

## “More Than 50 Ways to Prevent Diabetes”

By Dr. James R. Gavin, III  
Chairman, National Diabetes Education Program  
President, Morehouse School of Medicine

Millions of Americans are at risk for developing type 2 diabetes. In fact, about 40 percent of U.S. adults ages 40 to 74 – millions of whom are African American – currently have pre-diabetes, a condition that raises a person's risk of developing type 2 diabetes, heart disease, and stroke. However, in clinical trials that were conducted as part of the landmark Diabetes Prevention Program, we now know that diabetes is not inevitable. By losing a small amount of weight, those who are at risk can stop the onset of this devastating disease.

Some 2.7 million African Americans have diabetes, a third of whom are undiagnosed. That's 11.4 percent of the African American population, ages 20 to 74. Over the past decade, the percentage of African Americans ages 40 to 74 with type 2 diabetes has doubled, from 8.9 percent in 1980 to 18.2 percent in 1994. In addition, African-Americans are 1.6 times more likely to develop diabetes than whites of similar age. In every age group, the prevalence of diabetes is higher among African American women than among African American men. For African Americans 20 years and older, 11.8 percent of women and 8.5 percent of men have diabetes.

It is critical that we not take these statistics for granted. Our health is America's health. If we do not turn back this epidemic, billions more dollars in medical care will be spent on diabetes care. The National Diabetes Education Program's (NDEP) *Small Steps. Big Rewards. Prevent type 2 Diabetes* public education campaign and its tailored message for African Americans, “More Than 50 Ways to Prevent Diabetes” can help increase our community's awareness that type 2 diabetes can be prevented.

The campaign provides free information and tools—all designed to help people at risk take the small steps needed to stop diabetes in its tracks. Customized tip sheets that use humorous messages, such as “Snack on a veggie, Reggie,” and “Dance it away, Faye” can motivate our family members to take steps to prevent the disease.

As African Americans, we often use humor to deal with serious issues. But make no mistake, the epidemic of type 2 diabetes within the African American community—even among our youth—has profound consequences for the quality of our lives as individuals and as a community. We can reverse this negative trend by choosing to prevent diabetes.

The NDEP is taking the lead by providing free materials to get you started. Help your loved ones and those in the community not only *find* “More Than 50 Ways to Prevent Diabetes,” but actually *adopt* them as part of a new, healthier lifestyle. No one needs to run a marathon. Big rewards can be achieved by losing 5 to 7 percent of body weight through healthy eating and getting 30 minutes of physical activity five days per week.

Diabetes is serious—but it is also preventable. We now have scientific evidence that with modest weight loss, diabetes prevention is proven, possible, and powerful.
