Waste/Process Description (Chemical formulas may be used in this field)

Soil with minor rock and asphalt. This waste is generated from excavation and removal of soil from an inactive material and equipment storage area at SWMU 61-002. The soil excavation is part of pre-construction activities associated with the Security Perimeter Road Project.

Section 3 - Additional Constituents

Additional Constituents and Contaminates. Please account for 100% of waste. Ranges should be given within guidelines of LIG 404-00-03 of individual constituents. List all other constituents (including inerts) not identified above and attach any applicable analysis. No chemical formulas allowed in this field. Continue in Section 3 Additional Information as necessary. CAS Numbers are needed for all chemical constituents, for material without a CAS Number enter "No CAS Number." Contact Waste Services at 5-4000 for assistance.

CAS No.	Name of constituent	Minimum	Maximum
No CAS Number	Soil and Rock	85	to 100 %
No CAS Number	Asphalt	0	to 15 %
No CAS Number	Total Petroleum Hydrocarbons - Diesel Range Organics	0	to 1.2E-02 %
11097-69-1	Arochlor-1254	0	to 2.9E-03 %
11096-82-5	Arochlor-1260	0	to 8.3E-05 %
67-64-1	Acetone	0	to 5.4E-06 %
76-13-1	1,1,2-Trichloro-1,2,2-trifluoroethane	0	to 1.5E-07 %
75-09-2	Methylene Chloride	0	to 4.8E-07 %
117-81-7	Bis(2-ethylhexyl)phthalate	0	to 2.0E-05 %
			to %

Additional Information (Use additional sheet if necessary.)

If additional information is available on the chemical, physical, or radiological character of the waste not covered on this form, provide it below:

The approved Waste Characterization Strategy Form (12/03/04), which is on file at Waste Services, presents historical site information and the characterization approach for this waste stream.

Attached is a summary of the results of in-situ waste characterization sampling at SWMU 61-002. The soil sample ID#s are RE61-05-58761 through 58767, and RE61-05-58945.

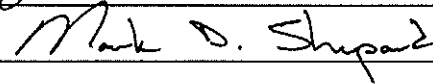

All samples were screened in the field by HSR-1 prior to shipping and were found to be at or below background radiation levels.

WASTE GENERATOR CERTIFICATION: Based on my knowledge of the waste and/or chemical/physical analysis, I certify that the information on this form is correct. I understand that this information will be made available to regulatory agencies and that there are significant penalties for submitting false information including the possibility of fines and imprisonment for knowing violations.

This contaminated soil [does/does not] contain listed hazardous waste and [does/does not] exhibit a characteristic of hazardous waste and [is subject to/complies with] the soil treatment standards as provided by 268.49(c) or the universal treatment standards.

Authorized Signature

I certify under penalty of law that I personally have examined this contaminated soil and it [does/does not] contain listed hazardous waste and [does/does not] exhibit a characteristic of hazardous waste and requires treatment to meet the soil treatment standards as provided by § 268.49(c).

Section 5 - Additional Constituents and Information

Additional Constituents and Contaminants: Please account for 100% of waste. Ranges should be given within guidelines of individual constituents. List all other constituents (including inerts) not identified above and attach any applicable analysis. No chemical formulas allowed in this field. Continue in Section 3 Additional Information as necessary. CAS Numbers are needed for all chemical constituents, for material without a CAS Number enter "No CAS Number." Contact Waste Services at 5-4000 for assistance.

Table with 4 columns: CAS No., Name of constituent, Minimum, and Maximum. Includes handwritten entries for Drill Cuttings, DWD waste (glove/nitrile), glass jars, plastic sheets, Paper towells, and See attachment for Additional Constituents. Minimum values are 90.95, 4.5, and 0.5; Maximum values are 99, 10, and 9. Total of max. ranges is 118 to 108 in % ML.

Additional Information (Use additional sheet if necessary.)

If additional information is available on the chemical, physical, or radiological character of the waste not covered on this form, provide it below:

Referencing WCSF 61-002 Site Investigation remediation of building 61-23 This is Waste # 2 in the WCSF ML
- This waste # 1 and # 2 in the WCSF
Analytical results are for the drill cuttings.

Section 6 - Work Control Documentation (answer all questions)

- Do the procedures for this process cover how to manage this waste? [X] Yes [] No (Provide comments)
Do the procedures for this process address controls to prevent changes to waste constituents and concentrations or addition or removal of waste to/from containers? [X] Yes [] No (Provide comments)

Comments:

Section 7 - Packaging and Storage Control

Describe how the waste will be packaged in accordance to the applicable WAC: Waste is packaged in accordance with DOT requirements. Generator will utilize one 20 yard roll-off bin

Identify the storage management controls that will be used for this waste stream: (check all that apply)

- [] Tamper indication devices [] Locked cabinet or building
[] Limited use locks with log-in for waste [X] Other (describe)

Section 8 - Waste Certification Statements (check only one)

- [X] Waste appears to meet WAC chapter for: 8.0 Hazardous Waste
[] Waste stream needs exception/exemption for treatment, storage, or disposal at:
[] Waste does not meet the criteria for any known TSDF. (DOE approval is required. Contact the Waste Management Program Office for assistance.)

WASTE GENERATOR CERTIFICATION: Based on my knowledge of the waste and/or chemical/physical analysis, I certify that the waste characterization information on this form is correct and that it meets the requirements of the applicable waste acceptance criteria. I understand that this information will be made available to regulatory agencies and that there are significant penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations.

Signature: Melanee M. Shurter Date: 1/12/07

WASTE CERTIFYING OFFICIAL: I have reviewed this form and any associated attachments and the characterization information provided appears to be complete and accurate. I certify, to the best of my knowledge, that the waste characterization information provided by the waste generator meets the requirements of the applicable WAC.

Signature: [Signature] Date: 1.12.07

Attachment 4 - LDR and UHC Information

Identify category and presence of any constituents listed below (equal to or above limit).

Non-Wastewater / Wastewater Category – Check only one.

Non Wastewater Wastewater [as defined by 40 CFR 268.2(f)] Lab Pack [40 CFR 268.42(c)] Sign Certification #1

NOTIFICATIONS AND CERTIFICATIONS – Check the applicable boxes

GENERATOR REQUIREMENTS:

This shipment contains hazardous waste contaminated soil that does not meet treatment standards Sign Certification #2
 This shipment contains untreated hazardous debris to be treated to 40 CFR 268.45 treatment standards Sign Certification #3
 Hazardous wastes (except soil) meeting treatment standards at point of generation Sign Certification #4
 Hazardous wastes contaminated soil meeting treatment standards at point of generation

TSDF OR GENERATOR TREATMENT:

TSDF Treated hazardous debris meeting the alternative treatment standards of 40 CFR 268.45 Sign Certification #5
 Generator Treated hazardous debris meeting the alternative treatment standards of 40 CFR 268.45 Sign Certification #6
 Hazardous wastes contaminated soil treated to 40 CFR 268.49 Sign Certification #7
 Wastes or Residues from characteristic hazardous waste treatment meeting treatment standards and UTS Sign Certification #8
 Wastes or Residues from characteristic hazardous waste treatment not meeting UTS Sign Certification #9
 Other TSDF wastes meeting the more stringent 40 CFR 268.40 treatment standards to be land disposed Sign Certification #10
 Other Generator wastes meeting the more stringent 40 CFR 268.40 treatment standards to be land disposed Sign Certification #11

Notification Of Underlying Hazardous Constituents

(Check the applicable underlying constituents above the concentration levels for D001 through D043 characteristic wastes only)

No Underlying Hazardous Constituents in this waste stream.

NOTIFICATIONS/CERTIFICATIONS #2

WPF # _____

This shipment contains hazardous waste contaminated soil that does not meet treatment standards.

This contaminated soil (does/does not) contain listed hazardous waste and (does/does not) exhibit a characteristic of hazardous waste and (is subject to/complies with) the soil treatment standards as provided by 268.49(c) or the universal treatment standards.

Melanie M. Shuster

Authorized Signature

I certify under penalty of law that I personally have examined this contaminated soil and it (does/does not) contain listed hazardous waste and (does/does not) exhibit a characteristic of hazardous waste and requires treatment to meet the soil treatment standards as provided by § 268.49(c).

Melanie M. Shuster

< 90 DAY ACCUMULATION AREA - EMERGENCY AND SITE SPECIFIC PLAN

SITE ID 3571	TA 61	BLDG	ROOM	GROUP ER	WMC OR CONTACT Michael LeScouarnec	PHONE 7-7112
-----------------	----------	------	------	-------------	---------------------------------------	-----------------

IN CASE OF AN EMERGENCY PLEASE CONTACT ONE OF THE FOLLOWING PERSONS IMMEDIATELY:

PRIMARY

NAME	ADDRESS	WORK/HOME PHONE
Michael LeScouarnec	ERSS	7-7112

ALTERNATES

NAME	ADDRESS	WORK/HOME PHONE
Melanie Shuter	ERSS	7-7369

LIST EMERGENCY EQUIPMENT AND LOCATION (or attach copy): (include distance) shovel(s)

& broom(s) (in truck during inspections).

LIST SPILL CONTROL AND LOCATION (or attach copy): (include distance) _____

IS THERE PROPER COMMUNICATION AT THE SITE? (include distance) _____

- Permanent telephone at site
 Cellular Phone
 2-Way Radio

IS THERE PROPER DECONTAMINATION EQUIPMENT?

- Eyewash Safety Shower Hose Bib (adequate water supply)
 Volume _____ Volume _____ Distance _____
 Distance _____ Distance _____ (NOTE: Must be capable of activation
 How long can it flow _____ at all times when area is in operation)

N/A (explain) Contaminated soils only in storage

EXPLAIN EVACUATION PROCEDURES (or attach copy): exit site to
truck route, to either main lab area West
or East down truck route. (see map on back)

NOTE: BEST MANAGEMENT PRACTICE "EQUIPMENT SHOULD BE NO MORE THAN 100 FEET FROM THE AREA."

HAZARDOUS/MIXED WASTE FACILITY INSPECTION RECORD FORM FOR < 90

¹ FACILITY:	³ <90-DAY ACCUMULATION AREA	⁴ START DATE:	⁵ END DATE:
² Site ID #: 3571		1-8-07	1-14-07

Containers Tank

PART I- Enter condition of the item inspected (OK, NA [Not Applicable], or AR [Action Required]) in column for day inspected.

ITEM	INSPECTED FOR:	MON	TUE	WED	THU	FRI	SAT	SUN
⁷ NO USE	No waste opened, moved, received, treated, or removed; or no waste stored					N/A		
⁸ COMMUNICATIONS EQUIPMENT	Availability and proper operating condition					OK		
⁹ SECURITY	Condition of fences, gates, locks, and other access control equipment					OK		
¹⁰ WORK SURFACES/ FLOORS	Any conditions that could lead to an accident or spill					OK		
¹¹ SPILL/FIRE EQUIPMENT	Present, appropriate, and in proper operating condition					N/A		
¹² EYEWASHES/ SAFETY SHOWERS	Proper operating condition					N/A		
¹³ COVERS/LIDS OF CONTAINERS	Closed and secured properly					OK		
¹⁴ LABELS	Proper labels on all tanks and containers					OK		
¹⁵ ACCUMULATION START DATE	Present and legible					OK-AR		
¹⁶ NOT EXCEEDING 90 DAYS	Waste has not exceeded 90 days					AR		
¹⁷ COMPATIBILITY	Separated according to compatibility					OK		
¹⁸ INTEGRITY (Containers, tanks, and ancillary equipment)	Integrity, leakage, deterioration, corrosion, and damage					OK		
¹⁹ (UN)LOADING AREA	Spills and deterioration					OK		
²⁰ AISLE SPACE/STACKING	Appropriateness and adequacy					OK		
²¹ PALLETS AND RAISED CONTAINERS	Any condition that could result in failure					N/A		
²² TANK SYSTEMS (Aboveground portions)	Discharge controls, leakage, fill level, and corrosion					N/A		

	MON	TUE	WED	THU	FRI	SAT	SUN

U.S. EPA Form 8700-22

Read all instructions before completing this form.

- This form has been designed for use on a 12-pitch (elite) typewriter which is also compatible with standard computer printers; a firm point pen may also be used—press down hard.
- Federal regulations require generators and transporters of hazardous waste and owners or operators of hazardous waste treatment, storage, and disposal facilities to complete this form (EPA Form 8700-22) and, if necessary, the continuation sheet (EPA Form 8700-22A) for both inter- and intrastate transportation of hazardous waste.

Public reporting burden for this collection of information is estimated to average: 30 minutes for generators, 10 minutes for transporters, and 25 minutes for owners or operators of treatment, storage, and disposal facilities. This includes time for reviewing instructions, gathering data, completing, reviewing and transmitting the form. Any correspondence regarding the PRA burden statement for the manifest must be sent to the Director of the Collection Strategies Division in EPA's Office of Information Collection at the following address: U.S. Environmental Protection Agency (2822T), 1200 Pennsylvania Ave., NW., Washington, DC 20460. Do not send the completed form to this address.

I. Instructions for Generators

Item 1. Generator's U.S. EPA Identification Number

Enter the generator's U.S. EPA twelve digit identification number, or the State generator identification number if the generator site does not have an EPA identification number.

Item 2. Page 1 of ____

Enter the total number of pages used to complete this Manifest (i.e., the first page (EPA Form 8700-22) plus the number of Continuation Sheets (EPA Form 8700-22A), if any).

Item 3. Emergency Response Phone Number

Enter a phone number for which emergency response information can be obtained in the event of an incident during transportation. The emergency response phone number must:

- Be the number of the generator or the number of an agency or organization who is capable of and accepts responsibility for providing detailed information about the shipment;
- Reach a phone that is monitored 24 hours a day at all times the waste is in transportation (including transportation related storage); and
- Reach someone who is either knowledgeable of the hazardous waste being shipped and has comprehensive emergency response and spill cleanup/incident mitigation information for the material being shipped or has immediate access to a person who has that knowledge and information about the shipment.

Note: Emergency Response phone number information should only be entered in Item 3 when there is one phone number that applies to all the waste materials described in Item 9b. If a situation (e.g., consolidated shipments) arises where more than one Emergency Response phone number applies to the various wastes listed on the manifest, the phone numbers associated with each specific material should be entered after its description in Item 9b.

Item 4. Manifest Tracking Number

This unique tracking number must be pre-printed on the manifest by the forms printer.

Item 5. Generator's Mailing Address, Phone Number and Site Address

Enter the name of the generator, the mailing address to which the completed manifest signed by the designated facility should be mailed, and the generator's telephone number. Note, the telephone number (including area code) should be the normal business number for the generator, or the number where the generator or his authorized agent may be reached to provide instructions in the event the designated and/or alternate (if any) facility rejects some or all of the shipment. Also enter the physical site address from which the shipment originates only if this address is different than the mailing address.

Item 6. Transporter 1 Company Name, and U.S. EPA ID Number

Enter the company name and U.S. EPA ID number of the first transporter who will transport the waste. Vehicle or driver information may not be entered here.

Item 7. Transporter 2 Company Name and U.S. EPA ID Number

If applicable, enter the company name and U.S. EPA ID number of the second transporter who will transport the waste. Vehicle or driver information may not be entered here.

If more than two transporters are needed, use a Continuation Sheet(s) (EPA Form 8700-22A).

Item 8. Designated Facility Name, Site Address, and U.S. EPA ID Number

Enter the company name and site address of the facility designated to receive the waste listed on this manifest. Also enter the facility's phone number and the U.S. EPA twelve digit identification number of the facility.

Item 9. U.S. DOT Description (Including Proper Shipping Name, Hazard Class or Division, Identification Number, and Packing Group)

Item 9a. If the wastes identified in Item 9b consist of both hazardous and nonhazardous materials, then identify the hazardous materials by entering an "X" in this Item next to the corresponding hazardous material identified in Item 9b.

Item 9b. Enter the U.S. DOT Proper Shipping Name, Hazard Class or Division, Identification Number (UN/NA) and Packing Group for each waste as identified in 49 CFR 172. Include technical name(s) and reportable quantity references, if applicable.

Note: If additional space is needed for waste descriptions, enter these additional descriptions in Item 27 on the Continuation Sheet (EPA Form 8700-22A). Also, if more than one Emergency Response phone number applies to the various wastes described in either Item 9b or Item 27, enter applicable Emergency Response phone numbers immediately following the shipping descriptions for those items.

Item 10. Containers (Number and Type)

Enter the number of containers for each waste and the appropriate abbreviation from Table I (below) for the type of container.

TABLE I.—TYPES OF CONTAINERS

BA = Burlap, cloth, paper, or plastic bags.	DT = Dump truck.
CF = Fiber or plastic boxes, cartons, cases.	DW = Wooden drums, barrels, kegs.
CM = Metal boxes, cartons, cases (including roll-offs).	HG = Hopper or gondola cars.
CW = Wooden boxes, cartons, cases.	TC = Tank cars.
CY = Cylinders.	TP = Portable tanks.
DF = Fiberboard or plastic drums, barrels, kegs.	TT = Cargo tanks (tank trucks).
DM = Metal drums, barrels, kegs.	

Item 11. Total Quantity

Enter, in designated boxes, the total quantity of waste. Round partial units to the nearest whole unit, and do not enter decimals or fractions. To the extent practical, report quantities using appropriate units of measure that will allow you to report quantities with precision. Waste quantities entered should be based on actual measurements or reasonably accurate estimates of actual quantities shipped. Container capacities are not acceptable as estimates.

Item 12. Units of Measure (Weight/Volume)

Enter, in designated boxes, the appropriate abbreviation from Table II (below) for the unit of measure.

TABLE II.—UNITS OF MEASURE

G = Gallons (liquids only).	N = Cubic Meters.
K = Kilograms.	P = Pounds.
L = Liters (liquids only).	T = Tons (2000 Pounds).
M = Metric Tons (1000 kilograms).	Y = Cubic Yards.

Note: Tons, Metric Tons, Cubic Meters, and Cubic Yards should only be reported in connection with very large bulk shipments, such as rail cars, tank trucks, or barges.

Item 13. Waste Codes

Enter up to six federal and state waste codes to describe each waste stream identified in Item 9b. State waste codes that are not redundant with federal codes must be entered here, in addition to the federal waste codes which are most representative of the properties of the waste.

Item 14. Special Handling Instructions and Additional Information

- Generators may enter any special handling or shipment-specific information necessary for the proper management or tracking of the materials under the generator's or other handler's business processes, such as waste profile numbers, container codes, bar codes, or response guide numbers. Generators also may use this space to enter additional descriptive information about their shipped materials, such as chemical names, constituent percentages, physical state, or specific gravity of wastes identified with volume units in Item 12.
- This space may be used to record limited types of federally required information for which there is no specific space provided on the manifest, including any alternate facility designations; the manifest tracking number of the original manifest for rejected wastes and residues that are re-shipped under a second manifest; and the specification of PCB waste descriptions and PCB out-of-service dates required under 40 CFR 761.207. Generators, however, cannot be required to enter information in this space to meet state regulatory requirements.

Item 15. Generator's/Officer's Certifications

- The generator must read, sign, and date the waste minimization certification statement. In signing the waste minimization certification statement, those generators who have not been exempted by statute or regulation from the duty to make a waste minimization certification under section 3002(b) of RCRA are also certifying that they have complied with the waste minimization requirements. The Generator's Certification also contains the required attestation that the shipment has been properly prepared and is in proper condition for transportation (the shipper's certification). The content of the shipper's certification statement is as follows: "I hereby declare that the contents of this consignment are fully and accurately described above by the proper shipping name, and are classified, packaged, marked and labeled/placarded, and are in all respects in proper condition for transport according to applicable international and national governmental regulations. If export shipment and I am the Primary Exporter, I certify that the contents of this consignment conform to the terms of the attached EPA Acknowledgment of Consent." When a party other than the generator prepares the shipment for transportation, this party may also sign the shipper's certification statement as the offeror of the shipment.
- Generator or Offeror personnel may preprint the words, "On behalf of" in the signature block or may hand write this statement in the signature block prior to signing the generator/offeror certification, to indicate that the individual signs as the employee or agent of the named principal.

Note: All of the above information except the handwritten signature required in Item 15 may be pre-printed.

Please print or type. (Form designed for use on elite (12-pitch) typewriter.)

U.S. EPA Form 8700-22

Read all instructions before completing this form.

- This form has been designed for use on a 12-pitch (elite) typewriter which is also compatible with standard computer printers; a firm point pen may also be used—press down hard.
- Federal regulations require generators and transporters of hazardous waste and owners or operators of hazardous waste treatment, storage, and disposal facilities to complete this form (EPA Form 8700-22) and, if necessary, the continuation sheet (EPA Form 8700-22A) for both inter- and intrastate transportation of hazardous waste.

Public reporting burden for this collection of information is estimated to average: 30 minutes for generators, 10 minutes for transporters, and 25 minutes for owners or operators of treatment, storage, and disposal facilities. This includes time for reviewing instructions, gathering data, completing, reviewing and transmitting the form. Any correspondence regarding the PRA burden statement for the manifest must be sent to the Director of the Collection Strategies Division in EPA's Office of Information Collection at the following address: U.S. Environmental Protection Agency (2822T), 1200 Pennsylvania Ave., NW., Washington, DC 20460. Do not send the completed form to this address.

I. Instructions for Generators

Item 1. Generator's U.S. EPA Identification Number

Enter the generator's U.S. EPA twelve digit identification number, or the State generator identification number if the generator site does not have an EPA identification number.

Item 2. Page 1 of ____

Enter the total number of pages used to complete this Manifest (i.e., the first page (EPA Form 8700-22) plus the number of Continuation Sheets (EPA Form 8700-22A), if any).

Item 3. Emergency Response Phone Number

Enter a phone number for which emergency response information can be obtained in the event of an incident during transportation. The emergency response phone number must:

- Be the number of the generator or the number of an agency or organization who is capable of and accepts responsibility for providing detailed information about the shipment;
- Reach a phone that is monitored 24 hours a day at all times the waste is in transportation (including transportation related storage); and
- Reach someone who is either knowledgeable of the hazardous waste being shipped and has comprehensive emergency response and spill cleanup/incident mitigation information for the material being shipped or has immediate access to a person who has that knowledge and information about the shipment.

Note: Emergency Response phone number information should only be entered in Item 3 when there is one phone number that applies to all the waste materials described in Item 9b. If a situation (e.g., consolidated shipments) arises where more than one Emergency Response phone number applies to the various wastes listed on the manifest, the phone numbers associated with each specific material should be entered after its description in Item 9b.

Item 4. Manifest Tracking Number

This unique tracking number must be pre-printed on the manifest by the forms printer.

Item 5. Generator's Mailing Address, Phone Number and Site Address

Enter the name of the generator, the mailing address to which the completed manifest signed by the designated facility should be mailed, and the generator's telephone number. Note, the telephone number (including area code) should be the normal business number for the generator, or the number where the generator or his authorized agent may be reached to provide instructions in the event the designated and/or alternate (if any) facility rejects some or all of the shipment. Also enter the physical site address from which the shipment originates only if this address is different than the mailing address.

Item 6. Transporter 1 Company Name, and U.S. EPA ID Number

Enter the company name and U.S. EPA ID number of the first transporter who will transport the waste. Vehicle or driver information may not be entered here.

Item 7. Transporter 2 Company Name and U.S. EPA ID Number

If applicable, enter the company name and U.S. EPA ID number of the second transporter who will transport the waste. Vehicle or driver information may not be entered here.

If more than two transporters are needed, use a Continuation Sheet(s) (EPA Form 8700-22A).

Item 8. Designated Facility Name, Site Address, and U.S. EPA ID Number

Enter the company name and site address of the facility designated to receive the waste listed on this manifest. Also enter the facility's phone number and the U.S. EPA twelve digit identification number of the facility.

Item 9. U.S. DOT Description (Including Proper Shipping Name, Hazard Class or Division, Identification Number, and Packing Group)

Item 9a. If the wastes identified in Item 9b consist of both hazardous and nonhazardous materials, then identify the hazardous materials by entering an "X" in this Item next to the corresponding hazardous material identified in Item 9b.

Item 9b. Enter the U.S. DOT Proper Shipping Name, Hazard Class or Division, Identification Number (UN/NA) and Packing Group for each waste as identified in 49 CFR 172. Include technical name(s) and reportable quantity references, if applicable.

Note: If additional space is needed for waste descriptions, enter these additional descriptions in Item 27 on the Continuation Sheet (EPA Form 8700-22A). Also, if more than one Emergency Response phone number applies to the various wastes described in either Item 9b or Item 27, enter applicable Emergency Response phone numbers immediately following the shipping descriptions for those Items.

Item 10. Containers (Number and Type)

Enter the number of containers for each waste and the appropriate abbreviation from Table I (below) for the type of container.

TABLE I.—TYPES OF CONTAINERS

BA = Burlap, cloth, paper, or plastic bags.	DT = Dump truck.
CF = Fiber or plastic boxes, cartons, cases.	DW = Wooden drums, barrels, kegs.
CM = Metal boxes, cartons, cases (including roll-offs).	HG = Hopper or gondola cars.
CW = Wooden boxes, cartons, cases.	TC = Tank cars.
CY = Cylinders.	TP = Portable tanks.
DF = Fiberboard or plastic drums, barrels, kegs.	TT = Cargo tanks (tank trucks).
DM = Metal drums, barrels, kegs.	

Item 11. Total Quantity

Enter, in designated boxes, the total quantity of waste. Round partial units to the nearest whole unit, and *do not* enter decimals or fractions. To the extent practical, report quantities using appropriate units of measure that will allow you to report quantities with precision. Waste quantities entered should be based on actual measurements or reasonably accurate estimates of actual quantities shipped. Container capacities are not acceptable as estimates.

Item 12. Units of Measure (Weight/Volume)

Enter, in designated boxes, the appropriate abbreviation from Table II (below) for the unit of measure.

TABLE II.—UNITS OF MEASURE

G = Gallons (liquids only).	N = Cubic Meters.
K = Kilograms.	P = Pounds.
L = Liters (liquids only).	T = Tons (2000 Pounds).
M = Metric Tons (1000 kilograms).	Y = Cubic Yards.

Note: Tons, Metric Tons, Cubic Meters, and Cubic Yards should only be reported in connection with very large bulk shipments, such as rail cars, tank trucks, or barges.

Item 13. Waste Codes

Enter up to six federal and state waste codes to describe each waste stream identified in Item 9b. State waste codes that are not redundant with federal codes must be entered here, in addition to the federal waste codes which are most representative of the properties of the waste.

Item 14. Special Handling Instructions and Additional Information

1. Generators may enter any special handling or shipment-specific information necessary for the proper management or tracking of the materials under the generator's or other handler's business processes, such as waste profile numbers, container codes, bar codes, or response guide numbers. Generators also may use this space to enter additional descriptive information about their shipped materials, such as chemical names, constituent percentages, physical state, or specific gravity of wastes identified with volume units in Item 12.

2. This space may be used to record limited types of federally required information for which there is no specific space provided on the manifest, including any alternate facility designations; the manifest tracking number of the original manifest for rejected wastes and residues that are re-shipped under a second manifest; and the specification of PCB waste descriptions and PCB out-of-service dates required under 40 CFR 761.207. Generators, however, cannot be required to enter information in this space to meet state regulatory requirements.

Item 15. Generator's/Officer's Certifications

1. The generator must read, sign, and date the waste minimization certification statement. In signing the waste minimization certification statement, those generators who have not been exempted by statute or regulation from the duty to make a waste minimization certification under section 3002(b) of RCRA are also certifying that they have complied with the waste minimization requirements. The Generator's Certification also contains the required attestation that the shipment has been properly prepared and is in proper condition for transportation (the shipper's certification). The content of the shipper's certification statement is as follows: "I hereby declare that the contents of this consignment are fully and accurately described above by the proper shipping name, and are classified, packaged, marked and labeled/placarded, and are in all respects in proper condition for transport according to applicable international and national governmental regulations. If export shipment and I am the Primary Exporter, I certify that the contents of this consignment conform to the terms of the attached EPA Acknowledgment of Consent." When a party other than the generator prepares the shipment for transportation, this party may also sign the shipper's certification statement as the offeror of the shipment.

2. Generator or Offeror personnel may preprint the words, "On behalf of" in the signature block or may hand write this statement in the signature block prior to signing the generator/offeror certification, to indicate that the individual signs as the employee or agent of the named principal.

Note: All of the above information except the handwritten signature required in Item 15 may be pre-printed.

UNIFORM HAZARDOUS WASTE MANIFEST		1. Generator ID Number NM0890010515	2. Page 1 of 1	3. Emergency Response Phone (505)667-6211	4. Manifest Tracking Number 000363684 JJK

1.0 PROJECT INFORMATION

1.1 Project Scope

The scope of the activities addressed in this Site Specific Health and Safety (H&S) Plan (SSHASP ER2006-0635) and associated Integrated Work Document (IWD ER2006-0634) is to complete the characterization and remediation of Solid Waste Management Unit (SWMU) 61-002. To accomplish the scope, the following activities will be performed: (1) Mobilization and installation of erosion control BMPs; (2) using a drill rig, collect soil and tuff samples to characterize the lateral and vertical extent of petroleum-contaminated soil that remains on site (five borings), (3) Excavation, removal, and disposal of potentially contaminated soil as identified by characterization data; (4) Collection of confirmation soil samples; and (5) Site restoration and demobilization.

The associated IWD for the project has been broken down into the following major activities:

- General Site Hazards;
- Site Setup and Mobilization;
- Drilling and Sampling
- Excavation and Disposal;
- Site Restoration and Demobilization; and
- Equipment Refueling.

Due to potential chemical exposure, work activities will be conducted in accordance with regulations and guidelines contained in Occupational Safety and Health Administration Title 29 Code of Federal Regulations (CFR) 1926.65, Hazardous Waste Operations and Emergency Response. This SSHASP, along with the associated IWD, also includes the five core functions of Integrated Safety Management and Integrated Safeguards and Security Management for the remediation of SWMU 61-002. The Site Safety Officer (SSO) will conduct chemical and physical monitoring as specified in this SSHASP and in the associated IWD.

In the unlikely event of a site occurrence such as, but not limited to, the discovery of an unknown material (e.g., visual identification, unusual odor) or if site conditions change in such a manner that requires modifications to existing work activities, all activities affected by the occurrence shall stop. The activities will not be allowed to proceed until the occurrence has been evaluated and, if necessary, corrected to the satisfaction of the responsible individuals, or their designees, who approved this SSHASP and associated IWD.

1.2 Key Personnel Having Project H&S Responsibility

Key personnel having project H&S (H&S) responsibility as of June 2006 are listed in Table 1. Equivalent individuals may be substituted as work progresses.

1.2.1 Health and Safety Line Management Responsibility and Lines of Communication

1.2.2 H&S Communication

H&S concerns will be communicated quickly and effectively to protect field team members and nearby personnel in accordance with the Environmental Programs Directorate Corrective Actions Program (EP-CA) Communications Plan for Field Operations 2006. The communication processes include Pre-Field Communication, Field Communication, and Post-Field Communication.

Pre-Field Communication

Pre-Job H&S Briefing: All field project team members will attend a Pre-Job H&S Briefing prior to the start of fieldwork. This briefing will inform each field worker of the site-specific information and the requirements contained in this SSHASP and associated IWD. The contents of the RWP, excavation permit, and other required documents will also be discussed at this time. Attendance at the Pre-Job H&S Briefing shall be documented on the appropriate forms (SSHASP and IWD). All personnel will sign the Pre-Job Start Health & Safety Briefing & SSHASP Acknowledgment Form (included in Appendix A) indicating that they have read the SSHASP and attended the Pre-Job H&S Briefing.

Field Communication

Daily Tailgate Safety Meetings: The Site Safety Officer (SSO) will conduct a tailgate safety meeting each day of active field operations to inform personnel of the anticipated activities for the day and the hazards, control measures, monitoring requirements, and emergency procedures associated with the activities. Any newly identified hazards, associated monitoring and exposure control measures, and problems or concerns that have arisen since the previous tailgate meeting will also be discussed and documented as required by this SSHASP and the IWD. Meeting attendance shall be documented on the Activity-Specific—Health and Safety Field Tailgate form (included in Appendix A).

All field team members should discuss any health or safety related concerns and emergency communication (Incident Reporting) during these meetings. All workers have the right to discuss any safety-related concern **without fear of reprisal**.

Post-Field Communication

H&S issues that are raised during the execution of the project will be evaluated by project team personnel and Los Alamos National Laboratory (LANL or the Laboratory) representatives for inclusion into future SSHASPs/IWDs. If required, the issues shall also be communicated to Group Leaders, Facility Management Unit Representatives, Lessons Learned Coordinator, etc.

Visitor Policy

The on-site supervisor ('Person-in-Charge,' or PIC) shall meet with visitors to determine the purpose of the visit, have the visitor sign the visitor log, and brief the visitor on the hazards present at the site. The PIC shall ensure that visitors have the required training and Personal Protective Equipment (PPE) commensurate with the visitor's hazard exposure.

1.2.3 Stop-Activity and Stop-Work Orders

Any individual who observes an operation that presents a clear and imminent danger to personnel or the environment, or is outside the boundaries of the SSHASP/IWD, has both the responsibility and authority to immediately stop activity/work. After activity/work is stopped, the Team Leader (TL), PIC, and SSO shall be immediately notified. Restart of the activity or work shall be in accordance with Environmental Restoration (ER) Project QP-10.3 Stop Work and Restart.

1.2.4 Relevant Site Information

SWMU 61-002 are within LANL Technical Area 61. All above-ground structures have been removed from the site in preparation for the site characterization activities and excavation of potentially contaminated soil. Once the excavations have been completed for each site, confirmatory samples will be collected in accordance with the Addendum to the Accelerated Corrective Action Work Plan for Area of Concern 03-001(i) and Solid Waste Management Units 03-029 and 61-002 (LANL 2006, ER2006-0067) submitted to the New Mexico Environment Department. The characterization samples along with visual inspection of the site will determine

if the extent of the site requiring remediation. Confirmatory samples collected following site excavation will determine when remediation of the site has been completed.

1.2.5 Site Description/History

1.2.5.1 General Site Information

SWMU 61-002 is situated on a mesa top of the Pajarito Plateau within TA-61 (Figure 1). The area is bounded on the north by Los Alamos Canyon and on the south by Sandia Canyon. SWMU 61-002 is a former storage area located on the east side of the Radio Repair Shop (Building 61-23) on East Jemez Road (Figure 2). The northern portion of the SWMU was historically used as a storage area for capacitors, transformers, and other unmarked containers. Before 1985, oil contaminated with polychlorinated biphenyls (PCBs) was stored in containers on the soil surface within the storage area. The containers were known to have leaked. Historical site characterization and remediation activities were conducted in 1986, 1994, and 1997 and included the collection of numerous soil samples and the removal of PCB-contaminated soils. Details of these activities are included in Section 2.0 of the original approved ACA work plan (LANL 2004, 87474). More recent characterization and remediation activities were conducted in the summer of 2005 because of impending construction activities associated with the Security Perimeter Road Project. Details of the 2005 ACA are included in the "Remedy Completion Report for the Investigation and Remediation of Area of Concern 03-001(i) and Solid Waste Management Units 03-029 and 61-002" (LANL 2005, 91150), which was submitted to NMED in December 2005. During the 2005 ACA investigation, an area of petroleum-contaminated soil and buried fuel lines was discovered near the northeast portion of Building 61-23. There are no records that indicate a petroleum storage tank or fueling facility was ever located in this area. Although it was beyond the scope of the original ACA work plan, additional characterization and remediation efforts were conducted to address this area of petroleum-contaminated soil. Because the extent of soil contamination extended into a major utility corridor and East Jemez Road to the north and to the west beneath Building 61-23, it was determined that a supplemental ACA investigation will be conducted once Building 61-23 has been removed.

SWMU 61-002 is located within TA-61 and was created during the Laboratory TA redesignations in 1989. With the exception of a 1-mi², privately owned residential trailer park, the few buildings at TA-61 were previously part of TA-03. A major feature at TA-61 is the municipal landfill. Established in 1974, the landfill is still in use and is operated by the County of Los Alamos. A portion of SWMU 61-002 extends into the northern portion of the landfill. SWMU 61-002 is located adjacent to the Radio Shop, Building 61-23 (Figure 1.1-2). Building 61-23 (formerly Building 03-282) was built in 1951 for the Reynolds Electric Company and purchased by the Laboratory in 1966. The building lies 58 ft south of the centerline of East Jemez Road and approximately 1200 ft east of Diamond Drive. The area east of the Radio Shop was previously used for storage of capacitors and transformers, unmarked drums, and other oil-filled vessels, some of which contained PCBs. Storage operations were discontinued in 1992. Building 61-23 is scheduled for demolition in late spring of 2006.

1.2.6 Previous/Existing Site Contamination Data

Potential releases related to historical activities at SWMU 61-002 include those to surface and subsurface soil and tuff. All potential historical releases are related to Laboratory historical operations (underground fuel storage and distribution activities).

The chemicals of potential concern (COPCs) for SWMU 61-002 are listed below.

- COPCs at SWMU 61-002 include inorganic chemicals, volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), Petroleum, and Polychlorinated Biphenyls (PCBs).

None of these potential contaminants are believed to exist at levels that pose a H&S risk to workers conducting remediation activities due to the small quantities of soil that will be unearthed and the nature of the site contaminants. Industrial hygiene controls for excavation activities shall be established if analytical results

site contaminants. Industrial hygiene controls for excavation activities shall be established if analytical results from characterization sampling or site conditions arise that pose a health or safety risk to site workers or the environment. If changes are required to the approach in the characterization and remediation of SWMU 61-002, revisions to the SSHASP/IWD shall be made as necessary.

1.2.7 Integrated Work Document

The IWD (ER2006-0634) contains a detailed list of work activities, potential hazards or concerns associated with each work activity, and hazard controls to be implemented. It also lists relevant reference documents and training requirements associated with the work activities. The IWD will be available on-site at all times.

1.2.8 Price-Anderson Amendments Act of 1988

This project is subject to, and will be conducted following, the provisions of the Price-Anderson Amendments Act of 1988.

1.2.9 Conduct of Operations

All personnel participating in remediation activities will complete Conduct of Operations requirements (using the graded approach) as required by DOE Order 5480.19.

1.3 Hazard Assessment

The IWD identifies the hazards associated with performing the tasks associated with the characterization and remediation of SWMU 61-002.

1.4 Administrative and Engineering Controls

As described in the IWD, administrative and/or engineering controls will be used to prevent and/or mitigate hazards and protect site personnel. If administrative and/or engineering controls do not prevent and/or mitigate the hazards, the appropriate PPE will be utilized.

1.5 Site Control

Access to the site will be controlled by site personnel. Personnel will work in groups of at least two people (buddy system), and have means of direct communication or maintain visual contact at all times. Formal Hazardous Waste Operations Exclusion Zones and Contamination Reduction Zones will be established per 29 CFR 1926.65. Work zones will be demarcated with fencing/barrier tape and postings.

1.6 Hazard Communications

Hazards at the site will be communicated to site personnel and visitors by the PIC. Site inspections will be conducted as described in Table 2. Any deficiencies identified during the inspections will be corrected and documented by site personnel. Site personnel will maintain communications with LANL personnel as described in Section 1.2.2. Any materials stored at the site (e.g., waste storage containers, PPE, sampling equipment) will be labeled. A Material Safety Data Sheet (MSDS) for each chemical product brought to the project site will be available for review in the Communications Notebook. The SSO or his/her designee shall maintain the MSDS.

1.7 Exposure Monitoring

Specific information on the personnel exposure pathways and the intended controls, preventive measures, bounding conditions, and training are detailed in Part 1 of the SWMU 61-002 IWD. The SSO will monitor factors such as weather forecasts, activities in neighboring facilities, and site conditions to minimize the exposure of personnel to hazards created by activities at each site. The SSO will evaluate project tasks and

determine appropriate PPE levels.

1.8 Personnel Protective Equipment

If the hazards present by a task cannot be mitigated by administrative or engineering controls, the appropriate PPE will be utilized. Each of the anticipated tasks, the potential hazards, and suitable PPE are presented in the IWD.

1.9 Project Spill Containment Plan

A spill response kit containing a minimum of shovels, brooms, and gloves will be available at the site during active field operations. Soil/debris excavated from SWMU 61-002 that is tracked by equipment or spilled during waste packaging will be swept into the open excavation or added to the waste accumulation container. If a spill originates from the equipment being used for remediation, soil from the excavation will be used to absorb liquids and minimize the area affected. Any material used to control liquid spills will be containerized separately until the appropriate disposal path can be determined. In order to minimize the potential for equipment leaks, all equipment used will be inspected daily before use. The equipment operator will complete an Equipment Safety Inspection Form and submit the completed form to the SSO. The SSO will notify the appropriate LANL personnel if a liquid spill occurs.

1.10 Project Emergency Action/Response Plan

In the event of an incident or emergency, on-site personnel shall function as the site emergency/incident coordinator and will immediately call 911. On-site personnel shall take control of the site until emergency services and/or Emergency Management and Response (EM&R) personnel arrive and assume control. A map indicating the route to Los Alamos Medical Center (Figure 3), the incident reporting flowchart (Figure 4), and incident/emergency contacts and telephone numbers (Table 1) are included in this SSHASP. Emergency evacuation routes will be discussed with the workers during the Pre-Job H&S Briefing to be conducted prior to initiating field activities and in the daily tailgate safety meeting.

1.10.1 Site Access

The site is accessible by paved and improved dirt roads. A current LANL badge is required to access TA-61. All site visitors must check in with the SSO.

1.10.2 First Aid/Cardiopulmonary Resuscitation (CPR)

At least one field team member who is properly trained in first aid and CPR must be present at the site during active field operations. Only qualified providers will be allowed to render CPR and first aid. Due to the proximity of the site to the LANL fire station, first aid support will be requested from emergency response personnel.

1.10.3 Emergency Response Equipment

First Aid/Bloodborne Pathogens Kits: A minimum of one first aid kit and one bloodborne pathogens kit will be on-site at all times. The first aid and bloodborne pathogens kits shall be inspected weekly and re-supplied by the SSO or designee. Contents shall meet the requirements of American National Standards Institute Z308.1-2003 – Minimum Requirements for Workplace First Aid Kits.

Communications: At least one working hardwired telephone or cell phone shall be present on-site during site activities. The incident reporting process shall be discussed to ensure that the field team understands whom to call in the event of an incident/emergency during normal work hours and during off-normal work hours.

Fire Extinguishing Equipment: At least one 10-pound (minimum) ABC fire extinguisher shall be

conspicuously located and readily accessible for each spark/flame producing operation and on or near each piece of heavy equipment. All extinguishers shall be inspected annually and at least once per month and the inspections shall be recorded on the extinguisher inspection tag. Fire restrictions and controls shall be based on the Fire Danger Rating Matrix located at http://int.lanl.gov/fire_matrix.html, which will be checked regularly by the SSO. If information changes, the SSO will notify field crew and addendums to field documentation will be available. All operations will be conducted to comply with LANL Fire Notice 0174, dated 4/17/2006.

Emergency Eyewash: The potential contaminants for this activity are located in oil-soaked soils. All site personnel are required to wear safety glasses. The sampling personnel will be the closest to the contaminated soil and will wear gloves and glasses. Portable eyewash bottles will be readily available for the potential of contaminant contact with the eyes. If the affected person needs further treatment, the portable bottles will be utilized while the person is transported to a hospital.

1.10.3.1 Muster Area Location

A site-specific muster area shall be determined by the PIC or designee and all field team members shall be informed of the location prior to the start of field operations. This location shall also be communicated to visitors when they arrive on-site.

1.10.3.2 Emergency Signal and Evacuation Plan

An air horn or a vehicle horn shall be used as the on-site emergency notification device. One blast of the horn will tell the crew to meet at the muster area. After the crew has assembled at the muster area, a head count will be performed using the daily tailgate form and visitor log. After the crew has been accounted for, they shall be directed where to report until the emergency is over. Every attempt will be made to shut down equipment prior to evacuation.

1.10.3.3 Emergency Route Map

An emergency route map to the Los Alamos Medical Center is included as Figure 3.

1.10.3.4 Incident Notification Process

The incident notification diagram is included as Figure 4. The emergency contact numbers are included as Table 1.

1.11 Medical Surveillance

Medical examinations of potential field personnel are required and conducted by a licensed physician certified in occupational medicine. The employee is provided a statement to qualify them to participate in site activities or restrict them to specific activities. The physical examination is in accordance with 29 CFR 1910.120(f) and the qualification is good for one year. The examination also determines the fitness for respiratory protection.

1.11.1 Inspection and Record Keeping

Table 2, Inspection and Recordkeeping Requirements, details the types of inspections and the person responsible for completing inspections, as well as the frequency.

1.11.2 Pre-Job Health and Safety Briefing Acknowledgement Form

All personnel participating in field activities for SWMU 61-002 are required to read this SSHASP and sign the Pre-Job Start Health & Safety Briefing & SSHASP Acknowledgment Form.

IWD Part 3, Validation and Release

IWD#: ER2006-0634 Revision #: ADDENDUM-1

Pre-Job Brief Content

- What are the critical steps or phases of this activity?
- How can we make a mistake at that point?
- What is the worst thing that can go wrong?
- What controls, preventive measures, and bounding conditions are needed?
- What work permits are required and how will we meet their requirements?
- What are the handoffs and coordination requirements among workers and multiple PICs?
- Are there hold-points including those that require sign-offs?
- What are the stop work responsibilities and expectations (e.g. for unanticipated conditions or hazards)?
- How would we respond to alarms and emergencies?
- Are there lessons learned from previous similar work?
- Is other information needed to perform this activity in a safe, secure, and environmentally responsible manner?
- Does everyone agree to the work tasks/steps, hazards, and controls and commit to follow them?

Pre-Job Brief Attendance Roster

By signing below, I agree to the following:

- I agree to follow the work steps and implement the controls as written.
- I agree to stop work when conditions or hazards change or when I encounter unexpected conditions during the execution of work, or when work cannot be performed as written, or instructions become unclear during execution.
- I confirm that I am authorized, qualified, and, fit to perform the work.

Worker (Signature/Z #/Date) Required	Worker (Signature/Z #/Date)
Worker (Signature/Z #/Date)	Worker (Signature/Z #/Date)
Worker (Signature/Z #/Date)	Worker (Signature/Z #/Date)
Worker (Signature/Z #/Date)	Worker (Signature/Z #/Date)
Worker (Signature/Z #/Date)	Worker (Signature/Z #/Date)

Work Release

By signing below, I verify this activity is compatible with current facility configuration and operating conditions
 RDL designated facility point-of-contact (Signature/Z #/Date) **If required by RDL** Approval of activity expires _____
Date

By signing below, I have verified the following:

- I have verified authorization by ensuring approval signatures of the RLM and RDL.
- I have jointly conducted a walkdown with workers to confirm the IWD can be performed as written, required initial conditions and other prerequisites are in-place.
- The assigned workers are authorized and are qualified to perform the work in a safe, secure, and environmentally responsible manner.
- I have conducted the pre-job briefing, and all workers have been briefed.
- I have ensured coordination with any required RDL work-area representatives (e.g., area work coordinators).

PIC (Signature/Z # /Date) Required _____

Alternate PIC Signatures when PIC authority is assumed the first time (*Note: alternate PICs are required to sign only once, but formal handoff and employee notification are required for each PIC change*).

Alternate PIC (Signature/Z #/Date) **Required** _____

Alternate PIC (Signature/Z #/Date) **Required** _____

Alternate PIC (Signature/Z #/Date) **Required** _____

Implementation of Addendum to the Accelerated Corrective Action Work Plan for the Investigation and Remediation of AOC 03-001(i) and SWMUs 03-029 and 61-002

Part 1 - Activity Specific Information - ADDENDUM #1 TO IWD

IWD#: ER2006-0634	Revision#: Addendum.1	Activity/Task Title: Implementation of Addendum to the Accelerated Corrective Action Work Plan for AOC 03-001(i) and SWMUs 03-029 and 61-002
Work Document #: (work order #)	Not Applicable	
TA: 54	Building: NA	Room: NA
Additional Location Description: Los Alamos National Laboratory, Technical Area 54, Area G, Pad 7		

Activity Description/Overview

This Integrated Work Document (IWD) and associated Site Specific Health and Safety Plan (SSHASP) ER 2006-0635 "Implementation of Corrective Action Work Plan for AOC 03-001(i) and SWMUs 03-029 and 61-002" addresses fieldwork associated with characterization and remediation of Solid Waste Management Unit (SWMU) 61-002 located within the Upper Sandia Canyon Aggregate Area at Los Alamos National Laboratory. The Laboratory plans to perform supplemental investigation and remediation activities related to an area of petroleum contamination that was discovered during the initial site characterization that was performed under the original AOC work plan: "Accelerated Corrective Action Work Plan for the Investigation and Remediation of AOC 03-001(i) and SWMUs 03-029 and 61-002" (LA-UR-04-07879). The area of petroleum contamination is located near the northwest portion of SWMU 61-002 and extends north and west (under the former location of Building 61-23) and just outside the formal SWMU boundary. Although a partial characterization and remediation of the petroleum contamination was performed, additional characterization activities are needed to define the vertical and lateral extent of contaminated soil. SWMU 61-002 will be investigated and remediated because the site lies in the path of the Security Perimeter Road in TA3 and will likely be inaccessible during and after the road has been completed. An Addendum to the Accelerated Corrective Action Work Plan (LA-UR-06-1085) has been prepared to address the planned activities.

All provisions of the original IWD and SSHASP are still in effect and shall be implemented. The objective addressed in this IWD ADDENDUM #1 is to transfer soils classified as hazardous waste from a 55-gallon drum to a roll off container. The drum and roll-off container were relocated from TA-61 and are now at TA-54, Area G, Pad 7.

Integrated Work Document
Part 1 - Activity Specific Information

IWD#: ER2006-0634	Revision#: 0	Activity/Task Title: Implementation of Addendum to the Accelerated Corrective Action Work Plan for AOC 03-001(i) and SWMUs 03-029 and 61-002
Work Document #: (work order #)	Not Applicable	
TA: 3	Building: NA	Room: NA
Additional Location Description: Los Alamos National Laboratory, Technical Area 3, Outdoors		

Activity Description/Overview

This Integrated Work Document (IWD) and associated Site Specific Health and Safety Plan (SSHASP) ER 2006-0635 "Implementation of Corrective Action Work Plan for AOC 03-001(i) and SWMUs 03-029 and 61-002" addresses fieldwork associated with characterization and remediation of Solid Waste Management Unit (SWMU) 61-002 located within the Upper Sandia Canyon Aggregate Area at Los Alamos National Laboratory. The Laboratory plans to perform supplemental investigation and remediation activities related to an area of petroleum contamination that was discovered during the initial site characterization that was performed under the original ACA work plan: "Accelerated Corrective Action Work Plan for the Investigation and Remediation of AOC 03-001(i) and SWMUs 03-029 and 61-002" (LA-UR-04-07879). The area of petroleum contamination is located near the northwest portion of SWMU 61-002 and extends north and west (under the former location of Building 61-23) and just outside the formal SWMU boundary. Although a partial characterization and remediation of the petroleum contamination was performed, additional characterization activities are needed to define the vertical and lateral extent of contaminated soil. SWMU 61-002 will be investigated and remediated because the site lies in the path of the Security Perimeter Road in TA3 and will likely be inaccessible during and after the road has been completed. An Addendum to the Accelerated Corrective Action Work Plan (LA-UR-06-1085) has been prepared to address the planned activities.

The objective addressed in this IWD is to complete the characterization and remediation in support of obtaining an NMED Certificate of Completion for SWMU 61-002. To meet this objective, the following activities will be performed (1) Mobilization and installation of erosion control BMPs; (2) Collection of soil and turf samples using a drill rig; (3) Removal and disposal of potentially contaminated soil; (4) Collection of confirmation soil samples; and (5) Site restoration and demobilization.

Mobilization to the site will include a survey of the area to locate and install any required drainage control measures (BMPs) and to locate utilities. Site personnel will utilize a pickup for transportation to and from the site. A drill rig will be mobilized to the site to collect characterization samples using a continuous core sampler. Field screening using a photo-ionization detector (PID) will be conducted during drilling activities. Based on field screening and laboratory analytical results, the contaminated soil will be removed using an excavator and loaded into rolloff containers for disposal. An estimated 250 cubic yards will be excavated and disposed at the Rio Rancho Landfill as New Mexico Special Waste. Confirmation sampling will be done via the excavator bucket. The excavated areas will be filled with soil obtained from an approved borrow source, compacted to specified criteria, graded to match the surrounding contours, and seeded. A compactor will be brought to the site for the restoration activities.

For this IWD, the project has been broken down into the following major activities: General Site Hazards; Site Setup and Mobilization; Drilling, Sampling, and Borehole Abandonment; Excavation and Disposal; Site Restoration and Demobilization; and Equipment Refueling.

Only personnel who have received all training according to their specific personnel training matrix will be authorized to work on-site. This includes all general LANL training in addition to project-specific and site-specific ECR training.

Work Tasks/Steps Identify work steps/tasks in sequence when such sequencing contributes to safety, security, and/or environmental protection.	Hazards, Concerns, and Potential Accidents or Incidents Identify both activity and work-area hazards for each task/step.	Controls, Preventive Measures, and Bounding Conditions Specify preventive measures, controls for each hazard (e.g., lockout/tagout points, specific PPE, TIDs, alarms, safes, recycle, waste minimization)	Reference Documents List permits, operating manuals, security plans, and other reference procedures.
