

# **Progress Toward Implementing Community-Based Systems of Services for Children with Special Health Care Needs:**

## **Summary Tables from the National Survey of Children with Special Health Care Needs, 2005-2006**

These tables report the results of analyses conducted by staff of the Survey Planning and Special Surveys Branch and provided to the Maternal and Child Health Bureau, Health Resources and Services Administration. All estimates are subject to sampling and non-sampling errors, including respondent classification and reporting errors and data processing mistakes.

**December 19, 2007**

## **Overview**

The Maternal and Child Health Bureau, Health Resources and Services Administration, has identified six core outcomes to be used for measuring progress in the implementation of community-based systems of services for children with special health care needs (CSHCN; 1-3). These outcomes are also being used as performance measures for states' Title V programs. The size outcomes measure the extent to which:

1. families of CSHCN are partners in decision-making at all levels and are satisfied with the services they receive;
2. CSHCN receive coordinated, ongoing, comprehensive care within a medical home;
3. families of CSHCN have adequate private and/or public insurance to pay for the services they need;
4. children are screened early and continuously for special health care needs;
5. community-based services are organized so families can use them easily; and
6. youth with special health care needs receive the services necessary to make transitions to all aspects of adult life, including adult health care, work, and independence.

To measure progress in achieving these six core outcomes, MCHB has developed a monitoring strategy that utilizes two new national surveys of children's health: the National Survey of Children with Special Health Care Needs and the National Survey of Children's Health. The National Center for Health Statistics (NCHS), Centers for Disease Control and Prevention, conducts both surveys.

Summary estimates for five of the core outcomes (#1, 2, 3, 5 and 6) are available from the National Survey of CSHCN. Summary estimates for the remaining outcome (#4, screening) are available for CSHCN from the National Survey of CSHCN and for all children from the National Survey of Children's Health. This report presents state-level estimates for the six outcomes using data from the 2005-06 National Survey of CSHCN (4).

This random-digit-dial telephone survey was conducted from April 2005 to February 2007. A parent or guardian who knew about the child's health and health care provided the information. Estimates were derived using sampling weights and generalize to the noninstitutionalized population of CSHCN less than 18 years of age in each state.

The method for producing the estimates in this report was provided by the Maternal and Child Health Bureau and were originally published in *Pediatrics* (5). In short, each core outcome was disaggregated into its essential elements or underlying concepts, and these essential elements or underlying concepts were then translated into measurable criteria using items contained in the survey. The list of tables on page 4 summarizes these elements, concepts, and measurable criteria, and indicates which table(s) include the relevant summary estimates. The Survey Planning and Special Surveys Branch in NCHS' Division of Health Interview Statistics conducted the data analyses. The SAS program developed to produce these estimates follows the tables.

Baseline assessments for five of the core outcomes were initially developed using data from the 2001 National Survey of CSHCN (5, 6). The survey questions used to assess several outcomes in 2001 were modified for the 2005-06 National Survey of CSHCN. These modifications were intended to improve the assessment of the outcomes. However, researchers and policy analysts who are interested in evaluating differences between the 2001 baseline and the 2005-06 assessment should recognize that these modifications may result in changes to the estimates even if the characteristics of the underlying population have not changed. Key measurement differences between 2001 and 2005-06 are summarized on pages 5 and 6.

## Detailed Tables

<b><u>Outcome and components</u></b>	<b><u>Table</u></b>
<b>1. Families of CSHCN are partners in decision-making at all levels and are satisfied with the services they receive.</b>	I and II
a. Doctors usually or always make the family feel like a partner	II
b. Family is very satisfied with services received	II
<b>2. CSHCN receive coordinated, ongoing, comprehensive care within a medical home.</b>	I and VI
a. The child has a usual source of care	III and VI
i. The child has a usual source for sick care	III
ii. The child has a usual source for preventive care	III
b. The child has a personal doctor or nurse	VI
c. The child has no problems obtaining referrals when needed	VI
d. The child receives effective care coordination	IV and VI
i. Family is very satisfied with doctors' communication with each other	IV
ii. Family is very satisfied with doctors' communication with other programs	IV
iii. Family usually or always gets sufficient help coordinating care, if needed	IV
e. The child receives family-centered care	V and VI
i. Doctors usually or always spend enough time	V
ii. Doctors usually or always listen carefully	V
iii. Doctors are usually or always sensitive to values and customs	V
iv. Doctors usually or always provide needed information	V
v. Doctors usually or always make the family feel like a partner	V
vi. An interpreter is usually or always available when needed	V
<b>3. Families of CSHCN have adequate private and/or public insurance to pay for the services they need.</b>	I and VII
a. The child has public or private insurance at time of interview	VII
b. The child has no gaps in coverage during the year before the interview	VII
c. Insurance usually or always meets the child's needs	VII
d. Costs not covered by insurance are usually or always reasonable	VII
e. Insurance usually or always permits child to see needed providers	VII
<b>4. Children are screened early and continuously for special health care needs.</b>	I and VIII
a. Child has received routine preventive medical care in past year	VIII
b. Child has received routine preventive dental care in past year	VIII
<b>5. Community-based service systems are organized so families can use them easily.</b>	I and IX
a. Child's family has experienced no difficulties using services	IX
<b>6. Youth with special health care needs receive the services necessary to make transitions to all aspects of adult life, including adult health care, work, and independence.</b>	I and XI
a. The child receives anticipatory guidance in the transition to adulthood	X and XI
i. Doctors have discussed shift to adult provider, if necessary	X
ii. Doctors have discussed future health care needs, if necessary	X
iii. Doctors have discussed future insurance needs, if necessary	X
b. The child has usually or always been encouraged to take responsibility for his or her health care needs	XI

## **Summary of Key Differences in Measurement from 2001 to 2005-06**

<b>Outcome and components</b>	<b>Key differences</b>
<p><b>1. Families of CSHCN are partners in decision-making at all levels and are satisfied with the services they receive.</b></p> <ul style="list-style-type: none"><li>a. Doctors usually or always make the family feel like a partner</li><li>b. Family is very satisfied with services received</li></ul>	<p>In 2001, this component was assessed only for the sample interviewed after July 5, 2001. In 2005-06, this component was assessed for all CSHCN.</p> <p>In 2001, this question was added on July 5, 2001, so estimates were based on only part of the sample. In 2005-06, this component was assessed for all CSHCN.</p>
<p><b>2. CSHCN receive coordinated, ongoing, comprehensive care within a medical home.</b></p> <ul style="list-style-type: none"><li>a. The child has a usual source of care<ul style="list-style-type: none"><li>i. The child has a usual source for sick care</li><li>ii. The child has a usual source for preventive care</li></ul></li><li>b. The child has a personal doctor or nurse</li><li>c. The child has no problems obtaining referrals when needed</li><li>d. The child receives effective care coordination<ul style="list-style-type: none"><li>i. Family is very satisfied with doctors' communication with each other</li><li>ii. Family is very satisfied with doctors' communication with other programs</li><li>iii. Family usually or always gets sufficient help coordinating care, if needed</li></ul></li><li>e. The child receives family-centered care<ul style="list-style-type: none"><li>i. Doctors usually or always spend enough time</li><li>ii. Doctors usually or always listen carefully</li><li>iii. Doctors are usually or always sensitive to values and customs</li><li>iv. Doctors usually or always provide needed information</li><li>v. Doctors usually or always make the family feel</li></ul></li></ul>	<p>For 2005-06, the assessment of a usual source for preventive care was modified (see below).</p> <p>No change.</p> <p>In 2005-06, a new question was added to ask specifically if such a place exists. If the child had no such place, the respondent had to volunteer this information in 2001.</p> <p>In 2001, a respondent may have reported "no" if the child had more than one personal doctor or nurse. For 2005-06, the question was modified to permit reporting of more than one personal doctor or nurse.</p> <p>The 2001 survey asked only about problems getting referrals to specialists. For 2005-06, the question was modified to refer to referrals for any doctors or any services, and a new question was added to determine if referrals were necessary.</p> <p>For 2005-06, this section of the survey was modified extensively (see below).</p> <p>In 2001, respondents were asked to judge the quality of doctors' communication. For 2005-06, the question was modified to ask about satisfaction with communication.</p> <p>In 2001, respondents were asked to judge the quality of doctors' communication with other programs. For 2005-06, the question was modified to ask about satisfaction with communication. Also, a new question was added to determine if such communication was needed.</p> <p>Professional care coordination questions from 2001 were dropped. New questions were added for 2005-06 to determine whether the respondent received help from anyone and whether the respondent felt that any extra help arranging or coordinating care would have been useful.</p> <p>For 2005-06, availability of interpreters was added as a component of family-centered care (see below).</p> <p>No change.</p> <p>No change.</p> <p>No change.</p> <p>No change.</p> <p>No change.</p>

<b>Outcome and components</b>	<b>Key differences</b>
like a partner vi. An interpreter is usually or always available when needed	New questions for 2005-06.
<b>3. Families of CSHCN have adequate private and/or public insurance to pay for the services they need.</b>	
a. The child has public or private insurance at time of interview	No change.
b. The child has no gaps in coverage during the year before the interview	No change.
c. Insurance usually or always meets the child's needs	No change.
d. Costs not covered by insurance are usually or always reasonable	For 2005-06, a response option of "no out of pocket costs" was added. Costs were considered reasonable if there were no costs.
e. Insurance usually or always permits child to see needed providers	No change.
<b>4. Children are screened early and continuously for special health care needs.</b>	
a. Child has received routine preventive medical care in past year	New questions for 2005-06.
b. Child has received routine preventive dental care in past year	New questions for 2005-06.
<b>5. Community-based service systems are organized so families can use them easily.</b>	
a. Child's family has experienced no difficulties using services	In 2001, respondents were asked to judge the organization of community-based services. For 2005-06, the question was modified to ask if respondents had any difficulties trying to use these services.
<b>6. Youth with special health care needs receive the services necessary to make transitions to all aspects of adult life, including adult health care, work, and independence.</b>	
a. The child receives anticipatory guidance in the transition to adulthood	The age range was expanded from 13-17 years to 12-17 years, and several new questions were added (see below).
i. Doctors have discussed shift to adult provider, if necessary	For 2005-06, a new question was added to determine if a shift would be necessary, and a new follow-up question was added to determine if discussions that did not occur would have been helpful.
ii. Doctors have discussed future health care needs, if necessary	In 2001, this question asked about discussions of changes in health care needs. For 2005-06, the question was modified to ask about adult health care needs generally. A new follow-up question was added to determine if discussions that did not occur would have been helpful.
iii. Doctors have discussed future insurance needs, if necessary	New questions for 2005-06.
b. The child has usually or always been encouraged to take responsibility for his or her health care needs	New questions for 2005-06.

**Table I. Percentage of CSHCN meeting each core outcome, by state: United States, 2005-2006**

State	Core Outcome #1			Outcome #2			Core Outcome #3			Core Outcome #4			Core Outcome #5			Core Outcome #6		
	Partner in Decision-Making / Satisfied with Services			Coordinated Care Within a Medical Home			Adequate Health Insurance			Early and Continuous Screening			Service Systems Organized for Ease of Use			Transition Services

Note: n is unweighted sample size. Valid n is sample size with non-missing data. SE is standard error.

Data Source: Centers for Disease Control and Prevention, National Center for Health Statistics, State and Local Area Integrated Telephone Survey, National Survey of Children with Special Health Care Needs, 2005-06  
Analysis Date: November 28, 2007

**Table II. Percent of CSHCN whose families partner in decision-making and are satisfied with the services received (core outcome #1), by state: United States, 2005-2006**

Doctors usually or always make the family feel like a partner										Family is very satisfied with services received										Core Outcome #1										
Missing = No doctor visits in past year, refused, unknown										Missing = Refused, unknown										Missing = Refused or unknown on any component										
State	Valid n	Weighted (in thousands)			Weighted (in thousands)			Weighted (in thousands)			Number of CSHCN	Number Not Meeting Outcome	Number of CSHCN	Number Not Meeting Outcome	Number of CSHCN	Number Not Meeting Outcome	Number of CSHCN	Number Not Meeting Outcome	Number of CSHCN	Number Not Meeting Outcome	Number of CSHCN	Number Not Meeting Outcome	Number of CSHCN	Number Not Meeting Outcome	Number of CSHCN	Number Not Meeting Outcome	Number of CSHCN	Number Not Meeting Outcome

Table V (continued). Percentage of CSHCN who receive family-centered care, by state: United States, 2005-2006

Doctors usually or always make family feel like a partner					An interpreter is usually or always available when needed					The child receives family-centered care						
Missing = No doctor visits in past year, refused, unknown					Missing = No doctor visits in past year, primary language in household is English, interpreters not needed, refused, unknown					Missing = No doctor visits in past year, or refused or unknown on any component

Note: Shaded estimates do not meet the NCHS standard for reliability or precision. The relative standard error is greater than or equal to 30%. Estimates are suppressed if valid n < N is unweighted sample size. Valid n is sample size with non-missing data. Estimated population totals may not include all CSHCN due to missing data. SE is standard error.

0 = Quantity more than zero but less than 500

- = Quantity zero

Data Source: Centers for Disease Control and Prevention, National Center for Health Statistics, State and Local Area Integrated Telephone Survey, National Survey of Children with Special Health Care Needs, 2005-06  
Analysis Date: November 28, 2007

**Table VI. Percentage of CSHCN who receive coordinated, ongoing, comprehensive care within a medical home (core outcome #2), by state: United States, 2005-2006**

The child has a usual source of care													The child has a personal doctor or nurse													The child has no problems obtaining referrals when needed																	
Missing = Refused or unknown on any component													Missing = Refused, unknown													Missing = No referrals needed, refused, unknown

Note: Shaded estimates do not meet the NCHS standard for reliability or precision. The relative standard error is greater than or equal to 30%.

N is unweighted sample size. Valid n is sample size with non-missing data. Estimated population totals may not include all CSHCN due to missing data. SE is standard error.

0 = Quantity more than zero but less than 500

- = Quantity zero
