

Carpenter Shops

General Description

- ❖ □ Carpenter shops consist of various saws, drills, and sanders. The shops produce wooden structures used to support materials that undergo explosives testing as well as shipping crates, cabinets, and other materials. Some shops are dedicated to maintenance work only.
- ❖ □ Most of the carpenter shops qualify as either insignificant or trivial activities under NMED policy. Two shops, located at TA-15-563 and TA-3-38, are subject to Title V permit requirements.

Applicable Requirements

- ❖ □ Currently no existing EPA or NMED air-quality requirements apply to the carpenter shops.

Proposed Monitoring, Recordkeeping, and Reporting

- ❖ □ Monitoring/Recordkeeping: Keep a record of emissions estimates for the shops.
- ❖ □ Reporting: Submit a semi-annual emissions report and monitoring report to the NMED.

Comparison of Carpenter Shops and LANL Emissions
