# "Small Steps. Big Rewards. Prevent type 2 Diabetes" HHS/NDEP Diabetes Prevention Campaign

## Hope for people at risk for diabetes

To help stem the diabetes epidemic, the National Diabetes Education Program (NDEP) has launched the "Small Steps. Big Rewards. Prevent type 2 Diabetes" campaign -a major national diabetes prevention effort. Based on the highly successful Diabetes Prevention Program (DPP), the campaign encourages people with pre-diabetes, a condition in which blood glucose levels are higher than normal but not high enough for a diagnosis of diabetes, to make modest lifestyle changes that could delay and possibly prevent the onset of the disease. By losing 5 to 7 percent of their body weight and getting 150 minutes of physical activity a week, people with pre-diabetes can cut their risk of developing type 2 diabetes by more than half. That's a weight loss of about 10 to 15 pounds in a 200-pound person and walking 30 minutes 5 days a week!

#### "Small Steps" for people at risk for diabetes:

- Ask your health care provider if you should be tested for pre-diabetes.
- Discuss steps you can take to prevent diabetes.
- Order NDEP's "Small Steps. Big Rewards. GAME PLAN" booklets to help you make modest lifestyle changes.
  - in-depth information about type 2 diabetes and its risk factors
  - proven strategies to prevent diabetes
  - o calorie and fat gram values of many foods, and
  - daily tracker to record and monitor progress.
- Work with your health care provider to set goals for weight loss and physical activity.

### "Small Steps" for health care providers:

- Assess your patients for pre-diabetes.
- Help patients initiate lifestyle modifications and refer them for help.
- Discuss treatment options.
- Order NDEP's "Small Steps. Big Rewards. GAME PLAN" toolkit for:
  - evidence-based information for identifying patients at risk,
  - recommended diagnostic criteria,
  - strategies to assist and motivate patients to make lifestyle modifications, and
  - a starter set of "Small Steps. Big Rewards.
    GAME PLAN" booklets to use with patients.

#### Risk factors for diabetes

Take the fist step - talk to your health care provider about your risk for pre-diabetes:

- ☐ Age: risk increases with age (especially 45 years and older)
- Overweight: Body Mass Index (BMI) 25 or higher (23 or higher if Asian American, 26 or higher if Pacific Islander) Ask your provider to calculate it for you.
- ☐ Family history of diabetes: having a parent, brother, or sister with diabetes
- Race/Ethnicity: African American, American Indian, Alaska Native, Asian American, Pacific Islander, or Hispanic American/Latino heritage
- History of Gestational diabetes: also giving birth to a baby weighing more than 9 pounds.
- Blood pressure: 140/90 or higher
- □ Cholesterol: HDL cholesterol less than 40 for men and less than 50 for women; triglyceride level 250 or higher
- ☐ Inactive lifestyle: exercises fewer than three times a week

To order materials, call 1-800-438-5383 or visit the NDEP website, www.ndep.nih.gov.
