

**FINAL POST PRELIMINARY ASSESSMENT/
SITE INSPECTION IN AREA 7 (AUS-0A07)**

**ADDITIONAL AND UNCHARACTERIZED SITES
OPERABLE UNIT**

**CRAB ORCHARD NATIONAL WILDLIFE REFUGE NPL SITE
MARION, ILLINOIS (WILLIAMSON COUNTY)**

This Final Post PA/SI Report is identical to the
"Draft" Report issued in July 2002.

OCTOBER 2003

18278-1/1-A

00054229

EXECUTIVE SUMMARY

Additional sampling was conducted in and near four buildings in Area 7 (AUS-0A07) of the Additional and Uncharacterized Sites Operable Unit (AUS OU) to supplement information gathered during the Preliminary Assessment/Site Inspection (PA/SI). The primary purpose of the supplemental investigation was to further characterize the pesticide contamination in soil at the site, and to conduct a preliminary evaluation of pesticide contamination in the interiors of the four buildings known to have been used for pesticide storage.

Results indicate that the major contamination is in the vicinity of the former storage buildings; levels in the intermittent stream that drains the area were relatively low to non-detect. At some locations, pesticides were detected at levels in excess of screening criteria at the maximum sampling depth of five feet.

Dust samples were compared with soil screening criteria. Wipe samples indicated the presence of several pesticides in the building interiors.

In addition to the chemicals of potential concern for human health (COPCs) and ecological risk (COPECs) that were identified for AUS-0A07, the following additional chemicals of concern were identified based on the results of this investigation.

Chemicals of Potential Concern

Soil:

- 1,2-Dichloropropane
- Benzene
- Tetrachloroethylene (PCE)
- 4,4'-DDE
- 4,4'-DDT
- Endrin aldehyde
- Gamma-chlordane

Sediment:

- 1,2-Dichloropropane
- Trichloroethylene (TCE)
- Antimony
- Arsenic
- Barium
- Beryllium
- Chromium
- Nickel
- Selenium
- 4,4'-DDD
- Dieldrin

Chemicals of Potential Ecological Concern

Soil:

- Total xylenes
- Acenaphthene
- 2,3,7,8-TCDD TEQ

Sediment:

- Arsenic
- Manganese
- Mercury
- Selenium
- Zinc
- 4,4'-DDD
- 4,4'-DDE
- 4,4'-DDT
- Aldrin
- Dieldrin
- Methoxychlor

Surface Water:

- Aluminum
- Hexachlorobenzene

APPENDICES

Appendix A Data Validation Reports

Appendix B Letter from IEPA

The Crab Orchard National Wildlife Refuge (CONWR) (Refuge) is administered by the United States Department of Interior (USDOI), Fish and Wildlife Service (USFWS). Figure 1-1 shows the Refuge boundaries. In September 2001, a Draft-Final Preliminary Assessment/Site Inspection (PA/SI) Report was submitted for the Additional and Uncharacterized Sites Operable Unit (AUS OU) of the CONWR Refuge National Priority List (NPL) Site in Marion, Illinois.¹ In the PA/SI report, Area 7 (AUS-0A07) was one of the sites recommended for a Remedial Investigation (RI). The PA/SI found elevated levels of pesticides in soils around four warehouse buildings in Area 7 that had been used for pesticide storage. The primary purpose of this investigation was to further characterize the pesticide contamination in soil at the site, and to conduct a preliminary evaluation of pesticide contamination in the interiors of the four buildings known to have been used for pesticide storage.

Area 7 is shown in Figure 1-2, is located approximately one and a half miles east of the intersection of Highway 148 and Ogden Road, and 0.5 miles north of Ogden Road on Chamnessstown Road. The portion of Area 7 that is the subject of this investigation (as shown in Figure 1-3) includes:

- The interiors and surrounding areas of Buildings IN-1-3, IN-1-4, IN-1-5 and IN-1-6.
- A portion of the main drainage ditch/intermittent stream (ditch) that flows northward through Area 7 to Crab Orchard Lake. The section of the ditch that is included in this investigation, starts just south of Mousertown Road (on the south side of the culvert for this road), and extends northward to the point where this ditch discharges into Crab Orchard Lake.

The additional investigative work in Area 7 was done under URS' contract with the USDOI Bureau of Reclamation (BOR)². The activities were conducted in accordance with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and the National Oil and Hazardous Substances Pollution Contingency Plan (NCP).

The organization of this report is similar to the Draft-Final PA/SI report (September 2001) for the AUS OU. Section 2 details historic search information for Area 7 such as its operational history and waste characteristics, also including previous sampling results. The information in Section 2 is taken directly from the PA/SI report. Sections 3, 4, and 5 include discussions regarding the supplemental field investigation, a screening risk assessment, and a summary, respectively.

¹ The Crab Orchard National Wildlife Refuge was placed on the U.S. Environmental Protection Agency's National Priorities List (NPL) in 1987. 52 Fed. Reg. 27620, 27265 (July 22, 1987).

² Contract No. 1425-97-CA-81-20003, dated November 15, 1996. Delivery Order No. 178.

2.1 SITE DESCRIPTION

Area 7 was the Inert Storage Area for the IOP, and was used for warehousing metal parts and other inert materials used in the production of artillery shells, tank mines and bombs.³ The original IOP configuration of Area 7 is shown in Figure 2-1.

The original building complex consisted of 6 rows of buildings (6 to 7 buildings per row originally) each of which were 51.3-feet (ft) wide by 200-ft long. All building numbers in this area were prefixed with "IN" (for Inert Storage). Figure 2-1 shows the numbering convention for the buildings. As discussed above, the only Area 7 buildings included in this investigation are Buildings IN-1-3, IN-1-4, IN-1-5 and IN-1-6.

2.2 OPERATIONAL HISTORY AND WASTE CHARACTERISTICS

During IOP operations, the Sherwin Williams Defense Corporation, under contract with the War Department (SWDC/War Department), occupied all of the buildings in Area 7. SWDC/War Department used Buildings IN-1-3, IN-1-4, IN-1-5 and IN-1-6 as warehouses for inert storage. There have been numerous post-World War II (WWII) lessees/operators in Area 7: Table 2-1 identifies these lessees/operators and their activities for Buildings IN-1-3, IN-1-4, IN-1-5 and IN-1-6 only. The lease information for these buildings is incomplete since building numbers were not identified in the lease information for some of the tenants that are known to have occupied buildings in Area 7. Many of these lessees appear to have engaged in activities that could have resulted in contamination in the soil, sediment, groundwater and surface water at this site.

This section summarizes the available information about post-WWII lessees for Buildings IN-1-3, IN-1-4, IN-1-5 and IN-1-6 in Area 7. As stated before, lease information is not complete, and often there is little or no information about a lessee's activities. For each building, available lease information is tabulated and other relevant information is summarized in the text following the table.

2.2.1 Building IN-1-3

Lessee	Dates	IN-1-3 Building Use
Hercules Powder ^{4,5}	1949 and 1950	Storage of linter for explosive powder production. Linter consisting of cotton fibers and fuzz escaping removal in the ginning operation. ⁶
Allen Industries	1956 to 1957 ⁷	Warehousing and production of rug underlay

Date Discrepancy

Note, the source document²⁷ for Great Lakes Terminal and Transport (GLT&T) and Norge's dates of occupancy in Building IN-1-3 indicates an overlap of time for these two tenants in 1963, 1964, and 1966.

Great Lakes Terminal and Transport

Great Lakes Terminal & Transport reported that they stored the following Shell Chemical products at the Refuge: technical aldrin, 94-97%; technical bidrin; ciodrin 2-3%; ciovap; technical dieldrin 100%; technical endrin 95-99%; technical nemagon; phosdrin; technical planavin; planavin 75%; rabon; vapona 1%; technidal vapona; allyl alcohol; Azordin; compound 4072; halbard; technical methyl parathion; 10% parathion 1% telodrin; niran 10-G; SD-8447 2lb/gal solution XP-837; SD-8447 4lb/gal solution XP-783; SD-8447 75% wettable powder code 3-15-24-1; vapona smear XP-246; vapona in petrolatum XP-507; vapona 50% solution XP-465; vapona 90% solution XP-409; 20% vapona resin XP-555; vapona 0.5% dieldrin-0.5% spray solution; verdan senescence inhibitor; various empty fibre and steel drums; cartons; glass bottles; polyethylene bottles; Celons and celoseals for jugs and bottles; caps for gallons and quarts; cartons.²⁸

Some of these pesticides are highly toxic and/or probable carcinogens and have been banned. For example, USEPA banned all uses of aldrin and dieldrin in 1987²⁹.

Little Egypt Grain

In 1986, Cape-Kil Pest Control Co., on behalf of Little Egypt Grain Co., requested permission to apply herbicides and pesticides to Little Egypt's leased facilities.³⁰ USFWS approved the use of MSMA and malathion (57%), but not some other requested pesticides.^{31,32} The herbicides and pesticides approved are in common use, and, based on available data, much less hazardous to human health and the environment than chemicals stored by Great Lakes Terminal and Transport, such as aldrin and dieldrin.³³ For example, the USEPA Region 9 preliminary remediation goal (PRG) for industrial soil for Malathion is more than 100,000 times higher than the PRGs for aldrin or dieldrin.

³⁰ FWM 000514-000516, DPRA document 00024861. Letter to Norrel Wallace, Project Manager, Crab Orchard Lake National Wild Life Refuge (sic) from Charles Knot, Cape-Kil Pest Control Co., dated 28 July 1986.

³¹ DPRA documents 00005954-00005960. Letter to Roger Twenhafel, Little Egypt Grain Co., from Norrel Wallace, Project Manager, dated 12 November 1986, with attachments. MSMA is a herbicide, described as 6+, Glyphosate (Roundup), Bromacil & Diuron (mixed). It was to control grasses in a three-ft band around the building. Malathion is a pesticide which was to be applied to the walls, floor, and the grain.

³² Cape-Kil Pest Control had also asked for permission to use Chlorphacinone, a rat poison. Permission was apparently not granted; this compound was not included in the list approved by USFWS. Reference: FWM 000515. Page 2 of letter to Norrel Wallace, Project Manager, Crab Orchard Lake National Wild Life Refuge (sic) from Charles Knot, Cape-Kil Pest Control Co., dated 28 July 1986.

³³ See, for example, U.S. Department of Agriculture Fact Sheets for the listed pesticides/herbicides available at <http://infoventures.com>.

2.2.2 Building IN-1-4

Lessee	Dates	IN-1-4 Building Use
Hercules Powder ^{34,35}	1949 and 1950	Refer to Building IN-1-3 table.
Allen Industries	1956 through 1957 ³⁶	Refer to Building IN-1-3 table.
Great Lakes Terminal & Transport	1951 or 1961 through 1971 ^{37,38}	Pesticide storage. Refer to Building IN-1-3 table.
Pennzoil	Three months in 1971 ³⁹	Refer to Building IN-1-3 table.
Olin	November 1971 through May 1976 ^{40,41}	Storage of ordnance explosives and ordnance materials ^{42,43}
Royal Crown (R.C.) Bottling Company	1976 through at least 1990 ^{44,45,46}	Cola sales/distribution; storage of vehicles and other items ⁴⁷

Aboveground Storage Tank

During the site reconnaissance on March 13, 2001, a horizontal aboveground storage tank (AST) was observed at the east end of the railroad loading dock on the north side of this building. This AST was approximately 6 feet long and 4 feet in diameter. It was rusted, and there was black staining on the loading dock beneath this tank that appeared to be from leakage from the tank. This black material has also stained some of the soils next to the loading dock.

2.2.3 Building IN-1-5

Lessee	Dates	IN-1-5 Building Use
Hercules Powder ^{48,49}	1949 and 1950	See Building IN-1-3 table.
Great Lakes Terminal & Transport	1951 through 1971. ^{50,51}	Pesticide storage. Refer to Building IN-1-3 table.

2.2.5 Building P-1-13

Sometime between 1943 and 1951,⁸⁷ building P-1-13 from Area 2P was moved to Area 7. It appears that it was added to the middle of the south side of Building IN-1-5.⁸⁸

According to Great Lakes Terminal & Transport's CERCLA Section 104(e) response, they were present in Buildings IN-1-5, IN-1-6, and P-1-13 from 1951 through 1971.^{89,90} Central Fixtures/Cubicon's leases also included Building P-1-13.⁹¹

Sometime after 1983, it appears Building P-1-13 was moved to a location where it adjoined Building IN-2-6.^{92,93}

Southern Illinois Manufacturing Company

The insurance policy for the Southern Illinois Manufacturing Company⁹⁴ included them with the Pre-Hung Door Company (a subsidiary of Marion Metal and Roofing Company, Inc.), who leased this building from 1974 through 1975. Pre-Hung Door Company manufactured wooden doors.

2.3 AREA 7 PREVIOUS SAMPLING RESULTS

2.3.1 O'Brien & Gere Remedial Investigation, 1988

Two sites in or near Area 7 were investigated as part of the O'Brien & Gere RI: Site 15 – the "Plating" Pond, and Site 16 – Area 7 Industrial Site (Figure 2-2). The results reported in the O'Brien & Gere RI were compared with the PA screening values.⁹⁵ Some results reported by O'Brien and Gere are not included in this report because they were determined to be not useable.⁹⁶ Those that are reported here are considered estimated.⁹⁷

⁹⁶ Some results reported by O'Brien and Gere are not included here because they were determined to be not useable, and those results which are discussed are considered estimated.. DPRA Document No. 00018887. Letter from Richard Boice to Dick Ruelle of USFWS regarding Crab Orchard Lake RI/FS, dated February 18, 1987. The letter reports that the data for the following constituents are not useable: 2-butanone, vinyl acetate, 4-methyl-2-pentanone, aniline, bis(2-chloro-isopropyl)ether, 4-chloroaniline, 2-nitro-sodiphenylamine, benzidine, di-n-octyl-phthalate, benzo(a)pyrene, indeno(1,2,3-c,d)pyrene, dibenz(a,h)anthracene, cyanide, Ag, As, Be, Cd, Cu, Ni, Pb, Se, Zn, and Hg.

⁹⁷ DPRA Document No. 00018887. Letter from Richard Boice to Dick Ruelle of USFWS regarding Crab Orchard Lake RI/FS, dated February 18, 1987. The letter reports that the data for the following constituents are not useable: 2-butanone, vinyl acetate, 4-methyl-2-pentanone, aniline, bis(2-chloro-isopropyl)ether, 4-chloroaniline, 2-nitro-sodiphenylamine, benzidine, di-n-octyl-phthalate, benzo(a)pyrene, indeno(1,2,3-c,d)pyrene, dibenz(a,h)anthracene, cyanide, Ag, As, Be, Cd, Cu, Ni, Pb, Se, Zn, and Hg.

The name "Plating" Pond was based on hearsay and is probably inaccurate. However, site 15 was a pond (approximately 50 feet by 30 feet) that had an inlet pipe located on the north side of the pond. The origin of this pipe was not found, and the outlet portion was removed during remediation. (Site 15 was remediated as part of the Metals Areas Operable Unit.) It is actually just south of Area 7 which is an area not discussed as part of this report. Also, remediated sites are not discussed in this report. However, Site 15 is discussed here because the source of the effluent that was discharged to the pond was probably a facility in Area 7.

One composite surface water sample (15-1), one composite sediment sample (15-2), and one groundwater sample (15-3) were collected at Site 15 as part of the O'Brien & Gere RI (Figure 2-2). Both the surface water and sediment samples were collected from the perimeter of the pond and the groundwater sample was collected downgradient of the pond. Barium, boron, calcium, iron, magnesium, manganese, and sodium were detected in the surface water sample (15-1). Barium (4 ug/L) exceeded USEPA ECOTOX thresholds (3.9 ug/L). There are no PA screening criteria for boron (70 ug/L), calcium (8,500 ug/L), magnesium (2,000 ug/L), and sodium (1,200 ug/L).

Arochlor-1260, alpha endosulfan, aluminum, barium, boron, calcium, chromium, iron, magnesium, manganese, molybdenum, sodium, titanium, and vanadium were detected in the sediment sample (15-2) (all sediment results are reported in dry weight). Arochlor-1260 (415 ug/kg) exceeded USEPA ECOTOX thresholds, Region IV Sediment Screening values, and Canadian Sediment Quality Guidelines (CSEQGs). Chromium (508 mg/kg) exceeded USEPA ECOTOX thresholds, Region IV Sediment Screening values, and CSEQGs. There are no PA screening criteria for alpha endosulfan (415 ug/kg), aluminum (15,800 mg/kg), barium (117 mg/kg), boron (83.3 mg/kg), calcium (2,990 mg/kg), iron (43,400 mg/kg), magnesium (2,070 mg/kg), manganese (498 mg/kg), molybdenum (20 mg/kg), sodium (60 mg/kg), titanium (238 mg/kg), and vanadium (35 mg/kg).

Methylene chloride, Arochlor-1254, and chromium were detected in the groundwater sample (15-3). Methylene chloride (6 ug/L) exceeded USEPA Drinking Water Maximum Contaminant Levels (MCLs) and New Dutchlist Groundwater Optimum Levels (DGOLs). Chromium (15 ug/L) exceeded Canadian Water Quality Guidelines (CWQGs) and DGOLs.

Site 16 -- Area 7 Industrial Site

Previous to the AUS OU PA/SI, there were no samples collected from next to Buildings IN-1-3, IN-1-4, IN-1-5 or IN-1-6. However, during the O'Brien & Gere RI, four samples were collected from the ditch that flows northward between Buildings IN-1-3 and IN-1-4, as discussed below.

In total, there were 19 samples were collected at Site 16 (Area 7 Industrial Park) during the O'Brien & Gere RI: five composite surface water samples, five composite sediment samples, and nine composite soil samples. As stated previously, four of those samples were located within the area which is part of this additional investigation: 16-1 (surface water), 16-2 (sediment), 16-18 (surface water), and 16-19 (sediment). Refer to Figure 2-2.

Two samples were located downstream of Area 7 in the drainage ditch: composite surface water sample 16-18, and composite sediment sample 16-19. Acetone, methylene chloride, aldrin, dieldrin, and magnesium (both total and filtered) were detected in the surface water sample. Acetone and methylene chloride were detected below PA screening criteria. Aldrin (0.17 micrograms per Liter (ug/L)) exceeded the IEPA General Use Surface Water Quality Human Health criterion and dieldrin (0.54 ug/L) exceeded the Ecological Direct Pathway Toxicity Reference Value (TRV) for surface water. Both aldrin and dieldrin are considered potentially bioaccumulative chemicals. Magnesium (total) (23,700 ug/L) exceeded background. There are no PA screening criteria for filtered magnesium (26,300 ug/L).

In the sediment sample (16-19), acetone, methylene chloride, di-n-butyl phthalate, and total magnesium were detected. Acetone and magnesium were detected below PA screening criteria. Methylene chloride (18 micrograms per kilogram (ug/kg)) exceeded the USEPA Region IX Migration to Groundwater PRG (dilution attenuation factor ((DAF)=1)). Di-n-butyl phthalate was detected at 1,600 ug/kg and is considered as a potentially bioaccumulative chemical.

Two samples were collected from the drainage ditch between Buildings IN-1-3 and IN-1-4: composite surface water sample 16-1 and composite sediment sample 16-2. In the surface water sample, barium, boron, calcium, iron, magnesium, manganese, and sodium were detected. Boron and manganese were detected below PA screening criteria. Barium (69 ug/L, calcium (74,700 ug/L), iron (300 ug/L), magnesium (25,600 ug/L), and sodium (28,300 ug/L) exceeded background. Refer to Figure 2-2.

In the sediment sample (16-2), alpha endosulfan, aluminum, barium, boron, calcium, chromium, cobalt, iron, magnesium, manganese, sodium, titanium, and vanadium were detected. Boron, cobalt, iron, and sodium were detected below PA screening criteria. Alpha endosulfan (137 ug/kg) and manganese (929 milligrams per kilogram (mg/kg)) exceeded the ecological direct pathway TRV for surface water. Aluminum (12,900 mg/kg), calcium (7,320 mg/kg), chromium (20 mg/kg), magnesium (2,840 mg/kg), and vanadium (36 mg/kg) exceeded background. Chromium and barium (104 mg/kg) also exceeded the USEPA Region IX Migration to Groundwater PRG (DAF=1). There are no PA screening criteria for titanium (148 mg/kg).

Site 16 was later addressed further as part of the MISCA OU RI.

2.3.2 Golder and Associates Phase I Remedial Investigation (Miscellaneous Areas Operable Unit), 1993

Site 16

Several samples were collected from Site 16 during the Phase I RI done by Golder and Associates in 1993. However, none of these samples were located in the portion of Area 7 that is under investigation in this report.

2.3.3 Woodward Clyde Consultants Remedial Investigation (Miscellaneous Areas Operable Unit), 1996

Site 16

Several samples were collected from Site 16 during the Phase II RI done by Woodward-Clyde in 1996. However, none of these samples were located in the portion of Area 7 that is under investigation in this report.

2.3.4 USFWS Preliminary Assessment/Site Inspection (AUS OU), 2001 (prepared by URS Corporation)

Area 7 - (AUS-0A07)

Thirty soil samples were collected throughout Area 7 as part of the AUS OU PA/SI. Fourteen⁹⁸ soil samples were collected within the additional investigation area discussed as part of this report (Figure 2-3). Samples AUS-0A07-001 through AUS-0A07-003 were collected from the perimeter of Building IN-1-6 and were analyzed for pesticides. Sample AUS-0A07-004 was collected from the former location of possible ASTs located adjacent (west) of Building IN-1-5. This sample was analyzed for pesticides as well. Sample AUS-0A07-005 was collected from the north perimeter of Building IN-1-5 and was analyzed for pesticides. Sample AUS-0A07-006 was collected from the northeast perimeter of Building IN-1-4 and was analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and inorganics. Finally, sample AUS-0A07-025 was collected from the main drainage ditch, slightly northwest of Building IN-1-3. This sample was analyzed for VOCs and PCBs.

All 001 through 005 had multiple exceedances of screening criteria for pesticides in both the 0-6" and the 2' samples. Some pesticides were detected at very high levels, such as high as 520,000 ug/kg for aldrin (Sample 002) and 290,000 ug/kg for dieldrin (Sample 004) which is the highest level detected in Area 7. This sample was taken from the former location of possible USTs. Many of pesticide samples exceeded several human health and ecological screening criteria. Refer to Figure 2-3 for sample locations, detections, and exceedance information.

VOCs in Sample 006 were not detected; however, SVOC constituent benzo(g,h,i)perylene was detected at 130 ug/kg (at 2') and is considered a potentially bioaccumulative chemical.

Trichloroethylene (TCE) (21 ug/kg) was the only VOC detection in Sample 025 which was located in the drainage ditch. TCE in this sample exceeded the USEPA Region IX Migration to Groundwater PRG (DAF=1). No PCBs were detected. Several inorganic compounds were detected. Iron (22,100 mg/kg) exceeded both the background and the Ecological Direct Exposure Pathway TRV for soil.

⁹⁸ Two soil samples were taken from each of seven locations, one from 0-6" and one from 2 feet below ground surface.

URS conducted a Site Inspection at AUS-0A07 from May 10 through May 11, 2000. The rationale for sample locations, media, and analytes was presented in the Field Sampling Plan (FSP)⁹⁹ for the AUS OU PA/SI. In March of 2001, additional sampling was conducted at this site. Because of sampling errors from the March 2001 event, in May of 2001, several of the March 2001 samples were re-collected. The rejected data are identified in Appendix A and are not included in the tables in this report.

The March/May 2001 sample locations that surrounded the four buildings included in the additional investigation are shown on Figures 3-1 through 3-4. Survey coordinates for all sample locations in this portion of Area 7 (except for the sample locations inside of the buildings) are listed in Table 3-1. Table 3-2 lists the sample locations and the matrix sampled at that location. Soil, sediment, surface water, dust, wipe, and air samples were collected during this investigation.

3.1 OBSERVATIONS DURING SITE VISIT

A site reconnaissance was done in spring of 1999, for all of Area 7. In March of 2001, a second site reconnaissance was done for Buildings IN-1-3, IN-1-4, IN-1-5 and IN-1-6. This site reconnaissance looked more closely at these buildings and included both the interiors of the buildings as well as the exteriors and the areas surrounding these buildings. The first site reconnaissance only included the exteriors and the areas surrounding the buildings. The following observations were noted during these site reconnaissances for the buildings included as part of this additional investigation.

3.1.1 Building IN-1-3

Interior of Building

The concrete floors of the building have some cracks in them and they are somewhat dusty. In the southeast corner of the building there is evidence of possible 55-gallon drum storage on the floor. In the southwest corner of the building, there is some evidence of smaller drum storage, with some staining evident around the possible smaller drums. There is some possible oil staining located near the entrance garage door; however, there is no evidence of drums in this area. According to Mr. Laurel Johns¹⁰⁰, this building does not flood.

The walls are metal and held up by wooden braces. They do not appear to have been insulated at any time. The wooden braces and the trusses have some dust on them. Overall, the building is not excessively dusty.

⁹⁹ U.S. Fish & Wildlife Service, Department of the Interior, March 2000, Draft Final Field Sampling Plan Site Inspection, Additional and Uncharacterized Sites Operable Unit, Crab Orchard National Wildlife Refuge Superfund Site, Marion, Illinois (Williamson County), prepared by URS Corporation.

¹⁰⁰ Laurel Johns is a Maytag employee. Maytag leased Building IN-1-3 at the time of the interview.

Exterior of Building

Along the east side of the building, there is a low spot which was dry at the time of the site visit. To the north of the building, there is a drainage ditch that runs westward approximately 15-20 feet north of the railroad loading dock. This ditch contains some water and it drains into the creek that runs generally northward through the center of Area 7. There is a newer concrete driveway on the south side, western end of the building. There is a low spot that was created just west of this driveway, likely as a result of construction of the driveway. This low spot contained no standing water.

3.1.2 Building IN-1-4

Interior of Building

Only the western three fourths of the building were visually inspected during the site reconnaissance. The eastern quarter of the building was inaccessible. The building appears to have an insulated, dropped ceiling.

The concrete floors of the building have some cracks in them and are somewhat dusty. There are some large (likely 55-gallon sized) and smaller drum markings on the floors in the center and near the western end of the building. There is some possible oil staining around the drum markings in the center of the building. The building is kept swept by the FWS Fisheries Department. When it rains, water comes into the western end of the building via the second garage door from the west end. The building's floor elevation at the western end of the building is lower than the ground surface outside this garage door, and the garage door does not close completely, thus allowing water to enter.

The walls are metal, held up by wooden braces, and the building may have been insulated at one time. The wooden braces and the trusses have some dust on them. Overall, the building is not excessively dusty.

Exterior of Building

To the north of the building there is a drainage ditch that runs eastward approximately 15-20 feet north of the railroad loading dock. This ditch contains some water and it drains into the creek, which runs generally northward through the center of Area 7. A second drainage ditch starts near the southeasternmost corner of the building and it also drains eastward into the same creek.

There was a horizontal AST observed on the east end of the railroad loading dock that is located on the north side of the building. This AST was approximately six feet long and approximately four feet in diameter, and its owner and contents are unknown. It is rusted and there is black staining on the loading dock beneath this tank which appears to be from leakage from the tank. This black material has also stained some of the soils next to the loading dock.

3.1.3 Building IN-1-5

Interior of Building

The concrete floors of the building have some cracks in them and they are very dusty with both grain and sawdust on the floor. There are some smaller drum marks and small container markings on the floors of this building – mostly along the walls and near the western end of the building. There is some staining around some of the smaller drum markings. It appears that portions of the floor have been painted in the past – especially at the eastern end of the building and the floor is corroded in places.

The walls are metal, held up by wooden braces and it appears that the building was insulated at one time, as some insulation still remains in places. The metal walls are dusty and the wooden braces also have much dust on them. The trusses contain a lot of dust also. Overall, the building is very dusty, with most of the dust located in the western end of the building.

Exterior of Building

To the north of the building, there is a drainage ditch that runs eastward approximately 15-20 feet north of the railroad loading dock. This ditch contains some water and it drains into the creek, which runs generally northward through the center of Area 7.

Just to the west of this building is an area of black-stained soil. Drainage in the area of this black soil drains northward towards the drainage ditch that flows eastward along the north side of this building. The 1951 aerial photograph shows very linear, parallel objects in the area of the black-stained soil. It is possible that these objects could be ASTs; however, this is just speculation.

3.1.4 Building IN-1-6

Interior of Building

The concrete floors of the building have some cracks in them and they are a little dusty. There are some smaller drum markings on the floors throughout the building, mostly along the walls of the building and at either end of the building. There are also some smaller container markings at the western end of the building. The floor is somewhat corroded in areas and it is kept swept by the tenants.

The walls are metal, held up by wooden braces and it appears that the building was insulated at one time, as some insulation still remains in places. The metal walls are dusty and the wooden braces were very dusty.

Exterior of Building

To the north of the building, there is a drainage ditch that runs eastward approximately 15-20 feet north of the railroad loading dock. This ditch contains some water and it drains into the

creek, which runs generally northward through the center of Area 7. There was a low spot with standing water located just to the west of the northwest corner of the building.

3.2 FIELD INVESTIGATION

Sampling was done in accordance with the sampling procedures outlined in the AUS OU FSP, except as noted.

3.2.1 Building IN-1-3

Soil Sampling

GLT&T used Building IN-1-3 for storage of pesticides for about five years. Pennzoil also reportedly occupied this building and they may have used this building for warehousing motor oil, and for barrel washing operations, and/or as an oil products distributorship. To evaluate possible contamination from these and other operations in this building, three soil samples were collected from next to the building. Two were located along the back dock on the north side of the building (0A07-071 and 0A07-076). The third sample (0A07-073) was located along the south side of the building, just east of a concrete driveway. This location appears to have been a former entranceway to the building as observed in both the 1965 and 1971 aerial photographs.

Wipe and Dust Sampling

One dust sample and two wipe samples were collected from inside Building IN-1-3. Initially a dust sample (0A07-099) was collected by sweeping an area in the southwest corner of the building. After dust sampling was completed, wipe sampling was done. A floor wipe sample (0A07-095) was collected from the southeast corner of the building and a metal wall wipe sample (0A07-094) was collected from the southern wall near the southeast corner of the building.

3.2.2 Building IN-1-4

Soil Sampling

During the site reconnaissance an aboveground storage tank with staining on the ground next to it was observed northeast of Building IN-1-4. Samples 0A07-006 and 0A07-060 were collected from the stained area next to this AST. The origin of this tank is not known.

GLT&T used Building IN-1-4 for storage of pesticides for at least ten and possibly twenty years. Pennzoil also reportedly occupied this building and they may have used this building for warehousing motor oil, and for barrel washing operations, and/or as an oil products distributorship. As a result, soil samples were collected from the areas surrounding this building.

Samples 0A07-054 (located next to southwest corner of building), 0A07-057 (located next to the second garage door on the east side of the building), and 0A07-061 (located next to the southeast

corner of the building) were collected along the south side of Building IN-1-4. All of these locations could have potentially received spilled materials.

Samples 0A07-053 (located near the northwest corner of the building), 0A07-056 (located near the center of the building), and 0A07-060 (located near the northeast corner of the building-next to the AST) were located along the back dock of this building. There is a shallow, east-flowing drainage ditch that parallels the north side of the building. Four samples were collected from this shallow drainage ditch: 0A07-052 (located near 0A07-053), 0A07-055 (located north of 0A07-056), 0A07-059 (located north of 0A07-060), and 0A07-062 (located midway between Building IN-1-4 and the main drainage ditch/intermittent stream that runs northward through Area 7). North of sample location 0A07-059, sample 0A07-058 was collected from a grassy area at the base of the treeline that is north of the drainage ditch. This treeline is elevated.

Wipe and Dust Sampling

One dust sample and two wipe samples were collected from Building IN-1-4. Initially a dust sample (0A07-098) was collected by sweeping an area in the northwest quarter of the building (near the northern wall). After dust sampling was completed, wipe sampling was done. A floor wipe sample (0A07-093) was collected from the southwest quarter of the building and a metal wall wipe sample (0A07-092) was collected from the southern wall, west of the southwest corner of the building.

3.2.3 Building IN-1-5

Soil Sampling

GLT&T used Building IN-1-5 for storage of pesticides for twenty years. Central Fixtures Manufacturing Company/Cubicon Corporation also reportedly occupied this building for woodworking.

Samples 0A07-046 (located next to the southwest corner of the building), 0A07-048 (located near the center of this building) and 0A07-051 (located next to the southeast corner of the building) were collected along the south side of Building IN-1-5. All of these locations could have potentially received spilled materials.

Just north of sample location 0A07-046, was an area of black-stained soil. This area of black stained soil appears to coincide with the location of four possible ASTs that were observed in the 1951 aerial photograph. Sample locations 0A07-004 and 0A07-045 were located within the area of black-stained soil and sample location 0A07-044 was located just north (down slope) of the area of black-stained soil. Sample location 0A07-040 was located just west of the area of black-stained soil.

Samples 0A07-043 (located near the northwest corner of the building), 0A07-005 (located near the center of the building) and 0A07-050 (located near the northeast corner of the building) were located along the back dock of this building. There is a shallow, east-flowing drainage ditch that

parallels the north side of the building. Three samples were collected from this shallow drainage ditch: 0A07-042 (located near 0A07-043), 0A07-047 (located north of 0A07-005), and 0A07-049 (located north of 0A07-050). North of sample location 0A07-042, sample 0A07-041 was collected from a grassy area at the base of the treeline that is north of the drainage ditch. This treeline is elevated.

Wipe and Dust Sampling

One dust sample and three wipe samples were collected from Building IN-1-5. Initially a dust sample (0A07-097) was collected by sweeping an area in the northeast quarter of the building (near the northern wall). After dust sampling was completed, wipe sampling was done. A floor wipe sample (0A07-091) was collected next to the west wall of the building. A wooden wall wipe sample (0A07-090) was collected from wooden bracing on the southern wall near the southeast corner of the building. A metal wall wipe sample (0A07-089) was collected from the west wall of this building.

3.2.4 Building IN-1-6

Soil Sampling

GLT&T used Building IN-1-6 for storage of pesticides for twenty years. Central Fixtures Manufacturing Company/Cubicon Corporation also reportedly occupied this building for woodworking.

Sample 0A07-032 is located on the west side of Building IN-1-6. Sample 0A07-031 is located northwest of Building IN-1-6, upstream of the area likely to receive drainage from this building. Samples 0A07-033 (located next to southwest corner of building), 0A07-036 (located near the center of this building) and 0A07-039 (located next to southeast corner of building) were collected along the south side of Building IN-1-6. All of these locations could have potentially received spilled materials.

Samples 0A07-001 (located in a low spot near the northwest corner of the building), 0A07-002 (located approximately fifty feet east of the northwest corner of the building) and 0A07-038 (located approximately fifty feet west of the northeast corner of the building) were located along the back dock of this building. There is a shallow, east-flowing drainage ditch that parallels the north side of the building. Three samples were collected from this shallow drainage ditch: 0A07-003 (located in the ditch, just north of the northeast corner of the building), 0A07-035 (located north of 0A07-002) and 0A07-037 (located north of 0A07-038). North of sample location 0A07-035, sample 0A07-034 was collected from a grassy area at the base of the treeline that is north of the drainage ditch. This treeline is elevated.

Wipe and Dust Sampling

One dust sample and seven wipe samples were collected from Building IN-1-6. Initially a dust sample (0A07-096) was collected by sweeping an area in the northwestern corner of the building (near the west wall). After dust sampling was completed, wipe sampling was done. Two floor wipe samples, two metal wall wipe samples, two wooden wall wipe samples (collected from wooden bracing on walls) and one box wipe sample (collected from dust on top of a box) were collected from this building. The first floor wipe sample (0A07-087) was collected from the northwestern corner of the building (where there were drum markings on the floor). The second floor wipe sample (0A07-086) was collected from the northeastern corner of the building (where there were drum markings on the floor, along with an oily residue).

The first wooden wall wipe sample (0A07-083) was collected from wooden bracing on the northern wall in the northwest quarter of the building. The second wooden wall wipe sample (0A07-085) was collected from wooden bracing on the northern wall in the northeast quarter of the building. The first metal wall wipe sample (0A07-082) was collected from the southern wall in the southwest quarter of this building. The second metal wall wipe sample (0A07-084) was collected from the eastern wall in the southeast quarter of this building. The box wipe sample (0A07-088) was collected from a box located along the west wall of the building.

3.2.5 Main Drainage Ditch/Intermittent Stream***Sediment Sampling***

There were 11 sediment samples (0A07-025, 0A07-063 through 0A07-069, 0A07-079 through 0A07-081) collected from the main drainage ditch/intermittent stream that flows northward through Area 7 and discharges into Crab Orchard Lake.

Three samples within the main drainage ditch/intermittent stream were located within the industrial portion of Area 7. Sample 0A07-068 was located in the main drainage ditch/intermittent stream, on the north side of the Mousertown Road culvert. Sample 0A07-069 was located on the south side of this same culvert. Sample 0A07-025 was located north of the former railroad culvert, at the point where the shallow drainage ditches that parallel the north side of Buildings IN-1-1 through IN-1-6, discharge into the main drainage ditch/intermittent stream.

In the intermittent stream to the north of the industrial portion of Area 7, four samples were located south of an un-named roadway (0A07-064, 0A07-065, 0A07-066 and 0A07-067) and three samples were located north of this un-named roadway (0A07-063, 0A07-079 and 0A07-080).

One additional sample (0A07-081) was collected at the confluence of this intermittent stream and Crab Orchard Lake.

Surface Water Sampling

One surface water sample, 0A07-025, was located north of the former railroad culvert, at the point where the shallow drainage ditches that parallel the north side of Buildings IN-1-1 through IN-1-6, discharge into the main drainage ditch/intermittent stream.

3.3 FIELD RESULTS

3.3.1 Site Conditions

3.3.1.1 Geologic Conditions

One groundwater monitoring well was installed in Area 7 during O'Brien & Gere's RI, however significant geologic information from this well was not found in the report. No monitoring wells were installed in Area 7 during the PA/SI or this investigation.

3.3.1.2 Hydrogeologic Conditions

One groundwater monitoring well was installed in Area 7 during O'Brien & Gere's RI, which indicated a groundwater elevation of 428.12 ft mean sea level (msl) in June 1987.¹⁰¹ No monitoring wells were installed in Area 7 during the PA/SI or this investigation.

3.3.1.3 Hydrologic Conditions

There is a north-flowing drainage ditch/intermittent stream in roughly the middle of Area 7, which flows toward Crab Orchard Lake. The north-flowing drainage ditch collects drainage from smaller east-west flowing ditches throughout Area 7.

There are no permanent water bodies located in Area 7.

3.4 CHEMICAL RESULTS

A full data validation was completed for all constituents in all samples, where applicable. Data validation reports are included in Appendix A. This validation was performed to assess whether the data are suitable for their intended use using applicable sections from the U.S. EPA guidance documents "National Functional Guidelines for Organic Data Review", (October 1999), and "Laboratory Data Validation Functional Guidelines for Inorganic Analyses," (USEPA, 1994). The data validation included validation of duplicate samples obtained in accordance with the QAPP. Based on the criteria outlined, the results reported for all analyses performed as part of the Area 7 supplemental investigation are judged to be valid and it is recommended that they should be accepted as qualified.

¹⁰¹ O'Brien & Gere. 1988. Remedial Investigation Report – Crab Orchard National Wildlife Refuge, Volume I, Final Report, Figure 34-4.

Tables 3-3 through 3-7 list the chemicals detected in AUS-0A07 during this investigation for each sample matrix, along with the frequency and range of detections. Table 3-8 shows the results of the dioxin/furan toxicity equivalents that were calculated for soil samples.

Sample results are presented in figures as follows:

- Figure 3-1 – pesticide results for soil and sediment samples collected from 0 to 6 inches below ground surface and for the surface water sample,
- Figure 3-2 – pesticide results for soil and sediment samples collected from depths deeper than 6 inches,
- Figure 3-3 – pesticide results for wipe and dust samples collected from the interiors of the buildings, and
- Figure 3-4 – organics (except pesticides) and inorganic results for all soil and sediment samples, and for the surface water sample.

3.5 AIR SAMPLING RESULTS SUMMARY

Air samples were collected to correspond with each dust sample.

Building IN-1-3 – Air Sample 0A07-099

Building IN-1-4 – Air Sample 0A07-098

Building IN-1-5 – Air Sample 0A07-097

Building IN-1-6 – Air Sample 0A07-096

Air sampling was performed to estimate the amount of dust that workers in the buildings might be exposed to. The air sampler, which is worn by one of the sampling personnel, creates a vacuum which pulls in air in the vicinity of the worker. The air passes over a filter which collects the dust.

The air sampler measures the volume of air that passes through the filter. The filter is weighed in a laboratory before and after sampling to determine the mass of dust in the volume of air that passed through the filter. These data are then used to calculate an average dust concentration during the time of the sampling (average dust concentration = dust mass collected/air volume measured by sampler). For each building, air was sampled during the approximately 20 minutes it took the sampling crew to sweep up a dust sample, collect it in a jar, label and seal the jar, and prepare the chain of custody. About five minutes of this time was spent sweeping. The measured dust concentrations for each building are as follows:

Building IN-1-3 — 11.0 mg/cubic meter

Building IN-1-4 — 3.0 mg/cubic meter

Building IN-1-5 — 6.7 mg/cubic meter

Building IN-1-6 — 6.9 mg/cubic meter

Results of the screening are presented in Tables 4-1 through 4-6 as follows:

- Table 4-1--human health screening of soils,
- Table 4-2--ecological screening of soils,
- Table 4-3--human health screening of sediment,
- Table 4-4--ecological screening of sediment,
- Table 4-5--human health screening of surface water, and
- Table 4-6--ecological screening of surface water.

Each table lists the maximum detected concentration for each constituent analyzed at AUS-0A07 during this additional investigation. The screening results are presented in the tables in terms of hazard quotients (HQs). The HQ for any chemical detected, for any particular screening criterion is simply the ratio of the maximum detected concentration to the screening concentration. For human health for carcinogens, a screening level "cancer risk" is calculated instead of an HQ. Chemicals that exceeded the screening criteria are identified as chemicals of potential concern (COPCs for human health risk) or chemicals of potential ecological concern (COPECs for ecological risk).

In cases where the chemical was analyzed but not detected, the HQ is the ratio between the maximum reporting limit and the screening concentration. Chemicals not detected are identified with a "U" or a "UJ" qualifier in the qualifier column. Some of these may have HQ values that exceed one, they are not identified as COPCs/COPECs, but rather as uncertainties.

In Figures 3-1 through 3-4, a shading convention is used that indicates exceedances of particular screening criteria. These criteria are indicated by the code in the analytical results labels on the figures. Duplicate results are shown only if the duplicate result for an analyte exceeded the screening criteria and the result from the original sample did not; or, if the analyte was detected in the duplicate and not in the original sample. Since in the screening process results which are qualified as estimated (coded with "J") are treated the same as unqualified results, data qualifiers are not included in the results shown in the figures. Refer to Tables 4-9 through 4-13 for data qualifiers.

Tables 4-7 (human health) and 4-8 (ecological) list all the analytes and corresponding media sampled and indicate whether each is a COPC (or COPEC), not a COPC (or COPEC), or an uncertainty. The codes in the tables indicate the rationale for each classification. All COPCs (Table 4-7) and COPECs (Table 4-8) are shaded in the tables.

4.1 HUMAN HEALTH RISK

4.1.1 Soil/Sediment/Dust

Human health screening results for soil and sediment samples are presented in Tables 4-1 and 4-3, respectively. Soil screening values were conservatively used to screen the sediment samples as well as the dust samples. For carcinogens, a cancer risk was calculated using the USEPA Region 9 Industrial Soil PRGs as screening values. The cancer risk was derived by calculating a ratio of the maximum detected concentrations, or the maximum reporting limits, to their appropriate screening values. These ratios were then multiplied by 1×10^{-6} . In addition, ratios were calculated using the USEPA Region 9 Industrial Soil PRG for Toxins, the USEPA Region 9 Migration to Groundwater Criteria (DAF=1), the Illinois Tiered Approach to Corrective Action Objectives (TACO) Industrial/Commercial Soil Ingestion Criteria, the Illinois TACO Construction Worker Soil Ingestion Criteria, and the Illinois TACO Class I Soil Component of Groundwater Criteria.

4.1.2 Surface Water

Human health risk screening results for chemicals in surface water from this area are presented in Table 4-5. The maximum concentrations from this area were screened against the Illinois General Use Surface Water Quality Criteria – Human Health.

4.2 ECOLOGICAL RISK

4.2.1 Soil/Dust

Ecological screening results for soil samples are presented in Table 4-2. Soil screening values were conservatively used to screen the dust samples as well. Soil screening concentrations for direct exposures were developed using toxicity reference values TRVs derived from several sources, including the following:

- USEPA (2000)¹⁰²
- Environment Canada (1995)¹⁰³
- Talmage *et al.* (1999)¹⁰⁴
- Efroymson *et al.* (1997a, 1997b)¹⁰⁵

- CCME (1999)¹⁰⁶
- MHSPE (1994)¹⁰⁷
- Other sources

A detailed discussion of the screening concentration selection is presented in Appendix G of the AUS OU PA/SI Report dated September 2001.

The screening approach for ingestion pathway exposures was based on the potential for a chemical to bioaccumulate. The potential for a chemical to bioaccumulate was based on the organic chemical-specific octanol-to-water partitioning coefficient (K_{ow}), which provides an indication of the lipophilicity of an organic chemical, and its potential for sequestration in biological tissue. The document *Assessment and Control of Bioconcentratable Contaminants in Surface Waters* (USEPA 1991)¹⁰⁸ used a log K_{ow} of 3.5 as a target threshold value indicative of bioaccumulative chemicals to target organic chemicals of greatest concern. Using this as a guideline, organic chemicals with a log K_{ow} greater than 3.5 were considered potentially bioaccumulative chemicals. Among inorganics, mercury and selenium were considered as potentially bioaccumulative chemicals. Any potentially bioaccumulative chemical that is detected was retained as a COPEC.

4.2.2 Sediment

Ecological screening results for sediment samples are presented in Table 4-4. Sources of TRVs for evaluating direct exposures to aquatic organisms in sediments included:

- Consensus-based freshwater sediment criteria (MacDonald et al. 1999)¹⁰⁹
- USEPA (1996 – summarized by Ingersoll et al. 1996)¹¹⁰
- Ontario Ministry of the Environment and Energy (1995)¹¹¹
- NOAA (1999)¹¹²
- Ecotox (USEPA 1996)¹¹³

- Long *et al.* (1995)¹¹⁴
- Equilibrium partitioning
- USEPA Region V Environmental Data Quality Levels (EDQLs)
- Other sources

With respect to effects levels, there are a number of potential sources and endpoints. There are also multiple endpoints from some sources. For example, threshold effects levels (TELs) as reported by Ingersoll *et al.* (1996) are the geometric mean of the 15th percentile in the effects data set and the 50th percentile in the no-effects data set. The effects-range low (ERL) and effects-range medium (ERM) are the 15th percentile and 50th percentile values in the effects datasets, respectively. The Probable Effects Level (PEL) is the geometric mean of the 50th percentile in the effects data set and the 85th percentile in the no-effects data set, and the effects range medium is the 50th percentile value of the effects dataset. A TEL or ERL is assumed to represent a concentration below which toxic effects are rarely observed. The range between the TEL and PEL is assumed to represent the range in which effects are occasionally observed. MacDonald *et al.* (2000) developed "consensus-based" freshwater sediment screening concentrations. Threshold effect concentrations (TECs) were developed as concentrations below which adverse effects are not expected to occur. Probable effect concentrations (PECs) were levels above which effects are frequently expected to occur. Among other potential screening values, no effect concentrations (NECs – Ingersoll *et al.* 1996) and upper effect thresholds (UETs – NOAA 1999) are also levels above which effects are frequently or always observed.

In deriving an ecological screening value (ESV), preference was given to the TEC, TEL and ERL values since these are the most conservative (i.e., levels below which effects are rarely observed). Preference was also given to freshwater-derived values (MacDonald *et al.* [1999], Ingersoll *et al.* [1996], Ontario [1995] and NOAA [1999]) as opposed to estuarine or saltwater (Long *et al.* 1995). If screening values were unavailable from the sources noted above, the "equilibrium-partitioning" (EqP) approach was used. This used the surface water ecological screening value and the expected partitioning between sediment and sediment pore water as described in USEPA (1993). A detailed discussion of the screening concentration selection is presented in Appendix G of the AUS OU PA/SI Report dated September 2001.

The screening approach for ingestion pathway exposures was the same as for soils as presented in Section 4.2.1.

4.2.3 Surface Water

Ecological screening results for surface water samples are presented in Table 4-6. TRVs for direct exposure by aquatic organisms in surface water were obtained from:

- Illinois water quality standards

¹¹³ USEPA. 1996. ECO Update: Ecotox Thresholds. EPA-540/F-95/038. U.S. Environmental Protection Agency. Office of Solid Waste and Emergency Response. Washington, D.C. 12pp.

¹¹⁴ Long, E.R., D.D. MacDonald, S.L. Smith, and F.D. Calder. 1995. Incidence of adverse biological effects within ranges of chemical concentrations in marine and estuarine sediments. Environ. Management. 19(1): 81-97.

- National Recommended Ambient Water Quality Criteria (USEPA 1999a)¹¹⁵
- EcoTox (USEPA 1996)¹¹⁶
- USEPA Region IV Freshwater Screening Values (1999b)¹¹⁷
- Maximum Acceptable Toxicant Concentrations (MATCs) or lowest observed effect concentrations (LOECs) obtained from the USEPA Assessment Tools for the Evaluation of Risk database (ASTER 2000)¹¹⁸
- Other sources

The Illinois water quality standards are believed to be the most relevant, followed by national recommended ambient water quality criteria. EcoTox reports values based on ambient water quality criteria, and Tier II water quality criteria have been developed in the absence of sufficient information to support a national recommended water quality criterion using guidelines outlined in the Great Lakes Water Quality Initiative. Remaining sources were prioritized based on relevance to the area and professional judgment. The detailed discussion of the approach for selecting a single ESV from among the multiple sources is presented in Appendix G of the AUS OU PA/SI Report dated September 2001.

The screening approach for ingestion pathway exposures was the same as for soils as presented in Section 4.2.1.

5.1 AIR MONITORING SUMMARY

Using the measured dust concentrations discussed in Section 3.5, and if we assume that the dust in the air has the same pesticide concentrations as the dust on the floor, the calculated aldrin concentrations for each building, for the 20-minute dust monitoring periods are:

Building IN-1-3 — 0.000044 mg/cubic meter
Building IN-1-4 — 0.00042 mg/cubic meter
Building IN-1-5 — 0.035 mg/cubic meter
Building IN-1-6 — 0.00014 mg/cubic meter

Air monitoring results were compared to the Occupational Safety and Health Administration (OSHA) and the National Institute for Occupational Safety and Health (NIOSH) standards. OSHA and NIOSH standards are applicable to workers in controlled, monitored, work places, and are not directly applicable to this site. Both OSHA and NIOSH have exposure limits for aldrin of 0.25 mg/cubic meter. This is the maximum average acceptable level that a worker should be exposed to for 40 hours per week. As shown, the calculated aldrin levels for the buildings in Area 7 are well below these limits. When dieldrin, which has the same exposure limits, is also considered, the calculated concentrations are still well below the OSHA/NIOSH exposure limits, even when the maximum pesticide dust detections are used with the maximum air concentrations. However, NIOSH considers both aldrin and dieldrin as potential carcinogens and recommends that occupational exposures to carcinogens be limited to the lowest feasible concentrations.

OSHA and NIOSH exposure limits for DDT are 0.5 mg/cubic meter and 1 mg/cubic meter, respectively. NIOSH classifies DDT as a potential human carcinogen and OSHA does not. OSHA and NIOSH exposure limits for endrin are 0.1 mg/cubic meter. Neither classifies endrin as a potential carcinogen. Based on the results from the sampling, the calculations show no OSHA or NIOSH exceedances of exposure limits for DDT or endrin. There are no OSHA/NIOSH published exposure limits for endrin ketone or isodrin.

The data collected do not indicate exceedances of OSHA/NIOSH standards for worker exposure to the pesticides detected. However these standards are based on air concentrations of pesticides and do not take into account other media and exposure pathways, nor do the exposure limits account for the effects of multiple contaminants. Also, as noted above, OSHA and NIOSH standards are not directly applicable to the site conditions. Aldrin, dieldrin, and DDT are classified as potential human carcinogens by NIOSH. NIOSH recommends limiting exposure to these chemicals to the lowest feasible levels.

In order to assist FWS understand the risk implications of worker contact with pesticides detected inside the buildings, IEPA also calculated conservative screening levels for most of the analyzed pesticides. IEPA suggested worker exposure be minimized to protect against both cancer and noncancer risks since the maximum amounts of aldrin and dieldrin exceed both the

cancer and noncancer risk-based screening level. A copy of IEPA's letter containing their calculations and recommendation can be found in Appendix B.

5.2 ANALYTICAL RESULTS SUMMARY FOR SOIL, SEDIMENT, SURFACE WATER, DUST, AND WIPE SAMPLES

Dust samples were compared with soil screening criteria. Wipe samples indicated the presence of several pesticides, but results were not compared to any standards.

Chemicals that exceeded the AUS OU PA/SI screening criteria and Refuge background (if applicable) for soil, sediment, and surface water are listed in Table 4-14.

The following chemicals are included in Table 4-14 but were not identified as COPCs or COPECs in the PA/SI report. These chemicals should be added to the COPC/COPEC list for AUS-0A07.

Chemicals of Potential Concern

Soil:

- 1,2-Dichloropropane
- Benzene
- Tetrachloroethylene (PCE)
- 4,4'-DDE
- 4,4'-DDT
- Endrin aldehyde
- Gamma-chlordane

Sediment:

- 1,2-Dichloropropane
- Trichloroethylene (TCE)
- Antimony
- Arsenic
- Barium
- Beryllium
- Chromium
- Nickel
- Selenium
- 4,4'-DDD
- Dieldrin

Chemicals of Potential Ecological Concern

Soil:

- Total xylenes
- Acenaphthene
- 2,3,7,8-TCDD TEQ

Sediment:

- Arsenic
- Manganese
- Mercury
- Selenium
- Zinc
- 4,4'-DDD
- 4,4'-DDE
- 4,4'-DDT
- Aldrin
- Dieldrin
- Methoxychlor

Surface Water:

- Aluminum
- Hexachlorobenzene

TABLE 2-1
AREA 7 POST-WORLD WAR II
OPERATORS/LESSEES AND BUILDING USES
(Buildings IN-1-3, IN-1-4, IN-1-5, and IN-1-6 only)

OPERATOR/LESSEE	AREA 7 BUILDING NUMBER	YEARS OF OCCUPANCY	INDUSTRIAL ACTIVITY IN BUILDINGS
Allen Industries	IN-1-3	195-1957	Warehousing/production of rug underlay samples and warehousing of packing materials
	IN-1-4	1956-1957	
Central Fixtures Manufacturing Company (changed its name to Cubicon Corporation in 1972 – see below)	IN-1-5	1971-1972	Makes interior display cases and shelves for many kinds of businesses (wood working) (Cubicon manufactured building fixtures)
	IN-1-6	1971-1972	
		1980-1983	
	P-1-13	1971-1973	
FPI (likely Federal Prison Industries)	IN-1-3	1976-1981	Warehousing of prison products
Great Lakes Terminal & Transport Corporation (formerly Great Lakes Solvents, Inc. from 1951 through 1961)	IN-1-3	1961-1966	Storage of packaged agricultural chemicals (pesticides)
	IN-1-4	1951 or 1961-1971	
	IN-1-5	1951-1971	
	IN-1-6	1951-1971	
	P-1-13	1951-1971	
Hercules Powder	IN-1-3	1949-1950	Storage of linter for explosive powder production; linter consists of cotton fibers and fuzz that escapes removal in the ginning operation
	IN-1-4	1949-1950	
	IN-1-5	1949-1950	
	IN-1-6	1949-1950	
Little Egypt Grain Co. (original lease was from 1986 through 1990; the 1990 tenant list only showed Little Egypt Grain Co. as leasing the equivalent of one of these buildings (unknown building number), so it is assumed that some of the rest of these buildings were unoccupied by that time)	IN-1-3	1986-1990	Storage of bushels of corn
	IN-1-5	1986-1990	
	IN-1-6	1986-1990	
Mark Twain Marine Industries	IN-1-3	1970-1971	Manufacture of boats and boat accessories
Maytag Appliances	IN-1-3	Current	Storage of service parts for equipment that is no longer manufactured
MDM - the Party Shop	IN-1-6	1998-2001	Observed during the spring of 2001 by USFWS personnel—the building contains boxes of party supplies (paper plates, etc.)
Midwest Woodworking & Fixture	IN-1-6	1985	Unknown
Norge	IN-1-2	1957-1965	Warehouse Washers/Dryers
	IN-1-3	1963-1964, 1966-1967	
Olin Corporation	IN-1-	1971-1976	Storage of ordnance explosives and ordnance materials
Pennzoil Co. (changed name to Pennzoil Products Company in 1986)	IN-1-3	1971 (6 months)	Warehousing motor oil and a barrel washing operation; and as an oil products distributorship
	IN-1-4	1971 (3 months)	
Pre-Hung Door Co. (Subsidiary of Marion Metal and Roofing Company, Inc.)	IN-1-6	1974-1980	Manufacturing Wooden Doors
Royal Crown (R.C.) Bottle Company (Hargreave, A.C.)	IN-1-4	1976-1990 (at least)	Cola Sales/Distribution
Southern Illinois Manufacturing Company, Inc.	IN-1-6	1972-1974	Unknown

AREA 7 (AUS-0A07)
ADDITIONAL AND UNCHARACTERIZED SITES OPERABLE UNIT
CRAB ORCHARD NATIONAL WILDLIFE REFUGE

CONSTITUENT	NUMBER OF DETECTIONS	RANGE OF DETECTIONS
VOLATILE ORGANIC COMPOUNDS		
1,2-Dichloropropane	5/10	20 ug/kg to 660 ug/kg
Acetone	8/10	9 ug/kg to 24 ug/kg
Benzene	3/10	7 ug/kg to 8 ug/kg
Chlorobenzene	3/10	13 ug/kg to 48 ug/kg
Ethylbenzene	2/10	27 ug/kg to 41 ug/kg
Styrene	2/10	21 ug/kg to 28 ug/kg
Tetrachloroethene	2/10	15 ug/kg to 48 ug/kg
Toluene	3/10	4 ug/kg to 11 ug/kg
Xylene (total)	3/10	200 ug/kg to 4,500 ug/kg
SEMI-VOLATILE ORGANIC COMPOUNDS		
Acenaphthene	2/17	150 ug/kg to 320 ug/kg
Acenaphthylene	3/17	95 ug/kg to 420 ug/kg
Anthracene	3/17	2.8 ug/kg to 87 ug/kg
Benzo(a)Anthracene	4/17	8.2 ug/kg to 100 ug/kg
Benzo(a)Pyrene	2/17	10 ug/kg to 17 ug/kg
Benzo(b)Fluoranthene	4/17	5 ug/kg to 21 ug/kg
Benzo(g,h,i)Perylene	2/17	15 ug/kg to 130 ug/kg
Benzo(k)Fluoranthene	4/17	2.7 ug/kg to 11 ug/kg
Bis(2-ethylhexyl) Phthalate	1/13	2,500 ug/kg
Chrysene	4/17	10 ug/kg to 81 ug/kg
Fluoranthene	4/17	28 ug/kg to 620 ug/kg
Fluorene	2/17	55 ug/kg to 210 ug/kg
Indeno(1,2,3-c,d)Pyrene	2/17	10 ug/kg to 14 ug/kg
Naphthalene	2/17	150 ug/kg to 330 ug/kg
Phenanthrene	4/17	24 ug/kg to 360 ug/kg
Pyrene	4/17	20 ug/kg to 330 ug/kg
PESTICIDES		
4,4'-DDD	28/91	1.5 ug/kg to 12,000 ug/kg
4,4'-DDE	17/91	3 ug/kg to 4,800 ug/kg
4,4'-DDT	32/90	1 ug/kg to 100,000 ug/kg
Aldrin	63/90	1.7 ug/kg to 1,300,000 ug/kg
Alpha Endosulfan	4/91	0.62 ug/kg to 12 ug/kg
Alpha-Chlordane	7/91	0.66 ug/kg to 490 ug/kg
Beta BHC (Beta Hexachlorocyclohexane)	2/91	1.3 ug/kg to 8.4 ug/kg
Beta Endosulfan	2/91	5.3 ug/kg to 18 ug/kg
Dieldrin	78/91	2 ug/kg to 290,000 ug/kg
Endosulfan Sulfate	1/91	7.7 ug/kg
Endrin	30/92	5.4 ug/kg to 12,000 ug/kg
Endrin Aldehyde	15/91	1.7 ug/kg to 9,000 ug/kg
Endrin Ketone	31/89	1.9 ug/kg to 20,000 ug/kg
Gamma BHC (Lindane)	5/92	0.59 ug/kg to 5.6 ug/kg
Gamma-Chlordane	12/91	0.73 ug/kg to 1,600 ug/kg

SOIL SAMPLE ANALYTICAL RESULTS SUMMARY

AREA 7 (AUS-0A07)
ADDITIONAL AND UNCHARACTERIZED SITES OPERABLE UNIT
CRAB ORCHARD NATIONAL WILDLIFE REFUGE

CONSTITUENT	NUMBER OF DETECTIONS	RANGE OF DETECTIONS
Heptachlor	5/91	4 ug/kg to 69 ug/kg
Heptachlor Epoxide	6/92	0.72 ug/kg to 11 ug/kg
Hexachlorobenzene	11/92	4.4 ug/kg to 2,700 ug/kg
Isodrin	29/90	0.9 ug/kg to 60,000 ug/kg
Methoxychlor	1/92	26 ug/kg
DIOXIN/FURANS		
TCDD equivalent	1/3	0.000289 ug/kg
INORGANICS		
Aluminum	17/17	2,720 mg/kg to 17,900 mg/kg
Antimony	8/17	0.34 mg/kg to 0.63 mg/kg
Arsenic	17/17	4.3 mg/kg to 9.6 mg/kg
Barium	17/17	18.8 mg/kg to 153 mg/kg
Beryllium	16/17	0.13 mg/kg to 1.2 mg/kg
Boron	10/17	0.85 mg/kg to 6.2 mg/kg
Cadmium	5/17	0.1 mg/kg to 0.39 mg/kg
Calcium	17/17	1,010 mg/kg to 217,000 mg/kg
Chromium, Total	17/17	6.1 mg/kg to 25.6 mg/kg
Cobalt	17/17	2.4 mg/kg to 15.1 mg/kg
Copper	17/17	8.6 mg/kg to 23.5 mg/kg
Iron	17/17	6,170 mg/kg to 34,000 mg/kg
Lead	17/17	9.3 mg/kg to 64.8 mg/kg
Magnesium	17/17	1650 mg/kg to 19,700 mg/kg
Manganese	17/17	209 mg/kg to 1,370 mg/kg
Mercury	4/17	0.011 mg/kg to 0.053 mg/kg
Nickel	17/17	9.2 mg/kg to 22.9 mg/kg
Potassium	17/17	524 mg/kg to 930 mg/kg
Selenium	1/17	0.78 mg/kg
Sodium	17/17	60.4 mg/kg to 1,360 mg/kg
Vanadium	17/17	5.7 mg/kg to 38.1 mg/kg
Zinc	17/17	28.9 mg/kg to 95.4 mg/kg

mg/kg = milligrams per kilogram

ug/kg = micrograms per kilogram

Note: This table was derived from the figures that show the analytical results. As a result, duplicates are shown only if the duplicate result for an analyte exceeded the screening criteria and the result from the original sample did not; or, if the analyte was detected in the duplicate and not in the original sample. There may be some duplicate results, not shown in the table, that are outside the range shown. In addition, the frequency and range of detections is based on the number of sample locations, not the total number of samples (the total number of samples includes originals plus duplicates).

A - Chemical was not detected and the reporting limit does not exceed the screening concentration.

B - Chemical was not detected, but reporting limit was equal to or exceeded screening concentration.

C - Chemical was not detected and there is no screening concentration.

D - Chemical was detected and was equal to or exceeded screening concentration, but did not exceed background.

E - Chemical was detected and was equal to or exceeded screening concentration and background, if applicable.

F - Chemical was detected and did not exceed screening concentration.

G - Chemical was detected, but no screening value was available.

H - Chemical was detected, but it is an essential nutrient.

NA - Not Analyzed or not applicable.

A - Chemical was not detected and the reporting limit does not exceed the screening concentration.

B - Chemical was not detected, but reporting limit was equal to or exceeded screening concentration.

C - Chemical was not detected and there is no screening concentration.

D - Chemical was detected and was equal to or exceeded screening concentration, but did not exceed background.

E - Chemical was detected and was equal to or exceeded screening concentration and background, if applicable.

F - Chemical was detected and did not exceed screening concentration.

G - Chemical was detected, but no screening value was available.

H - Chemical was detected, but it is an essential nutrient.

I - If pH<5.5, Aluminum is a COPEC, otherwise it is not.

NA - Not Analyzed or not applicable.

Notes:

ND = Not Detected

RL = Reporting Limit

Qual = Qualifier

mg/kg = milligrams per kilogram

µg/kg = micrograms per kilogram

ng/kg = nanograms per kilogram

R = Rejected

J = Estimated

U = Nondetect

UJ = Estimated Nondetect

The calculation of detection frequency does not include results from reanalyzed samples.

Notes:

ND = Not Detected

RL = Reporting Limit

Qual = Qualifier

mg/kg = milligrams per kilogram

µg/kg = micrograms per kilogram

ng/kg = nanograms per kilogram

R = Rejected

J = Estimated

U = Nondetect

UJ = Estimated Nondetect

The calculation of detection frequency does not include results from reanalyzed samples.

Notes:

ND = Not Detected

RL = Reporting Limit

Qual = Qualifier

mg/kg = milligrams per kilogram

µg/kg = micrograms per kilogram

ng/kg = nanograms per kilogram

R = Rejected

J = Estimated

U = Nondetect

UJ = Estimated Nondetect

The calculation of detection frequency does not include results from reanalyzed samples.

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC?

Yes

2.0 Laboratory Case Narrative

Were problems noted in the laboratory case narrative or cooler receipt form which are not discussed in subsequent sections?

The laboratory case narrative indicated MS/MSD RPDs surrogate outside evaluation criteria. These issues are addressed in the appropriate section below. Also, the narrative indicated CCV for pesticides and internal standard recoveries for VOCs were outside evaluation criteria. While the CCVs and IS are not part of the data review, the CCV and IS for the impacted samples were reviewed and no data required rejection. ICB/CCB and serial dilutions were outside criteria for metals. These parameters are not included in the data review; however, they were reviewed for the impacted samples. No data required "R" qualification. No problems were noted on the cooler receipt form which impact data quality.

Additionally, due to sampling errors, sample integrity was compromised and pesticide analyses were qualified rejected (R) for sample AUS-0A07-025-SD-04.

Crab Orchard Area 7 Data Review

Laboratory SDG: 202474

3.0 Holding Times

Were samples extracted/analyzed within QAPP limits?

Yes.

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

Yes.

Blank ID	Analyte	Concentration	Units
Metals blank	Arsenic	-0.43	mg/kg
Metals blank	Cadmium	-0.40	mg/kg
Metals blank	Calcium	7.53	mg/kg
Metals blank	Chromium	0.14	mg/kg
Metals blank	Cobalt	-0.13	mg/kg
Metals blank	Lead	0.34	mg/kg
Metals blank	Nickel	-0.310	mg/kg
Metals blank	Potassium	12.39	mg/kg
Metals blank	Selenium	0.28	mg/kg
Metals blank	Thallium	-0.640	mg/kg
AUS-0A07-002-TB-00	Acetone	3.0	ug/L
AUS-0A07-002-TB-00	Methylene chloride	0.5	ug/L

Qualifications due to blank contamination are included in the table below. Analytical data that were reported nondetect or at concentrations greater than five times (5X) the associated blank concentration (10X for common laboratory contaminants) did not require qualification.

Field ID	Analyte	New RL	Qualification	Assoc. Blank ID
AUS-0A07-025-SD-0X	Cadmium	0.33	U	Method blank
AUS-0A07-025-SD-0X	Thallium	1.1	U	Method blank

5.0 Laboratory Control Sample

Were LCS recoveries within evaluation criteria?

No

Crab Orchard Area 7 Data Review

Laboratory SDG: 202474

LCS ID	LCS Compound	LCS/LCSD Recovery (%)	Criteria (%)
VBLK14042	Bromomethane	44	64-139
SBLK14824	2,2'-oxybis(1-chloroprpane)	108	43-106
SBLK14824	n-Nitrosodipehnylamine	116/114/2	65-111/20

Analytical data that required qualification based on LCS data are included in the table below. Analytical data which were reported as nondetect and associated with LCS recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Field ID	Analyte	Qualification
NA		

Associated data were reported as nondetect, therefore, no qualification of data was required.

6.0 Surrogate Recoveries

Were surrogate recoveries within evaluation criteria?

No, some surrogate compound recoveries for QC samples (i.e. LCS and method blanks) were slightly above evaluation criteria. Since the surrogate recoveries for investigative samples were within criteria and the exceedences were slight, no qualification of data was required.

Field ID	Analysis	Surrogate	Recovery	Criteria
NA				

Analytical data that required qualification based on surrogate data are included in the table below. Analytical data which were reported as nondetect and associated with surrogate recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Field ID	Analyte	Qualification
N/A		

7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

Were MS/MSD samples reported as part of this SDG?

Yes,

Were MS/MSD recoveries within evaluation criteria?

Crab Orchard Area 7 Data Review

Laboratory SDG: 202474

No, various MS, MSD, and MS/MSD RPDs for VOCs were outside evaluation criteria. In addition, some MS, MSD and RPDs for pesticides were outside evaluation criteria. Organic data should not be qualified using MS/MSD data alone. Since the recoveries were greater than the upper limit (with the exception of bromomethane for LCS, which was previously qualified) and associated data were reported as nondetect, no qualification of data was required.

MS/MSD ID	Analyte	MS/MSD Recovery (%)	RPD	Criteria (%/RPD)
NA				

Analytical data that required qualification based on MS/MSD data are included in the table below. The MS/MSD recoveries for inorganic compounds with sample concentrations greater than four times (4X) the matrix spike concentration did not require evaluation or qualification.

Field ID	Analyte	Qualification
N/A		

8.0 Lab Duplicate Results

Were lab duplicate samples collected as part of this SDG?

No.

Were laboratory duplicate sample RPDs within criteria?

N/A.

Field ID	Analyte	%RPD	Criteria
N/A			

Field ID	Analyte	Qualification
N/A		

9.0 Field Duplicate Results

Were field duplicate samples collected as part of this SDG?

Yes

Crab Orchard Area 7 Data Review

Laboratory SDG: 202474

Field ID	Field Duplicate ID
AUS-0A07-065-SD-02	AUS-0A07-115-SD-02
AUS-0A07-079-SD-0X	AUS-0A07-139-SD-0X

Were field duplicates within evaluation criteria?

Yes

Field ID	Field Duplicate ID	Analyte	Qualification
NA			

10.0 Sample Dilutions

For samples which were diluted, were undiluted results also reported?

No.

11.0 Additional Qualifications

Were additional qualifications applied?

Yes.

Field ID	Analyte	New RL	Qual	Comments
AUS-0A07-065-SD-02	Acetone	23	U	Common lab cont., in TB sample
AUS-0A07-115-SD-02	Acetone	22	U	Common lab cont., in TB sample
AUS-0A07-025-SD-04	Acetone	12	U	Common lab cont., in TB sample

10.0 Sample Dilutions

For samples which were diluted, were undiluted results also reported?

No samples were diluted.

The following table identifies the analyses which only diluted results were provided and one or more analytes were reported as nondetect.

Crab Orchard Area 7 Data Review

Laboratory SDG: 202477

Analysis	Quantity	Dilution Factor Range
N/A		

11.0 Additional Qualifications

Were additional qualifications applied?

No.

Field ID	Analyte	New RL	Qualification	Comments
N/A				

Professional judgement was used to qualify acetone and methylene chloride data reported less than two times (2X) the RL since both compounds are common laboratory contaminants. Additionally, if the RPD for an initial analysis concentration and a reanalysis (or dilution analysis) concentration was greater than 50%, then the data was qualified nondetect (U) based on professional judgement.

12.0 QA/QC Summary

QA/QC ID	Analysis	# of Analytes	# of Analytes Outside Criteria
Surrogates	VOC	4	0

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC?

Yes

2.0 Laboratory Case Narrative

Were problems noted in the laboratory case narrative or cooler receipt form which are not discussed in subsequent sections?

The laboratory case narrative/cooler receipt form indicated the following:

- Units on Form I reports should be ng/wipe

These issues are addressed in the appropriate sections below. The case narrative also indicated the following:

- Some 4,4'-DDT breakdown on the confirmation column exceeded the required control limit. This information is not part of the review procedure, therefore no qualification of data was required.

No additional problems were noted in the case narrative.

Crab Orchard Area 7 Data Review

Laboratory SDG: 202497

3.0 Holding Times

Were samples extracted/analyzed within QAPP limits?

Yes

Field ID	Analyte	Qualification
N/A		

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

The case narrative stated that the method blank results were below the reporting limit for all target analytes.

Blank ID	Analyte	Concentration	Units
N/A			

Qualifications due to blank contamination are included in the table below. Analytical data that were reported nondetect or at concentrations greater than five times (5X) the associated blank concentration (10X for common laboratory contaminants) did not require qualification.

Field ID	Analyte	New RL	Qualification	Assoc. Blank ID
N/A				

5.0 Laboratory Control Sample

Were LCS recoveries within evaluation criteria?

Yes

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC?

Yes, sample IDs marked with (R) had the pesticides results rejected due to improper decontamination techniques while sampling.

2.0 Laboratory Case Narrative

Were problems noted in the laboratory case narrative or cooler receipt form which are not discussed in subsequent sections?

The laboratory case narrative/cooler receipt form indicated the following:

- Surrogates were diluted out of several samples during sulfur clean-up.
- Select MS/MSD recoveries were biased high during pesticide analysis.
- Select LCS recoveries were biased high during SVOC analysis.

These issues are addressed below in the appropriate sections. No additional problems were noted in the case narrative.

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC?

Yes

2.0 Laboratory Case Narrative

Were problems noted in the laboratory case narrative or cooler receipt form which are not discussed in subsequent sections?

The laboratory case narrative indicated LCS and surrogate recoveries outside evaluation criteria. These issues are addressed in the appropriate section below. Also, the narrative indicated internal standard recoveries outside evaluation criteria. While the internal standards are not part of the data review, the IS were reviewed and no data required rejection. No problems were noted on the cooler receipt form which impact data quality.

3.0 Holding Times

Were samples extracted/analyzed within QAPP limits?

Yes.

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

No.

Crab Orchard Area 7 Data Review

Laboratory SDG: 202519

Blank ID	Analyte	Concentration	Units
NA			

Qualifications due to blank contamination are included in the table below. Analytical data that were reported nondetect or at concentrations greater than five times (5X) the associated blank concentration (10X for common laboratory contaminants) did not require qualification.

Field ID	Analyte	New RL	Qualification	Assoc. Blank ID

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC?

Yes.

2.0 Laboratory Case Narrative

Were problems noted in the laboratory case narrative or cooler receipt form which are not discussed in subsequent sections?

The laboratory case narrative/cooler receipt form indicated surrogate and MS/MSD recoveries outside evaluation criteria.

These issues are addressed below in the appropriate sections. Additional items of interest not normally included in the data review process were:

- ICB/CCB were outside evaluation criteria for sodium. Since the sodium values were much greater than the ICB/CCB concentrations, no qualification of data was required.
- Due to sampling errors, sample integrity was compromised and pesticide analyses were qualified rejected (R) for samples AUS-0A07-037-SS-02, AUS-0A07-039-SS-02, AUS-0A07-042-SS-02, AUS-0A07-042-SS-04, AUS-0A07-043-SS-02, and AUS-0A07-043-SS-04.

No additional problems were noted in the laboratory case narrative.

5.0 Laboratory Control Sample

Were LCS recoveries within evaluation criteria?

No.

Crab Orchard Area 7 Data Review

Laboratory SDG: 202534

LCS ID	LCS Compound	LCS/LCSD Recovery (%)	Criteria (%/RPD)
SBLK14822	2-Methylphenol	110	59-101
SBLK14822	2,2'-oxybis(1-chloropropane)	119	43-106
SBLK14822	n-nitroso-di-n-propylamine	116	52-108
SBLK14822	4-Methylphenol	119	58-107
SBLK14822	2-Nitroaniline	114	67-110
SBLK14822	2,6-Dinitroaniline	122	65-113
SBLK14822	2,4-Dinitrophenol	137	42-127
SBLK14822	4,6-Dinitro-2-methylphenol	125	60-123

Associated data were reported as nondetect, therefore, no qualification of data was required.

6.0 Surrogate Recoveries

Were surrogate recoveries within evaluation criteria?

Yes; however, surrogates were diluted out of several pesticide analyses due to sulfur clean-up and dilutions. No qualifications to the data were required.

Field ID	Analysis	Surrogate	Recovery	Criteria
NA				

Analytical data that required qualification based on surrogate data are included in the table below. Analytical data which were reported as nondetect and associated with surrogate recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Field ID	Analyte	Qualification
N/A		

7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

Were MS/MSD samples reported as part of this SDG?

Yes.

Were MS/MSD recoveries within evaluation criteria?

No.

Crab Orchard Area 7 Data Review

Laboratory SDG: 202534

MS/MSD ID	Analyte	MS/MSD Recovery (%)	RPD	Criteria (%/RPD)
AUS-0A07-043-SS-0X	Antimony	4.9	NA	75-125
AUS-0A07-043-SS-0X	Arsenic	69.4	NA	75-125
AUS-0A07-043-SS-0X	Lead	127	NA	75-125

MS/MSD recoveries for an SVOC MS/MSD sample were diluted out. No qualification of data was required. In addition, MS/MSD recoveries for SVOC and pesticides were outside evaluation criteria. National Functional Guidelines for Organic Data Review (USEPA 1999) does not require data qualifications based on MS/MSD analysis alone. Since the above data was previously qualified due to the LCS recoveries, no further qualifications to the organic data were made.

Field ID	Analyte	Qualification

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC?

Yes; however, the pesticide results for the following sample results were qualified as rejected "R" due to sampling errors. AUS-0A07-054-SS-02, AUS-0A07-055-SS-02, AUS-0A07-047-SS-02, AUS-0A07-047-SS-03, AUS-0A07-047-SS-04, AUS-0A07-047-SS-05, and AUS-0A07-035-SS-02

2.0 Laboratory Case Narrative

Were problems noted in the laboratory case narrative or cooler receipt form which are not discussed in subsequent sections?

The laboratory case narrative/cooler receipt form indicated LCS, surrogate and MS/MSD recoveries outside evaluation criteria. These issues are addressed in the appropriate sections below. In addition, the narrative indicated CCVs and ICB/CCBs outside evaluation criteria. These QC measurements are not included in the data review, but were briefly reviewed to determine if the data required rejection. No, data required rejection.

No additional problems were noted in the laboratory case narrative.

3.0 Sample Preservation and Holding Times

Were samples extracted/analyzed within QAPP limits?

Crab Orchard Area 7 Data Review

Laboratory SDG: 202535

Yes,

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

Yes.

Blank ID	Analyte	Concentration	Units
Method	Arsenic	-0.43	Mg/kg
Method	Boron	0.62	Mg/kg
Method	Cadmium	-0.04	Mg/kg
Method	Calcium	7.53	Mg/kg
Method	Chromium	0.140	Mg/kg
Method	Cobalt	-0.130	Mg/kg
Method	Lead	0.340	Mg/kg
Method	Nickel	-0.310	Mg/kg
Method	Potassium	12.39	Mg/kg
Method	Selenium	0.28	Mg/kg
Method	Thallium	-0.640	Mg/kg

Qualifications due to blank contamination are included in the table below. Analytical data that were reported nondetect or at concentrations greater than five times (5X) the associated blank concentration (10X for common laboratory contaminants) did not require qualification.

Field ID	Analyte	New RL	Qualification	Assoc. Blank ID

Crab Orchard Area 7 Data Review

Laboratory SDG: 202535

5.0 Laboratory Control Sample

Were LCS recoveries within evaluation criteria?

HERE.

LCS ID	LCS Compound	LCS/LCSD Recovery (%)	Criteria (%/RPD)
SBLK14822	2-Methylphenol	110	59-101
SBLK14822	2,2'-oxybis(1-chloropropane)	119	43-106
SBLK14822	n-nitroso-di-n-propylamine	116	52-108
SBLK14822	4-Methylphenol	119	58-107
SBLK14822	2-Nitroaniline	114	67-110
SBLK14822	2,6-Dinitroaniline	122	65-113
SBLK14822	2,4-Dinitrophenol	137	42-127
SBLK14822	4,6-Dinitro-2-methylphenol	125	60-123

Associated data were reported as nondetect, therefore, no qualification of data was required.

6.0 Surrogate Recoveries

Were surrogate recoveries within evaluation criteria?

Yes; however, surrogates were diluted out of several pesticide analyses due to sulfur clean-up and dilutions. No qualifications to the data were required.

Field ID	Analysis	Surrogate	Recovery	Criteria
NA				

Analytical data that required qualification based on surrogate data are included in the table below. Analytical data which were reported as nondetect and associated with surrogate recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Field ID	Analyte	Qualification
N/A		

7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

Were MS/MSD samples reported as part of this SDG?

Crab Orchard Area 7 Data Review

Laboratory SDG: 202535

Yes.

Were MS/MSD recoveries within evaluation criteria?

Yes; however, MS/MSD recoveries for pesticides were diluted out due to high levels of target compounds.

MS/MSD ID	Analyte	MS/MSD Recovery (%)	RPD	Criteria (%/RPD)

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC?

Yes.

2.0 Laboratory Case Narrative

Were problems noted in the laboratory case narrative or cooler receipt form which are not discussed in subsequent sections?

The laboratory case narrative/cooler receipt form indicated the following:

- Lead contamination existed in the metals calibration blanks.
- Surrogates were diluted out of select pesticide samples during sulfur cleanup.
- The pesticide LCS was biased high for select compounds.

These issues are addressed below in the appropriate sections. Additional items of interest not normally included in the data review process were:

- One calibration verification was biased low for antimony. The one CV in question did not bracket any URS samples and did not affect data quality.
- Due to sampling errors, sample integrity was compromised and pesticide analyses were qualified rejected (R) for samples AUS-0A07-045-SS-04, AUS-0A07-045-SS-05, AUS-0A07-040-SS-02, AUS-0A07-045-SS-02, AUS-0A07-059-SS-02, AUS-0A07-061-SS-02, AUS-0A07-044-SS-04 and AUS-0A07-056-SS-02.

No additional problems were noted in the laboratory case narrative.

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC?

Yes.

2.0 Laboratory Case Narrative

Were problems noted in the laboratory case narrative or cooler receipt form which are not discussed in subsequent sections?

The laboratory case narrative/cooler receipt form indicated the following:

- Lead contamination existed in the metals calibration blanks.
- Surrogates were diluted out of select pesticide samples during sulfur cleanup.
- The pesticide LCS was biased low; therefore, several samples were re-extracted and re-analyzed. Samples were re-extracted beyond holding times and both sets of results were reported.
- The pesticide MS/MSD had several recoveries and RPDs outside QC limits.

These issues are addressed below in the appropriate sections. Additional items of interest not normally included in the data review process were:

- Several pesticide calibration verifications were biased low for select compounds. Although calibration verifications are not normally included in data reviews, the calibration data was evaluated and determined not to require rejection.
- Due to sample collection errors, sample integrity was compromised and pesticide analyses were qualified rejected (R) for samples AUS-0A07-060-SS-02, AUS-0A07-

Crab Orchard Area 7 Data Review

Laboratory SDG: 202538

Professional judgement was used to qualify acetone and methylene chloride data reported less than two times (2X) the RL since both compounds are common laboratory contaminants. Additionally, if the RPD for an initial analysis concentration and a reanalysis (or dilution analysis) concentration was greater than 50%, then the data was qualified nondetect (U) based on professional judgement.

6.0 Surrogate Recoveries

Were surrogate recoveries within evaluation criteria?

No, the surrogate recovery for the method blank sample were outside evaluation criteria. Since the surrogate recoveries for the associated samples were within criteria, no qualification of data was required. In addition, surrogate recoveries were "diluted out" for several samples. Since the surrogate recoveries for the original samples were within evaluation criteria, no qualification of data was required.

Field ID	Analysis	Surrogate	Recovery	Criteria
N/A				

Analytical data that required qualification based on surrogate data are included in the table below. Analytical data which were reported as nondetect and associated with surrogate recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Field ID	Analyte	Qualification

Crab Orchard Area 7 Data Review

Laboratory SDG: 203557

7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

Were MS/MSD samples reported as part of this SDG?

Yes, AUS-0A07-R39-SS-02.

Were MS/MSD recoveries within evaluation criteria?

No, several MS/MSD and RPDs were outside evaluation criteria. The sample was analyzed at a dilution and also re-extracted and re-analyzed. Due to the considerable number of outlying recoveries for the sample, all pesticide results were qualified as J/UJ for sample AUS-0A07-R39-SS-02 and its reanalysis.

MS/MSD ID	Analyte	MS/MSD Recovery (%)	RPD	Criteria (%/RPD)

Analytical data that required qualification based on MS/MSD data are included in the table below. The MS/MSD recoveries for inorganic compounds with sample concentrations greater than four times (4X) the matrix spike concentration did not require evaluation or qualification.

6.0 Surrogate Recoveries

Were surrogate recoveries within evaluation criteria?

Yes.

Field ID	Analysis	Surrogate	Recovery	Criteria
N/A				

Analytical data that required qualification based on surrogate data are included in the table below. Analytical data which were reported as nondetect and associated with surrogate recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Field ID	Analyte	Qualification
N/A		

7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

Were MS/MSD samples reported as part of this SDG?

Yes, AUS-0A07-R55-SS-02.

Crab Orchard Area 7 Data Review

Laboratory SDG: 203560

Were MS/MSD recoveries within evaluation criteria?

Yes.

MS/MSD ID	Analyte	MS/MSD Recovery (%)	RPD	Criteria (%/RPD)
NA				

Analytical data that required qualification based on MS/MSD data are included in the table below. The MS/MSD recoveries for inorganic compounds with sample concentrations greater than four times (4X) the matrix spike concentration did not require evaluation or qualification.

Field ID	Analyte	Qualification
N/A		

8.0 Lab Duplicate Results

Were lab duplicate samples collected as part of this SDG?

No.

Were laboratory duplicate sample RPDs within criteria?

N/A.

Field ID	Analyte	%RPD	Criteria
N/A			

Field ID	Analyte	Qualification
N/A		

9.0 Field Duplicate Results

Were field duplicate samples collected as part of this SDG?

Yes

AUS-0A07-R43-SS-02	AUS-0A07-517-SS-02	Dieldrin	J/UJ
AUS-0A07-R43-SS-02	AUS-0A07-517-SS-02	Endrin keton	J/UJ

10.0 Sample Dilutions

For samples which were diluted, were undiluted results also reported?

No; however, samples were diluted due to the presence of high concentrations of target analytes.

11.0 Additional Qualifications

Were additional qualifications applied?

No.

Field ID	Analyte	New RL	Qualification	Comments
N/A				

Professional judgement was used to qualify acetone and methylene chloride data reported less than two times (2X) the RL since both compounds are common laboratory contaminants. Additionally, if the RPD for an initial analysis concentration and a reanalysis (or dilution analysis) concentration was greater than 50%, then the data was qualified nondetect (U) based on professional judgement.

Superfund/Technical File

Dear Mr. Pinigis:

On May 15, 2001 the Illinois Environmental Protection Agency ("Illinois EPA") received electronic mail from the U.S. Fish and Wildlife Service ("USFWS") containing information related to pesticide sampling in four buildings in Area 7 of the Crab Orchard National Wildlife Refuge ("Refuge"). Area 7 is one of the areas investigated as part of the Additional and Uncharacterized Sites ("AUS") Operable Unit ("OU") Preliminary Assessment/Site Investigation ("PA/SI"). Great Lakes Terminal and Transport (GLT&T), also known as Great Lakes Solvents, leased the buildings in Area 7 for storage of pesticides for Shell Chemical Company. These four warehouse buildings were numbered: IN-1-3, IN-1-4, IN-1-5 and IN-1-6. These buildings have had several tenants since WWII and all four are currently occupied.

Maytag, MDM Distributors (the Party Shop), USFWS and the Illinois Department of Natural Resources continue to use the warehouses now. Employees of these entities enter the buildings varying amounts. USFWS collected dust, air and wipe samples from the interiors of the buildings because of pesticide residues found outside the buildings, the past pesticide storage within the buildings and because the buildings are in use. In order to assist USFWS understand the risk implications of worker contact with pesticides detected inside the buildings, Illinois EPA calculated conservative screening levels for most of the analyzed pesticides (described below).

It appears that two of the pesticides, aldrin and dieldrin, are present above their screening levels. This suggests that the buildings may be unacceptable for routine worker exposure. Note Illinois EPA has not evaluated the results of the air samples, since URS has already recommended minimizing worker exposure due to the measured air values in their report.

Screening Levels – The screening levels have been calculated using a procedure developed by Jeffrey M. Paul (*A Proposed Risk-Based Model for the Evaluation of*

Surface Contamination, and the Assessment of Potential Dermal Exposure. Thesis submitted to: The School of Hygiene and Public Health of the Johns Hopkins University, 1997). This is one of two approaches for addressing surface exposures that have been recommended to the Illinois EPA by USEPA. The basic equation for calculating the Risk-Based Screening Level (RBSL, in units of ug/cm²) is:

$$\text{RBSL} = \frac{D_{\max} \times \text{BW} \times \text{AT}}{\text{CR} \times f_{ss} \times [((1 - f_{do}) \times (f_{der})) + (f_{do} \times f_{gi})] \times \text{EF} \times \text{ED}}, \text{ where:}$$

D_{max} = Risk-Specific and Benchmark Dose (Risk-Specific Dose (RSD) for carcinogens and Reference Dose (RfD) for noncarcinogens, chemical-specific);

BW = Body Weight (70 kg assumed)

AT = Averaging Time (70 years for carcinogens and 1 year for noncarcinogens assumed)

CR = Surface Area Contact Rate (420 cm²/hr for 8 hours assumed)

f_{ss} = Transfer Efficiency from Surface to Skin (10% = 0.10 assumed)

f_{do} = Transfer Efficiency from Dermal to Oral Route (5% = 0.05 assumed)

f_{der} = Dermal Absorption Fraction (chemical-specific or 10% = 0.10 assumed for organic chemicals and 1% = 0.01 assumed for inorganic chemicals)

f_{gi} = Oral Absorption Fraction (chemical-specific)

EF = Exposure Frequency (250 d/yr assumed for workers)

ED = Exposure Duration (1 year assumed)

The chemical-specific variables (where available) for the analyzed chemicals are summarized in the following table. Note that the Risk-Specific Dose assumes an excess cancer risk of 1E-06.

Chemical	RSD (ug/kg/d)	RfD (ug/kg/d)	f _{der}	f _{gi}
Aldrin	5.9E-05 ^a	0.03 ^a	0.078 ^b	0.80 ^c
Dieldrin	6.25E-05 ^a	0.05 ^a	0.077 ^b	0.80 ^c
Endrin + Ketone (total)	NA	0.30 ^d	0.10 ^e	0.80 ^c
DDT	2.9E-03 ^a	0.50 ^a	0.03 ^f	0.80 ^f
Isodrin	ND	ND	ND	ND

Notes:

NA = Not applicable.

ND = No data available.

(a) = Value from USEPA's Integrated Risk Information System (IRIS; online).

(b) = Value from ATSDR's Toxicological Profile for Aldrin/Dieldrin (Update). US Dept. of Health & Human Services. September 2000.

(c) = Value from ATSDR's Toxicological Profile for Chlordane (Update). US Dept. of Health & Human Services. May 1994. (Based on structural similarity.)

(d) = Value from USEPA Region 3's Risk-Based Concentration Table, 10/5/00.

(e) = Default value, no chemical-specific value available.

(f) = Value from ATSDR's Toxicological Profile for DDT/DDD/DDE (Update). US

I998620014 -- Williamson
 Crab Orchard/AUS OU
 Superfund/Technical File

Dept. of Health & Human Services. September 2000.

Using the default and chemical-specific values listed above, screening levels were calculated for carcinogenic and/or noncarcinogenic effects for all chemicals except isodrin (for which insufficient data were available to complete calculations). Since the analytical data are reported as ug/wipe, and the wipe samples were collected from 1 square foot surfaces (\approx 929 square centimeters), all data were converted to units of ug/cm² to facilitate comparison with the screening values. The analytical data and screening values are summarized in the following table.

Chemical	Amount (maximum) (ug/cm ²)	RBSL (cancer) (ug/cm ²)	RBSL (noncancer) (ug/cm ²)
Aldrin	0.78	0.01	0.08
Dieldrin	0.64	0.01	0.13
Endrin + Ketone (total)	0.32	NA	0.68
DDT	0.06	0.22	9.1
Isodrin	0.12	ND	ND

Notes:

NA = Not applicable

ND = No data available.

Discussion – Comparing the RBSLs to the maximum amount analyzed on a building surface, it can be seen that workers are potentially exposed to unacceptable levels of pesticides in all three buildings for aldrin and dieldrin. These results suggest that worker exposure be minimized to protect against both cancer and noncancer risks, since the maximum amounts of both chemicals exceed both the cancer and noncancer RBSLs. Furthermore, aldrin and dieldrin are similar in structure and toxic endpoints, so their effects are considered additive.

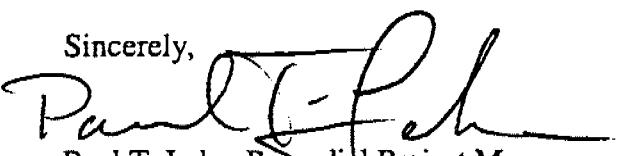

It should be noted that the calculation of the RBSLs has been done using conservative assumptions, such as assuming full-time worker exposure (8 hr/d for 250 d/yr) and a surface contact rate of 420 cm²/hr. If the workers' exposures are less than these assumed values, then their risks would be correspondingly less. However, as mentioned above, the inhalation risks have already been found to be a concern, so the workers' total exposure to pesticides is likely to be unacceptable under all but the briefest of exposures.
