ARGONNE NATIONAL LABORATORY

Fast-Tracking Drivetrain Electrification

Argonne National Laboratory is at the forefront of hybrid and electric vehicle research. For more than 20 years its research has contributed to the growing acceptance of these vehicles as real alternatives to traditional gasoline-powered internal combustion engine vehicles.

Argonne National Laboratory's research to fast-track drivetrain electrification focuses on

- component technology development;
- technology analysis;
- assessment and benchmarking;
- grid connectivity; and
- successful partnerships with government and industry.
