefits	\$1,299,269,307	\$1,214,280,789	
Average household size	2.32	2.32	
Average benefit per person	\$75.03	\$70.20	

Income Decision Rule

Several household-level income and deduction variables are both reported and can be calculated by summing across reported person-level variables. Gross income is the key variable since the earned income and excess shelter expense deductions and net income depend on gross income, and benefit levels depend on net income. The data on which this report is based were edited to achieve internal consistency. The reported and calculated values for fiscal year 2001 for selected variables are presented in appendix Table D-1.

Completion Rates

Failure to complete reviews for all cases subject to review can bias the sample results if the characteristics of unreviewed households are significantly different from those of reviewed households. While there are no direct measures of such differences, the ratio of complete reviews to total sample cases selected for review provides an indication of the magnitude of any potential bias. The number of cases subject to review, the number of valid observations, and the estimated completion rates for fiscal year 2001 are as follows:

	FSPQC Sample	
	Fiscal Year 2001	
Number of cases subject to review	54,722	
Number of cases completed	47,009	
Estimated completion rate	85.9

APPENDIX E SAMPLING ERROR OF ESTIMATES

PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPY	YING

SAMPLING ERROR

The estimates of the characteristics of food stamp households in this report are based on a sample of households and, consequently, are subject to statistical sampling error. One indicator of the magnitude of the sampling error associated with a given estimate is its standard error. Standard errors measure the variation in estimated values that would be observed if multiple replications of the sample were drawn. The magnitude of the standard errors depends on: (1) the degree of variation in the variable within the population from which the sample is drawn; (2) the design of the sample, including such issues as stratification and sampling probabilities; and (3) the size of the sample on which the estimate is based. This appendix presents estimates of the standard errors associated with key statistics and outlines methods for estimating the standard errors of other statistics for which standard errors have not been directly calculated.

Standard Errors

The standard error of an estimated proportion of households, s_p , based on a simple random sample is:

(1)
$$s_p = \sqrt{[p(1-p)(N-n)]/[(n-1)N]}$$
,

where p is the weighted estimate of the proportion, N is the number of households in the population, and n is the sample size. The standard error of an estimated number of households, s_N , based on a simple random sample is:

$$(2) \quad s_{_{N}} = N s_{_{P}}$$

These formulas for the standard errors of estimates based on a simple random sample do not necessarily apply to estimates derived from more complex samples, such as the stratified sample of the FSPQC. In this appendix, standard errors calculated using equations (1) and (2) are referred to as "naive standard errors." Standard errors can be estimated more accurately using Taylor series linearization.

More precisely, n is the sample size corresponding to the population that forms the denominator or "base" of the proportion being estimated. When the base is all food stamp households in fiscal year 2001, n = 47,009. Sample sizes for selected demographic subgroups for fiscal year 2001 are shown in the sample size column of Table E-1. For subgroups not shown in Table E-1, the sample size can be approximated by multiplying the total sample size (47,009) by the ratio of the subgroup population size to the total population size (N). For fiscal year 2001, N = 7,450 thousand and there are 1,520 thousand elderly households. Hence the approximate sample size for elderly households in fiscal year 2001 would be calculated as (1,520/7,450) x (47009) = 9,591. In this case the approximation can be compared to the true elderly sample size of 9,488, as shown in Table E-1.

The following discussion presents standard errors of selected estimates that were computed using the Taylor series method. It then presents a simple method for approximating standard errors of estimates for which individual standard errors have not been computed.

Standard Errors of Estimated Numbers of Households

The standard errors of selected estimates of food stamp households in fiscal year 2001 are shown in Table E-1. These standard errors can be used to compute confidence intervals for the estimated number of households with a particular characteristic.² For example, the estimated number of food stamp households that receive the minimum benefit is 834,000 (Table A-1), and the corresponding standard error is 13,960 (Table E-1). Therefore, the 95 percent confidence interval extends from 806,100 to 861,700.³

For standard errors not shown in Table E-1, the approximate standard error, S_E , of an estimated number of households for fiscal year 2001 can be calculated using equation (3):

$$(3) S_E = s_N x d$$

where s_N is the naive standard error from equation (2) above, and d is the square root of the design effect for the population subgroup and characteristic of interest, from Table E-2. The design effect reflects the loss of precision due to the different sampling rates in different strata of the FSPQC sample. It is the ratio of the variance computed by the Taylor series method (Table E-1) to the naive variance.⁴ When the population subgroup (for example, households with elderly) is listed in Table E-2, but the characteristic of interest (for example, zero net income) is not, use the average design effect for the subgroup, from the rightmost column of Table E-2. When neither the subgroup nor the characteristic is listed, use the average design effect for all FSP households, 1.29.

For example, to estimate the standard error of the number of households containing an elderly person with zero net income, the first step is to obtain the size of the estimate. As shown in appendix Table A-17, 128,000 elderly households have zero net income. The next step is to

² A confidence interval is a range of values that will contain the true value of an estimated characteristic with a known probability. For instance, a 95 percent confidence interval extends approximately two standard errors above and below the estimated value for a characteristic, and 95 percent of all confidence intervals will contain the true value.

³ Calculated as: $(834 - (2 \times 13.96)) = 806.1$ and $(834 + (2 \times 13.96)) = 861.7$.

⁴ The variance and naïve variance are the standard error and naïve standard error squared, respectively.

calculate the naive standard error. Using equation (2), the value is 4,320.⁵ Multiplying 4,320 by the square root of the design effect (d), 1.70, from Table E-2 yields an estimated standard error of 7,344 (compared with the Taylor series standard error from Table E-1, 7,360).

Standard Errors of Estimated Percentages

Comparing equations (1) and (2), it is apparent that the standard error of an estimated percentage of households, s_p , is equal to the standard error of the corresponding count of households, s_N , divided by the number of households in the population that forms the base of the percentage. That is:

$$(4) s_p = s_N/N$$

For example, appendix Table A-17 shows that, of the 4.0 million households with children, 293,000 (7.3 percent) have no gross income. The standard error (s_N) of the number of households with children with no gross income is 8,260 (Table E-1). To calculate s_p , the standard error of the corresponding percentage estimate, simply divide s_N by the number of households in the population that forms the base of the percentage—in this case, 4.0 million households with children. The resulting standard error of the percentage estimate is 0.2 percentage points, and the corresponding 95 percent confidence interval extends from 6.9 to 7.7 percent, around the point estimate of 6.3 percent.

Equation (4) can also be applied to standard errors that are not shown in Table E-1. First, calculate the adjusted naive standard error of the number of households using equation (3). Then divide the resulting standard error by the size of the population that forms the base of the percentage. Returning to an earlier example—of the 1.5 million elderly households, 128,000 (8.4 percent) have zero net income. Dividing the adjusted naive standard error (calculated above as 7,344) by 1.5 million, yields an adjusted naive standard error of the percentage estimate of 0.5 percentage points.

Standard Errors of Estimated Means

The standard errors for selected estimated means for fiscal year 2001 are provided in Table E-3. For example, the standard error of the mean gross income for all food stamp households in fiscal year 2001 is \$2.54 (Table E-3), and the mean itself is \$624 (Table A-21). Therefore, a 95 percent confidence interval extends from approximately \$619 to \$629.

$$1,520,000 \times \sqrt{[(128,000/1,520,000)\times(1-(128,000/1,520,000))\times(1,520,000-9,488)]/[(9,488-1)\times1,520,000]} = 4,320$$

where 1,520,000 is the estimated population of elderly households, 128,000 is the estimated population of elderly households with zero net income, 9,488 is the sample size of elderly households (Table E-1), and 4,320 is the standard error.

⁵ Calculated as:

Generalized approximation methods such as the one used in equation (3) work well for standard errors of estimated numbers and percentages, because the standard errors depend only on the sample size, the estimated proportion, and the design effects. Generalized methods are less appropriate for standard errors of means because the standard error depends on the variance as well as the sample size and design effects. Nevertheless, a rough approximation of the magnitude of standard errors of means not included in Table E-3 can be obtained from Table E-4. Table E-4 shows for each variable in Table E-3 the average, minimum, and maximum value of that variable's standard error as a percentage of the variable's mean value. These three values are shown for all food stamp households and for selected subgroups. The standard errors in Table E-4 include design effects.
