### Standard Reference Material 2020c

### White Ceramic Tile for Directional-Hemispherical Reflectance from 250 to 2500 nm

V. R. Weidner and J. J. Hsia

This Standard Reference Material (SRM) is intended for use in calibrating the reflectance scale of integrating sphere reflectometers, such as those used in the evaluation of solar energy materials.

The reflectance of each tile was measured at 375, 550, and 2000 nm with a high-precision instrument to guarantee the homogeneity of this SRM. The certified values for incidence at 6° from normal were determined in the following way. The reflectance of each of 25 tiles was measured at 10-nm intervals from 250 to 2500 nm with a high-precision reflectometer. The reflectance of five of the 25 tiles was also measured at 25-nm intervals from 250 to 800 nm and at 100-nm intervals from 800 to 2500 nm with the highly accurate NBS Reference Reflectometer. These accurate measurements were used to correct for the systematic biases in the high-precision measurements, which after being corrected, provide the mean reflectance at each wavelength for this lot of tiles.

The mean values for 6°/hemispherical reflectance factor are given in Table 1. Starred values have an uncertainty of 0.005 or less, expressed as one standard deviation. This standard deviation applies to the difference between the value the NBS Reference Instrument would give for a single tile and the value given in this table. The errors for different wavelengths, however, are not independent. The uncertainties for unstarred values in the table cannot be fully assessed because they were obtained in part by interpolation of an additive correction. However, an indication of the maximum uncertainty is provided by the size of this correction, which ranged from 0.001 to 0.013. The research and development of this SRM were supported by the DOE Solar Thermal Program through the Solar Energy Research Institute.

The overall direction and coordination of the preparation and technical measurements leading to certification were performed under the chairmanship of J.C. Richmond.

The technical and support aspects involved in the certification and issuance of this SRM were coordinated through the Office of Standard Reference Materials by R.W. Seward.
