Introduction

The California Organic Products Act (COPA), signed into law in 2003, provides protection to producers, processors, handlers and consumers in that foods produced and marketed as organic must meet specified standards. As part of the regulatory process, COPA requires annual registration of all processors, growers and handlers of commodities labeled as organic. State registration is separate from, and does not act as a substitute for, organic certification. State law mandates registration administered by the California Department of Food and Agriculture (CDFA) while federal law mandates certification by a USDA accredited third-party organization.

This publication quantifies the current size and growth of the organic industry in California in terms of acres, farm gate sales and number of growers statewide and by commodity, commodity group, county, and region based on CDFA registration data from 1999-2005. Values have been updated since the December 2005 Review. The state's counties are divided into eight geographic regions based on similar groupings used by CDFA in their annual statistical reports (Figure 1). The five major commodity group classifications presented also parallel the CDFA reports and include: field crops; fruit and nut crops; livestock, dairy, poultry and apiary products; nursery, forestry and flowers; and vegetable crops.

When interpreting the data, the following points should be considered. The numbers contained in this publication are derived solely from information provided in the annual registration forms of organic growers. In other words, the numbers are presented *as reported to* CDFA by growers. Only sales from products marketed as organic are required to be reported to CDFA. This means that income from sales of organically grown products sold in the conventional market may not be included. Similarly, income from government payment is not reported.

Under CDFA regulations, producers of organic commodities pay graduated registration fees based on an operation's total sales. However, registrants grossing over \$5 million annually were not obligated to report the value of sales above that amount prior to 2003. While most registrants reported actual amounts over \$5 million, some registrants reported at the ceiling. Therefore, the total value of production in this publication is undoubtedly underestimated because income realized by some high-revenue producers may not have been fully counted.

In this report, acreage was calculated by tallying only crop production acres. Land that was double or multiple cropped was counted as one crop acre. Fallow land and land utilized for roads, houses and farm buildings were excluded from the analysis. The acreage reported here includes only those acres from which growers reported organic sales.

Finally, when interpreting the total number of growers, the sum of the subcategories may not equal the total because some individual growers have reported in multiple subcategories. For example, a grower producing vegetables and fruit will count as one vegetable grower and one fruit grower, and still only account for one of the total number of growers. Simply adding the number of vegetable growers to the number of fruit growers would result in double counting. Similarly, a grower producing wheat and corn counts as one corn grower and one wheat grower but only one of the total number of field crop producers.

Figure 1. Geographic Regions of Organic Production in California

California Organic Agriculture by Commodity Group, 2000 – 2005

Number of Growers*

YEAR	Field Crops	Fruit & Nut Crops	Livestock, Dairy, Poultry & Apiary	Nursery, Greenhouse & Floriculture	Vegetable Crops	Total*

*The sum of the number of growers of individual commodities may not equal the category total due to growers reporting production of multiple commodities.

**Grapes, all equals the number of growers who produce and market organic grape juice, raisins, table grapes, wine, and other uses.
