| H. Verification.....   | 36 |

## I. INTRODUCTION

This document serves as the Interagency Fire Weather Annual Operating Plan (AOP) for the Southwest Geographic Area. The general relationship between NWS and the interagency fire management community is set forth in the National Interagency Agreement for Meteorological Services. The AOP provides specific procedural and policy information regarding the delivery of meteorological services to the fire management community in the Southwest Area, as allowed under the umbrella of the National Agreement. References include:

- National Weather Service NWSI 10-4: Fire Weather Services
- Interagency Agreement for Meteorological Services (Referred to as the National MOA, or “National Agreement”)
- Southwest Area and National Mobilization Guides

## II. SIGNIFICANT CHANGES SINCE LAST YEAR

- A. Increased digital weather forecast information for smoke dispersal has been added to Appendix E.
- B. Several sections in the AOP have been condensed, placed in a tabular format and hyperlinked.

## III. SERVICE AREA AND ORGANIZATIONAL DIRECTORY

- A. Fire weather services are provided by SWA Predictive Services and the NWS forecast offices listed below and depicted within Appendix C. Local NWS office fire management liaisons are listed below and their general responsibilities highlighted in Section V.C. Additional contact information can be found in the Southwest Area Mobilization Guide, Chapter 50 – Directory.

## B. Participating Agencies

1. DOC/NOAA/National Weather Service – Western and Southern Regions
2. USDA Forest Service – Southwest Region
3. DOI Bureau of Land Management – Arizona & New Mexico State Offices
4. DOI National Park Service – Intermountain Region
5. DOI US Fish and Wildlife Service – Southwest Region
6. DOI Bureau of Indian Affairs – Units of the Southwest, Navajo, and Western Regions that fall within the Southwest Geographic Area
7. New Mexico State Forestry Division
8. Arizona State Land Department
9. Texas Forest Service — Areas west of 100° W longitude

## IV. NATIONAL WEATHER SERVICE SERVICES AND RESPONSIBILITIES

A. Basic Services – The following constitute the current operational fire weather forecast products provided by NWS. Any non-operational forecast products will be clearly labeled as “Experimental” or “Prototype”.

### 1. Fire Weather Planning Forecasts (FWF)

Fire Weather Planning forecasts are issued by all NWS offices serving the Southwest Area. The intent is to provide general, zone-based information for daily preparedness and planning purposes.

- a.) Issuance times - At least once daily by 0830 LST on a year round basis. Afternoon forecasts are issued by some offices on a year round basis, and by others on a seasonal basis, no later than 1530 LST. Beginning and ending dates of seasonal afternoon forecasts will be coordinated through Predictive Services.

Forecasts will be updated when a Fire Weather Watch or a Red Flag Warning is issued, the current forecast does not adequately represent current or expected weather conditions, or a typographical/format error is detected.

- b.) Access – Primary method to retrieve forecasts will be directly from websites of [NWS Forecast Offices](#) serving the Southwest Area, or via [SWCC Fire Operations](#) and the [NWS National Fire Weather](#) website.
- c.) Content and Format – Forecasts will conform to either the national standard narrative, or national standard tabular format, per NWSI 10-401. Each forecast will begin with a headline(s), if applicable, followed by a non-technical weather discussion. Individual zone forecasts follow the discussion and contain the following elements:

### MANDATORY ELEMENTS

- Headline(s) as appropriate
- Sky/weather
- Temperature and 24 hour trend
- Humidity and 24 hour trend
- Winds - 20 foot RAWS Standard (slope/valley)  
10,000 Ft. MSL Wind (ridgetop)

### OPTIONAL ELEMENTS

- Probability of Precipitation (replaces qualifying weather descriptor)
- Lightning Activity Level (LAL)
- Haines Index
- Mixing Level
- Transport Winds

### OPTIONAL ELEMENTS (continued)

- Ventilation (kt-ft) and/or Ventilation/Dispersion Category  
**Important:** Ventilation/Dispersion is a State-defined parameter and is required for daytime periods only. Ventilation information is not provided for every zone in AZ or TX.
- Extended Outlook to at least day 5 (may appear at end of product)

Descriptions of [Forecast Parameters](#) can be found in [Appendix A](#), and [Fire Weather Planning Forecast \(FWF\)](#) examples in [Appendix B](#).

## 2. Spot forecasts (FWS)

- a.) Criteria - Spot forecasts are site-specific forecast products issued for wildfires, prescribed burns, search and rescue operations, aerial spraying, etc., and are available upon request at any time of day, week or season. Spot forecasts are available to any federal, state or municipal agency.

Site-specific forecasts are considered one-time requests, and are not routinely updated. Spot forecasts will be updated when representative observations are available to the forecaster and/or the forecaster deems the current forecast does not adequately represent current or expected weather conditions. Priority for the update of spot forecasts is as follows:

- o Wildfires
- o Prescribed burns, or Wildland Fire Use (WFU)
- o All other requests

Land management personnel should contact the appropriate WFO for a spot update if forecast conditions appear unrepresentative of the actual weather conditions.

The spot forecast will be corrected when a typographical/format error is detected. Corrections should be delivered to users in the same manner as the original spot forecast if possible.

NWS Western Region offices will offer automatic 7-day FARSITE weather support with all wildfire spot forecast issuances. For prescribed burn spot forecasts, FARSITE data will be produced at the request of the agency. Please refer to [Experimental Digital Services from the NWS](#) in [Appendix E](#) for product description and information.

- b.) Content and Format – See [NWS Forecast Examples of a Spot Forecast \(FWS\)](#) in Appendix B. Spot forecasts will contain the required minimum elements listed below, unless otherwise specified upon request:
- o Headline (required when Red Flag Warning / Fire Weather Watch)
  - o Discussion
  - o Sky/weather (including chance of rain)
  - o Temperature
  - o Relative humidity
  - o 20 foot winds

Optional elements may be included upon request, including site-specific ventilation for smoke management purposes. The following conditions apply to the provision of ventilation data in spot forecasts in New Mexico and Arizona:

- 1.) Ventilation for the nearest forecast reference point in the fire weather planning forecast rates *POOR* in New Mexico, or *MARGINAL* or *POOR* in Arizona.
- 2.) Elevation-adjusted ventilation for a specific site, based on the information in the fire weather planning forecast, rates *POOR* in New Mexico, or *MARGINAL* or *POOR* in Arizona.
- 3.) The fire weather planning forecast rating is *FAIR*, but unusual, extenuating circumstances make additional information essential for accomplishment of management objectives (e.g. particularly sensitive downwind receptor). In these unusual cases, the requester is encouraged to call/consult with the fire weather meteorologist on duty prior to submitting a spot request.

The valid time will be determined at the time of the request. Most spots contain three periods, usually “TODAY”, “TONIGHT”, and “NEXT DAY”, e.g., “TODAY”, “TONIGHT”, and “THURSDAY”.

- c.) Procedures – Internet-based spot forecast programs are the standard for requesting and retrieving spot forecasts and should be used when available. They are accessible from the individual websites of various [NWS Forecast Offices](#) serving the Southwest Area, or via the [SWCC Fire Operations](#) website.

When internet access is not available, spot forecasts may be requested via phone, or fax machine using the [Backup Spot Forecast Request Form](#) in [Appendix F](#). Spot forecasts should be available within 60 minutes from the time the appropriate NWS office receives the request. NWS should be contacted immediately by telephone if a spot forecast is not available within this time frame.

At or before the time of a spot request, the requesting agency should provide information about the location, topography, fuel type(s), elevation(s), size, ignition time, and a contact name(s) and telephone number(s) of the responsible land management personnel. Also, quality representative observation(s) at, or near, the site of the planned prescribed burn, or wildfire, should be available to the responsible WFO with the spot request(s). NWS Spot and the backup form will provide blocks to fill this data in and will indicate which are absolutely essential to receive a spot forecast.

- d.) Spot Forecast Feedback Requirement -- Responsibility for providing fireline observations for the validation of forecast accuracy rests with the fire management agencies, as outlined under, [“Fireline Observations and Spot Forecast Feedback”](#) on page 14.
3. Fire Weather Watches and Red Flag Warnings (RFW) – A Red Flag event is a critical combination of dry fuels and weather conditions that support extreme fire behavior. Red Flag Warnings are issued to identify Red Flag events which are highly likely, or imminent, usually within the following 24 hour period. Fire Weather Watches are issued to identify the elevated threat of similar conditions during the following 72-hour period. Specific objective criteria for Red Flag events are listed below. Fire management may also request that Red Flag Warnings or Fire Weather Watches be issued under extenuating circumstances (i.e., fuel conditions are so severe that marginally windy and dry conditions would lead to extreme fire behavior).
    - a.) Criteria – Standardized criteria for issuance of Fire Weather Watches and Red Flag Warnings in the Southwest Area are a combination of weather and fire danger ratings. In the absence of overriding input from fire management personnel, a Red Flag event is defined by the following conditions occurring simultaneously for three or more hours across any portion of a fire weather zone:
      - 1.) 20-foot winds sustained at 20 mph or greater,  
or gusting to 35 mph or greater
      - 2.) Relative humidity of 15% or lower
      - 3.) NFDRS adjective fire danger rating of “High” or higher

The following are assumed:

- o Sustained winds are considered relative to the midpoint of a forecast range (i.e. 15 to 25 mph meets criteria, 15 to 20 mph does not)
- o RH is considered relative to the minimum value in a given forecast

range. (i.e. 13 to 23% forecast for a zone meets criteria for those locations in the zone expected to be 15% or less)

- o Wind forecasts are for the 20-foot level/10 minute time average and apply to RAWS properly sited and maintained, per NWCG National Fire Danger Rating System (NFDRS) Weather Station Standards.
- b.) Product Format and Contents – Warnings and watches will conform to either the national standard per NWSI 10-401. See [NWS Forecast Examples of a Red Flag Warning and a Fire Weather Watch \(RFW\)](#) in Appendix B.
- 1.) Headline including description of watch/warning, description of valid location and time period for which watch/warning is valid.
  - 2.) List of fire weather zones impacted
  - 3.) Short discussion detailing causes and nature of event
- c.) Procedures and Access - When Fire Weather Watches and Red Flag Warnings are issued they will be headlined in spot forecasts, the fire weather narrative and the appropriate zone sections where the conditions are expected. The headline will be in the same descriptive format as on the RFW product. If issuance of a Red Flag Warning or Fire Weather Watch requires an update of the general forecast, the NWS office will verbally notify the affected zone dispatch centers and SWCC Predictive Services as soon as possible. Red Flag Warnings and Fire Weather Watches will remain in effect through the expiration time noted in the forecast, or until canceled or upgraded.

Red Flag Warnings and Fire Weather Watches are available within minutes of issuance from websites of the [NWS Forecast Offices](#) serving the Southwest Area, or via [SWCC Fire Operations](#) and the [NWS National Fire Weather](#) websites.

4. NFDRS Forecasts (FWM) – The National Weather Service role in NFDRS is to provide 24 hour forecasted weather information that allows the NFDRS software to predict the next day’s fire danger indices.
- a.) Criteria for Issuance – NFDRS observations must be complete and available in WIMS by 1350 LST (1450 LDT) to be received in time for the NWS to produce a forecast. When NFDRS observations are received, the appropriate NWS office will issue forecasts for use by the NFDRS on a year-round basis. NFDRS stations that are not on time in WIMS will not have next day fire danger indices available.
  - b.) Content and Format – Complies with NWSI 10-4 and is outlined in [Appendix A – NWS Forecast Examples: NFDRS](#) for reference. Required meteorological elements for NFDRS forecasts are: State of Weather, Temperature, Humidity, Lightning Activity Level, Wind speed, and Precipitation Duration. The actual NWS NFDRS forecast product is used only by WIMS and is not viewed directly by fire management.

c.) Procedures – For every NFDRS observation received from WIMS at the 1400 LST (1500 LDT) collective, forecast weather parameters for 1300 LST (1400 LDT) the next day will be produced, and may be a combination of zone trend, station trend or station specific forecasts. Zone and station trend forecasts will be favored over station specific forecasts. Where station specific point forecasts are issued, NWS will be responsible for taking reasonable actions to ensure forecasted values do not conflict with the historical possibility for those stations.

5. Interagency Participation - NWS offices within the Southwest Area are expected to provide representation at the annual regional AOP meeting, with proxy representation acceptable, and will be invited to serve as technical advisors on the Southwest Area Predictive Services Committee as appropriate. NWS offices are also expected to host at least one meeting per year with local fire management units to strengthen the customer relationship and address local concerns.

B. Special Services – NWS will provide and maintain a cadre of trained IMETs. A sufficient number of IMETs should be available from Southwest Area offices to support multiple incidents in May and June. At least one IMET from the offices that serve the Southwest Area should be available for dispatch between March 1<sup>st</sup> and August 1<sup>st</sup>.

C. Forecaster Training - The NWS recognizes the need for specialized training in fire weather meteorology for forecasters. Any NWS meteorologist producing fire weather products will have met the requirements set forth in NWSI 10-405.

## V. WILDLAND FIRE AGENCY SERVICES AND RESPONSIBILITIES

Wildland Fire Agency programs provide Geographic Area and national products for the strategic role of resource prioritization and utilization. Some specific responsibilities of Wildland Fire Agencies are listed below.

- A. Operational Support and Predictive Services – Interagency fire meteorologists at SWCC combine forecast information from NWS and other sources into area-wide summaries and briefings. These meteorologists work in conjunction with Fire Intelligence to form the Predictive Services Group, which produce integrated fire weather/fire danger assessments for the entire Southwest Area. The intent of Predictive Services is to provide strategic, regional and sub-regional information to assist in the preparedness, movement and allocation of firefighting resources. SWCC Predictive Services is the provider of fire danger and potential forecasts within the Southwest Area beyond the next day NFDRS forecasts provided by the NWS.

Predictive Services Products – All products and services are available from the [SWCC Website](#).

1. Day 1 and Day 2 Area-Wide Fire Weather & Behavior Outlooks - Fire weather outlooks combine information from FCAMMS/Rocky Mountain Center, NWS and Predictive Services meteorologists into a day 1 and day 2 graphic of significant fire weather parameters. When the Fire Behavior Service Center is functioning at SWCC (Preparedness Level 3-4+), daily reports and maps of general fire behavior potential will be produced as well.

*Issuance Schedule:* 1700 MST for the next day (primary), with updates as necessary by 1000 MST the following morning from April 1 – July 15, or as fire danger or activity warrants. Occasionally, products are issued upon request before and after peak season to support prescribed fires.

2. 7-Day Significant Fire Potential Outlook - Integrates fuel dryness, weather triggers and resource capability into statistically based large fire potential by Predictive Services Area (PSA). Includes general weather synopsis, fire potential discussion, resource discussion and anticipated resource demand outlook.

*Issuance Schedule:* Daily by 1000 MST April 1 – July 15, or as fire danger or activity warrants, Monday through Friday by 1030 during the remainder of the year.

3. Monthly and seasonal fire potential outlooks - Utilizes all available weather, climate and fire danger information to make longer-term predictions of fire business potential. Monthly outlooks highlight the potential for significant fire activity and resource utilization relative to normal. Seasonal outlooks cover the following three months and highlight the trends relative to Above Normal significant fire potential only.

*Issuance Schedule (Monthly):* Year round, issued around the first of each month and valid for that month. (i.e. outlook issued around January 1 is valid for January)

*Issuance Schedule (Seasonal):* Year round, issued concurrently with the monthly outlook and valid for the following three months. (i.e. outlook issued around January 1 is valid for February through April)

- B. Program Management - Management of federal land management and fire agency fire weather programs and responsibilities.
1. RAWS/NFDRS - Regional RAWS Coordinator at SWCC will manage the interagency RAWS program for the Southwest Area. This includes regular monitoring of data quality, assisting with station maintenance and acquisition and development of appropriate training.
  2. Liaison - Predictive Services Group Leader/Fire Weather Program Manager will be a liaison between field fire managers and various service providers including NWS, the private sector and the research community.
- C. Monitoring, Feedback and Improvement of Fire Weather Information – SWCC meteorologists and designated fire management liaisons (listed in Section III) will monitor all sources of fire weather information to ensure consistency, quality and applicability. Where issues arise, data will be archived and brought to the attention of the provider to enhance awareness and work towards improvement. Some priorities include:
- NFDRS forecast consistency with station climate histories.
  - General forecast parameter consistency across the Southwest Area, especially across forecast area and land management unit boundaries.
  - Accuracy and applicability of Red Flag Warnings.
  - Quality of fireline observations and spot forecast feedback.
  - Overall adherence to policies and procedures set forth in AOP.
- D. Technology Transfer – SWCC meteorologists will work to integrate advanced technology analytical and prediction systems into fire management planning and operations. Some efforts will include:
- Regional numerical modeling of weather and smoke dispersion
  - Proper use of RAWS and NFDRS
  - Research and development to advance fire meteorology
- E. Agency Computer Systems - Where fire management computer systems like WIMS are locally available, access to the systems will be granted to NWS to provide or develop services, as needed. Costs will be borne by the Interagency Wildland Fire Agencies for requirements that are beyond the distribution of weather information through a central communications gateway.
- F. WIMS ID's for NFDRS Stations – All NFDRS observation stations are assigned a 6-digit NWS station identification number for use in WIMS. The SWCC RAWS Coordinator must be contacted for assignment of a 6-digit number for any new station, or for any changes in location made to existing stations that already have an NWS ID number. The RAWS Coordinator will obtain appropriate 6-digit ID's and will notify NWS, the Arizona Department of Environmental Quality

and other appropriate entities of any new or relocated NFDRS stations. A listing of [Current NFDRS stations](#) and IDs is included in the Appendices.

## G. Fire Weather Observations

### 1. RAWS & NFDRS Observations

Fire weather observations for stations that desire next day forecasts will be entered into WIMS no later than 1350 LST (1450 LDT). Observations from Remote Automated Weather Stations (RAWS) sites will be the latest data available from the satellite interrogation. RAWS and NFDRS stations are expected to be sited and maintained according to NWCG PMS 426-3 “National Fire Danger Rating System Weather Station Standards”. The proper siting of all stations is a goal in the Southwest Area. Any new or relocated stations will be correctly sited in a long-term effort to address this issue. Regardless of station age or location, annual RAWS maintenance requirements will be strictly adhered to.

### 2. Fireline Observations & Spot Forecast Feedback

Fireline Observations – Fireline observations are required when requesting a spot forecast. Fire management agency personnel will take standard fireline observations of temperature, humidity, wind speed and direction and weather/sky condition consistent with guidance provided in NFES 2140, “Weather Station Handbook - an Interagency Guide for Wildland Managers”.

Spot Forecast Feedback and Validation - Feedback on spot forecasts is required to validate forecasts and improve accuracy. The following observational information is required to be made available to the appropriate NWS office the same day any spot forecast is issued for prescribed burn or wildland fire use (WFU) purposes.

#### **Feedback on forecasts issued for wildfires is essential.**

Requirement - the character of temperature, humidity and wind affecting the burn period. Information made available to NWS within 24 hours of forecast issuance or before issuance of next spot forecast, whichever is first. At a minimum, the following must be included (assuming daytime burn):

- a.) Maximum temperature
- b.) Minimum Relative Humidity
- c.) Significant afternoon winds (speed and direction)

In the event of nighttime burning, conditions affecting the burn period could include minimum temperature and maximum relative humidity.

Example of Minimum Required Feedback for Daytime Period:

Maximum temp = 61

Minimum RH = 18 %

Afternoon winds = South 2-4G8, shifting to west at 1500 hours

Acceptable Methods of Providing Feedback:

- a.) Faxed copies of fireline (belt weather) observations.
- b.) Phone call to appropriate NWS office
- c.) Submission of required information via “remarks” section of internet spot forecast (feedback example).
- d.) Faxed or electronically transmitted copies of hourly weather data from an on-site portable weather station.
- e.) Notification of deployment of a portable GOES telemetered RAWS so NWS can download the data from the Internet.

H. Liaisons to Southwest Area Predictive Services Committee – The Predictive Services Committee of the Southwest Area Coordinating Group will identify fire management agency contact points for each NWS Weather Forecast Office (WFO). These persons will act as primary liaisons between each NWS office, the fire management units they serve, and the Predictive Services Committee. Liaisons will provide single points of contact to aid in communication, organization of local customer meetings and the elevation of local issues to the Predictive Services Committee, as appropriate. Predictive Services Committee liaisons are listed in the organizational directory.

## **VI. JOINT RESPONSIBILITIES**

A. Training – Meteorological training assistance for NWCG and other courses will be provided jointly. NWS has priority for training conducted by local units while SWCC meteorologists have priority for training conducted on a sub-regional or regional basis. Requests for training from NWS offices should be directed to that office’s Meteorologist-in-Charge. Requests for training from SWCC meteorologists should be directed to the Predictive Services Group Leader/Fire Weather Program Manager. In all cases, sufficient advance notice should be given to allow for scheduling and proper preparation.

The following conditions must be met in order for NWS to provide training for non-federal agencies:

- Sufficient lead-time to schedule an instructor must be given to an NWS office’s Meteorologist-in-Charge.
- The NWS instructor must be the only one available to provide the training. (i.e., there are no land management agencies or private meteorologists who are ready, willing and able to provide the training.) The Southwest Area Predictive Services Group Leader will be the contact concerning the availability of non-NWS fire weather instructors.
- NWS must be able to be reimbursed for associated overtime and travel costs.

B. Incident Response - The NWS is the provider of Incident Meteorologists (IMETs). In general,

Southwest Area NWS IMETs will be requested to respond to all incidents within the Southwest Area. Costs incurred by NWS in providing IMET support will be borne by the requesting agency. Predictive Services meteorologists can respond to incidents when the NWS cannot provide a certified IMET within 24-hours of request receipt by the National Fire Weather Operations Coordinator (NFWOC). In these instances, and when requested by incident command staff, Predictive Services meteorologists will provide forecast support as a Technical Specialist until the arrival of a certified NWS IMET. Technical Specialists will not be used as a substitute for NWS IMETs. Forecast support will revert to the NWS IMET after reasonable transition period. Through coordination with the NWS National Fire Weather Operations Coordinator (NFWOC) at NIFC, certified fire management agency IMETs may be utilized under special circumstances.

All requests for IMETs will be processed through SWCC and the following information will be provided to the requested IMET:

1. Name of fire
2. Location of fire
3. Directions to location where the IMET is to report and Fire Camp Location
4. Name of Incident Commander, Plans Chief and Fire Behavior Analyst if available.
5. Request and Resource Order number for IMET
6. Verification that “Special Needs” section on Resource Order should include authorization for use of a rental vehicle, cell phone, computer equipment and the All Hazards Meteorological Response System (AMRS).

Additionally, the user agency is responsible for providing adequate shelter to allow the equipment and fire weather meteorologist to function efficiently. This would include a location free of excessive dust, heat and moisture, protection from wind and other elements, table and chair. Transportation and shelter arrangements should be made at the time of request. 120 volt AC power is desirable.

- C. Briefings – Either NWS or SWCC meteorologists will conduct briefings upon request, time and resources permitting. SWCC meteorologists will provide briefings for strategic planning purposes and will refer the requesting entities to the local NWS office(s) for specific, operationally oriented information.
- D. Fire Weather Conference Calls
  1. Fire Weather Conference Calls (FWCCs) will be hosted by Southwest Area Predictive Services to enhance situational awareness and increase communication.
  2. FWCCs will be held daily during peak fire season, periods of enhanced fire activity or potential, and other critical fire weather situations as appropriate.
  3. WFOs, NWS western and southern regional and national fire weather program personnel, SPC, and deployed IMETs will be invited and encouraged to participate, though participation is entirely optional for all parties.
  4. Initiation and cancellation of daily FWCCs will be accomplished through phone or e-mail notification of above parties by Predictive Services. It will be the responsibility of the WFOs to pass along the information to any IMETs deployed within their CWAs.

5. Once initiated, calls will be held daily at 11:45 am MDT (1745 UTC) until cancelled.
6. Calls will be run by Predictive Services and will follow the format below. All attempts will be made to keep the calls to 15 minutes or less and address the following:
  - o Overview of fire activity and fire potential situation by Predictive Services
  - o Regional synopsis of current and expected fire weather situation by Predictive Services, focusing on Critical Fire Weather patterns and/or other pertinent forecast concerns from a Geographic Area perspective.
  - o Round robin where all participants will have the opportunity to ask questions and share information regarding forecast concerns, forecast differences, etc.
7. Recordings of daily FWCCs will be available for playback via the Internet.
8. Details on logistics regarding access to the conference calls and the call recordings will be provided when the FWCCs are initiated by Predictive Services.

**VII. EFFECTIVE DATES OF THE AOP**

Roughly May 1, 2008 to April 15, 2009.

Strictly, this AOP shall be effective on the date the last signature is placed on the signature section and it will remain in effect until the date the last signature is placed on the signature page the following year. Updates or amendments may be added in the interim upon agreement of all signatories.

## IX. APPENDICES

### A. APPENDIX - FORECAST PARAMETER DEFINITIONS

#### 1. General Parameters

Sky/weather – Cloud cover (day or night) expressed as a percentage, and weather descriptors that include rain, snow, showers, thunderstorms, etc. Cloud cover is defined as follows:

- Sunny (day), Clear (night) – less than 6% cloud cover
- Sunny (day), Mostly clear (night) - 6% to 25% cloud cover
- Mostly sunny (day), Partly cloudy (night) - 26% to 50% cloud cover
- Partly sunny (day) / Mostly cloudy (night) - 51% to 69% cloud cover
- Mostly cloudy to Overcast (day or night) - greater than 70% cloud cover

Temperature and 24-hour trend – Dry bulb temperature extreme, either daytime or nighttime, and trend of extreme from previous 24 hours.

Humidity and 24-hour trend – Relative humidity extreme, either daytime or nighttime, and trend of extreme from previous 24 hours.

Wind - 20 foot RAWS standard – Surface wind speed and direction (altered by local terrain and surface roughness) that is measured by instrumentation and adheres to standards set by NWCG for the RAWS program and NFDRS. In practice, any surface wind forecast based on the ASOS standard will be reduced by 20% to obtain 20 ft. winds, except in cases where wide-open rangeland, or desert is predominant. This same comparison will be used in considering stations other than RAWS to validate forecasts.

10,000 foot MSL Wind – Synoptic scale wind speed and direction representative of winds at roughly 10,000 feet above mean sea level, which are generally unaltered by surface frictional effects. Equivalent to “ridgetop wind”, “wind aloft”, “free-air wind” and “general wind”.

Chance of Rain – Probability of occurrence of 0.01” or greater liquid equivalent precipitation. In the case of convective cells, this will pertain to the areal coverage of cells producing rainfall.

Haines Index – A numerical means to indicate the potential for existing large wildfires to experience extreme fire behavior (i.e. crowning, spotting, and rapid rates of spread). The Index combines both the instability and dryness of the air by examining the lapse rate between two pressure levels in the atmosphere and the dryness at the lower level. For most of the Southwest Area, the levels used are 700 mb (about 10,000 ft) and 500 mb (about 18,000 ft). The drier and more unstable the atmosphere, the higher the Haines Index and the potential for extreme fuel driven fire behavior. Haines Index **does not** include the effects of wind on fire spread.

#### HAINES INDEX POTENTIAL FOR LARGE FIRE GROWTH

|        |          |
|--------|----------|
| 2 or 3 | Very Low |
| 4      | Low      |
| 5      | Moderate |
| 6      | High     |

A. APPENDIX - FORECAST PARAMETER DEFINITIONS

2. Ventilation

Basic ventilation information is used by the states of Arizona and New Mexico in considering the potential for smoke impacts from wildland fires. The following are terms and definitions necessary to understanding ventilation data and values:

**Mixing height or mixing depth:** The height to which relatively vigorous mixing occurs due to heating. Units are in feet above ground level (AGL), with ground level being the elevation above mean sea level (MSL) of the upper-air site. It is important that wildland fire managers note the difference in elevations between the burn site and the referenced upper-air sight, and then modify the provided mixing depths accordingly.

**Transport winds:** A measure of the average rate of the horizontal transport of air within the mixing layer. Units are in knots (1 knot = 1.15 mph). An average wind direction (the direction from which the wind is blowing) is provided. If winds are light and variable as they likely will be in a critical situation, then it may be best to consider the normal drainage winds.

**Ventilation:** The product of the mixing height and the transport wind speeds. It is a measure of the volume rate of horizontal transport of air within the mixing layer per unit distance normal to the winds. Units are in knot-feet, though some regulatory entities use meters<sup>2</sup>/second. Ventilation values are established at a state level and used as breakpoints for general Ventilation or Dispersion Categories that are used for smoke management or regulatory purposes.

| <b>Ventilation (Dispersion) Categories and Values</b> |                    |                                  |
|---|--------------------|----------------------------------|
| <u>Adjective Category</u>                             | <u>Knot - Feet</u> | <u>Meters<sup>2</sup>/Second</u> |
| <b>ARIZONA</b>  |                    |                                  |
| Excellent   | > 100,000          | > 15,700                         |
| Very Good   | 70,000 – 99,999    | 11,000 – 15, 699                 |
| Good  | 40,000 – 69,000    | 6,300 – 10,999                   |
| Fair  | 20,000 – 39,999    | 3,100 – 6,299                    |
| Marginal  | 8,500 – 19,999     | 1,300 – 3,099                    |

| Fair  | 40,000 – 59,999    | 6,300 – 9,399                    |
| Poor  | < 40,000           | < 6,300                          |

A. APPENDIX – FORECAST PARAMETER DEFINITIONS

3. Lightning Activity Level (LAL)

**LIGHTNING ACTIVITY LEVEL GUIDE**

<sup>1</sup> Individual storm cell cloud-to-ground lightning discharges

| <b>LAL</b> | <b>Cloud and Storm Development</b>  | <b>Areal Coverage</b> | <b>Counts<sup>1</sup><br/>cg/5 min</b> | <b>Counts<sup>1</sup><br/>cg/15 min</b> | <b>Average<sup>1</sup><br/>cg/min</b> |
|------------|---|-----------------------|--|---|---------------------------------------|
| 1          | No thunderstorms  | None                  | ----                                   | ----                                    | ----                                  |
| 2          | Cumulus clouds are common but only a few reach the towering stage. A single thunderstorm must be confirmed in the rating area. The clouds mostly produce virga but light rain will occasionally reach ground. Lightning is very infrequent. | <15 %                 | 1-5                                    | 1-8                                     | <1                                    |
| 3          | Cumulus clouds are common. Swelling and towering cumulus cover less than 2/10 of the sky. Thunderstorms are few, but 2 to 3 occur within the observation area. Light to moderate rain will reach the ground, and lightning is infrequent.   | 15-24 %               | 6-10                                   | 9-15                                    | 1-2                                   |
| 4          | Swelling cumulus and towering cumulus cover 2-3/10 of the sky. Thunderstorms are scattered but more than three must occur within the observation area. Moderate rain is commonly produced, and lightning is frequent.                       | 25-50 %               | 11-15                                  | 16-25                                   | 2-3                                   |
| 5          | Towering cumulus and thunderstorms are numerous. They cover more than 3/10 and occasionally obscure the sky. Rain is moderate to heavy, and lightning is frequent and intense.  | >50 %                 | >15                                    | >25                                     | >3                                    |
| 6          | Dry lightning outbreak. (LAL of 3 or greater with majority of storms producing little or no rainfall.)  | >15 %                 | ----                                   | ----                                    | ----                                  |

## B. APPENDIX – NWS FORECAST EXAMPLES

### 6. NFDRS Forecast (FWM)

- a. **ZONE/FCST\*** Shows whether this forecast is 24 hour trend (ZONE) or specific forecast values (FCST). Trend forecasts can apply to either NFDRS zones or individual stations. Specific point forecast values apply only to individual NFDRS stations and are done where only a few observations are available.
- b. **YYMMDD\*** Year, month, and day valid forecast time.
- c. **NO\*** NFDRS Zone Number (or individual NFDRS station number)
- d. **13\*** Always 1300 LST
- e. **WX\*** State of Weather valid at 1300 LST tomorrow. Valid entries are:
  - 0 clear
  - 1 scattered clouds (1/8 to 4/8)
  - 2 broken clouds (5/8 to 7/8)
  - 3 overcast clouds (more than 7/8)
  - 4 foggy
  - 5 drizzle
  - 6 raining
  - 7 snowing or sleet
  - 8 showers (in sight or at the station)
  - 9 thunderstorm(Categories 5, 6, or 7 sets NFDRS index to 0)
- f. **TEMP\*** Temperature in deg F valid at 13 LST (or temperature trend + or -)
- g. **RH\*** Relative humidity in percent valid at 13 LST (or RH trend + or -)
- h. **LAL1#** Lightning Activity Level 1400 LST to 2300 LST
- i. **LAL2#** Lightning Activity Level 2300 LST to 2300 LST
- j. **WIND\*** Wind speed in mph valid at 13 LST  
(or wind speed trend + or -, 20 ft level/10 minute average)
- k. **10HR** 10 hour timelag fuel moisture in percent valid at 13 LST (or trend + or -)
- l. **Tx** Max temperature from 1300 LST to 1300 LST tomorrow
- m. **Tn** Min temperature from 1300 LST to 1300 LST tomorrow
- n. **RHx** Max relative humidity from 1300 LST to 1300 LST tomorrow
- o. **RHn** Min relative humidity from 1300 LST to 1300 LST tomorrow
- p. **PD1\*** Precipitation duration in hours 1300 LST to 0500 LST
- q. **PD2\*** Precipitation duration in hours 0500 LST to 1300 LST
- r. **WETFLAG** Y or N. Indicates whether liquid water will be on the fuels at 13 LST.  
(Use with caution - a “Y” will set all the NFDRS indices to zero!)

**\* = Required forecast element for NFDRS # = Required forecast element for select NWS offices only**

The NFDRS Forecast will follow the comma delimited format as shown:

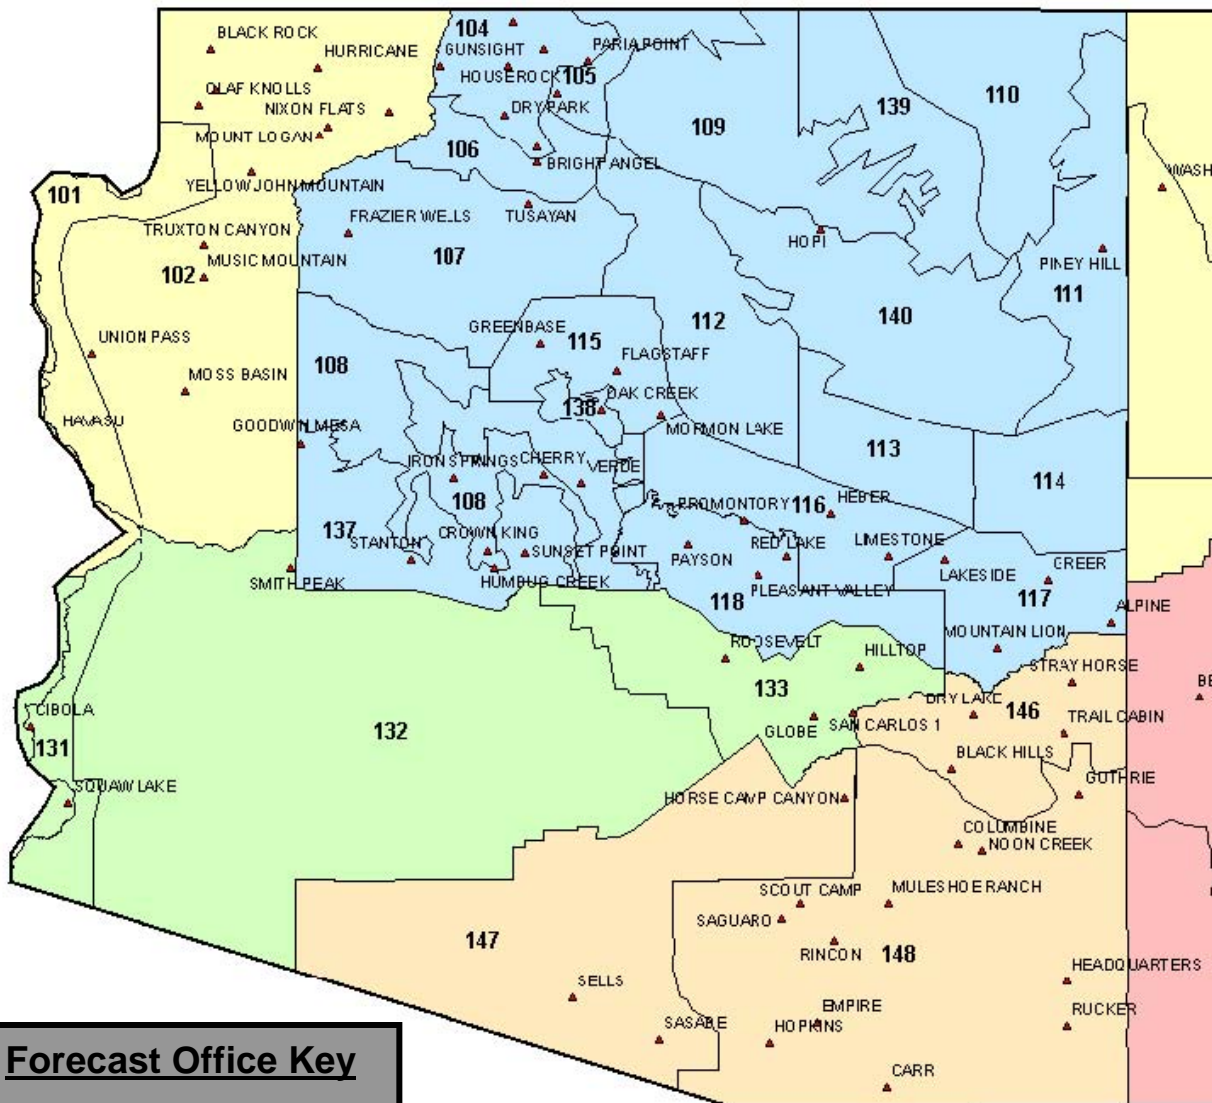

ZONE/FCST,NO,YYMMDD,13,WX,TEMP,RH,LAL1,LAL2,WIND,10HR,TX,TN,RHx,RHn, PD1, PD2,WETFLAG

**An example of products, formatted for transmission into AWIPS, is displayed below:**

C. APPENDIX – NARRATIVE FIRE WEATHER ZONE MAPS (Arizona)

**Forecast Office Key**

WFO Las Vegas, NV  
 WFO Flagstaff, AZ  
 WFO Phoenix, AX  
 WFO Tucson, AZ

**Southwest Area Red Flag Criteria**

The following conditions occurring simultaneously for three or more hours across any portion of a fire weather zone:

- 20 ft. winds sustained at 20 mph or greater OR gusting to 35 mph or greater
- Relative humidity 15% or lower
- NFDRS adjective fire danger rating of “High” or higher

C. APPENDIX – NARRATIVE FIRE WEATHER ZONE MAPS (New Mexico Only)

**Southwest Area Red Flag Criteria**

The following conditions occurring simultaneously for three or more hours across any portion of a fire weather zone:

- 20 ft. winds sustained at 20 mph or greater OR gusting to 35 mph or greater
- Relative humidity of 15% or lower
- NFDRS adjective fire danger rating of “High” or higher

C. APPENDIX – NARRATIVE FIRE WEATHER ZONE MAPS (West Texas Only)

**West Texas  
Narrative Fire Weather  
Forecast Zones**

- El Paso WFO**
- Amarillo WFO**
- Lubbock WFO**
- Midland WFO**
- San Angelo WFO**

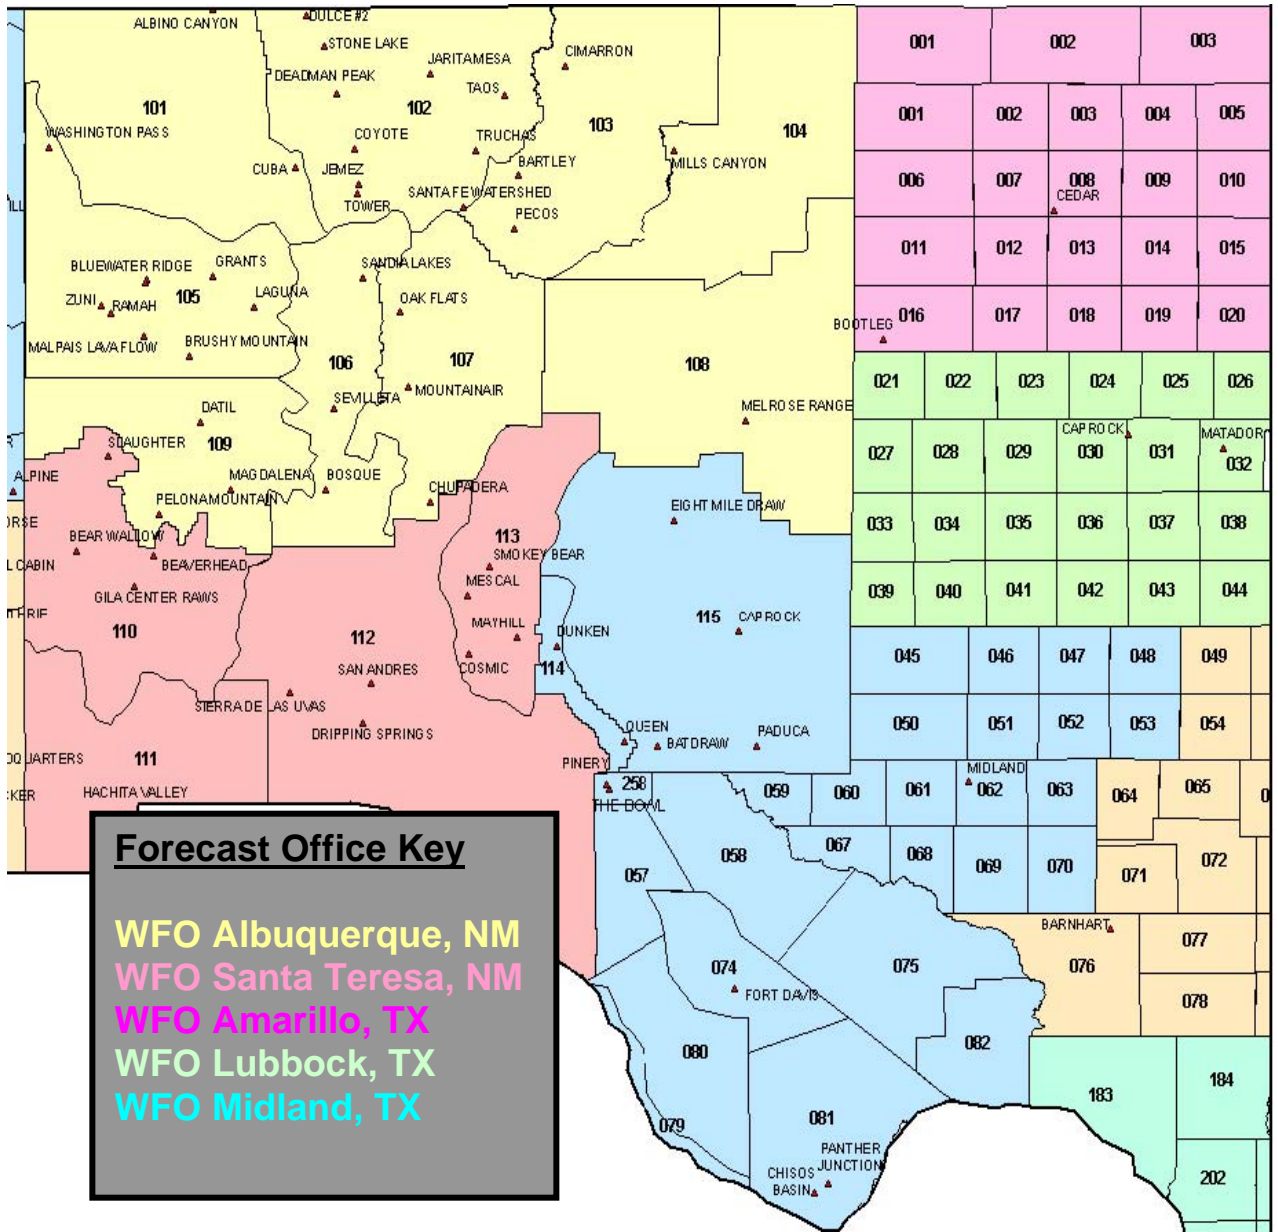

**Southwest Area Red Flag Criteria**

The following conditions occurring simultaneously for three or more hours across any portion of a fire weather zone:

- 20 ft. winds sustained at 20 mph or greater OR gusting to 35 mph or greater
- Relative humidity of 15% or lower
- NFDRS adjective fire danger rating of “High” or higher

C. APPENDIX - NARRATIVE FIRE WEATHER ZONE MAPS (NM, TX and OK)

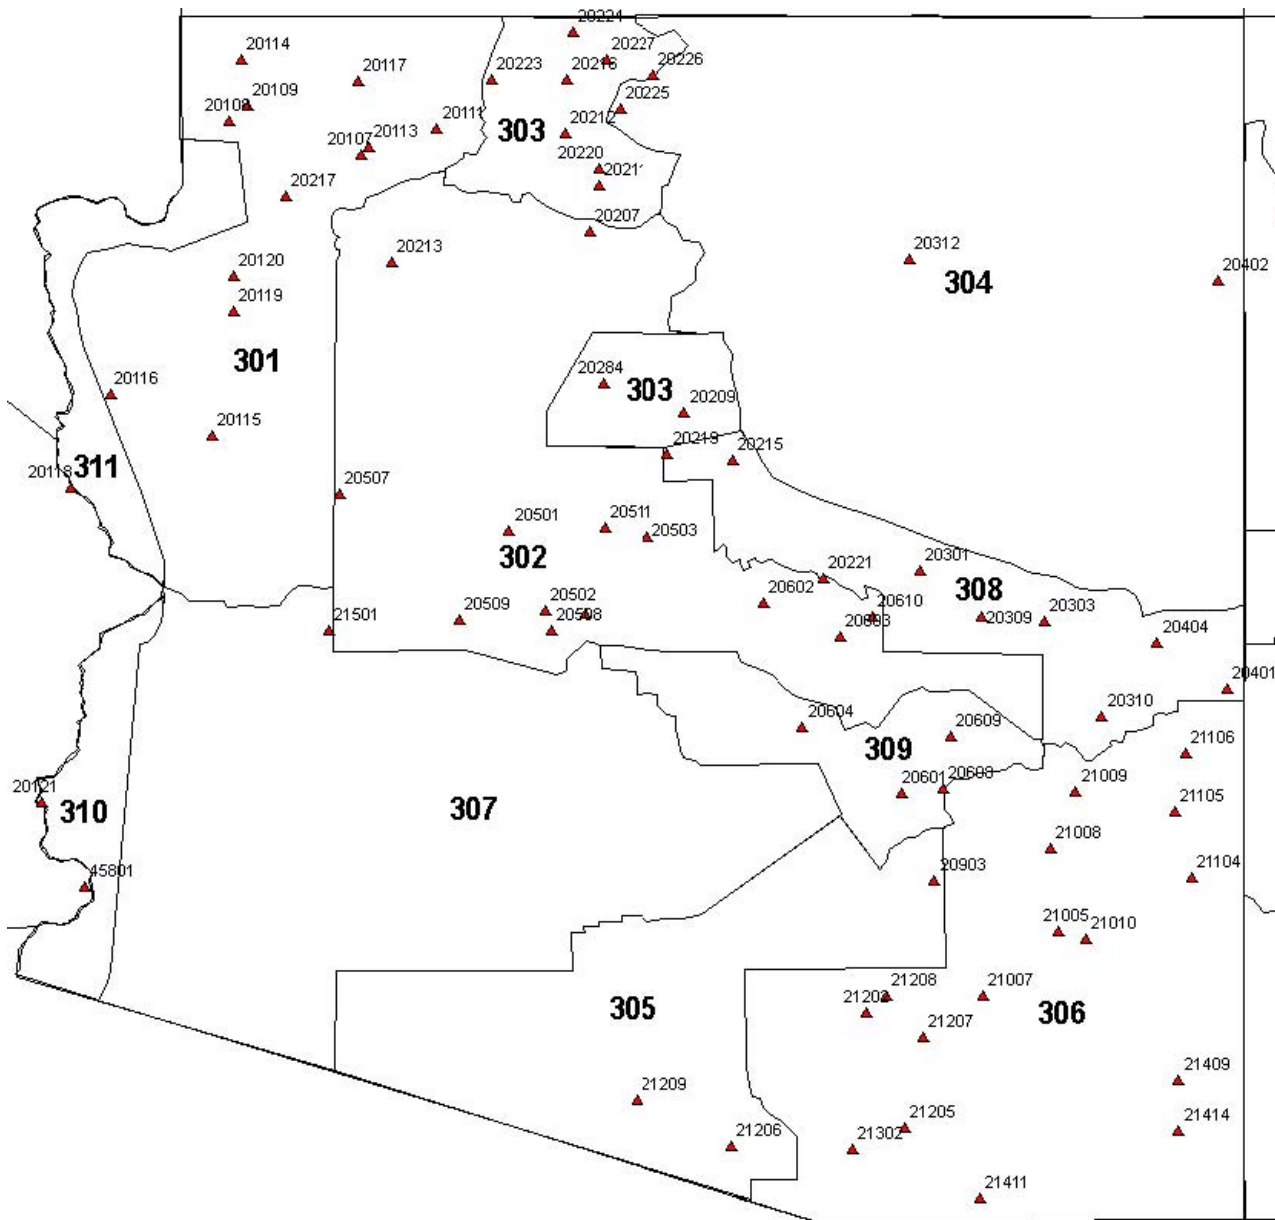

**Southwest Area Red Flag Criteria**

The following conditions occurring simultaneously for three or more hours across any portion of a fire weather zone:

- 20 ft. winds sustained at 20 mph or greater OR gusting to 35 mph or greater
- Relative humidity of 15% or lower
- NFDRS adjective fire danger rating of “High” or higher

D. APPENDIX – NFDRS ZONE MAPS (Arizona)

E. APPENDIX – Experimental Digital Services from the National Weather Service

**Gridded Weather Input for Fire Area Simulation Model - (FARSITE)**

Availability – **FARSITE** data will be generated upon request by a fire agency official, usually concurrent with a spot forecast request. When a forecaster creates a spot forecast, **FARSITE** weather and wind data files will be automatically generated and sent to the appropriate WFO fire weather web page. If a user does not need a full spot forecast, they can call the WFO responsible for the geographic area of the request. The forecaster can then produce **FARSITE** data by entering fire location and name. Again, the data is produced and sent to the web automatically.

Example: National Weather Service - NWS Phoenix, Arizona

<http://www.wrh.noaa.gov/firewx/farsite/farsite.php?wfo=psr>

**Digital Weather Elements in GIS Format**

All of the NWS Offices in Region 3 will provide increased digital weather forecast information in 2008. This information will include smoke dispersion elements including Mixing Height, Transport Winds and Ventilation Index. This information will be available in the “Graphical Forecast” section of the office web pages. The information is also available in GIS-friendly format. Please contact your NWS office or SWCC for more information.

**Fire Weather Point Forecast Matrix Product (PFM)**

1. Graphical map for generating a PFM from various sites will be found on each NWS office fire weather web site. SWCC will also provide a Region III wide graphical map to which the product will be linked.

Example of NWS link: <http://www.wrh.noaa.gov/firewx/fwpfm/fwpfm.php?wfo=psr>

SWCC link: Under development to be placed on SWCC Weather Page  
(<http://gacc.nifc.gov/swcc/predictive/weather/weather.htm>)

2. Some format differences within the product may be found across Region III.

Example: <http://www.wrh.noaa.gov/vef/firematrix.php?loc=orientalwash>

Example: <http://www.srh.noaa.gov/maf/Fire/getpfw.php?loc=midland>

3. Forecasts will be based on a 2.5 or 5 square km grid box for which the RAWS site is located.

WS FORM D-1  
**WS FORM D-1, January 2005 INSTRUCTIONS:**

**I. Incident Personnel:**

1. Complete items 1 through 27 where applicable.

a. Example of weather conditions on site:

| 13. Weather Observations from project or nearby station(s): |           |          |             |       |                 |       |       |     |          |    |   |
|---|-----------|----------|-------------|-------|-----------------|-------|-------|-----|----------|----|---|
| Place   | Elevation | †Ob Time | 20 ft. Wind |       | Eye Level Wind. |       | Temp. |     | Moisture |    | Remarks<br><i>(Relevant Weather, etc.)</i>                  |
|   |           |          | Dir         | Speed | Dir             | Speed | Dry   | Wet | RH       | DP |   |
| Unit G-50   | 1530'     | 0830     | NW          | 6-8   | NW              | 3-5   | 32    |     | 72       |    | Observations from unit<br>RAWS station, 50% cloud<br>cover. |

b. If the incident (HAZMAT, SAR) involves marine, put the wave/swell height and direction in the Remarks section.

2. Transmit in numerical sequence or fax to the appropriate Weather Forecast Office. (A weather forecaster on duty will complete the special forecast as quickly as possible and transmit the forecast and outlook to you by the method requested)
3. Retain completed copy for your records.
4. **Provide feedback to NWS utilizing separate page.** Be sure to include a copy of the spot forecast with any feedback submission including forecaster's name. Feedback to NWS personnel is imperative to assist with future forecasts. **Remember, feedback on correct forecasts is equally as valuable as feedback on incorrect forecasts!** If spot forecast is significantly different than conditions on site, a second forecast may be required.

**II. ALL RELAY POINTS should use this form to insure completeness of date and forecast. A supply of this form should be kept by each dispatcher and all others who may be relaying requests for forecasts or relaying completed forecasts to field units.**

**III. Forms are available from your local National Weather Service Weather Forecast Office. They may also be reproduced by other agencies as needed, entering the phone number and radio identification if desired.**

**G. APPENDIX – CATALOG OF RAWs AND NFDRS OBSERVATION LOCATIONS  
Permanent Stations and Locations Sorted by NFDRS Zone**
